IX. Topic: Christian concession. Places: Antioch in Syria, Jerusalem. Jewish Christians came from Jerusalem to Antioch in Syria and taught that the Gentiles should keep the law of Moses. There was a small council of the churches of Antioch and Jerusalem on the subject, and the decision was reached that the Gentiles should be asked to refrain from eating what was sacrificed to idols, from eating blood and things strangled, and from fornication.

X. Topic: Progress in missions. Places: From Antioch in Syria through Asia Minor to Philippi in Macedonia. In Paul's second missionary journey he had Silas as his companion, Barnabas having taken John Mark. Paul and Silas visited Derbe, Lystra, Iconium and Antioch. In a vision Paul was called to Macedonia.

XI. Topic: The gospel standard. Place: It is not certainly known where the epistle was written. Paul urges all to be careful of their influence. He exhorts us to be helpful to others, and at the same time there are certain burdens which we must carry for ourselves.

XII. Topic: Apostolic ministry defined. Place: Philippi in Macedonia. Through the casting out of an evil spirit such opposition was raised against Paul and Silas that they were brought before the magistrates, beaten and put in prison. At midnight while they were praying and singing, there was an earthquake.

Practical Survey.

Topic—The spread of Christianity.

I. As a result of the dispersion.

II. By the founding of foreign missions.

I. As a result of the dispersion. Notwithstanding the opposition of the chief rulers in Jerusalem, and some startling defects among individuals, associated with the early church, the number of disciples increased and the gospel gained strong support in the midst of Judaism. Not until the systematic persecution conducted by Paul of Tarsus did the compact body of believers divide into companies and settle in various parts of the country, distant from Jerusalem. Not until after the conversion of Saul of Tarsus, when persecution subsided, and when the apostle Peter had opportunity to visit the scattered disciples, was it known just how faithful the disciples had been in declaring the truths of the gospel wherever they went. It was during his absence from Jerusalem that Peter experienced the great transition from Jewish exclusiveness into Christian fellowship that Cornelius, the first Gentile convert, whom he received into the church. Peter was more fully delivered from his attachment to the Jews when Herod put forth his authority to accomplish for the Jews what the rulers had been unable to do, in a purpose to destroy utterly the new sect by putting to death its leaders. By miraculous power in answer to a praying church Peter escaped death and was delivered from prison. The miracle in his behalf was like those which he had performed in the name of Christ, when he declared healing for Aeneas and restoration to life for Dorcas. Separated from the apostles and distant from Jerusalem, the scattered disciples found Gentiles at Antioch who were moved by their words to embrace the gospel. That strong body of spiritual converts attracted the attention of the heathen, who distinguished them by conferring upon them the name best suited to all converts to Christianity, that of Christian. The noble Barnabas, who was among the first to sell his property for the support of the gospel and who was the first to endorse the converted Saul, and to vouch for his conversion among the brethren, was the man selected as a representative from the Jerusalem church to visit the new assembly at Antioch. His endorsement was placed upon the work, and through his efforts Saul was engaged to act with him in the oversight of the church. Under their labors the church grew in numbers and in spiritual strength. Fellowship was established between them and the church at Jerusalem.

II. By the founding of foreign missions. From his introduction into the church at Antioch Saul became the strong man in aggressive work in the early church. At Antioch the missionary spirit was strong. The Gentile membership readily received the divine illumination which indicated an extension of the work into foreign lands. Their devotion brought to them the communication of the divine plan to send Barnabas and Saul as missionaries. Commissioned by the Holy Ghost and set apart by the church, these two men began their journey in full confidence that the gospel should be planted among the Gentiles. Faithful, scriptural preaching to the Jews was their first effort in every town they visited. Violent opposition sent them from place to place, but not without converts to maintain the gospel standards. Jewish prejudice occasioned the persecution on all occasions. The heathen were ready to crown the missionaries as gods until Jews who had followed them stoned Paul and drew him out of the city and left him for dead. Love for the new converts surpassed fear of persecution so that Barnabas and Saul determined to retrace their steps, that they might provide for the continuance of the work among those who had embraced the gospel amid so much persecution. The Antioch church gave endorsement to their returned missionaries. Without authority Judaizing teachers contested the admission of Gentiles into the church without circumcision. This led to the first church council in which the missionaries and the leaders at Jerusalem agreed upon rules suited to Jew and Gentile. Paul was again constrained to continue missionary work. What first seemed a serious rupture of God-ordained companionship proved an occasion of extending the work and the enlargement of forces. The Lord changed Paul's course and led him to labor in Europe.

T. R. A.

FINGER RINGS.

Curious Customs and Beliefs Regarding Them.

Nowadays the bride has the wedding ring placed on the fourth finger of the left hand, the ancient belief being that a small artery (some people call it veins) runs from this finger to the heart. But at one time married women of this country placed the plain hoop of gold on the thumb, and some old missals are said to have directed that the ring be placed on the thumb, afterwards upon the second, then on the third, and finally on the furth finger.

Rings, however, are by no means limited to betrothals and weddings, according to Mr. Jones, in his well-known book, "Finger Ring Lore." One of the prettiest fancies connected with these ornaments is the inscribing of mottoes or short verses within the hoop, though it must be confessed that betrothal rings are especially marked out for such sentiments.

When men and women took life perhaps more seriously than they did just before the outbreak of the war, mourning rings were inscribed with a death's head, a sort of grim reminder, like the skeleton at the feast, that mankind is mortal; and a famous Scottish noble family have a mournful tradition connected with this custom. In the seventeenth century the young heir won the heart and hand of a Dutch lady of rank, but when the marriage day arrived the bridegroom was missing. Excited and breathless messengers found the young man calmly sitting down to breakfast, oblivious to the important business on hand; but he attempted to make amends for his strange lapse of memory by hastening to the church, where his alarmed bride awaited him.

Then he found that he had forgotten the ring, but a friend hurriedly handed him one, which was placed on the bride's finger, when to everyone's horror it was discovered that an evil omen has occurred in that it was not an ordinary, but a mourning, ring, bearing the sinister sign of the skull and crossbones. This occurrence had such an effect on the newly made wife that she declared she should die within the year, and the tradition adds that her prophecy was unhappily fulfilled.

Rings were also used in connection with astrology, divination, investitudes, quackery, coronations and religion, and at one time a certain kind was believed to be efficacious in the cure of cramp and epilepsy.—Tit Bits.

The Simple Faith.

O give me yet the simple faith in
  which the fathers trod,
The gospel of the rugged paths that
  lead our feet to God,
The blood-red road of cross and pain
  that we must go—and then,
That doctrine of forgiving love for
  men that war with men.

I want that faith that makes no
  psalm of creed for you and me,
The Scripture truths that children
  learned at some old mother's
  knee,
That doctrine of old-fashioned trust
  in saving grace and love,
The lessons that the Bible taught of
  realms of grace above.

Men mock such simple faith, I know,
  and jeer at those who pray;
But somehow it seems sweeter here
  to live our lives that way.
To try to keep the golden rule, and
  help as best we can
To gain a little joy ourselves and help
  our fellow-man.

And so beyond the silly deeps of wisdom and its scorn
Sometimes unto my ears it seems a
  sweeter music's borne
Because that hunger in my heart
  turns everything to gold,
Beneath that sweet, old-fashioned
  faith to which I long to hold.

THE BRITISH FLEET

What It Has Done for the United States People.

(Toronto Saturday Night.)

Lord Cromer's reply to President Wilson's peace prattle and suggestions that Britain's navy is interfering with what he terms the "freedom of the seas," will clear the air a little. After dismissing the President's peace talk as not worthy of either consideration or discussion, Lord Cromer goes on to state that the President should fully realize that the meaningless and misleading phrase invented in Berlin about the freedom of the seas is generally regarded in Britain as a mere euphemism for the destruction of the supremacy of the British navy, which in the past has been of such infinite benefit not only to Britons, but to the rest of the civilized world.

It is interesting in connection with Lord Cromer's remarks to point out a number of instances where, in the past forty years, the supremacy of the British navy was of vital importance and vast benefit to the United States, and, singular as it may seem, in every instance in which the overpowering strength of England's ships have been helpful to the United States, Germany has been the aggressor and the bully which had to be backed off. With the close of the Franco-German war, a period when the German people, under Bismarck, began to feel their strength, came a number of disturbing complications between Germany and the United States. First was the commercial war between the two countries concerning pigs and sugar, and for a long period this was a rare subject of diplomatic discourse. Then came the Samoan incident, which found Germany on one side and Britain and the United States on the other. In the harbor of Apia the warships of these nations faced each other. Germany determined to take the island, and raise her flag, to the exclusion of the other two, who had prior rights, which Bismarck did not deem worthy of recognition, and it was only through the medium of a terrific storm which wrecked all these vessels, save the British cruiser Calliope, that a crisis was averted.

Next came the trouble preceding and succeeding the Spanish-American war. Spain was out looking for a friend to help her against the United States, and she found several who listened with attentive ears. Germany, Austria, France and Italy, according to those who know in Washington, were willing to tell the United States that they deemed intervention in Cuban affairs unjustifiable, and that such intervention would not be looked upon with indifference. Such a combination would have spelled disaster to the United States. But something happened. Sir Julian Pauncefote, then British Ambassador, refused to join in any such protest. Britain's "iron walls" loomed up before the eyes of other Ambassadors and they thought better of their plan, and the conquest proceeded unopposed.

Shortly after this incident, Admiral Dewey began having his troubles with the German naval officers out in the Pacific. The first clash took place at a Chinese port, when Prince Henry of Prussia, the Kaiser's brother, openly insulted the American Admiral at a dinner given by the Prince to the officers of the various warships in port. Admiral Dewey, together with his staff, left the dinner table in a body, and an apology was demanded, and which was finally tendered.

After this followed the memorable chain of incidents at Manila Bay, in which the German fleet openly attempted to block the American fleet in its work of reducing the Spanish ships and fortifications. The utter disregard by the Germans of established naval usages, their attempts to provision the enemy, and other breaches of neutrality, finally became so serious that Admiral Dewey was obliged to "call down" Admiral von Diederich in words more forcible than polite. In fact, even open threats of war were exchanged. And this was all the more serious in view of the fact that the German fleet, both in weight and quality, was superior to that commanded by Dewey. The climax came when he finally began the bombardment of Manila. It was then that the German squadron made open threats against Dewey's fleet, and here once more the British Admiral stepped in. When the American squadron took up its position before the Spanish fort, the German fleet followed in battle array, and Dewey found himself in the difficult position of having what looked like a hostile fleet at his back and the enemy force in front. Whether the German Admiral really meant to open fire or not is, of course, unknown, but there was every indication of it. It was a heap of powder that needed just a match. At this crisis the British Admiral steamed between the German and American fleets, and took up such a positions that the Germans would have been obliged to fire into the British vessels in any attack. Thereupon Admiral Diederich took the hint and retired, and with his fleet sailed away to return no more.

Of course, these incidents have been published before, but it is just as well at such a time as this, when there is much talk by the American Chief Executive regarding the "freedom of the seas," to recount what Britain's navy has done for the American people.

Monster Petticoats.

During the reign of Charles I. the hoop petticoat was worn only by wives of the lower gentry and by the wives of the citizens. In the latter part of the reign of Queen Ann it rose again, this time in another form—that of an enormous hoop. This grew to such immense proportions that during the time of George I. and II. eight yards was considered the proper width.

These hoops had outstanding steel or whalebone foundations at the bottom of the skirt. In Elizabeth's time this whalebone had been used at the top, near the waist, enlarging the hips for several feet. Addison expressed himself about the subject as follows through his Sir Roger de Coverley:

"My great-great-grandmother has on a new fashioned petticoat, except that hers is gathered at the waist. My grandmother appears as if she stood in a large drum, whereas the ladies now walk as if they were in a gocart."

You never can tell. It is possible for a man to be a model husband and a good fellow, too.

SUNDAY AT HOME

NEARER HOME.

One sweetly solemn thought
  Comes to me o'er and o'er;
I'm nearer my home to-day
  Than I ever have been before.

Nearer my Father's house,
  Where the many mansions be;
Nearer the great white throne;
  Nearer the crystal sea;

Nearer the bound of life,
  Where we lay our burdens down;
Nearer leaving the cross,
  Nearer gaining the crown!

But the waves of that silent sea
  Roll dark before my sight,
That brightly the other side
  Break on a shore of light.

O, if my mortal feet
  Have almost gained the brink;
If it be I am nearer home
  Even to-day than I think:

Father, perfect my trust:
  Let my spirit feel in death
That my feet are perfectly set
  On the rock of a living faith!

THE HUMBLE EXALTED.

Verily he took not on him the nature of angels; but he took on him the seed of Abraham. In all things it behoved him to be made like unto his brethren. Upon the likeness of the throne was the likeness as the appearance of a man above upon it.—The Son of man . . . which is in heaven.—Behold my hands and feet that it is I myself: handle me, and see; for a spirit hath not flesh and bones, as ye see me have.

He made himself of no reputation, and took upon him the form of a servant and was made in the likeness of men: and being found in fashion as a man, he humbled himself and became obedient unto death, even the death of the cross. Wherefore God also hath highly exalted him, and given him a name which is above every name: that at the name of Jesus every knee should bow.—Be watchful and strengthen the things which remain that are ready to die: for I have not found thy works perfect before God.

INVISIBLE VICTORY.

Think of a state of war in which there was no strategy, no diplomacy, no statecraft, no secret treaties. All through the Napoleonic wars, one thing lay on the mind of the Emperor by his own confession: he did not, could not, know the mind of his adversary. The basis of trickery is ignorance. You cheat your customer because he does not know the first cost. Fraud and guile and delusion are the stock in trade of all worldly powers. But God is a God of knowledge, and by Him actions are tried.

Here is a battle without guns, powder and shot, without uniform, rank, medals or pensions. No horses return riderless, no wife or lover left to mourn. No spectators, no correspondents, no deserters, no quarter. It is a war of spirits, and a thousand can dance on the point of a needle; we are out of our depth. "Deep calleth unto deep," and we hold our hands to our ears lest the vibrations destroy our power of hearing. Men by nature are sold under sin; they have eyes but see not. The man of God lives two lives at once. Here he is limited by time, by mountain ranges, by oceans, and by physical weakness. He must be fed and covered, or he die. But there is a spirit in man and the inspiration of the Almighty giveth him understanding. The Spirit teacheth all things; as we live and walk with the Lord, we come to understand more and more. He lifts the curtain and we see. He opens the eyes and the mountain is full of chariots and horses. All things and beings are open to Him with whom we have to do; we see only in part, only through the chinks and rifts, and pauses of the tempest.

Oh, these precious hints and helps that come from the holy lips: Can I not call twelve legions of angels, say 120,000. They are ready and loyal. They are not for show or parade, but for work. They wait, but they strike, and strike home. They were ready and they were wanted. To the whole combination of hostile forces, He said: "Now is your hour and the power of darkness. Now is the prince of this world cast out." Here is the crisis of the universe, all heaven holds its breath. A quivering juncture is reached, and is felt through hell, and heaven, and earth, and the culminating cry is heard and had in reverence. "It is finished." Distance lends no enchantment here: these hostile forces are real and near. Oh, wonder of wonders! The battle field is the human heart, the kingdom is within. This is the great prize!

Hell moves to work its dearth,
Heaven stoops to give it life.

A caution to be believers here! Many are troubled about the devil. What do you know and how much? Take care; this work is too much, and it is needless, not a few carry a burden here, and it is in vain.

Your only care is to get on board the gospel ship and stay there. The captain will see to the safe navigation and the sure arrival!

H. T. Miller.

Army Moustaches.

The order has gone forth that officers in the British Army are for the future to wear moustaches if possible.

This new edict was announced the other day to a party of aspirants to commissions, and some of them are in a quandary owing to their inability to grow the hirsutical effect at all.

On the other hand, the Charlie Chaplin moustache—the tuft of hair about half the usual breadth—is doomed in the Army, for the officers commanding declare they will not tolerate them at any price. They would rather no moustache at all.

The "kute tufte," as the Charlie Chaplin order is known in the Army, has become the vogue lately, and, although it has been tolerated, it has never been admired, and now the halt has been ordered.

Whilst the involuntarily beardless one may have reason for anxiety, the "knut" will have reason for a few moments' close thought as to whether he will become clean-shaven and commence afresh, or whether he will suffer the incongruity and indignity of appearance until the new portion of the moustache has grown.

COUGHED SO HARD

Would Turn Black In The Face.

SHE WAS CURED BY USING

DR. WOOD'S Norway Pine Syrup.

Mrs. Ernest Adams, Sault Ste. Marie, Ont., writes: "My little girl, six years old, had a dreadful hard cough. At nights she would cough so hard she would get black in the face, and would cough for several hours before she could stop. We tried different kinds of medicines and had several doctors, but failed to do her any good. She could not sleep nor eat her cough was so bad, and she was simply wasting away. A friend advised me to try Dr. Wood's Norway Pine Syrup. I got a bottle and saw an improvement, and got another. Now I am only too glad to recommend it to all mothers."

Too much stress cannot be laid on the fact that a cough or cold should be cured immediately.

Dr. Wood's Norway Pine Syrup will cure the cough or cold and prove a preventative from all throat and lung troubles such as bronchitis, pneumonia and consumption.

"Dr. Wood's" is put up in a yellow wrapper; three pine trees the trade mark; price 25c and 50c, per bottle.

Manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

FATAL RIDICULE.

Youths of Ancient Alexandria Paid for Their Caustic Wit.

In ancient days the impudent wit of the young Greco-Egyptian dandy was proverbial, says Arthur E. P. Brome Weigall in "The Life and Times of Cleopatra." That was especially true in Alexandria, whose people were characterized by the Emperor Hadrian as "light, wavering, seditious, vain and spiteful, although as a body wealthy and prosperous."

No sooner did a statesman assume office or a king come to the throne than the wags of the city gave him some scurrilous nickname that stuck to him throughout the remainder of his life. Thus Ptolemy IX. was called "The Bloated," Ptolemy X. "The Vetch" and Ptolemy XIII. "The Tipper." Seleucus they named "Pickled Fish Peddler," and in later times Vespasian was named "Scullion."

When King Herod Agrippa passed through the city on his way to his insecure throne these young Alexandrians dressed up an unfortunate madman whom they had found in the streets, put a paper crown upon his head and a reed in his hand and led him through the town, hailing him as king of the Jews and that in spite of the fact that Agrippa was the close friend of Caligula, their emperor. Against Vespasian they told, with delight, the story of how he had ordered one of his friends for the payment of a trifling loan of 6 oboli, and some one made up a song in which that fact was recorded.

They ridiculed Caracalla for dressing himself like Alexander the Great, although his stature was below the average, but in that case they had not reckoned with their man. His frightful revenge upon them was the almost total extermination of all the well-to-do young men in the city, whom he collected under a false pretense and then butchered in cold blood.

TEN COMMANDMENTS OF SUMMER DIET.

Thou shalt take every precaution with thy digestion during the heated spell.

Thou shalt not eat three heavy meals per day, when the weather is hot, for much food keeps the body heated.

Thou shalt eat meat but once a day, and only sparingly then.

Thou shalt make up thy summer menu very largely of vegetables and fruits.

Thou shalt be unusually slow and deliberate, chewing thy food carefully, for digestion's sake.

Thou shalt not go out into the hot sun just after a hearty meal, but rest awhile in quiet.

Thou shalt not eat heartily after violent exercise, while thy body is excessively hot.

Thou shalt not continually pour iced water or iced drinks down thy throat, if thou wouldst keep thy stomach in condition and avoid nausea.

Thou shalt avoid as much as possible all fat-producing foods during the summer months.

Thou shalt eat very sparingly when travelling by land or water if thou wouldst keep well.

—Harvey Peake, in Philadelphia Record.

The duty of a church is sometimes to get the people together, and then to keep them apart.

Heart Was So Weak Could Not Go Up Stairs Without Help.

When the heart becomes weak and does not do its work properly the nerves become unstrung and the whole system seems to go "all to pieces."

When this happens you need a tonic to build up both the heart and nerves, and Milburn's Heart and Nerve Pills will accomplish this for you, providing you do not let your case run too long and allow it to become chronic.

Mrs. Evangiliste Loverdure, Fort Coulonge, Que., writes: "Last summer my heart and nerves were so bad I could not sleep at night, and my heart was so weak I could not go up stairs without help. My doctor said he could do no more for me as my heart was completely done. A cousin of mine came in one day and told me that Milburn's Heart and Nerve Pills cured her completely. I immediately gave her 50 cents to bring me a box, and since that day there is a box always on my sideboard. I am now well, and my heart and nerves are stronger than when I was a little school girl. I advise anyone with heart trouble to try them. No doctor can beat them."

Milburn's Heart and Nerve Pills are 50c per box, 3 boxes for $1.25; for sale at all dealers; mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

NOTICE TO HOUSEWIVES

OFFICIAL FRUIT BULLETIN

Hereafter a weekly bulletin will appear in this paper telling the housewife the proper time and proper fruit to buy. By following this bulletin your grocer will be able to buy such fruits as you require in good time.

FOR YOUR PROTECTION

a label will appear on every basket of Niagara Peninsula Grown Fruit.

POINTERS ON POTATOES.

In raising early potatoes, a different method must be employed from that of the main or late crop. Potatoes can be planted at early times. The early crop is planted as soon as settled weather comes. The plant is sensitive to frost.

It is important that the ground be cultivated several times to warm it up and make it mellow.

The rows are three feet wide, the furrows four inches deep, and the seed pieces are placed about a foot and a half distant in the furrow.

A rich, sandy loam, one that is well supplied with organic matter and naturally well drained, is the best adapted for heavy yields. Good crops, however, can be grown on almost any kind of soil, but on a heavy, clay soil the tubers are inclined to sogginess. Stiff soils should be lightened by drainage, and by plowing under green crops and barnyard manure.

The soil should not only be fertile, but in a good mechanical condition—loose, friable, deep and mellow.

On heavy clover sod, the crop does very well. It is important that rotation with other crops be practised, as scab and other diseases are apt to develop when the crop is grown on the same ground year after year.

In a number of the large potato districts a three year rotation is used, consisting of fall wheat seeded to clover in the spring the first year; clover the second, which is plowed under in fall or winter, and potatoes the third year.

Thorough preparation is one of the most important factors in successfully growing potatoes. Soils that are heavy should be deeply plowed in the fall and thus exposed to the action of the winter frosts. Cultivation should be frequent, and the soil should be mellow and loose at the time of planting. The roots of the potato feed deep, though the tubers are generally formed within six inches of the surface.

Well-rotted barnyard manure is the best fertilizer for potatoes, excepting on rich garden soils or soils abundantly supplied with humus. When barnyard manure is directly applied to the potato crop, the tubers are apt to become scabby. Therefore it is best to apply it to the preceding crop, but in such quantity as to leave the land well prepared for potatoes.

Potatoes do well after a heavily matured corn, clover or grass crop. On soils that have been made rich in humus by the application of barnyard manure, or the plowing under of green crops, commercial fertilizers will be found of most value.

The New York Station recommends for potatoes, root crops and vegetables in general, an application of four tons of good farm manure, worked well in the soil, and supplemented with 500 pounds of a fertilizer containing 2.5 to 3 per cent. of nitrogen, and 8 to 10 per cent. of available phosphoric acid. If no manure is used, apply 800 to 1,000 pounds of fertilizer containing 4 per cent. of nitrogen and 8 to 10 per cent. of available phosphoric acid.

Fertilizers for potatoes should be applied when the ground is being prepared, and thoroughly mixed into the soil. It does not make much difference whether the fertilizers are applied above or below the potatoes, but they should not be applied in immediate contact with the seed pieces.

As a rule the best seed potatoes are those grown in the locality where they are to be planted.

Unsprouted tubers are better than cellar sprouted ones. When stored in a damp cellar or pit, tubers are apt to grow long, white sprouts, which should be rubbed off when planting, as the growth of these sprouts weakens the tubers. However, if the tubers are spread out in a shallow layer in a bright, sunny room, the sprouts that start are short and sturdy and will start off and grow more rapidly, and thus produce an earlier crop than tubers that have not sprouted at all, or that have grown long, weak sprouts in the dark.

It is best not to cut the tubers more than a few days before they are planted. While small potatoes may be used, medium sized potatoes will give best results. All parts of the potato or tuber are equally valuable for planting. When seed potatoes are high, some farmers cut the tubers in quarters; when it is cheap, they cut them in halves. Nothing less than halves should be used when the potatoes are small.

After the crop is planted, but before the plants have broken through the soil, it is best to run over the field with a light harrow. This will break up the crust and destroy the weeds that are just starting. The field should be harrowed again in about a week or ten days later, and again when the plants are three or four inches high. After that cultivation between the rows should be shallow and frequent throughout the growing period, keeping the ground level. A little soil should be thrown toward the plants about the time they begin to blossom, or just before, but hilling is not advisable if the seed has been planted four inches deep.

FARM NEWS AND VIEWS.

The young apple plant lice usually hatch from eggs found chiefly on the smaller twigs before the buds show green in the spring and are then extremely tender. By delaying the winter strength lime-sulphur spraying until this time and taking special care to see that the twigs and small branches are completely covered both the scale and the lice may be effectively hit. In destroying the rosy apple louse, better results will probably follow the addition of three-fourths of a pint of 40 per cent. nicotine ("Black leaf No. 40" is the substance with which this fact has been determined) to each 100 gallons of the winter-strength lime-sulphur. Though the best time to destroy the lice is when the buds show green much can be done by spraying thoroughly when the flower buds show pink with a mixture of one part of 40 per cent. nicotine to 600 parts of water (about 1½ pints to 100 gallons), to which soap is added, 4 pounds to each 100 gallons, or the lime-sulphur-lead-arsenate spray, usually used at that time and 40 per cent. nicotine at the rate of one to 600, without soap. Especial care must be taken to wet the cluster buds thoroughly. Later sprayings for lice are of little avail because the heavy foliage affords protection.

Whether or not a cover crop has been or is to be planted, the trees will need all the benefit that may be given to keep down weeds and conserve moisture. If there is not cover crop, by all means cultivate. This should be done, too, before the weeds make their start or before the soil gets hard or dry. Do not defer orchard cultivation until every other work is done, unless you get to the orchard in plenty of time to utilize the moisture and other favorable conditions for cultivation.

Care should always be taken to keep from injuring the trees. The single-trees and double-trees often strike the trunks and branches of the trees, breaking the bark or bruising the trees, thus making a place for insects and fungi. It is much easier to prevent insects and diseases than to stop them when they begin. Hence precaution should be used for the right kind of implements, and notice carefully to see that the hames, traces, single-trees, double-trees and implements do not rub the trees.

HOW PNEUMONIA STARTS AND HOW IT IS OFTEN PREVENTED

You catch a little cold to-day and by to-morrow it has reached the throat, next day the lungs are affected and you wish you had used "Catarrhozone," which kills colds in five minutes. In the first place Catarrhozone soothes the irritated membranes and relieves congestion—then it cuts out the phlegm and destroys the germ. It enables the blood to retain a natural supply of oxygen, lung food and vitality. In any cough, bronchitis or catarrh it's guaranteed to positively cure. Beware of dangerous substitutes offered under misleading names for genuine CATARRHOZONE, which is sold everywhere. Large size, containing two months' treatment, costs $1; small size, 50c; trial size, 25c.

WASHING THE EYES.

Also How to Shut Them to Keep Out Soapy Water.

It is a common thing to screw one's eyes up as tightly as possible when washing, in order that the soap shall not get into one's eyes. Many of us remember, especially when children are concerned, how much a strong soap smarts when the suds steal under the eyelids.

We should never get soap in our eyes if we closed them naturally, as in sleep. The eyelid is an absolute protection. Certainly no soapsuds can penetrate the membrane, and equally certain the way in which the eyelashes cover the actual joint make it impervious. The eye, when closed in sleep, is light proof, a much greater test of being shut than the ability to shed soapy water.

On the other hand, when we screw up our eyes tightly, which is done by contracting the muscles of the eyebrow and the upper cheek, a number of creases are formed down which the soapsuds trickle, and the eye, which seems so tightly shut, is really more open to annoyance. The more tightly the eye is held, however, the more does the lower lid force up the protecting eyelashes of the upper lid and thus prevent the watershed that the naturally closed eye makes.

In modern city life, where there is so much dust, the eye should be washed every day. The trick of opening one's eyes under water, which every good swimmer knows, can be easily done in an eyeglass, or, for that matter, in an ordinary basin. To put the face down in clear cold water and open and shut the eyes once or twice not only will give a feeling of freshness, but for those who use their eyes a great deal it will be found a great preventer of eye strain.

In washing out the eye, however, it is necessary to be careful. Soapy water should never be used, as in most soaps there are chemicals of a drying an alkaline character, which are excessively injurious to the eye.

Labor.

No greater misfortune could befall a people than a general belief that labor—I mean manual quite as much as intellectual toil—is to be shunned, to be evaded or to be looked down upon as a disgrace.—Dr. James W. Robertson.

STRAWBERRY TIME IS HERE

HOUSEWIVES ARE ADVISED TO "GET BUSY!"

"Preparedness" is Advisable in Food Preparation; and Strawberries Are One of the Staple Fruits for Canning—Now is the Time.

Strawberries are ripe; and if we don't utilize them in every possible way while fresh and fragrant from the garden, and then put up as many as we can for future use, we shall be losing a golden opportunity. The strawberry is a wholesome fruit for most people. But there are persons who cannot eat the fresh berries without bring on some discomfort of the stomach, though they may eat the cooked fruit with impunity.

When it comes to ways of cooking and serving strawberries, we will try first, old-fashioned shortcake.

An Unfortunate Blunder

(By F. A. Mitchell.)

When the world war broke out there were the usual quantum of American summer tourists in Europe.

Frederick Jackson was one of those Americans near the seat of war, being at Thun, Switzerland. He made a bolt to get through France to the sea, so that he might embark for home. He was unable to register his trunk any farther than Berne, and on arriving at that city began a hunt for it. Approaching a pile of baggage, he saw his trunk—at any rate it had his initials on it—and was about to claim it, when a lady exclaimed:

"There it is! Bring it along quickly. I shall be left."

She pointed to Jackson's trunk, a porter shouldered it and was about to carry it away when Jackson interfered.

"Beg pardon, madam. Are you sure that is your trunk?"

"Certainly. Don't you see my initials on it—F. E. J.?"

"Those are my initials, and I am quite sure that is my trunk."

"Go on, porter," said the lady, and off they went, leaving Mr. Jackson gaping after them. He was about to follow them to regain his trunk when an official pointed to another trunk with the same initials on it, and asked if it were not his. Jackson was puzzled. No matter how familiar one is with his trunk he cannot be certain unless there is some familiar mark on it. However, it was evident that there were two trunks with the same initials on them, and Jackson argued that this one was either his or hers. So he claimed it and directed a porter to shoulder it and go for the train.

The episode occurred on Aug. 2, 1914. A week later Jackson crossed the English Channel, the vessel having darkened lights to escape German war craft, and landed safely in England. There he waited two weeks for a passage to New York.

When the ship was well out to sea Jackson one morning left his stateroom somewhat peculiarly attired. He had on a ruffled collar, and his necktie was a broad blue ribbon. In the cabin he met a lady in a pair of masculine spats much too large for her—a man's choker and a blue speckled cravat ornamented with a mosaic pin resembling one Jackson had bought in Rome. The man and the woman stopped and looked at each other with marked interest. Jackson raised his cap politely.

"I believe, sir," said the lady, "that you are the man who claimed a trunk at Berne which I believed to be mine."

"I am."

"Well, the trunk turned out not to be mine."

"I captured a trunk with my initials on it and held on to it."

"Heavens be praised; it must be mine!"

"That scarf you are wearing matches one I own, and the pin is exactly like one I brought from Italy."

"Quite likely. I have been obliged to use some of the articles I found in your trunk. I fancy that ruffled collar you wear is mine, and the ribbon" (she tried to repress a smile) "is the exact color of one I got in Lucerne. I assure you I am very tired trying to make out with a man's neckwear. Look at these enormous spats!"

"I assure you I have found a woman's robe de nuit altogether too cramped. Besides, the workmanship in it scratches me."

"You are very bold!"

"I will apologize if you will assure me that you have not used my own for a similar purpose."

The lady colored, but made no reply.

"I will have a porter carry the trunk to your stateroom and get mine. I will reserve such articles of clothing as I have been obliged to use to be laundered."

The lady looked uncomfortable.

"Will that suit you, madam?" he added.

"But what shall I do in the meantime for—for——"

"Can't we get the pieces laundered immediately."

A stewardess was passing. The lady called her and put the laundry question. She was told that to get clothes laundered aboard would be next to impossible, and if possible would cost a large sum. A few pieces only would cost a guinea.

"Rather than pay that," said Jackson, with a twinkle in his eye, "I will sleep in embroidery and lace all the voyage."

"But I will not sleep—I mean you shall not sleep in——" She was stalled.

"Then we must change trunks with the articles as they are," said Jackson.

"That's very mean of you."

"I don't see how you can call me mean. At Berne I was about to have my trunk carried to the train when you interposed and had it carried off as yours. Since then I have had to depend upon garments to which I have been entirely unused."

This ended the interview. The lady turned and beat a retreat. Jackson paid an enormous sum to have the articles he had used laundered and sent the trunk with everything in it to the lady's stateroom. He did not receive his own until the end of the journey.

A year after that date when these two were about to start on a wedding tour the groom-to-be sent some of his clothes to his fiancee to pack in her trunk on the ground that he hadn't room for them. She sent them back in a huff.

He laughed.

Burns and Fame.

It is amusing to learn that Burns when just emerging from obscurity jocularity anticipated that his birthday would come to be noted among other remarkable events. In a letter to his early patron, Gavin Hamilton, in 1786 he says, "For my own affair I am in a fair way of becoming as eminent as Thomas a Kempis or John Bunyan, and you may henceforth expect to see my birthday inscribed among the wonderful events in the Poor Robin and Aberdeen almanacs along with the Black Monday and the battle of Bothwell Bridge."

FISHING IN ALGONQUIN PARK

In the extensive reservation of 1,750,000 acres, set aside by the Ontario Government as a playground for the people and known as Algonquin Park, the fishing in the waters of its 1,500 lakes and rivers is good. Such gamey species as small-mouthed black bass, speckled trout, salmon trout and lake trout predominate. With the annual increase of anglers and tourists visiting this section the lakes in close contiguity to the hotels and log cabin camps are apt to become depleted, and to avoid any possibility of this the Ontario Government, with the co-operation of the Grand Trunk Railway, are continually re-stocking these waters. They have just forwarded from the Government Hatchery in Wiarton, 200,000 lake trout fry which reached the Park in good condition and 60,000 of them were placed in Smoke Lake, on which is situated the log cabin camp known as "Nominigan Camp," and 140,000 placed in Cache Lake, directly opposite the Highland Inn. The fishing in the lakes some miles from the hotel, and reached by innumerable canoe routes, teem with the gamiest of the finny tribe and the natural propagation of these fish will keep these lakes well stocked indefinitely. Algonquin Park is probably the most delightful region in Canada for a summer outing. It is the highest point in Ontario, 2,000 miles above sea level.

THE CAPTAIN OF THE PIT.

Down in the deep, the utter deep, where white Sea-serpents hide,
There drooped a wreck's great tangled bulk that never more could ride
The ocean's waves; for it was fang'd both fore and aft inside.

The Shark and Skate, a conference called to view this fearsome sight;
They took the Pilot-fish to ring the bells with all his might;
To summon vipers from the Pit—the Pit, below the light.

So o'er the sands of oceans' floor, there crawled great slimy things,
That never human eyes hath seen with all its fathomings;
And when the muster roll was called, the Pilot-fish, he sings:

"Hear ye! Hear ye! All fish that swim and ye that dwell within
The Pit, our Brother Shark has asked who did this grievous sin;
Who came from out the slime below to hurl their fangs at men?"

The blind, white Serpents snaked around to feel within the rip,
And shook their heads so a-[illegible] wise, the Shark curled back his lip;
For none of all the Serpents knew whose fang had struck the ship.

The Squid dipped in his pot of ink to write a curt denial;
He wrote about the spawn of men who'd died without a smile;
The tiny human babes who laid within the chambered pile.

The Shark had just begun to weep, when shadows crept o'erhead,
And down there came a Submarine to nestle 'midst the dead;
A snaky thing so fearsome built; its fangs was dripping red.

The Cuttle-fish, the Adder-snake, the blind Sea-serpents white,
The Squirting-squid, the Killer-whale, they all recoiled in fright,
For deep within the Submarine they heard a voice recite:

"I am the thing, Ya-Ya-Ya-Ya! the captain of the Pit;
The slinking, sneaking Submarine, whose circle fang has slit
At two mile range, this fast mail boat; so drink to me: 'Prosit!'"

The tiny little Pilot-fish, he made a crown of green,
To place it on the periscope to crown his snakeship [illegible];
And king of all the viper tribe they crowned the Submarine.

—Sing Sing No. [illegible] in "Star of Hope", the official paper of Sing Sing Prison.

There are more ways than one of making a man happy, but one will do.

JUDGING A PLAY.

Frohman Didn't Agree With Tree That Barrie Had Gone Mad.

Frohman weighed a play by the idea in it, and he never produced a play, however arbitrary in story or characters—as, for example, "Peter Pan"—without being able to name specifically the elements of success he thought it possessed.

"Barrie has gone out of his mind, Frohman, I am sorry to say it, but you ought to know it, we are both so fond of him," said Sir Herbert Tree to Frohman one night. "He's just read me a play. He is going to read it to you, so I am warning you. I know I've not gone woozy in my mind, because I have tested myself since hearing the play, but Barrie must be mad. He has written four acts, all about fairies, children and Indians, running through the most incoherent story you ever listened to, and what do you suppose—the last act is to be set on top of trees!"

But the following day Frohman heard "Peter Pan" and accepted it at once. Long afterward he gave these as his reasons: "First, it was written by Barrie; next, it was unmistakably a fine novelty. The most emphatic play in any theatrical season, the one that is most likely to focus general public attention, is the most novel. You can estimate its novelty by the amount of fineness a play contains, for the common in life, like the poor, is always with us and can never seem novel. Only the fine registers with the emphasis of novelty. People go to the theatre not to see life as it is, but as they wish it were. The theatre's business is to present not life, but the illusion of life. Youth is the illusion of life, old age the delusion, and 'Peter Pan' is packed with youth; so I was for it."—John D. Williams in Century.

Magic "Nerviline" Cures Toothache, Earache

IT RELIEVES EVERY EXTERNAL PAIN.

Cures Colds, Coughs, Sore Throat, Tight Chest and Hoarseness.

It's when sickness comes at night, when you are far from the druggist or the doctor, that's when you need Nerviline most. Experienced mothers are never without it. One of the children may have toothache. Without Nerviline—a sleepless night for the entire household. It may be earache, perhaps a stiff neck, or one of the kiddies coughing with a bad chest cold. Nothing can give quicker results than vigorous rubbing with this old-time family remedy.

Nerviline is too useful, too valuable to be without. For lumbago, lame back, sciatica or neuralgia there is no liniment with half of Nerviline's power to penetrate and ease the pain.

As a family safeguard, as something to ward off sickness and to cure the minor ills that will occur in every family, to cure pain anywhere, you can find nothing to compare with old-time Nerviline, which for forty years has been the most widely used family remedy in the Dominion. The most economical size is the large 50c family size bottle, small trial size 25c. All dealers sell Nerviline.

FINISHING BIG GUNS.

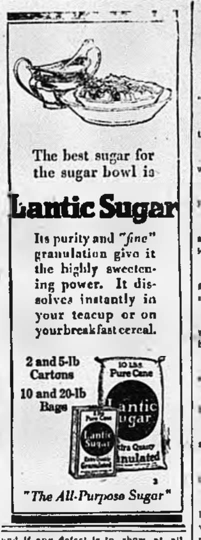
A Wonderful Process—The Wire-Wound is Best.

When quite cool after the boring and the tempering of the metal the embryo gun is subjected to a second boring. Its outer tube—for there are two tubes—is fixed permanently to the inner tube in a most interesting position. This latter tube is placed upright into a pit made for the purpose, and over it is dropped the outer tube, taken from the furnace at a blue heat, the two uniting by the shrinkage set up by cooling. To ensure, as far as possible, that this important operation will turn out an unqualified success, the bore is measured to the infinitesimal part of an inch.

A little grit in the outer tube may ruin all, but, even when all conditions have been faultlessly complied with, something may still go wrong to spoil the gun. Perhaps, through some inequality in the cooling process, the ends of the two tubes may take grip before the middle part has definitely left the expansion stage, with results which may well be guessed. It is here the value of gas jets as a heating agency enters. Unless regular contraction is ensured, the gun may have to be written off as a spoiled one, or, worse still, be passed and certified only to set up a fatal defect when put to actual use.

By this time a multiplicity of operations have been passed through, yet the new gun is still far from being finished. Broaching, or very fine boring, has to be performed, and the surface lapped with lead and emery, the latter to produce a faultless surface. Of course, the rifling grooves which give the parting steadying twist to the projectile, besides economizing the propulsive force, have to be attended to, for smooth bore guns are entirely out of date. It is this rifling which brought about a revolution in the accuracy of gun fire. The grooves are cut out by special machinery after the breech of the gun has been prepared to receive it. Then there follows a number of lesser operations, mainly connected with the fittings of the breech, and, when all is ship-shape, gutta percha impressions are taken of the bore, which had previously been measured to a thousandth part of an inch. The gun is now a gleaming thing of burnished metal ready to slay its hundreds, but before being passed into the service, it is submitted to a very searching test, much more severe than it is ever likely to be put to in the most fiercely contested battle.

Pieces of artillery are sometimes referred to as wire guns. The country which was quickest to realize the merits of wired ordnance was undoubtedly Britain, and the outcome to-day is that the finest guns extant are British made and British owned. The wire gun is the soundest in the world. It could hardly fail to be. The wire—it is almost broad and thick enough to be termed a ribbon—is coiled at the tremendous initial pressure of 50 tons to the square inch, and if any defect is to show at all, it must do so in the covering process. The advantage, however, does not end here, as will be realized when it is explained that a 12-inch wire gun, though weighing only a trifle more than the ordinary twelve inches, can throw a shell 136 pounds heavier and pierce 10 more inches of wrought iron than the other. This simply means that the plain or banded gun is no match whatever for the wire gun of similar calibre.



The best sugar for the sugar bowl is

Lantic Sugar

Its purity and *"fine"* granulation give it the highly sweetening power. It dissolves instantly in your teacup or on your breakfast cereal.

2 and 5-lb Cartons
10 and 20-lb Bags

"The All-Purpose Sugar"

EVOLUTION OF A WORD.

"Hypocrite" Was Once the Title of a Pantomime Actor.

Do you know what a hypocrite is? Why, he is a person who uses the church as a cloak to cover graft and greed and all manner of evildoing. At least that is what he was in the days of our fathers. More recently he has taken on another color, a different kind of cloak. He need not be a dissembler merely in the matter of religion. Hypocrisy may be practiced in friendship, in culture, in philanthropy. It goes a degree further even than that, for the hypocrite may deceive himself as well as his fellow man.

But how did the word, which is obviously a compound of "hypo," meaning "under," and the very familiar "critic" come to mean a person who deceives either himself or other people? This question suggests a second one: What is a critic?

The Greek verb from which the noun was derived meant originally to analyze, separate or judge. So the critic came to be one who had been set apart or judged worthy to plead a cause or present an argument. At one stage of his evolution the critic was a person who recited the works of the great dramatists. He was an actor—who did not act. The gestures were supplied by a man trained for that purpose, who went through a sort of pantomime, while the real interpreter of the part gave the melodiously intoned words.

The pantomime artist was a "hypocrite" because he played an under part to the "critic." Later, when the speaking and acting were done by the same person, he was called the "hypocrite." Now any one who plays a part not his own is practicing hypocrisy.

Drive a nail through an empty spool. It will make a handy peg to hang damp towels on. The spool will not tear or rust the article hung upon it.

ANY WOMAN'S STRUGGLE FOR GOOD HEALTH QUICKLY REWARDED

A Simple Home Treatment Now Advocated That Gives Fine Results.

When a woman's face grows haggard and pale, when she is tired all day and ready to cry when night comes, she ought to know something is wrong.

Putting off only makes matters worse. The best advice we can give any sickly woman is to test out the following treatment:

At the close of every meal, with a sip or two of water, take two chocolate-coated Ferrozone Tablets. This seems to be the best thing going for folks who are tired out, run down and in need of a strengthening, building-up medicine.

Ferrozone's action aids the three principal functions of the body—digestion, assimilation, elimination.

By strengthening digestion it forms an abundance of rich, red blood—this gives good color.

By perfecting assimilation, Ferrozone supplies nutrition — this gives strength, vim, stability.

Elimination is assured because Ferrozone quickens the actions of the liver, kidneys and bowels—this guarantees the maintenance of vigorous health.

Ferrozone puts you on the right road—the one that leads to health.

Not a man, woman or child needing blood, vigor, endurance—not a person who is weak, nervous or sickly, not a person in ill-health who won't receive immediate help from Ferrozone.

As a tonic and restorative, as a health-bringer and body-builder, Ferrozone is unrivalled. It cures because it feeds and nourishes, because it contains the elements that build up and strengthen. Try it yourself—sold everywhere in 50 cent boxes, 6 boxes for $2.50, or by mail from the Catarrhozone Co., Kingston, Ont.

CURRENT COMMENT

The German fleet was among the "also rans."

Chancellor Bethmann-Hollweg has troubles of his own apparently.

If enough of men volunteer there will be no conscription.

Take the "a" out of Hungary and you have the condition of the people.

The demobilization of the Greek army may mean the abdication of King Constantine.

Austria will have a time making good the wastage of over 100,000 prisoners captured by the Russians.

The German who faked the interview with Ambassador Gerard must have done it for "military reasons."

So Germany lies for military reasons.

In the meantime we would like to hear from Grand Duke Nicholas.

For strategic reasons, Germany is still covering up her losses.

Germany's "victorious" fleet is still in hiding. "Der Tag" was a fizzle.

The Germans first lie about their losses and excuse themselves afterwards by saying that they did so for military reasons.

Four million women will vote for the next President of the United States. Some day there will be a female Vice-President.

If the Kaiser has now control of the seas, Herr Ballin will order his great liners to resume their sailings from New York.

The Buffalo News says that "it is informed that each of the 9,000 American recruits will carry with him a small American flag and that our ensign will float along the European battle front." Don't worry, there are no flags at the front.

Roosevelt's notable tribute to the life and work of Lord Kitchener evidently came from the heart.

No visitors are now allowed at Wilhelmshaven, Germany's naval base. The fleet is in no condition to be seen.

The Northcliffe press will now have the opportunity they wanted of putting another man in Kitchener's place.

Some of the United States newspapers are loath to admit that the Jutland battle was a British victory. They were misled in the first place, and hate to admit it.

The pro-German press which chortled so loudly over the alleged British naval defeat have now a dish of crow set before them, but they will refuse to eat. They will let the lie go uncontradicted.

There may be a time limit to Carranza's next note to President Wilson.

Still it will be noticed that Sir David Beatty is sailing the North Sea while the German fleet is in hiding.

If the Germans lost 6,800 men in the Jutland naval battle their losses must have been greater than were the British.

The great Russian drive on the Roumanian border will teach the Roumanians that it would not be safe to join hands with the Kaiser.

In Bayonne, N. J., boys who play hockey will be fined ten cents for each day of unexplained absence from school. The parents will then sit up and take notice.

Denver has tired of the commission form of government and gone back to the mayoral form. New Orleans and Jersey City changed back some time ago. What's the answer to this?

It is to the eternal shame of Canada that there were no Canadian dreadnoughts in the North Sea.—Toronto News.

And to the eternal shame of Borden there was no Canadian fleet there.

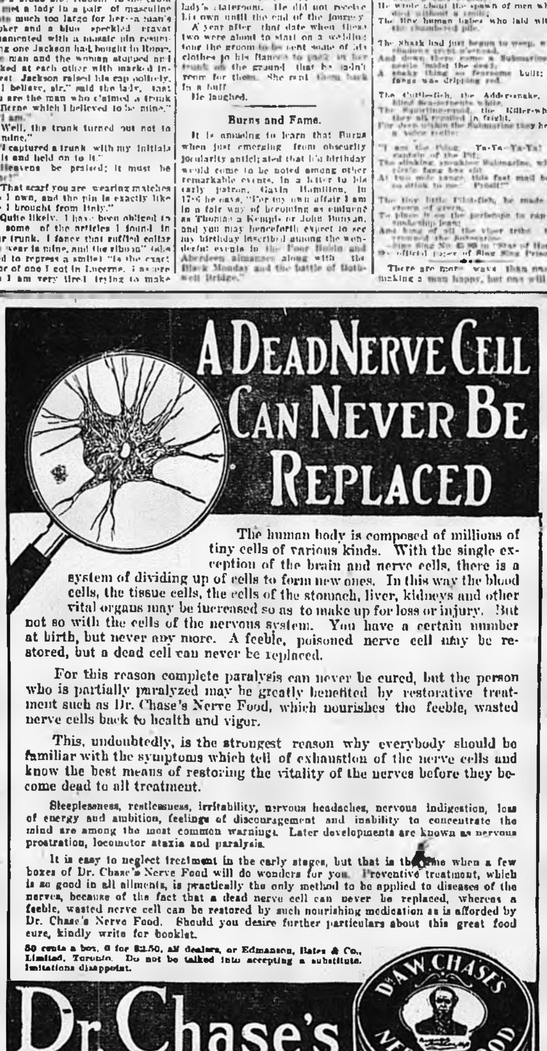
Until yesterday nearly all the world was confident that a great sea fight between England and German fleets would result in a sweeping victory for the British.—Rochester Post-Express.

So it would, only the Germans ran away when they got more than they wanted, and were afraid that they would get some more.

There was an increase of more than $67,000,000 in the value of British exports during May, as compared with May, 1915. The gain was principally in iron, steel, cotton and woolen products. This is pretty good evidence that Britannia rules the waves.

Twelve survivors of the Hampshire have been found. We may now hear whether a mine or a torpedo sent the vessel to the bottom with Kitchener and his staff.

Lloyd George writes that the value of big guns and high explosives is the lesson from the fight at Verdun. He adds that the Allies are now or soon will be superior in these to the enemy.



A DEAD NERVE CELL CAN NEVER BE REPLACED

The human body is composed of millions of tiny cells of various kinds. With the single exception of the brain and nerve cells, there is a system of dividing up of cells to form new ones. In this way the blood cells, the tissue cells, the cells of the stomach, liver, kidneys and other vital organs may be increased so as to make up for loss or injury. But not so with the cells of the nervous system. You have a certain number at birth, but never any more. A feeble, poisoned nerve cell may be restored, but a dead cell can never be replaced.

For this reason complete paralysis can never be cured, but the person who is partially paralyzed may be greatly benefited by restorative treatment such as Dr. Chase's Nerve Food, which nourishes the feeble, wasted nerve cells back to health and vigor.

This, undoubtedly, is the strongest reason why everybody should be familiar with the symptoms which tell of exhaustion of the nerve cells and know the best means of restoring the vitality of the nerves before they become dead to all treatment.

Sleeplessness, restlessness, irritability, nervous headaches, nervous indigestion, loss of energy and ambition, feelings of discouragement and inability to concentrate the mind are among the most common warnings. Later developments are known as nervous prostration, locomotor ataxia and paralysis.

It is easy to neglect treatment in the early stages, but that is the time when a few boxes of Dr. Chase's Nerve Food will do wonders for you. Preventive treatment, which is so good in all ailments, is practically the only method to be applied to diseases of the nerves, because of the fact that a dead nerve cell can never be replaced, whereas a feeble, wasted nerve cell can be restored by such nourishing medication as is afforded by Dr. Chase's Nerve Food. Should you desire further particulars about this great food cure, kindly write for booklet.

50 cents a box, 6 for $2.50, all dealers, or Edmanson, Bates & Co., Limited, Toronto. Do not be talked into accepting a substitute. Imitations disappoint.

Dr. Chase's Nerve Food

NEIGHBORING VILLAGES & COUNTRYSIDE

News of the Week Collected by Staff of Live Correspondents

MILDMAY

The Camp-Meeting Services of the Evangelical Church are to start on Wednesday evening June 21st this year.

Pte. Chester Gowdy, son of Mr. Isaac Gowdy has been reported wounded in the last few days battle in France.

Entrance Exams will be held in the Mildmay public School on June 21, 22 and 23.

Miss Katie Schmalm has resigned her position as teacher in the second form of the Mildmay Public School, and intends going West in July.

Miss Lavina Schefter, trained nurse of Detroit, is visiting at the home of her mother, Mrs. A. Schefter for a few weeks.

It is very gratifying to see so many of our residents taking great pains to beautify their dwellings by keeping their lawns so neatly. Every resident should show his pride in the place by keeping his property neat and tidy.

The Directors of the Carick Agricultural Society have decided to hold the Mildmay Fall Show a little earlier this year, on account of the uncertainty of the weather conditions later in the season, and have selected Sept. 11th, and 12th, as the Show dates this year.

Miss Rose Helwig, Miss Dora Wendt, Lance-Corp. Charles Wendt and Mr. W. F. Wendt spent Sunday in Wroxeter.

The crop of dandelion wine for the dry season after Sept. 10th promises to be a bumper one.

NARVA

The Narva Women's Institute will meet at the home of Mrs. W. Alexander, 12th Con. of Greenock on Wednesday, June 28th at 2.30 p. m. Miss H. T. Job of Freeman will lecture on "The Best Taste." All the ladies cordially invited.

RIVERSDALE

Mrs. E. O'Hagan has returned to her home after a pleasant visit with friends in the vicinity.

We are pleased to state that Mrs. Robt. Chatreau having fully recovered from her recent illness has returned to her home from Walkerton.

Mrs. Robert Green of Cargill is spending a few days at the home of Mrs. Robt. Chatreau.

Mr. and Mrs. Stephen Scharbach spent Sunday in Cargill.

There is some live baseball team in the village this year—the few ladies on the team proving themselves expert at the bat or on the field.

Miss Eva Benninger spent the week-end with her friend Miss Isabelle Chatreau.

Mr. and Mrs. Spiers and son Mr. Thomas Spiers motored from Toronto last week to visit Mrs. Spiers' brother, Mr. William Cassidy.

HANOVER

Dr. Stanley Ball, son of Mr. R. J. Ball M. P. and Mrs. Ball of Hanover, is on his way home after a year of service in a medical capacity. He is expected in a few days.

Mrs. Isabel Jane Tyreman passed away on Friday June 9 at the advanced age of 90 years and six months. Death was due to cancer of the stomach. She had been ailing for about six months.

Recruiting commenced again on Monday for the 147th Batt. 125 are required to bring the Battalion up to full strength again, following the departure of the fifty men who left last week for St. Andrews, N. B., as a Pioneer unit, and the loss of men in various ways since the Grey boys went to Niagara.

MAPLE HILL

Miss Isabel Gowanlock has taken a position at Bracebridge.

Mr. John D. Little has sold his Belgian horse, Vandelveldt, to Mr. Samuel Little of Elmwood.

Last Friday evening was a busy one, a patriotic dance being held at Adam Gowanlock's, a dance and presentation at Prospect Hill school and a dance at Charlie Tanner's. All three were O.K.

Mr. James McWhinney raised a driving shed Tuesday evening.

Mrs. Stella Little gave a fowl supper Monday evening in honor of her brother, Pte. Threndyle of the 160th Batt., at which the family presented their boy in khaki with a wrist watch.

PINKERTON

Miss Lena Pinkerton returned from Tennessee last week, where she has spent the winter months.

Mr. Gordon Pinkerton journeyed to Walkerton on Tuesday of last week and signed up with the 160th. Gordon was home over Sunday and certainly looks well in his uniform.

The Canadian Order of Foresters will attend Divine Service in the Anglican Church on Sunday afternoon, June 25th. at 2.30. An invitation is extended to members of outside lodges.

Mr. George Scott took his annual trip through the vicinity with his sawing-machine outfit.

Miss Myrtle Garland and Master Thompson Garland spent a few days in Chesley.

Pte. Gordon Garland spent Sunday at his home here. Gordon leaves for London this week.

Senator Donnelly and Mr. Wm Taylor are learning the art of driving their new Overland cars.

The pupils from the School here are trying their examinations in Paisley this week. We wish them success.

Mrs. Norman Birrell and daughter returned to Toronto last week.

A garden party under the auspices of the Ladies Aid will be held at the Manse, Pinkerton, on Monday, July 10th. Tea served from 6 to 8 o'clock. A good program will be provided. Admission 25 cents. Children under 12 years 15 cents.

GLAMIS

Statute Labor is the order of the day!

Rev. P. Reith returned home from Toronto on Friday.

Miss Emma Howson visited relatives in Paisley last week.

Mrs. Margaret Heaton, son and daughter, returned to their home in Toronto last week.

Lieut. Cronin of D Company 160th Batt., visited his sister, Miss D. Cronin, first of the week.

Mr. McDonald of Ripley visited his sister Mrs. C. McKinnon last week. All are pleased to see Mrs. McKinnon out and around after her illness.

Mrs. L. D. Tufford has returned to her home in Beamsville.

The B. Y. P. U. Society are arranging for a musical entertainment on Friday evening June 30th.

Privates James Thompson, Mac McKinnon, Torrence McLennan, Neil McDonald, Will. Patterson, Wilbert McNally, and John Kitchen were Sunday visitors at their homes here. This will be the boys' last visit here before leaving Walkerton for London this week.

Quite a number from here and vicinity attended the Owen Sound Association of Baptist Churches held in Paisley last week.

Mr. John McKenzie spent a few days with relatives in and around Markdale.

Private Will. Osborne, and sister of Port Elgin were week-end visitors with their mother, Mrs. Owen Webb.

Mr. Amsey Gregg of Pinkerton is painting the outside of Mr. Campbell's residence.

Lieut. Wilfrid L. McKay called on friends here last week. All were pleased to see him again.

The annual Union S. S. Picnic will be held on Tuesday July 4th at Inverhuron.

We are sorry to report Mr. McCauley's mother is no better. She has been removed to the home of her daughter, Mrs. Bell, near Dobbinton, and Mr. McCauley returned to spend the week with her.

Mrs. Thos. Madden of Hamilton is here on a visit to Mrs. Groves.

Mr. John Kidd is busy in this neighborhood with his wood-sawing outfit.

All join in wishing Mr. and Mrs. Edgar Wilson (nee Miss Jessie Ross) of 14th con., Greenock, much joy and happiness.

Mr. Richardson of Pinkerton is working at W. J. Graham's.

We regret to announce at time of writing Mrs. Chas. McKinnon is very low, having taken seriously ill on Monday evening.

EAST BRUCE

Road work is the order of the day.

Mr. Howard McKeeman is sick with the typhoid fever.

Mr. Henry Annes is home from Emo, Rainy River District, after being away for 12 years.

Mr. McLean Young spent Sunday with friends in Kincardine.

Pte. McGregor and Campbell spent Sunday at their home.

Mr. J. J. George of Port Elgin made a business trip on the 8th. con, last week.

Miss Maggie Mills returned to the O. A. C. Guelph last week.

Mr. and Mrs. Frank Cuerig of Moose Jaw Sask. is visiting at his home, and friends here at present.

KINLOSS

Mr. Peter McDonald lost a very valuable cow last week. It went into the well head first.

Miss M. Armstrong who has been in Lucknow, is home for the holidays.

The farmers are again doing statute labor. My it's great for the cars.

Mr. Chas. Gibson and family of McGee, Sask., is at present visiting her sister, Miss Abbie Rowe.

The Farmers' Institute picnic held here last Thursday was a decided success. People from all over South Bruce answered the call.

Mrs. O. Hildred from the west arrived home on Saturday night. We are pleased to see so many of our used-to-be Kinlossites coming back to the fold once more.

Messrs George and Will. Moore returned from Hanover on Saturday. They went over to see the circus but they wouldn't let them join.

Mr. and Mrs. Frank Cole and daughter, Ruby, have moved into the village.

Miss Wilda Stanley and lady friend of London are visiting her parents, Mr. and Mrs. Albert Stanley.

Mrs. Allan Kaake is at present at home with her father, Mr. Griffith, who is seriously ill. We hope he will soon be enjoying health and strength again.

BRANT

On Friday night June 9th the whole neighborhood turned out a gathering at S.S. No. 2 for the purpose of giving the boys of the 160th, from this section a good send-off. Mr. T. H. Wilson occupied the chair and after a few appropriate remarks, called upon Mr. W. A. Rowand who read an address to the boys, while Messrs James A. Lamb and Jas. Threndyle made the presentation. Trave James, Hugh Threndyle, T. G. Lamb, and Gordon McNalley were given handsome signet rings and a wrist watch was presented to J. E. Plowright. Sergt James and Mr. James McWhinney made short addresses. Mr. A. E. Wahn rendered a violin solo, and Miss James and Master Tom Plowright gave solos all of which were enjoyed and applauded by a large audience. The school section is proud of the class of men it is sending out and wishes them one and all success in their fight for King and Country and a safe return.

S. S. No. 7, Brant:—

Sr. IV.—Recommended, Oliver Seller; Not recommended, Dan McKeeman.

Jr. IV.—Lillie Scott, Winnie O'Reilly, Dick Desmond.

Sr. III.—Jack McKeeman.

Jr. III.—Florence Smith, Maurice Young, Arthur Young, Tom Young, Verna Blue.

Sr. II.—Lola Kerry, Tracey Desmond, Harry Scott, Edith Blue, Nelson Kerry, Marjorie Brown, Edith Blue, Sophie Kauffman, Frank Desmond, Edith Blue.

Jr. II.—Ernest Houle, Mansel Napper, Jennie Alexander, Hazel Edmunds, Joe O'Reilly, Percy Gregg, Melvin Pearson.

Jr. 1st—Annie Kauffman.

Pr. Sr.—Grace Kerry, Dorothy O'Reilly.

Pr. B.—Verna Young, Polly Kauffman, George Gregg.

Pr. A.—Wallace Napper, Henry Young.

OTTER CREEK

Mr. and Mrs. John Hogg returned from the West on Friday.

Master Lang is visiting at Mr. John Hogg's at present.

Mr. and Mrs. Henry Hossfeld, Mr. and Mrs. Conrad Hossfeld and Mr. and Mrs. Will Hossfeld attended the wedding of Miss Annie Hossfeld of Brant.

Mr. and Mrs. Adam Seigmiller attended the wedding of Mrs. Seigmiller's sister, Miss Kreuler of Ashfield.

Mr. Gordon Hogg left again for training with the 160th Batt. He was home while his parents were out West.

Miss Olive Tegler and Miss Janet Hutton were visitors in Hanover last week.

CARGILL

Mrs. M. Bell was in Walkerton on Friday.

The May Picture Festival which has been in the Foresters' Hall for the past week, left on Wednesday for Paisley.

Mrs. U. W. Keeling was a visitor in Listowel on Saturday.

Mrs. C. M. Martyn (nee Mabel Hamilton) and babe returned to Winnipeg on Tuesday after spending the past week with her mother, Mrs. Hamilton.

The Bowman Trophy which has been captured by our club several times, is now held by Queen City Bowling Club of Toronto, they having taken it from Orangeville.

On Monday next the early train will arrive 6.43 a. m. instead of 7.02 a. m. and the afternoon at 3.02 instead of 3.17. Don't forget to set the clock right or you will be compelled to wait half a day.

Owing to Corpus Christi in Chepstow, mass will be at 8 30 a. m. here on Sunday next.

Mrs. C. and Alice Hamilton were in the County Town on Saturday.

Ptes. Clancy and Anderson of the 160th Batt., Walkerton, spent Sunday here.

Miss Marie Mahoney of the Queens Hotel, Walkerton, spent the week-end here with her parents.

A number from here visited Walkerton on Wednesday morning to see 160th Batt. depart for London.

At a meeting of the Cargill Baseball Club held on Monday evening, the following officers were elected for the season—President, John Clancy; Captain Robert Loughleen; Sec'y-Treas., J. H. Smith.

In the removal of Rev. Wm. J. Fiddes, Ph. B. the Methodist Church loses a beloved pastor and the community a good citizen. Both Mr. and Mrs. Fiddes will be greatly missed. Mr. Fiddes was invited to Ancaster but the stationing committee sent him to Cayuga, the County town of Haldimand County. His successor here will be Rev. Walter C. Almack. Mr. Almack was formerly a member of the Hamilton Conference, but resigned to go overseas with the First Canadian Contingent. He was taken ill however, released from active service and took a church in the Nova Scotia Conference. He now returns to the Hamilton Conference and will assume the pastorate of Cargill Methodist Church next week.

Messrs. J. B. Huether and Howard Todd will take over their newly acquired business at Guelph the first of the week. Mr. and Mrs. Todd arrived from Red Deer on Saturday and have taken a furnished house at Guelph. Mr. and Mrs. Huether will not remove to Guelph until they return from their cottage at Southampton on the first of September.

Mr. and Mrs. Henry Tanner, South Line, motored to Toronto last week, accompanied by Mr. and Mrs. Andrew Kirstine to attend the wedding of their cousin, Miss Tanner. They report that of all the country passed through, Bruce County has suffered least from the excessive rains. All along the way, both this side of and beyond Guelph they passed hundreds of acres where no seed had been sown.

On Monday evening the friends and neighbors met at the home of Mr. Hugh McNeill, and presented Pte. Jos. Chesney with a Gillette Safety razor. Pte. Neil McNeill was the recipient of a beautiful wrist watch, by his sister of Fergus. A gold signet ring inscribed with "160" from the members of his family at home, and a Gillette Safety razor and fountain pen from the neighbors. The remainder of the evening was spent in games and dancing.

+ + +

An Old Landmark.

The big barn on the old Kingsmill property, one of the old land-marks of the town, changed hands this week, Frank Schnurr selling the building to Mr. Fennell, who will remove it to his farm southeast of the town. The barn was built by the late Joseph Walker, the founder of Walkerton.

BORN

HARRIS—In Carrick, on Sunday, June 11th, to Mr. and Mrs. John J. Harris, a son.

FREIBERGER—At Carlsruhe, on June 15th, to Mr. and Mrs. August Freiberger, a son.

MARRIED

ZUBER—STADE—At Walkerton R. C. Church, on June 12th, Miss Annie Stade, daughter of Mr. Fred Stade of Brant to Mr. Ed. Zuber of Brant.

Notice To Creditors

IN THE MATTER OF THE ESTATE OF DAVID ALBERT ALLARDYCE LATE OF THE TOWNSHIP OF BRANT IN THE COUNTY OF BRUCE YEOMAN DECEASED.

Notice is hereby given pursuant to the Revised Statutes of Ontario, 1914, Chapter 121, Sec. 56, that all creditors and others having claims against the estate of the said David Albert Allardyce who died on or about the ninth day of May, 1916, are required on or before the 21st day of July, 1916, to send by post prepaid or to deliver to Frederick J. Allardyce, Cargill P. O., Ont., the administrator of the estate of the said deceased, their christian and surnames, address and descriptions, the full particulars of their claims and a statement of their accounts and the nature of securities, (if any) held by them.

And further take notice that after such mentioned date the said administrator will proceed to distribute the assets of the deceased amongst the parties entitled thereto having regard only to the claims of which they shall then have had notice, and that the said administrator will not be liable for the said assets or any part thereof to any person or persons of whose claim notice shall not have been received by them at the time of such distribution.

Dated 20th day of June, A. D. 1916.

FINED $300.00 AND COSTS

Walkerton Magistrates Give Two Chesley Citizens the Minimum Fine for Breach of Liquor Law on Military Day.

For the 'steenth time it was demonstrated here on Monday that breaking the liquor license laws is one of the most expensive pastimes in which a man can indulge. Two Chesley citizens, Gordon Lloyd, liveryman, and John Chas (Mike) Tears, Bell Telephone foreman, appeared before Magistrate Tolton and Richardson, and were fined $300 and costs each, for selling liquor without a license. It happened on the Big Military Day, June 3rd. It had been anticipated that liquor would be brought in from outside for the big day, so two spotters were on hand from the Provincial Dept. According to the evidence of the Spotters, Robinson and Ringer, they were sold a bottle of whiskey each in Lloyd's livery office between twelve and one o'clock noon. Lloyd and his helper swore that the office was locked at that hour. Tears swore he was not there at all. In choosing between the stories, the magistrate preferred to believe the spotters on the ground that they were not paid for getting convictions and had not the same inducement to perjure themselves as the other men. They made the minimum fine in each case. Lloyd paid $314.23 and Tears, $318.65. O. E. Klein of Walkerton, prosecuted, and E. C. Spereman of Owen Sound appeared for the defendants.

NEW TRAIN TIMES

Summer Time Cards Have Several Changes Affecting Walkerton

The new time cards which came into effect this week have a number of changes affecting Walkerton. Telescope readers will find it worth while to clip the following information for reference:—

G. T. R.

Leaves Walkerton 7.05 a. m.; arrives Toronto 11.05 a. m.

Leaves Walkerton 3.23 p. m.; arrives Toronto 8.20 p. m.

Leaves Toronto 7.00 a. m.; arrives Walkerton 11.23 a. m.

Leaves Toronto 5.00 p. m.; arrives Walkerton 0.10.

C. P. R.

Leaves Walkerton 6.30 a. m. arrive, Union Station, Toronto 11.35.

Leaves Walkerton 3.10 p. m., arrives North Toronto at 8.10 p. m.

Leaves Toronto Union Station 8.10 a. m., arrive Walkerton 1.20 p. m.

Leave North Toronto 5.25 p. m. arrive Walkerton 10.85 p. m.

The C. P. R. evening trains, both ways, do not touch Union Station or Parkdale, but connect at the new C. P. R. station at North Toronto.

HE DIED FIGHTING

Ray Hyslop's Battalion Nearly Annihilated in the Awful Battle of June 3rd

That Ray Hyslop died fighting to the last is the word that has come in a personal letter from one of his chums at the Front who was with him at the last. Some idea of the terrible nature of the battle may be gathered from the fact that out of the entire battalion less than 200 came through unscathed.

June 16th, 1916

Dear Mr. and Mrs. Hyslop:—

No doubt by the time this letter reaches you, the Government will have informed you of the sad end of your brave son. I was his bosom chum and he left me your address so that if the worst happened, I might write to you. I don't know what to put in the letter because I feel so broken-hearted.

To start at the beginning, the Canadians lost a line of trenches, and our Batt. was called upon to take them back. I was with your gallant son when we charged over the parapet and he died fighting to the last. He did not suffer any pain and we buried him at night, so that you can rest content and be as easy in mind as is possible under the terrible circumstances. I am forwarding his Bible and a few more personal effects that I found on him. Sincerely hope you receive them in good condition. All his friends, and he had many, send their deep sympathy in your sad bereavement. He was a good boy and if I live to be a hundred, I will never forget him.

I cannot write any more as must send away another letter on the same errand. Our battalion has suffered very heavily and if we can muster 200 I think we will be lucky.

I hope you will remember my address and if I pull through alright I will make a call on you personally and will tell you everything.

Hoping you will bear up and have courage in these terrible times. May God keep you safe and give you strength, is my prayer for you all.

I remain your sincere friend,

Pte. T. Eaves, 433,148.
A Co. 40th Batt., C. E. F.,
Army P. O., London.

PROMOTION EXAMS

Form to Form Promotions at Walkerton High School Announced

The names are in order of merit.

Taggart, H. Johnston, Eddie Ramsay, Bolas Farewell, Barrie Moore, W. Brown, D. Kenny, B. Cunningham absent through sickness, provisionally promoted.

Passed in Commercial course—F. O'Neill.

FORM II to III

Matriculants—D. Girvin, Louis Batte
Commercial Course—M. Leech.

The promotion of all others in this Form will be determined in connection with the results of the Departmental Examinations when these are announced.

Strawberries! Strawberries!

Now is the time to do your canning. Prices down. Fresh supply every day. —C. Patrick.

✦ ✦ ✦

Mrs. Wisser Regent

Mrs. Wisser was elected to the regency of Walkerton Chapter on Saturday to succeed Miss Shaw, who resigned owing to ill-health.

✦ ✦ ✦

Wanted

At once, a reliable man of good address with some experience among farmers, to act as county representative for Bruce County.—Stone & Wellington, Nurserymen, Toronto, 19-23

✦ ✦ ✦

Our Reputation is Behind Them.

We offer you a good line of Cooked Hams, Bacons, Cured Hams, and Roll Meat; also Bologna, Head Cheese, Fresh Sausage and Liver Sausage.—Prices right.—Goode & McKay.

✦ ✦ ✦

Sixty-Eight Confirmed

Confirmation service was conducted at the Walkerton R. C. Church on Sunday morning by Right Rev. Dr. Dowling, Bishop of Hamilton. No less than sixty-eight boys and girls of the parish were confirmed.

✦ ✦ ✦

Steel Helmets Handy.

Writing to Mr. A. Collins, Lieut. "Rad." Robertson said that the new steel helmets now in use at the Front are a mighty handy thing. The steel helmet he is wearing has saved him five times from shrapnel wounds.

✦ ✦ ✦

Shouldice-Belback

At the Manse, Walkerton, on Tuesday, June 27th, James Stewart Shouldice and Ella Isabel Belback, both of Brant, were united in marriage by Rev. Thos. Wilson. The groom was supported by Mr. Arthur Belback and the bride by Mrs. Belback.

✦ ✦ ✦

Shingles! Shingles!

R. Truax & Son have received a car of 3X and 4X B. C. shingles and expect in a few days to have a car of 8X and 5X. As shingles are hard to get on account of labor shortage in British Columbia, those wanting shingles will do well to call.

✦ ✦ ✦

Premier Sends Sympathy.

Mr. Thos. Hyslop whose son Ray fell at Hooge on June 5th received the following message from Ottawa last week:—The Prime Minister and Ministers of the Government of Canada send their deepest sympathy in the bereavement which you have sustained.

✦ ✦ ✦

Second Choice Appointed

As Mr. Knowles did not accept the appointment of Mathematical Master of Walkerton High School, the Board has appointed Mr. A. D. Lamont B. A. of Brussels who comes highly recommended. Mr. Lamont is a 1915 honor graduate of Queen's University in the Department of Mathematics and Physics and has had four years' teaching experience.

✦ ✦ ✦

Major Jones Missing

Major Stanley Jones, one of Calgary's prominent lawyers and a member of the Princess Patricias, is reported to be missing since the recent battle near Ypres. Major Jones was well-known in Walkerton, his first wife being Miss Allie Todd, daughter of Mrs. Peter Todd of this town. The Major was a veteran of the Balkan War. His wife accompanied him to England at the beginning of the present struggle and is serving as a nurse at the Front.

✦ ✦ ✦

BORN

LEIFSO—At Malcolm, on Tuesday, June 20th, to Mr. and Mrs. John H. Leifso, a son.

WEBER—In Carrick, on June 19th, to Mr. and Mrs. Henry N. Weber, a daughter.

DIED

FRASER—At Walkerton, on June 27th Hugh Fraser, aged 75 years, 9 months.

McDONALD—In the General Hospital, Toronto on June 18th Hugh McDonald, of Teeswater, aged 50 years.

Mr. Hugh J. O'Neill left for Detroit on Saturday morning to attend the wedding of his daughter, Elizabeth to Mr. Peter Ditmer on Monday.

Both antiseptic and cleansing, Rexall "93" Shampoo Paste leaves the hair smooth, the scalp clean, 25c, at Rexall Drug Stores only.—A. P. Sieveright.

Messrs J. B. Huether and Howard Todd left for Guelph this week. They are taking possession of the McCrae grocery and meat establishment on July 1st.

Miss Lizzie Rennie of the Woodstock General Hospital staff arrived home last night and will spend two weeks with her parents, Mr. and Mrs. Frank Rennie in Brant.

Lieut. Aylmer Rowand of Stratford spent Sunday at Mr. Jno. Rowland's. Lieut. Rowand, who is attached to a Toronto Battery leaves for Overseas in the near future.

Rev. and Mrs. D. A. Walker and family left yesterday for Preston, and Rev. C. W. Cosens, the new pastor of the Methodist Church, and Mrs. Cosens arrived from Elmira.

Mr. Howard Martin B. A., a recent graduate of Toronto University and a brother of Miss Grace Martin, formerly of the Walkerton H. S. staff, has been appointed head of the Science Department at Parkdale Collegiate Inst., Toronto.

Rev. W. H. Sterne formerly of Cargill, who asked to be left without a charge a year ago on account of throat trouble, has been appointed manager of the Edmonton branch of Beatty Bros. implement business. His wife and two children went out to him last week.

Principal Nelson of Port Elgin High School has been engaged as principal of Kincardine High School for the coming year at $1600.

A car which is meeting with great favor is the $961 five passenger Overland touring car. This is the most popular Overland of them all. Mr. J. E. McGregor, local agent, is demonstrating this model.

Col. D. M. Sutherland, who was commanding officer of the 71st, with which so many Walkerton boys went to England, was placed in command of the 74th., on the breaking up of the 71st.

Rev. D. A. Walker was presented with a nice address and a handsome set of military brushes by the members of the Methodist Epworth League on Monday night, prior to his removal to Preston.

The Annual School Picnic of S. S. No. 8, Carrick will be held in Mr. John Hogg's bush on Friday. Everybody is invited to come along and have a good time. The Aristocratic Orchestra will be in attendance.

The Bowlers have been late in starting this season owing to their lawn being used by the soldiers but expect to be on the Green right away now. Mr. Amos Hoover has been engaged as caretaker for the coming season.

Mrs. Grant of Paisley who had been recuperating at the home of Mrs. Stauffer from the effects of a fall at the C. P. R. station last week, was sufficiently recovered on Monday to be conveyed to her home by motor.

Mr John H. Cunningham, an old Walkerton boy and graduate of the W. H. S., is revisiting the scenes of his youth at present. Mr. Cunningham is secretary-treasurer of the Regina School System, a position which demands his full time.

Conversation is a conveyance for ideas, but what rough rides "some men" are. Our extensive advertising actually works for you, it explains how "Dutch Cleanser" saves work—how it can be used for cleaning everything. We sell it.—Goode & McKay.

George Henninger, who had the end of the ring finger of his left hand removed at the Knechtel Factory last month, received a cheque on Saturday through the Workmen's Compensation Board for his month's wages and also $35 for permanent disability.

Walter Yaeck of the A. M. C. London, was home for a few days this week before going Overseas. Walter would like to get some recruits from his home town for the A. M. C. He points out that new recruits can get overseas in two months in the Medical Corps.

The crops in this vicinity are looking fine. Prospects for fall wheat and hay are the best in years. A sample of fall wheat is hanging up in the Telescope office which it would be hard to beat anywhere. Mr. William Dalgarno of Eden Grove took it from his field on June 21st. It measures exactly 5 feet, 2 inches.

The Methodist Sunday School has elected officers for the coming year as follows:—Supt. John McCool; Ass't-Supt., W. C. Searle; Sec. Ass't Sec. Vernon Tovell; pianist, Clayton Tovell; Ass't pianist, Miss Florence Cunningham. The School will be held at 10 a. m. Sundays during the summer beginning next Sunday.

Editor McDonald of the Chesley Enterprise drove over Wednesday morning to say good-bye to the boys of the Bruce Batt. The Enterprise man has given both sons to the King's service. His young son, J. C. is a lieutenant in the 160th and the other boy W. M. who graduated with honors from the University this Spring is now with the Divisional Signallers at Ottawa. Mr. McDonald is known as Fighting Mac and would be in khaki too if he were not beyond military age.

The "Provincial Resources Committee" of which Lt-Gov. Hendrie, Premier Hearst, N. W. Rowell, K. C., M. P. P. and other prominent men of Ontario are the head, has been very much impressed with the "Bruce Preparedness League" and has decided to have a similar league formed in every County in the Province. This means another feather in the cap of the County of Bruce. Everyone in this County who is loyal and patriotic should see that the minor details of completing the league be attended to as soon as possible.

Girl Wanted.

Young girl wanted for general housework—Box 41.

✦ ✦ ✦

For Sale Cheap

Good sideboard, centre table, and enamelled iron bed, for sale cheap.—Apply at Telescope.

✦ ✦ ✦

Pickles!

We sell the finest grade of pickles in bulk and bottles—with that nice spicy flavor that makes you want more.—Goode & McKay.

SUCCUMBS TO ANAEMIA

One of Brightest Young Members of the 160th Batt. Called by Death

A young life full of great promise was cut short by the death at Paisley on Thursday of Duncan McKerracher, youngest son of Mr. and Mrs. Hugh McKerracher in his 22nd year. Duncan was born at Walkerton and was well-known and highly regarded here. When the formation of a "Bruce Battalion was announced in December he resigned his position with the Standard Bank at Hamilton, and joined the colors. He was a fine cleancut, lovable chap, both officers and men had nothing but good to say of him. Promotion to a sergeancy came very quickly and further advancement would no doubt have followed in a short time. In April he was taken ill with anaemia and returned to his home at Paisley to recuperate. His condition however became worse and on Thursday last he passed peacefully away. It was the intention of his commanding officer to send the 160th Batt. Band and a firing squad from London to attend the funeral on Sunday, and as the Battalion was under quarantine, it was impossible to do so. Lt. Col. Weir and Capt. Shaw represented the Battalion and followed the remains of Sergt. McKerracher on foot to the grave. During the service which was conducted by Rev. Little of Paisley, Lieut-Col. Weir paid a warm tribute to the memory of his young friend and companion at arms, referring to the fact that he was an especial favorite of both officers and men. Six members of the Pioneer detachment, which was still stationed at Walkerton, acted as pall bearers. The funeral cortege was the largest which had been seen in Paisley for many a day, and included a great number of friends from the County town and other points throughout the County. The floral tributes which were numerous and very beautiful, were borne by twenty-three young friends.

Will Close At 7 p. m.

We, the undersigned, have agreed to close our places of business every evening except Saturday, and evenings before holidays, at 7 o'clock. Wingefelder & Krueger, Bruder & Loos, A. McIlwain.

✦ ✦ ✦

Dick Addley Wounded

Private Dick Addley who went over with the 34th is reported slightly wounded. Mrs. Addley received a telegram yesterday from the Militia Department that he had been wounded between June 3rd. and June 5th but was still on duty.

✦ ✦ ✦

A Former Walkertonian

The remains of a very old former Walkertonian, Mr. Joseph Reid, were interred in the cemetery here yesterday under the auspices of Saugeen Lodge, No 197. A. F. and A. M. Service was taken by Rev. Thos. Wilson and the Masonic ceremony was conducted by A. P. Johnston P. M. The late Mr. Reid, who was in his 82nd year passed away at his home at Coldwater on the 25th inst. It is thirty-two years since he left Walkerton. During his residence here he was employed in the old Noxon sash and door factory. Mr. Duncan Bacon, formerly of this town, was a son-in-law.

✦ ✦ ✦

C. O. F. at Church

The members of the C. O. F. attended the Methodist Church on Sunday night and heard an inspiring sermon by Rev. D. A. Walker B. A. He took for his text; Love the brotherhood, fear God, Honor the King. He expressed approval of the work the fraternal societies are doing in strengthening the ties of brotherhood among men and emphasized the necessity of right relationship with God. Miss Pryne sang beautifully, "I have a Friend." Mr. Walker said farewell to his congregation at the morning service and at the night service he referred to the pleasure which association with the men of other congregations and of various organizations of the town had meant to him. He would have only the kindliest recollection of Walkerton and its people.

✦ ✦ ✦

Schurter—Heldmiller.

A pretty wedding took place at St Anne's Church, Riverdale, on Wednesday, June 21st, when a popular young couple, Miss Elizabeth K. Heldmiller daughter of Mr. John Heldmiller and Mr. Jacob F. Schurter were united in the holy bonds of matrimony by Rev. Father Capps of Teeswater. The bride was assisted by the groom's sister, Miss Oliva Schurter, while the bride's brother, Mr. Albert Heldmiller performed similar service for the groom. The bride was prettily gowned in white shadow lace over white satin, with a wreath and veil, carrying a bouquet of white roses. The bridesmaid was gowned in pink silk with hat to match and carried pink roses. After the ceremony a reception was held at the Heldmiller home at which between three and four hundred friends assembled to do honor to the happy young couple. Mr. and Mrs. Schurter will reside on the groom's farm near Greenock.

160TH BATT. QUARANTINED

Measles Keeps the Boys Confined in London—Bruce Battalion May be Moved to Borden Camp.

The 160th Battalion has been under quarantine for measles since going into camp at London on Wednesday last, which means that the boys have to stay close in camp for the present. It has been rumored that the Battalion will be removed shortly along with others, from London to Camp Borden, but no reliable information is available. It is probable however that the Battalions which are up to full strength will be the most likely to be moved. And the 160th is one of these. The members of the Batt. are now all at camp, the Pioneer detachment having left Walkerton on Monday, and the men who were quarantined here for measles went to London yesterday morning.

THE TOWN COUNCIL

Getting the Sidewalk By-Laws in Shape—Will Appoint Town Scavenger

The Town Council held a special meeting on Monday night and went over twelve side-walk by-laws. The petitions were referred to the Street's Committee for investigation and if it is found that they are signed by two-thirds of the property owners affected representing at least one half the property, the by-laws will be given their final reading. They were drafted on the 60 per cent and 40 per cent basis, the larger amount being paid by the property owners in twenty annual installments. The proposed walks will be mostly in the East and West wards, on the following streets—Scott, Archie, McGivern, Ridout, South, Princess, Napier, May, Amelia, Alma, Gibson and William. The biggest stretch will be on May St., west of the Fair Grounds in the direction of the G. T. R. It is probable also that a walk may be built at both ends of the East End bridge.

The bylaw relating to the regulation of closets which had been discussed at the previous meeting, was forwarded to the Ontario Health Dept. for consideration. The by-law will provide also for the appointment of a town scavenger.

"HELL LET LOOSE"

Major J. J. Fraser Thus Describes the Bombardment of the Canadian Trenches on June 3rd

Some idea of the big fight in which the Canadians were engaged on June 3rd may be gathered from extracts of a letter which Mr. A. Collins received on Tuesday from Major J. J. Fraser. He writes.—

As you have seen by the papers, the Canadians have again been in heavy fighting and we have been extremely busy. In fact, the medical service has suffered quite severely. It is described in the communique as the heaviest bombardment ever put on the British front. It certainly was Hell let loose, not only on the trenches but on the whole of the country at the back of them. It is all ploughed up so as to be unrecognizable. It has let up a little at present but is not probably over yet. Being at the dressing station is almost as hard as being in the scrap. The Third Division has suffered heavily but you will probably see all about it in the papers before you get this. The English papers today give great great praise to the Canadians. They marvel at the fact that they go into the charge, smoking cigarettes or a pipe. They are certainly great boys. We had one in the dressing station today with a diseased heart who would not go back as he said his battalion was going to go over the golden wall (meaning the trenches) soon. He is from London, Ont. I met Fraser, son of D. C. Fraser of Nova Scotia the other night. He is Adjutant of the 15th, I borrowed his bombers as stretcher bearers for the night. In the morning they were all in. They said they thought bombers were fools but thought stretcher bearers were worse fools. The S. B.'s have certainly done great work and while they may not get the glory of the infantry they deserve just as much credit. They are everywhere. Also the motor car drivers and orderlies who take chances every trip they make and they go back and forth all the time.

This afternoon I went to see Rad and Roy but they were both out. "Rad" went for a ride to get some things for the mess. Roy had dinner with us about a week ago but have not seen Rad since the first night when I saw him as they were detraining. They are both well. We have a Thos. O'Hagan with us, I asked him if he were related to Thos. O'Hagan of Bruce. He said he was not, but was often asked the question. He is quite oratorical. He made a speech one night eulogizing me and I would not like to tell you all the nice things he said.

AN EVIL HERITAGE

Probably his first experience of matrimony had sobered him, for this time he suffered his father to choose for him; and it was in something of a hurry, too, that the final choice was made. Berrincott senior having had his third apoplectic stroke, thought it high time to put his mind at rest concerning his son's future—that son having already proved that his own wisdom was not to be trusted—and, accordingly Simon found himself, rather to his own surprise, transformed one fine day into the husband of a moderately good-looking young woman, daughter of an old friend of his father's.

During all this time Simon had carefully kept clear of his cousin James. It was not until he had been married for close upon fifteen years that any intercourse was resumed between the two branches of the family and even then it was by rights an illegal intercourse, tolerated but not encouraged by the respective heads.

Bernard was at the bottom of it all—or, more truly speaking, the Polar bear at the Zoological Gardens was at the bottom of it all, for if the Polar bear had not chanced to have an unusually good appetite that morning, it is quite possible that Marian and Bernard would never have got introduced.

It was on a crisp December day that the meeting took place. Marian's eyes were full of tears when they first fell on Bernard, for she had just discovered that the two precious pennies which she had been so carefully clutching had in some unaccountable manner eluded her jealous clasp, and the Polar bear was "asking for more."

"It's no good, miss," nurse was saying, "you must 'ave dropped 'em in the street. Surely you're not going to cry for such a bit of nonsense, and you seven years old."

"Oh, nurse," gasped Marian, "don't you think the man at the corner would give me a bun on credit?"

It was at this moment that a dark haired boy, accompanied by a bland and butler-like individual stopped up the group.

"I can give you a bun," he announced in a tone which betrayed real sympathy, though likewise a touch of condescension, and he held out a paper bag.

Marian looked eagerly at the bag, then inquiringly at her nurse.

"You needn't be afraid," said the small stranger, noticing her hesitation. "There ain't be any objection to taking a thing from me. My name is Berrincott."

"So is mine," said Marian, opening wide her eyes, in which astonishment had instantaneously dried up the tears.

"Is it?" and a brilliant smile broke over the boy's face. "Then you must be my cousin."

There followed an explanation, which ended by Bertram accompanying Marian and her nurse home to 21 Laurel Road.

He was passing through London on his way from Harrow for his Christmas holidays, under charge of the family butler, and unhampered, therefore, by the presence of his father.

The first step once taken, Bernard's visits to Laurel Road became an institution. Number 21 was not a specially lively house, and very likely he would have tired of it soon had it not possessed for him an attraction of its own. The fact is, that since the days of rocking horses and wooden swords Bernard had possessed a hankering after the military profession, a hankering which at home met with nothing but discouragement, for ever since he had been rejected in favor of a British officer, Simon had never entirely got over the feeling of pique with which the entire British army inspired him. Who knows, too, whether, had she not been a little dazzled by the glory of the wounded warrior, fresh from the Crimean, Maria Hilton would have made the same choice between the rich and the poor cousin?

Bernard's longings being what they were, it is clear that Uncle James and his game-leg and his Crimean stories could not fail very powerfully to attract him. The boy made no secret of his visits to Laurel Road, and, considerably to his own surprise, they were not immediately put a stop to. This, too, had its reason. Simon had not seen Marian since the day on which she had told him that she could not marry him, and though it would be stretching a point to say that he still loved her, yet it is certain that he still felt about her a keen and somewhat spiteful curiosity. To gather from Bernard's talk the details of the narrow life she now led, to learn from some casual remark that the cheek of his old love, which had once been pink and soft, was now shrunk and faded, that her bright eyes were dim, her clear voice broken—all this afforded him a strange relish.

When Bernard was nineteen and Marian twelve, her mother, who had long been an invalid, died; and after that Bernard's visits ceased. They had always been more or less ignored but now they were peremptorily forbidden.

To Bernard, his father's command did not make much difference; he had plenty of other interests waiting for him; but to Marian it made all the difference in the world, for in spite of being a Londoner she was very much more solitary than most girls of her age.

Compelled by his wounded leg to quit the army after a brief though brilliant career, Captain Berrincott had selected the metropolis as the spot for pitching his tent, principally because there is no place like London for utter privacy, and because utter privacy was the article of which he was in search. Despite his success in love, his life, taken all round, was a failure. Not only was there the collapse of his military hopes, but his wife's health, broken down not many years after their marriage, and of the five children that were born to them Marian alone survived. Strangers would describe him as crusty and even crabbed, whereas in point of fact he was a secretly broken-hearted man, very nervous about being suspected of having feelings.

Marian had grown into the sort of girl that James Berrincott's daughter could not well fail to grow into—silent, self-sufficing, and above all, reserved. She had a few acquaintances, but neither friend nor confidant. Was it likely she should want one? Even as a child she had not been allowed to cry over her broken dolls; was it likely that, supposing she had any emotion to express—she would even know how to set about expressing it? Ever since his misfortunes had begun to overtake him, James Berrincott had loathed the most distant approach to a "scene," and so deep-rooted was his dislike to the sight of tears that in the old nursery days every quarrel used summarily to be decided by the formula: "The one that's crying is in the wrong; the one that's laughing is in the right."

There were some people who declared that Marian's face was beautiful, but even these seldom did so at first sight, for there are faces that disclose themselves entirely at one glance, and there are others that in some undefinable way seem only to reveal themselves bit by bit—to "grow upon you," as the saying is. Marian belonged to the latter order of beauty. For many tastes her style of looks would have been too little pronounced; for neither in stature nor in coloring did Marian come under the head of what is usually called "striking." Most people like to be able to describe a woman in a few concise words; above all they prefer her to be distinctly labelled as blond or as brunette. Marian was both cloudily dark in shadow, wanted only the touch of a sunbeam to appear as though powdered with golden dust. It was the same with her eyes; they were generally considered to be grey, yet there were moments and moods and angles at which something like a blue fire seemed to smoulder within them. No one so dependent on mood and light as Marian. There were days on which the slender, pale girl with the serious child-face, the lustreless brown hair, and the quiet grey eyes might almost be passed over as insignificant; others again when in this golden-haired, blue-eyed creature she was scarcely to be recognized as the same person. Her complexion partook of the same unobtrusive character which belonged to her entire personality—that is to say, it was not brilliant, but absolutely flawless, its usual lack of color making her eyes appear darker than they actually were.

About a week had passed since the day on which the evening post had brought such a revolution into 21 Laurel Road, and Marian was occupied in pouring out tea for her aunts under the laburnum-tree in the back garden, for the weather had suddenly turned warm.

A London back garden cannot perhaps help savoring a little of the absurd; and yet only those who have possessed those thirty square yards or so of turf, these six bushes, and these three trees, know what a difference there lies between the thirty yards and nothing. The back-garden of Number 21 could boast of two flower-beds, a little group of boxwood bushes, an old hawthorn-tree and a holly hedge masking one of the brick-walls—the whole, it is needless to say, overtowered by chimneys and a good deal at the mercy of neighboring windows; but the pride of the enclosure was undoubtedly the laburnum, under whose golden branches the tea-table had been set out this afternoon. What if it could be a little dimmed by flying "blacks," and what if the hawthorn is unquestionably stunted, and what if the birds that hop around in quest of crumbs be nothing but the cockney of sparrows? It is a real laburnum for all that, and a real hawthorn, and there comes a moment in every month of May in which the dinkiest yard that holds a twig that can blossom is transformed, almost in spite of itself into a morsel of paradise.

That moment had now come in this particular month of May, and Marian, ignorant as she was of country delights, was drinking in what she considered to be the beauties of her surroundings. As usual she was drinking them in silently, and as usual Miss Valeria was talking. It is almost needless to say that she was talking of Lot 13. Her conversation during the last week had partaken of a decidedly tropical coloring, being largely seasoned with palm trees and enlivened by such things as humming-birds and deadly reptiles.

"At any rate there will be the cocoanuts," she was saying to Marian just now, "even though it has been a bad season for the sugar, as that man writes to say. There will always be pleasant little treats like the cocoanuts to fall back upon. Mind you send us a hamperful at Christmas."

Miss Honoria held up her hands. "Not cocoanuts, my dear child, if you have any regard for my wishes. Cocoanuts are much too fattening and at the same time much too tempting; I know I should succumb. Let it be pineapples rather; that's safe."

Marian smiled without making any reply; she knew that none was expected of her, and she was busy just then, her occupation being nothing less than putting the finishing touches to a daisy chain; for there were genuine though rather grimy little daisies as different from the plump white daisies of a village green as a child of the slums is from a rosy-cheeked country urchin—nestling among the grass.

It had been rather a hard struggle to get the poor, starved stalks to take a proper grip of each other, and the moment that the work was accomplished Marian's hands rested idly in her lap, her head sunk back against the cushions of her chair, as she gave herself up to the passive enjoyment of everything around her.

This happened to be the very moment of that great transformation scene which occasionally, though not by any means invariably, precedes sunset. The brick wall seemed on fire; the trees that usually stood apart, stretching their arms towards one another over the housetops like some forlorn sort of country folk that have lost their way in the town, had now suddenly turned of a delicate jewel-like transparency; even the chimneys were glorified by this light, so that it was quite possible to believe that they were not chimneys at all, but rather mediaeval turrets fit to play their part in a fairy tale; and as for the clouds, when Marian's eyes had reached them they rested there and a great longing came over her to see the glorious death-bed scene which must be enacting somewhere in the West.

"It certainly is a pity," Miss Valeria was saying, "that you should begin with a bad year. I wonder whether that manager understands his business properly."

Just then there were steps on the gravel path, and Marian brought her eyes down from the clouds with something of a start.

Her father was coming round the corner of the house, accompanied by a stranger. Such was her first impression; but looking again, it appeared to her almost as though this stranger was not quite strange, as though he had about him something undefinably familiar.

She was still saying this to herself, and her father had just made a movement, when the young man, not waiting for an introduction, stepped forward, and taking her hand as it lay in her lap, daisy chain and all, said in a voice which she knew, "You are Marian, are you not? You remember me, dont you! I am Bernard."

CHAPTER III.

Most young men would probably, under these circumstances, have said, "Do you remember me?" It was characteristic of Bernard that he should take for granted that he was not forgotten, which does not, however, mean that he was odiously conceited. Of course, he thought a good deal of himself. Considering the training he had had and the position he had occupied since his babyhood, this was indeed unavoidable; but a certain boyish simplicity about him, and an utter absence of affectation, saved him from being either a prig or a coxcomb.

In point of fact, his assumption was, in his case, perfectly justified. Marian remembered him from the moment that she had heard his voice. It was the same voice that had said to her, with the same self-assurance, on that crisp December day: "I can give you a bun." He was a good deal changed within these last five years. He had always been a big boy, and now he was a big man, although scarcely yet with that absolute "finish" of gesture about him with which perfectly developed manhood is stamped. Both bodily and mentally there were still a good many corners to be rubbed off Bernard. When last Marian had seen him there had not even been a shade on his upper lip; now there was a short brown and rather obstreperous moustache, which completely altered his expression, or so it seemed to her. Somehow the moustache made her feel shy. After one questioning glance into the strong dark face above her, she dropped her eyes with a feeling of bewilderment. Yes, her first instinct had been right; he was a stranger after all. This was not her old friend Bernard; this was another Bernard—a new Bernard whom she had not been prepared to meet, and whom she must teach herself to get used to.

"And those are your aunts, I suppose?" Bernard went on to say, turning towards the Miss Hiltons, and again not waiting for an introduction. "I hope you will allow me to consider myself as a sort of nephew. Considering that you are Marian's aunt, and that I am Marian's cousin, it only requires a little stretching of a point to make it all right. Don't you agree with me?"

"Entirely," answered Miss Valeria, fervently, her heart being already won by Bernard's smile. "From this hour forward I am your aunt."

"Take a seat, my dear boy," put in the Captain, with a sort of surly friendliness which with him did the duty for amiability. He was a trifle off his balance this afternoon. Bernard's unexpected appearance had given him, in a different way, almost as great a shock as it had given to Marian. In years past he had never been able to see the boy without tracing some fanciful resemblance between him and his lost first-born; and now the sight of the man had given him a stab under which he was still writhing, as the unsteadiness of the hand with which he pushed forward a chair would have betrayed to any close observer. Ay, just such a long-limbed, deep-chested youngster would Charles have turned into. Even the brown hair waving so freely back from the temples was the same. Surely it was hard to have but a gravestone to mourn over.

"Don't you bother about the chair, uncle," said Bernard, possessing himself of the article in question. "I'm going to sit down; but not just here. Do you know that you've chosen the very worst spot in the garden for an encampment? I see a much better place—over there, in the shadow of that wall, where you won't have the sunset dazzle in your eyes. It's very bad for the eyes, you know. I propose an adjournment. What? A trouble moving the table? Not a bit of it. Call Jemima? Nonsense! I don't know who Jemima is, but I'm perfectly certain that I am as equal to moving furniture as she is. Just let me have my way, and you'll bless me for it."

It ended by his having his own way, despite some objections of the Captain, and despite a sort of passive resistance on the part of Miss Honoria, who was feeling too comfortable to enjoy the idea of moving even to a more desirable position. In less than three minutes' time, while Miss Honoria was still trying to collect objections to the plan, and before Miss Valeria had quite realized what had happened, the whole party found itself established at the other end of the little oblong enclosure, with only a few overturned tea-cups and some puddles of spilled cream to speak of the deed that had been performed.

There followed five minutes, which Miss Valeria devoted principally to the memory of Simon Berrincott. Bernard did not seem able to speak much of his father, but by the grip of his hands upon each other and by the painful frown that puckered his sun-tanned forehead, it was easy to guess that Simon had not gone to his grave entirely unmourned. In truth, his love for his only son had been the one soft spot in an unusually hard heart, and the affection existing between these two, the one bright side of an otherwise barren existence.

Having got through the condolences, Miss Valeria, by way of making things pleasanter, embarked on complimentary remarks upon the deceased, and the range of only decently plausible things which could be said in this direction being painfully limited, she unavoidably found herself landed once more in Lot 13.

"It showed such real good feeling on his part, you know—such a true fund of family affection, still surviving after all these years of estrangement."

(To be continued.)

SUNDAY SCHOOL LESSON

Lesson I. July 2, 1916.

Paul at Thessalonica and Berea.—Acts 17: 1-15.

Commentary.—I. The apostle at Thessalonica (vs. 1-9). 1. Had passed through Amphipolis—Paul, Silas and Timothy were going westward from Philippi on the Egnatian road, which led toward Rome. It is probable that Luke remained at Philippi, for he speaks of the company in the third person instead of saying we, as he often did. Amphipolis was thirty-three miles from Philippi. The record does not intimate that the apostles preached there or at Apollonia, thirty miles farther west on the great highway. They came to Thessalonica—This was thirty-seven miles from Apollonia, hence one hundred miles from Philippi. The city was formerly called Therma and was named Thessalonica after a sister of Alexander the Great. It was a flourishing and important city. It was captured by the Saracens in A. D. 904, by the Crusaders in 1184 and by the Turks in 1430. Its present name is Saloniki, and it has been an important point in two recent wars. It now has many Christians and more Jews among its inhabitants. A synagogue of the Jews—There was a large Jewish population in the city in Paul's time. 2. As his manner was—It was Paul's custom to attend the synagogue service on the Jewish Sabbath, for then he would have an opportunity to reach many Jews. Reasoned with them out of the scriptures—Paul engaged in discussions with the people upon the Old Testament writings. 3. Opening—The verb means to make plain what before had been obscure. Alleging—The old meaning of this word and its meaning here is set forth. Christ must needs have suffered—That the Messiah must suffer and die was clearly set forth by the prophets, and it was as clearly shown that he must rise again from the dead. This Jesus .... is Christ—With the scriptures as the basis of his argument, Paul made it clear that Jesus was the Messiah. 4. Some of them believed—Some, but not all, received Paul's message as true and believed the gospel. Consorted with Paul and Silas—Became associated with the Christians and probably became real Christians.

5. Jews which believed not—Those whose prejudices kept them from accepting the Messiahship of Jesus. Moved with jealousy (R. V.)—They could not bear to see the multitudes rejecting their beliefs and joining with the apostles and believing in Jesus. Lewd fellows—Vile persons. Of the baser sort—"Of the rabble,"—R. V. Idlers about the market-place. Set all the city on an uproar—The Jews gathered a crowd of these wicked and idle persons, stirred them up by speeches against the apostles and aroused them to such a pitch of opposition that they were ready to mob Paul and his company. Jason—He was the apostles' host, and probably a Jew who had become a Christian. 6. When they found them not—The mob failed to find Paul and his company, as they were not at that time at Jason's house, so they dragged Jason and other Christians before the magistrates and entered a complaint against them. Turned the world upside down—The charge was a true one and was a statement greatly in the apostles' favor. They had not labored in vain. The world was wrong side up, and the Jews and other haters of the truth wished it left that way; but Paul and his fellow workers were in earnest to turn it right side up. 7. Whom Jason had received—They tried to show that Jason should be punished for entertaining the apostles. Contrary to the decrees of Caesar—The Jews preferred to charge them with treason rather than to raise the question of religions. Another king, one Jesus—Although there is no record that Paul spoke of the kingdom of Jesus, it is probable that he spoke of his kingdom, and the Jews perverted his statement so that they might make a charge of treason against the apostles and their sympathizers. 8. Troubled the people—Spread alarm among them at the prospect of an insurrection and made them eager to punish the apostles.—Cam. Bib. 9. Taken security of Jason—The magistrates required a pledge or a bond of Jason that he would not violate Caesar's decrees, and it would appear that they attempted to make him responsible for the conduct of the apostles.

II. The Apostles at Berea (vs. 10-15). 10. The brethren—During the stay of the apostles at Thessalonica a Christian church was established. Sent away Paul and Silas by night—The persecution became so intense that the only safety for Paul and Silas was to leave the city, therefore their friends helped them to escape. Timothy seems to have remained for a while. He probably had not been prominent in the work of preaching the gospel there. Berea—Fifty miles southwest of Thessalonica, where the modern Verria stands. Went into the synagogue of the Jews. To preach the gospel. 11. More noble—The hearts of the Bereans were open to receive the truth. They had nobility of character. Searched the scriptures daily—Paul preached the Messiahship of Jesus from the scriptures and his hearers studied the scriptures to see whether the preacher had made the right application of the passages which he quoted. The truth that falls into an open, candid heart is likely to bring forth fruit. 12. Honorable women—Women holding high positions in society.

13. They came thither also—The bitterness of the Jews of Thessalonica toward the Christians is indicated by their going fifty miles to Berea for the purpose of persecuting the apostles. Stirred up the people—The persecuting Jews probably aroused the people by declaring that the apostles were opposing the Roman government, as they had already done at Thessalonica. 14. Sent away Paul—Paul was the chief speaker and hence the fury of the Jews was directed against him. To go as it were to the sea—"To go as far as to the sea." R. V. It seems that the immediate purpose was to escape from Berea without any fully formed plans as to the next field of labor. Abode there still—It seems that the stay of Silas and Timothy at Berea was not long. 15. Unto Athens—It is not clear whether the journey to Athens was made by land or sea, but probably by sea, and Athens would naturally be the next stopping place.

Questions.—Who accompanied Paul on this journey? Through what cities did they pass? Give distances from Philippi. Where did they remain? What was Paul's custom? Why did he enter the synagogue on the Sabbath day? What was his method of teaching? How were the missionaries received at Thessalonica? Who was Jason? What charge was brought against Paul and Silas? Why did they go by night to Berea? Give an account of the establishing of the church in Berea. To what place did Paul next go?

PRACTICAL SURVEY.

Topic.—Prophecy revealed.

I. A stumbling-block to the envious.

II. The way of life to honest seekers.

I. A stumbling-block to the envious. Paul had a fixed custom and a settled habit in his religious life. The synagogue was repeatedly the scene of his labors. As Christian workers he and Silas patiently and conscientiously proceeded with their mission. The continuity of their devotion and the renewal again and again of their efforts after persecution, proved them loyal to their God-given trust. They did not depend upon human sympathy and could not be silenced by human opposition. Paul took the old Testament as his text-book. He had but one message, and this he endeavored to adapt to his varying audiences. Whether for Jew or Greek, the atonement of Christ was the foundation theme. His plain preaching offended many of his hearers. The propositions that Paul laid down were unpalatable to the Jews and therefore they rejected them. They could not refute him by argument and therefore they stirred up a riot against him. They saw that his teaching and influence were undermining theirs. They covered their envy with the garb of patriotism. Unwittingly they uttered a great truth. They paid the highest possible compliment to the gospel. Paul's unmistakable declaration, "This Jesus, whom I preach unto you, is Christ," was like a pointed sword. It was an unwelcome historical identification. The suffering of their Messiah was the part of the Old Testament which the Jews failed to recognise or accept. Within that favored and enlightened nation there were hypocrisy, superficiality, bigotry, unbrotherliness and spiritual delusion. Beyond that circle there were superstition, ignorance, atheism, vice, cruelty—all the abominations of corrupt heathenism. Nothing would be sufficient short of a radical revolution. The force of envy and the servility of a mob met the apostles at Thessalonica. Questionable as was the support for the evidence against them, their accusers succeeded in troubling the multitude and the rulers. To put down Christianity the Jews made use of persons whom they would not have approached otherwise. The Jews saw in Paul's preaching a world-wide attractive force. Amid all the tumult and uproar and opposition the name of Jesus became well fixed in the public memory. When endangered in one place Paul and Silas advanced in all fidelity and zeal to another. Regardless of persecution they gained converts to Christ.

II. The way to honest seekers. Having been scourged at Philippi and almost mobbed at Thessalonica the apostles were just as ready to present their theme in Berea. When Paul and Silas entered the synagogue at Berea, they found themselves in a new atmosphere. Instead of ignoble prejudice they found noble openness of mind. The Bereans showed respect to the commission of the apostles. They were Jews who were not acquainted with any religion except the law of Moses. Equally removed from listless indifference and haughty presumption they were at liberty to listen to the apostle's reasoning and to draw their own conclusions. Their nobility consisted in their reverence for scripture as the test of truth. Paul did not desire his hearers to believe without evidence. He encouraged scripture research. The Bereans did not rashly or impulsively embrace Paul's teaching. They carefully considered it, prepared to accept or reject it, according as it stood the test of examination. They had a right to hear the apostle's reasons in favor of Christianity before they received or rejected it. Their true preparation for the divine blessing depended upon the reading of the scriptures daily with a set purpose, in connection with the apostolic preaching, to follow their guidance. The question for consideration was too grave for delay and too personal to be honestly evaded. With the Old Testament scriptures and the established facts connected with the life, death and resurrection of Christ as Paul could present them, they could see that his message was a matter of prophetic revelation and of answering historical facts. Their inquiries then were concerned with the actual contents of the revelation and the testimony of the witnesses. They took hold of the matter with zeal and thoroughness. They had chosen the honorable course and did the estimable thing. The Jews of Thessalonica rejected the teaching because they refused to examine its evidences. T. R. A.

Are You You?

(From "Impertinent Poems")

Are you a trailer, or are you a trader?
Are you tagged to a leader through wisdom and folly?
Are you Somebody Else, or You?
Do you vote by the symbol and swallow it "straight?"
Do you pray by the book, do you pay by the rate?
Do you tie your cravat by the calendar's date?
Do you follow a cue?

Are you a wielder, or that which is wielded?
Are you a shepherd, or one of the herded?
Which are you—a What or a Who?
It sounds well to call yourself "one of the flock,"
But a sheep is a sheep after all. At the block
You're nothing but mutton, or possibly stock.
Would you flavor a stew?

Are you a being and own of your soul?
Or are you a mummy to carry a scroll?
Are you Somebody Else, or You?
When you finally pass to the heavenly wicket,
Where Peter the Scrutinous stands on his picket,
Are you going to give him a blank for a ticket?
Do you think it will do?

—Edmund Vance Cooke.

Christening Boats.

The modern custom of christening vessels is without doubt an adaptation of an ancient custom, just as so many of our other customs and habits have been adapted from ancient ones. The ancients used to place the image of a tutelar deity at the stern of their vessels, in the tutela, or shrine. Do you remember that the boat mentioned in the twenty-eighth chapter of the Acts, the boat that carried Paul from Malta to Rome, was "under the sign of Castor and Pollux?" It was so says Acts.

The ceremony of breaking a bottle of wine on the bow of a new vessel as it is launched is another ancient adapted custom for the ancient offered a libation to Neptune or Poseidon, who ruled the seas, as they launched their boats.—Exchange.

Truth About Venus

Venus was the goddess of love and beauty, and, very properly, she had a sentimental attachment for Mars, the god of war. Just, in fact, as she has to-day.

The most generally accepted version of the birth of Venus is that she rose of her own accord out of the sea, a perfect type of ready-made feminine goods. There are other stories of her birth, but naturally we select the one that is easiest to believe. Besides, Venus was known to the Greeks as Aphrodite, a name that is derived from a word that means sea-foam. So that proves that the story of her birth must be true.

It was, of course, a little embarrassing for Venus to be flung up on the seashore of Cyprus, where at that time there were no bathing-machines. But some kind ladies met her as soon as she landed and lent her a decorative peignoir until she could find time to look around and get the usual two of everything.

Shortly after she was born Venus thought about getting married. It was perhaps rushing things a bit; but as she had come into the world ready grownup, she didn't see why she should wait. Still, the old proverb says that if you marry in haste you will repent at leisure, and that's what happened to Venus.

The husband assigned to Venus was Vulcan, who was really no more than a common blacksmith fellow. And he was lame, besides. Some malicious people say that it was on account of his lameness that Venus married him, because if she ran away from home he wouldn't be able to catch her.

All Venus' girl friends told her plainly that she was throwing herself away on a chap like Vulcan, but she just threw all the same. And then shortly after she was married, Vulcan used to catch her idling her time away at the back door, gossiping with the butcher's boy or the baker's man, when she ought to have been dusting the front room. Vulcan once nearly struck her, and she couldn't threaten to go back home to mother because she had never had anything of the kind to go back to.

According to all accounts, Venus was no better than she should have been; but allowance must be made for the fact that she had had no early training, and had never known a mother's care.

Like all the other gods and goddesses, Venus was very fond of interfering in mortal affairs, and as her department was love—which is on the ground floor of life, just as you go in at the door—she was naturally kept pretty busy.

One of the best-known cases in which Venus interfered to make the course of love run smooth was that of Atalanta, the champion amateur sprinter of the period. Atalanta was a perfectly lovely girl, but she had not, what you might call a warm heart. If a likely young man fluttered an eyelid casually in her direction Atalanta would look the other way at once and pretend she hadn't noticed anything.

When a suitor who meant business came along Atalanta suggested that he should try to race her round the track. If he won she would marry him; if not, he would be pushed into a quiet corner, and the family undertaker would call and collect him in the morning. Quite a number of promising young fellows came to a sad and sudden end in this way.

Then a young man named Hippomenes stepped into the ring. He had consulted Venus first about his love trouble and Venus said she would be pleased to help him. She gave him three golden apples of rare beauty and told him how to use them so that they would do most good.

Then, amid a cheer from the crowd on the grandstand, the race started. At the end of the first lap Atalanta was leading by a couple of yards, and Hip's backers were feeling rather cheap. All at once Hip flung one of the golden apples on the side of the track, and Atalanta ran out of her course to pick it up. This enabled Hip to get ahead and start fair with his second wind.

Every time Atalanta got in front of him Hip flung a golden apple away, and Atalanta stopped to pick up the treasure. Hip threw away the third apple just in time to win the race. He breasted the tape two seconds ahead of his rival and bowed his acknowledgments to the crowd.

Unfortunately, Hip's head was so swelled with his success that he forgot to go and return thanks to Venus for past favors. Consequently, Venus became very horrid. The young couple were just starting for the honeymoon when Hip observed, to his surprise, that his bride had been changed into a lioness. He was just about to appeal to her to leave off being silly like that when he noticed that he himself had been turned into a lion. So there it was!—Pearson's Weekly.

BATTLED FOR THEIR BRIDES.

The Most Thrilling Wedding Day in the World's History.

Do you know what was the most thrilling wedding day in the history of the world? There have been many romantic marriages and many nuptial services that had to be deferred because of the opposition of parent or royal, but all of them pale into dingy gray when compared with the colorful spectacle of the abduction and recapture of the Venetian brides in the early winter of 923, when Candiano II., the noble doge, was lending his presence to the biggest wedding party in the history of the Church of San Pietro. It had long been the custom for all the noble brides to be married on St. Mary's day. It was, moreover, the custom for the brides to bring with them all their jewels and their dowries, in gold coin, inclosed in handsomely carved chests.

The latter fact was well known in Trieste, that ancient Roman colony which was the harbor for bands of pirates, who were most clever navigators. On this richest of all St. Mary's wedding days the ceremony for more than a score of brides had already begun when the pirates from Trieste burst into the church, captured the brides and their dowries and carried them to the waiting boats. Thanks to the Trunkmakers' Union, there were several boats waiting, and in these the bereft bridegrooms and the sturdy trunkmakers gave pursuit. There was a battle royal, one of the most thrilling sea fights on record, dowries and brides were recovered, and before midnight all had been safely married.—St. Louis Globe-Democrat.

SUNDAY AT HOME

"THEY ALSO SERVE."

"They also serve who only stand and wait."
Take comfort from the thought in lonely hours,
When naught seems set aside for you by Fate
To do, while others have far richer dowers.

With days brimful of hope and work and love,
Full to the brim and haply running o'er.
The angels, watching from their homes above,
Can see how sad the waiting is, how sore.

But if the waiting is not all in vain,
If those who wait are serving truly, too,
Oh, then they need not mind the nameless pain,
But think it is the part they are to do.

And peace and rest will fill the lonely days
That once were filled with naught but pain and woe;
For, though we cannot understand His ways,
Enough to know our Father wills it so.

I WILL CLEANSE YOU.

I will cleanse them from all their iniquity, whereby they have sinned against me; and I will pardon all their iniquities, whereby they have sinned, and whereby they have transgressed against me. Then will I sprinkle clean water upon you, and ye shall be clean; from all your filthiness, and from all your idols, will I cleanse you.

Except a man be born of water, and of the Spirit, he cannot enter into the kingdom of God. If the blood of bulls and of goats, and the ashes of a heifer sprinkling the unclean, sanctifieth to the purifying of the flesh: how much more shall the blood of Christ, who through the eternal Spirit offered himself without spot to God, purge your conscience from dead works to serve the living God?

He saved them for his name's sake, that he might make his mighty power to be known. Not unto us, O Lord, not unto us, but unto thy name give glory, for thy mercy, and for thy truth's sake.

THE SOUL.

It means a whole personality. Can you write the history of a soul; can you write all about yourself, the flights, the dives, the travels? How much do you know? Can you turn the telescope round and read your heart? Can you find the right words; can you photograph yourself? What are your powers of discovery? How fast can you travel; how high, how deep?

You have wings. Can you start from the centre and touch the utmost margin of circumference and reach the centre again? How deep can you go into the ocean? The devil-fish has lungs of wondrous power. Can you avoid him? The ink-fish can squirt a black cloud and so evade its pursuers. Can you use that ink to write your biography? It is the best ink in the world; solidified, it makes a water-color paint called sepia.

How high can you soar? You can reach the central heavens, reach the very home of the supreme. Angels are waiting to convey you, for they are your servants and bodyguard, faithful and true. We are not talking about the future. You can do it now. "If I ascend into heaven, Thou art there; if I go down to the depths of the sea—five miles down—Thou art there; if I take the wings of the morning and dwell in the uttermost parts, Thou art there to protect and solace by Thy right hand and smile."

Wireless telegraphy is limited to a blanket forty miles thick, which envelops the earth; but you can go beyond, for your lines of correspondence are without termination. You are not limited by time or mountain range. Your soul has neither habitation nor locomotion; you stand on the confines of the seen and the unseen in the meeting place of light and shade. You have creative powers and your progress is not measured by money or by miles. How truly wonderful is the soul of man, and so past finding out. Yet one short sigh of human breath upborne can reach the seat of God, and find answers ready to fill thy soul.

"Of what an easy, quick access,
My blessed Lord, art Thou! How suddenly
May our requests Thine ear invade!
To show that state dislikes not easiness,
If I but lift mine eyes, my suit is made;
Thou canst no more not hear than
Thou canst die."

Man is not solitary, like Robinson Crusoe on his island. Man is crowded with company, and that of the best kind. Call them, they will come like clouds of birds by our window. Only you must bid them welcome and have eyes to see, and then, like a servant of old, you will behold the mountain filled with horses and chariots which will outnumber the hostile horde. The Master had twelve legions of angels in reserve (49,200), and He used them, and He overcame at that hour, but blind man did not see them nor enter into the triumphal march.

H. T. Miller.

Celts Discovered Soap.

Soap appears to have been discovered by the Celts, for the name is derived from the Celtic word "sebon." It seems strange that such early wanderers should have been familiar with soap, but if they had the name they must certainly have had the article it stood for. Moreover, it is quite conceivable that nomads using wood fires could accidentally discover soap. All woods have a certain amount of mineral salts, chiefly those of potash, in their fibres. After burning these are left in the form of carbonate, which a heavy shower of rain would dissolve into a liquid lye, wanting only the grease from an overturned caldron of broth to form soap. A dash of natural curiosity on the part of the woman who cleaned up the mess would reveal the cleansing properties of the new substance.—London Mail.

It isn't every man who can steer a straight course between the devil and the deep sea.

DIARRHOEA
Was Caused By
Change of Diet, Etc

Diarrhoea arises from many caus such as, change of diet, change of wate change of climate, catching cold, th eating of unripe fruits, or anything that will cause or induce an excess of bile.

On the first sign of any looseness of the bowels it should not be neglecte should be looked after imm if not diarrhoea, dysentery c serious bowel complaint may

Mr. Geo. Smith, Victoria, "It is five years ago since Dr. Fowler's Extract of Wild S I was then on a timber survey fered greatly from diarrhoea, change of diet, etc. A frien party gave me a few doses wh me great relief. Since then I h in survey work, and would as so of starting out on a trip with compass and blankets as with supply of Dr. Fowler's Extract Strawberry, which I consider the man's best friend."

Price, 35 cents.

Toronto—Certain wholesale dealers report a temporary, seasonable lull in trade. The same men, however, speak of the volume of sales this year to date, as well ahead of a year ago. In dry goods firms the above is especially true. In all departments of the larger houses increases are shown. The hide and wool business is fairly active and prices are firm. Grocery firms are fairly active. Hardware is moving freely from shelves. Money is slightly easier. Collections at wholesale houses are good.

Montreal—Business conditions are about normal. The wholesale trade has been good, summer orders in dry goods houses having been liberal and fall placing orders fair. Collectio have also been fairly good. The gr ery trade is moderately active in s ples. Boot and shoe and leather fir are all busy and prices are tendi higher in both departments.

Winnipeg—Western business m are optimistic. Not only is pres trade on a healthy basis, but the n future is promising. Wholesale ho report an active volume of sales encouraging indications for fall tr In the grocery business prices steady to firm. Finer weather stimulated demand for summer of footwear and sorting orders been large. In dry goods houses is satisfactory. Collections have good. The hardware trade has generally steady, with price adv in several staple lines. Farm m ery has been going in fair volu

Calgary—The far Middle W improving its financial and co cial position. With prospects f excellent crop in Alberta, confi is growing.

Vancouver—Trade in wholes houses is fair, and prospects are nitely brighter. Lumbering is on increase. The fishing and mining dustries are steadily growing.

Hamilton—Business continues to look up. A steady trade is be done by wholesale and retail in all staple lines of groceries goods, hardware, etc. Manufa continue operations undiminished.

London—Business is normal wholesale circles.

Ottawa—Business shows stabili The wholesale trade has had a go season and manufacturers are most them busy.

Quebec—Business as a rule shows little change over the preceding week, amongst the dry goods sorting orders are fair, groceries and provisions are in liberal demand, hardware and builders' supplies report favorably. In the city local industries are well employed and retailers as a rule report a fair turnover at the season. Collections on the whole are fair.

Wanted the Test.

A western professor said one day that he could tell good soil by tasting it, and a man in the east end who saw the statement promptly packed a box and sent it to him by parcel post. He also enclosed this note:

"Dear Professor, I saw what you said about tasting soil and am sending a sample selected haphazard from my back yard. I wish you'd give it the palate test and tell me frankly what you think. I don't seem to have any luck with it myself. My cabbages came up without heads, my potatoes have been mistaken for chestnuts, my onions are scentless and my corn look like bird shot. Bite off a chunk and let me hear from you. Never mind about returning the balance. Keep it for dessert. Write soon."

Had Weak Back
and Kidneys
COULD HARDLY MOVE IN BED

When the back becomes weak a starts to ache and pain it is a sure s that the kidneys are not performing th functions properly.

On the first sign of backache Doa Kidney Pills should be taken and seri kidney troubles prevented.

Mr. Francis McInnes, Woodbine, N writes: "I deem it my duty to let y know the wonderful results I have r ceived from the use of Doan's Kidn Pills. For a long time I had been su fering from weak back and kidneys. used to suffer the most at night, and some times could hardly move in bed with the pain. I could do no hard labor o account of my back. A friend advise me to give Doan's Kidney Pills a trial, and I am glad I did for the pain in my kidneys is gone; my back is strong, and I can perform any hard labor and get my good night's sleep. I only used three boxes of the pills."

Doan's Kidney Pills are 50 cents per box, or 3 boxes for $1.25; at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

When ordering direct specify "Doan's."

FARM AND GARDEN

BUSY JUNE DAYS.

There is much to do during the month of June in planting, weeding, fighting insects, etc. It surely is a busy month for the farmer.

Sweet corn should be planted every ten days to keep up a succession.

The grass and weeds must be kept out of the asparagus bed. The beets e thinned out, and such plants ry, cauliflower, cabbage, leeks occoli set out. Sow more cu s.

plantings of fodder corn will mature a good crop on rich Plant stock beets.

soon as the early crops are ed the land should be cleaned and the space utilized with cel cabbage, strawberry, cucumber seed second crops. On rich, early d these crops may be sown quite e.

INSECT PESTS ARE HERE.

sects are getting plenty, requiring ch watchfulness and poison. Have good Bordeaux lead mixture on hand to spray tomatoes and eggplants shortly after they are set, and repeat in about 10 days to two weeks. The same materials can be used to advantage on melons and squash. If plant lice appear, spray with Black Leaf 40, or boil one pound of tobacco dust or stems in one gallon of water for an hour. Dilute with one or two gallons of water and add one pound of soap to each 50 gallons. Apply the spray to the insects on the underside of the leaves before the leaves curl. This will kill the lice on any truck crops or ornamentals.

For maggots on cabbage and similar crops, use carbolic acid emulsion around the young plants. This is prepared by dissolving one pound of hard soap in one gallon of boiling water. Add one pint of crude carbolic acid and churn or mix to make a smooth emulsion. Dilute one part to 50 parts of water. Apply plenty of this around each plant close to the stem. Abundant fertilizer will also help the plant to withstand the maggot attack. Tobacco dust is proving to be of particular value in preventing the ravages of the cutworm. Sprinkle a little around each hill and little trouble need be expected from the above. The dust is also valuable this year as a fertilizer on account of the 7 per cent. potash it contains.

As soon as the potatoes have reached a six-inch stand or thereabout, the first application of Bordeaux and arsenate of lead should be made. This year it is quite as cheap, with bluestone selling at 30 to 40 cents per pound, to buy Bordeaux lead in paste and prepare as directions call for spray, thereby saving labor.

Second spray to follow in about three weeks with the same mixture. For early white potatoes need little other care than thorough cultivation. Thorough cultivation will maintain a two-inch dry soil mulch over the entire patch.

MORE JUNE WORK.

Sow beans for succession. The round-podded, stringless varieties are st.

Melon, squash and pumpkin seed be sown in the early part of June. hese can be protected from the striped beetle by covering with Bordeaux mixture containing arsenate of lead, and also by putting cheesecloth-covered frames over the hills.

All plants set out can be protected on cutworms by wrapping brown about the stems before planting. About one inch of the paper ould be in the ground and an inch more above it.

Turnips can be planted for a fall

Thoroughly cultivate the garden to maintain a dust mulch to conserve the soil moisture.

After the June drop, thin out the young fruit on the apple, pear, peach and plum trees.

The currant worms should be destroyed by spraying the stalks with arsenate of lead until the fruit begins to get large, when the plants should be dusted with hellebore.

To prevent mildew on the gooseberries, spray with potassium sulphide, one-half ounce to a gallon of water.

To prevent the spread of the brown rot or monilia rot, spray the peach and plum trees with self-boiled lime-sulphur wash, also with arsenate of lead, to help hold the curculio in check. The flowers, on any branches, which are rotting should be picked off to prevent the spread of brown rot.

To hold in check fungous diseases and insects, such as scab and the codling moth, spray the apple and pear trees with Bordeaux mixture, containing arsenate of lead.

To prevent or hold in check the ravages of anthracnose and rust, spray the brambles with Bordeaux mixture.

FARM NEWS AND VIEWS.

Dairying is the system of farming that will maintain the fertility of the farm without the use of high-priced fertilizers. For two reasons, dairying maintains the fertility of the land. First, because in butter there is almost no plant food of value, and, second, because 90 per cent. of all the grain feeds purchased for the cow, as well as 90 per cent. of all food raised on the farm and fed to the cow, is returned to the farm. With barnyard manure and an occasional crop of clover, the land will remain productive indefinitely. When we stop to think of it, whenever we sell wheat, corn or oats, and get $1, we sell about 30 cents' worth of our farm. When we get $1 for selling butter, we sell less than one-half a cent's worth of soil. The land owner who makes his money selling the soil fertility, and in ten or fifty years leaves his farm worn out, is not a farmer, but a soil robber. He holds the same relation to the soil that a timber thief does to our forests. The tillers of the soil in the future will find their fathers have not been kind to them; that they have inherited barren patches. We should dairy them, because there is present money and future for the farm in it.

The cause and remedy for clover bloat are discussed in Circular 5 of the Kentucky Agricultural Experiment Station. Red clover blooms contain about 3.6 per cent. of sugar; alfalfa blossoms, 2.08 per cent.; white clover blossoms, 2.1 per cent. After being eaten by stock, this sugar undergoes rapid fermentation, and is converted into carbon dioxide. This causes the bloating. The authors of the bulletin strongly recommend for acute bloating one quart of 1½ per cent. solution of formalin. After this is administered a wooden block should be placed in the animal's mouth, and the animal should be given gentle exercise if it can stand on its feet. Formalin is a trade name for a 40 per cent. solution of formaldehyde gas in water, and may be obtained at any drug store for about 40 cents a pint. One-half ounce of formalin in one quart of water is a proper solution with which to drench an animal.

The fattening hog should never be overfed, just enough so that everything is eaten before the pig leaves the trough the first time. Young pigs are best kept decidedly hungry. An exception in this case would be where appetites are satisfied with roughage or water.

Grand Complexion Imprpver! Better Than Cosmetics

When it's so easy to bring back the bloom of youth to faded cheeks, when skin disfigurements can be removed, isn't it foolish to plaster on cosmetics?

Go to the root of the trouble—remove that cause—correct the condition that keeps you from looking as you ought. Use Dr. Hamilton's Pills and very soon you'll have a complexion to be proud of. How much happier you'll feel—pimples gone, cheeks rosy again, eyes bright, spirits good, joyous health again returned. Never a failure with Dr. Hamilton's Pills, get a 25c box today.

KITCHENER.

Are we downhearted yet? Lor' bless yer,
no!
But aye—it's cruel 'ard to see 'im go,
'Im as the Good Book calls—what is it?
"Bulwark and stren'th,"
Doin' 'is bit for us day after weary day,
Until at length
Gawd called him:

And we blind fools without 'im 'ere be-
low,
Yet wait—I see 'im marshalling them
there,
Those white battalions wingin' by 'im
alone,
Called by his faith as though by bugle's
blare,
To 'elp 'im strike a blow at England's foe
Because 'e loved us—and we loved 'im so!

Come on, boys, cut the tears and sing,
Tighten the Teuton ring,
Fight on the Victory as e'd 'ave us go;
God Save the King!
—Anonymous, in Montreal Star.

The Unreality of Opera.

There are people who still complain of the unreality of opera who cannot subject themselves to its illusion. And indeed the illusion of opera breaks down if everything in it is not kept at the same distance from reality. In that world of musical expression we must never be suddenly lowered by any incongruous detail into the ordinary world of prose. Realism, the attempt to work upon the emotions by complete illusion of reality, is disastrous in opera. If the scene is a railway station we remember at once that people do not sing when they are catching trains.—London Times.

THE QUEEN'S APPRECIATION

The following is an extract from a letter received by the Montreal branch of Queen Mary's Needlework Guild from Lady Hawley, Hon. Secretary, at the Guild headquarters in London, England:

"I hardly know how to thank all those who have so kindly contributed, and hope you will come to my aid by conveying the expression of Her Majesty's appreciation to the various branches and individual workers who have contributed to your last consignment. Her Majesty was much interested in the Indian made socks, and much astonished what one of her little petticoats has been and is doing for the cause, as we see that in addition to six cases of comforts made from the proceeds of this little petticoat, there is more to follow.

"The South African picture-books are delightful, and I will send them to one of the officers' hospitals.

"The dressings have been despatched to Cliveden Hospital as requested.

"I must not forget to mention the comfort bags from Yarmouth, which were lovely and will be much appreciated.

"Should you by any chance get any women's and children's things, I should now be glad of a few, as I am asked for some for widows and orphans of officers, and as you know, our department for women and children has been closed.

"Could you let Mrs. Hamilton know that her shirt was quite correct?

"With renewed thanks. Yours truly (Signed) Annie Lawley, Hon. Secretary.

LAW OLD AND NEW.

A Cynical View of Past Methods and Those of the Present.

Law, more especially criminal law, has usually been an occult science. It is still the practice of Burma, we believe, to give two disputants candles of the same size, to be lighted at the same time. The one whose candle burns longest gets judgment against the other.

Less than 100 years ago a defendant in an English criminal trial appealed to the ordeal of battle, and the court was more or less surprised to find that the ancient law on which he relied had never been repealed.

Determining a man's guilt or innocence by his ability to walk on hot plowshares or carry a hot iron or drink a poisonous decoction or by throwing him bound into water has been practiced for ages among many peoples. The medieval method of letting accused and accuser fight it out with weapons was common over Europe.

Our modest ancestors confessed their inability to find the merits of the cause and so relegated the whole affair to the intervention of supernatural agencies. The main difference is that we are less modest. Instead of the ordeal of battle or the old key and Bible test or the "sieve witch," we have the defendant play a game of trip the court. If he can catch the judge putting down an "i" dot over an "e" he wins and is pronounced innocent.

The Lamp of a Man's Life.

Dr. Holmes said the lamp of a man's life has three wicks—brain, blood and breath—and to turn down any one of them spares the other two go out. The wounded who will survive and even disregard so long as his head, heart and lungs are unhurt have long been one of the wonders of war history.

Pretty Political Problem.

St. Gingolph, which is on the borders of Lake Geneva, is the cause of a pretty little international problem. One part is in French and the other in Swiss territory, and a certain area is owned in common. Since [illegible] this communal land has been the subject of dispute, and pourparlers were begun in [illegible]. These have not yet been finished, but both the French and Swiss governments are taking steps to arrive at some definite understanding. A local peculiarity is that while the French inhabitants cross the Swiss frontier to go to church the Swiss residents proceed into French territory to worship.

Chateaubriand a Lover of Cats.

Many famous men have loved cats—Cardinal Richelieu and Victor Hugo among others but probably the animals' most eloquent defender was Chateaubriand, the French writer.

"I love in the cat," he said, "that independent and almost ungrateful temper which prevents it from attaching itself to any one, the indifference with which it passes from the salon to the housetop. The cat lives alone, has no need of society, does not obey except when it likes, pretends to sleep that it may see more clearly, and scratches everything it can scratch."

And the great writer on another occasion went so far as to express a hope that by long comradeship with cats he was acquiring some of their characteristics.—London Times.

What narrow innocence it is for one to be good only according to the law.—Seneca.

TOO LITTLE BLOOD MEANS MUCH MISERY

That is What Makes People Pale, Weak and Languid

The one source of most of the misery that affects men and women and growing children is poverty of the blood. If you consult a doctor he says you are anaemic, which really means bloodless. That is what makes people drag along, always tired, never real hungry, often unable to digest their food, breathless after the slightest exertion, and too often on the verge of complete breakdown.

More weak, anaemic people have been made strong, energetic and cheerful by taking Dr. Williams' Pink Pills than by any other means. These pills actually make new, rich blood which reaches every part of the body, strengthens the nerves and brings new health and strength. The following is proof of Dr. Williams' Pink Pills to restore health. Mr. Geo. Turner, New Haven, N. S., says: "No doubt due to constant hard work, I got in a badly run down condition. It took very little exertion to tire me, and my appetite was far from being good. Often I had headaches, and when going upstairs, or after any slight exertion my heart would palpitate violently, and I grew considerable alarmed about my condition. I decided to take Dr. Williams' Pink Pills, and after using a few boxes I felt much better. I continued using the pills for some weeks longer, and they completely cured me. I can warmly recommend this medicine to men who are weak or run down."

You can get these pills through any medicine dealer or by mail, post paid, at 50 cents a box or six boxes for $2.50 from Th Dr. Williams Medicine Co., Brockville, Ont.

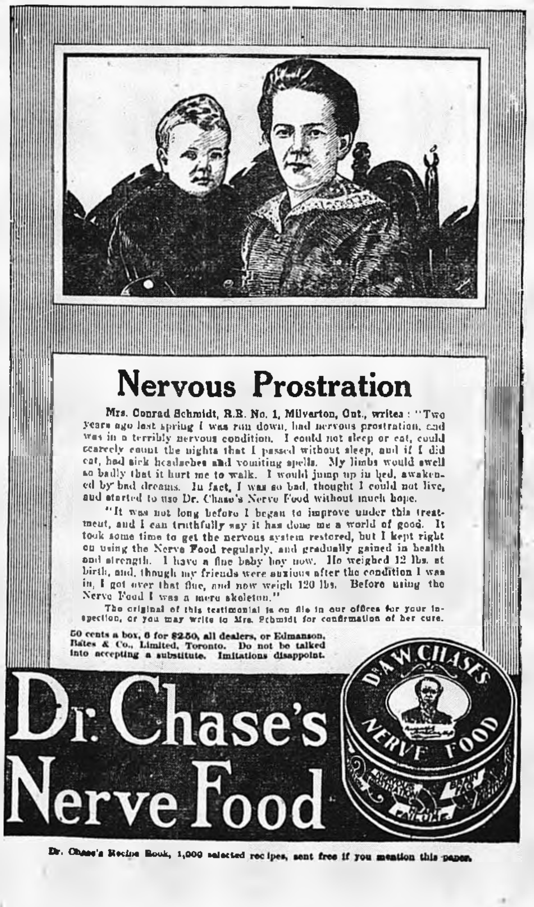
CURIOUS JAPANESE RITE.

The Art of Divination Through the Use of Tortoise Shell.

The curious art of divination importance of this practice in the eyes of the Japanese may be inferred from the fact that the farms in which the sacred rice for the coronation ceremony was grown were selected through tortoise shell divination.

The divination is carried on first by worshipping a god called [illegible]. Then a tortoise shell is taken and scraped inside until quite thin and the outside surface polished. On the shell are several hollow squares in each of which there is a certain sign marked in black ink. The whole is then baked under great heat, causing cracks to appear in the surface. These cracks are then studied in accordance with the formulae in the divination book, the result being a sort of code message from the gods.

This is not the earliest form of divination known in Japan. Previously there was a kind called Futomani, in which the shoulder blade of a stag was used in place of a tortoise shell. The tortoise shell method, which probably came from China, was considered an improvement and was probably adopted because it was something new, for at that time the Japanese were seizing upon all things foreign.—Japanese Magazine.



Nervous Prostration

Mrs. Conrad Schmidt, R.R. No. 1, Milverton, Ont., writes: "Two years ago last spring I was run down, had nervous prostration, and was in a terribly nervous condition. I could not sleep or eat, could scarcely count the nights that I passed without sleep, and if I did eat, had sick headaches and vomiting spells. My limbs would swell so badly that it hurt me to walk. I would jump up in bed, awakened by bad dreams. In fact, I was so bad, thought I could not live, and started to use Dr. Chase's Nerve Food without much hope.

"It was not long before I began to improve under this treatment, and I can truthfully say it has done me a world of good. It took some time to get the nervous system restored, but I kept right on using the Nerve Food regularly, and gradually gained in health and strength. I have a fine baby boy now. He weighed 12 lbs. at birth, and, though my friends were anxious after the condition I was in, I got over that fine, and now weigh 120 lbs. Before using the Nerve Food I was a mere skeleton."

The original of this testimonial is on file in our offices for your inspection, or you may write to Mrs. Schmidt for confirmation of her cure.

50 cents a box, 6 for $2.50, all dealers, or Edmanson, Bates & Co., Limited, Toronto. Do not be talked into accepting a substitute. Imitations disappoint.

Dr. Chase's Nerve Food

Dr. Chase's Recipe Book, 1,000 selected recipes, sent free if you mention this paper.

Tommy Atkins to Captain Bunkum

The following poem, a parody on "You Are Old, Father William," appears in the Hawick News (Scotland) of April 21st.

"We are told, Captain Bunkum," the
private groans,
"And we slept in wet blankets last
night,
Yet we stand on parade till we're chilled
to the bone.
Do you think that is treating us right?"

"The Canadian Contingent," the Cap-
tain replied,
"Is tough, as you'll see by the news,
And will flinch from no hardships, how-
ever they're tried,
If you don't believe me, ask Sam
Hughes."

"We drill every day in the wet, Cap-
tain B.
And the clothes we put on remain
damp.
This tells on one's stock of endurance,
you see.
Say, why don't we shift from this
camp?"

"The huts are not ready yet," came the
reply,
"And we'll miss a parade if we move.
Be patient, take hardships, as soldiers
and I,
By next spring things ought to im-
prove."

"If the cooks, Captain Bunkum, should
vary our meals,
With Hamburg steak, sausage and
such,
An occasional spud or two boiled without
peels,
Would the Government mind very
much?"

"To grumble at rations with your scale
of pay,
Seems to me, my man, quite idiotic.
You can buy extra chuck with your
dollar a day,
Besides, Hamburg steak's unpatriotic."

"Just one moment, Captain," the private
called out,
"I've one problem more then I'll quit,
If we're fit for the front as is rumored
about,
Are our officers equally fit?"

"I've answered three questions and that
is enough."
The Captain with energy roars.
"Say, do you think we are throwing a
bluff?
DISMISS, or I'll make you form fours."
—Galt Reporter.

PILES CURED AT HOME BY NEW ABSORPTION METHOD

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment free for trial, with references from your own locality, if requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P. 8, Windsor, Ont.

Police All Ears.

A British Ambassador once had occasion to tell a grand vizier of Turkey that he had incontestable proof that there sat at the grand vizier's table every evening a man who reported all that passed to the ambassador of another power the next morning. It is said that the police of Paris and London vie with each other year after year in their claim that no important crime ever goes undiscovered. It was once wittily said of the police of Beirut, under the old regime, that they surpassed those of London and Paris in the fact that they knew of every crime and robbery before it occurred.—Christian Herald.

Some people are all wrapped up in themselves, and others simply feel done up.

ZAM-BUK

KITCHENER!

O thou, pillar of the Nation's Hall
Woe there is that thou shouldst fall
When thou'rt needed most!
Whilst thy body shouldst lie in state,
The sad waves murmur in thy wake,
A whited, sheeted, ghost.

Thy silent face no more to be seen
In realms where the nation has learned
to lean
Upon thy stalwart arm,
That, now, no longer guiding us, -
Triumphant foes are hiding us
With new, and strange, alarm.

They triumph not o'er British born
They are, not yet, the conquered mourn,
The nerves that they give—
But they laud to the skies in great
acclaim
At the death of one who bears that name
that through ages shall live.

We lov'd the man that in him shone
Whose dauntless heart would cringe
nor fawn
To men, where e'er they stand,
Who knew stern duty's bendless sway,
And the soldier's part that made obey—
Kitchener—the man!

We lov'd the fighting blood that coursed
Through throbbing veins, whose ardor
forced
Oppressors to their doom—
And he who stood 'midst shot and shell,
A lion at bay in the mouth of hell—
Kitchener, of Khartoum!

Who brav'd the storm of scandal's tide
That swept the nation, far and wide
In hissing, seething rage—
But, all in vain its furies spent,
It broke before the adamant
It could not assuage.

We lov'd our hero's silent face
That, set for duty's bitter pace,
Kept down all selfish sorrow
Who gave himself to the nation's life
To pilot her through endless strife
Till a brighter to-morrow.

But his was not the high command,
His was not the Ruling Hand
To write the Final Word—
There came the call beyond repute—
And he bravely gave his last salute
Before his Crowned Lord.

L'ENVOI.

Thou art the Nation's greatest loss
Than sweetest gold, or meaner dross
That lie within the State—
Who cared not for the selfish things,
Who was honored by a hundred kings—
Kitchener—the great.
—H. M. [illegible], aged 15.
June 9th, 1916.

CURES CATARRH, BRONCHITIS BY SWIFT CERTAIN METHOD

Thousands of drug fiends have been started on their downward course through catarrh snuffs containing some habit forming drug. If you suffer from cold, sneezing or catarrh, don't use a snuff; use a sensible treatment like Catarrhozone. It heals and soothes, brings relief at once, cures thoroughly. In bronchitis and throat trouble, no doctor can do better than prescribe Catarrhozone. Try it; see what wonders it works, what power it possesses. Different from the old way—you inhale Catarrhozone. Get a dollar outfit, which includes the inhaler, and is guaranteed. Smaller sizes, 50c; sample size, 25c, at all dealers.

HIS BAD HABIT.

How the Chronic Food Grumbler Was Cured of His Trouble.

Three or four men were talking about breaking bad habits and giving their experiences.

"Did I ever master a bad habit?" responded a very active business man. "I did, but I had to have some outside assistance, though I didn't ask for it.

"Once upon a time I had the bad habit of eating three meals a day, and I had to have them or there was trouble for somebody. Then my coffee at breakfast must be just so or there was trouble; the bacon must be properly crisp or there was trouble; the toast had to be correctly brown or there was trouble; the eggs could not vary from standard or there was trouble. The other meals I was not so super-sensitive about. But I must have my smoke after each one. It was trouble all around, going and coming, because I suffered no less than those about me.

"That was twenty-five years ago and I was in control of the situation and insisted on having everything exactly as I wanted it. It was an extremely bad habit and I didn't realize it. Then came changed conditions, and I was forced out into a world beyond my control.

"Everywhere I went I was called a crank, and my reputation in that line soon expanded all over, because I had a new eating place about every week or ten days. One morning, after I had been to all the feederies within a mile of my lodgings, a kind hearted waiter girl in a very nice little tea room I had discovered came down on me like a thousand of brick for finding fault with the breakfast she had brought me.

"She said I wasn't old enough to be senile, nor young enough to be a baby, and looked like I might be a very respectable person if I were properly trained. She was Irish and she wasn't afraid. Well, you know some men would have raised a row about talk like that from a servant to a guest, but I didn't. It struck me as the light struck Saul of Tarsu and I thanked her sincerely.

"After breakfast I took counsel with my better nature and resolved I would try to live up to the waiter girl's suggestion. Next morning I went to the same place for breakfast and had the same breakfast. Breakfasts vary, and this wasn't really quite what it should have been, but I ate it without a growl, though I did want to growl. I could see the girl was expecting the usual manner, but I disappointed her.

"As I left she looked at me rather curiously and smiled. I told her I knew the breakfast was just a bit shy, but I wouldn't worry, because I was sure it would be better to-morrow. And it was. At least I thought so.

"And thus it went for meal after meal, at one place and another, some good and some bad, but I had my mind fixed to take things as they came and I stuck to it. I went further. I resolved to give them up as they went, and if I missed a meal or a smoke or my coffee I consoled myself by thinking the next would taste that much better, and I laughed instead of whined.

"I will admit that it wasn't as easy to do it as it is to tell it, for there was a thirty year habit to overcome, and a habit grows mighty tight to one in that time. It took me a year to become reformed, but I finally got there, and now whatever other bad habits I may have I haven't that one, and I don't have headaches or indigestion or a grouch, and there isn't a waiter girl I know who doesn't think I have the finest disposition she ever met up with, and what a lovely husmarry."

Coal Mines of Holland.

Though the coal mines of Holland have not been developed to any great extent, yet it is known that extensive beds underlie Limburg, the most southerly province. Strange as it may seem, the coal mines of Holland are probably the most ancient, their records showing workings near Kerkrade as early as 1113. The pits now owned and worked by the state were for many centuries exploited by monks from the abbey of Kloosterade, who continued their mining operations until as late as 1795. The pits, now named the Wilhelmina, the Emma and the Hendrik, gave employment to 167 officials and 4,332 pit men.

Beautiful Lives.

Beautiful lives are those that seek
To make life beautiful—peak to peak
Sending the sunlight, sounding the
cheer
That heal the sorrow and dry the
tear.
Beautiful lives, that build and
bloom
In every sunless and silent room,
A shrine of beauty that those that
dwell
May feel the touch of the beautiful
spell.
Beautiful lives that find their way
Into the corners so dark and gray,
And dust the cobwebs and bring the
gleam
That the hermit souls therein may
dream.

Beautiful lives are those that find
The beautiful secret of being kind,
And passing it on and making it
grow
In many an aching heart of woe.
Beautiful lives, that where they
pass
Are like a music along the grass,
A breeze of summer, a velvet thing
Like a butterfly poised on azure
wing.
Beautiful lives, that come with love
To teach the lesson of dream and
dove,
And spread the fashion of being
sweet
From door to door in the little street.

Beautiful lives are those that give
Beautiful love that the world may
live
In mellow manners and tenderer
ways
Down its toiling and teeming days.
Beautiful lives are those that seek
To help the helpless and aid the
weak,
To cheer the cheerless and sing
and smile
In such a friendly and fearless
style.
Beautiful lives that are a dew
On dusty roads that the world
ploughs through,
And a vine by the door and a flower
on the sill,
To bring God's beauty to lone and ill.
—Baltimore Sun.

Voltaire and the Doctors.

Voltaire despised doctors and, like Macbeth, thought it well to "throw physic to the dogs." The French author once said, "A physician is a man who pours drugs of which he knows little into the body of a man of which he knows less."

A BLOOD-FOOD DISCOVERED THAT ENTIRELY OVERCOMES ANAEMIC WEAKNESS

Carefully Investigated Reports Establish Truly Wonderful Results.

Heretofore it has often been a hopeless task for a thin-blooded person to gain either strength or weight. Neither food nor medicine in many instances had beneficial effect.

What is practically a perfect blood-food, containing such elements as iron has at last been produced, and when taken after meals will put new life and vigor into people that have despaired of ever being strong again.

This truly wonder-working treatment consists of taking two small chocolate-coated Ferrozone Tablets at the close of every meal.

This wonderful blood-food supplies nourishment, vim, energy—sends a stream of vigorous, strength-making blood to every nook and corner of the body, makes every muscle and fibre sing with new-found life and health.

That gnawing tiredness leaves you—Ferrozone drives it away. Sleepless nights are turned into periods of rest, and you pick up fast. Day by day your appetite improves—this means more food is transformed into nutriment that will build and energize weak organs. The inclination to worry passes away because Ferrozone imparts nerve tone and bodily strength that prevents depression.

Think it over—Ferrozone is a wonderful tonic, in fact it is more because it establishes health that lasts. Thousands use it and thereby cleanse and restore the entire system to a perfect condition. You'll feel the uplifting power of Ferrozone in a week—it's bound to help you if you only give it the chance. Sold by all dealers, 25c a box, or six boxes for $2.50. Be sure of the name Ferrozone. Forwarded by mail to any address if price is remitted to The Catarrhozone Co., Kingston, Ont.

CURRENT COMMENT

The Crown Prince hasn't been dead for a long time now.

◆

The Russian offensive is too much for the Austrian defensive.

◆

Edmonton has a woman magistrate. It may have a female Mayor next.

◆

The German fleet got another black eye from the Russians in the Baltic yesterday.

The Mexican-American war is giving but few thrills. Villa is still leading in the batting average.

Perhaps it is for "military reasons" that the Austrians are hiding their losses in their flight from the Russians.

Lloyd George, it is said, has been offered the portfolio of Secretary of War, in succession to Lord Kitchener. So far General Hughes has not had its refusal.

Holland's preparedness plan calls for 1,300,000 men, of which 796,000 will be regulars and the remainder in the reserves. Yet Canada sticks in its effort to get 500,000.

The German high fleet is not just now engaged in any northward enterprise, nor is it scouring the North Sea looking for the British grand fleet.

The Canadians put it all over the Germans at the Ypres salient yesterday, recapturing more lost ground, and punishing the enemy severely. The counter attack must have surprised the Germans, for they fled, leaving much stores behind them. Three cheers for the Canadians!

The Democratic slogan is "Peace, Prosperity and Preparedness." The Republican is "Preparedness, Protection and Permanent Peace," a run upon the p's. These alliterations should have a better fate than the "Rum, Romanism and Rebellion" of the Republicans in a former election.

Founders' Day of the Barnardo Homes will be held on the 1st of July when it is proposed to raise 100,000 half crowns to help feed the 7,500 children in the homes. There are now 7,150 Barnardo boys serving in the army and navy and mercantile marine.

Bethmann-Hollweg wants peace terms based on the war map. Well, the Allies hold a larger slice of German territory than the Germans hold of allied territory. There are big slices of Turkey, Africa and Asia which the Allies hold. Then there are the seas which Britain hold. What would the Chancellor give for control of the seven seas?

The judges of the Supreme Court of Canada have unanimously agreed that the owners will be well paid if they receive $388,000 for the Carslake Hotel property in Montreal, which they tried to sell the Government for $743,000, and which the Government would have paid if objection had not been raised to the deal. The Montreal Herald takes credit to itself for exposing the attempted transaction.

On the day that Russia raised a loan of $50,000,000 in the United States, it ordered 200,000 tons of barbed wire. The Philadelphia Record says that the Russian purchases from the States are enormous and promise to continue large for a long time. It is not only war supplies, but railroad material, it is buying there, and the money borrowed in the American money market will be used in paying for supplies produced by the mills and factories in the States.

President Wilson has signed the act incorporating the boy scouts of America under a federal charter. There are in the United States more than 182,000 registered boy scouts in good standing, 43,000 men registered as leaders, 5,000 serving as scout masters and 8,500 as assistant scout masters, constituting a group of nearly 225,000 men and boys, more than the combined numerical strength of the U. S. army and navy and almost as large as the proposed new army. The boy scouts are a potent factor for preparedness.

The Belgian Government complains that Belgian subjects who have resided in Germany for three years are being compulsorily enrolled in the German army. The Belgian Government have addressed a strong protest to the allied and neutral governments, and the Spanish Government, who represent Belgian interests in Germany, have protested spontaneously and energetically against the violation of a well-known fundamental of international law, that no person can be forced to take up arms against his own country. But that is no better in German eyes than a scrap of paper.

The Philadelphia Record says that an American observer has been looking back over history to discover if the British navy ever was defeated. In order to find a serious defeat he had to go back 250 years, to June 1, 1666, when the Dutch fleet under De Ruyter defeated a British force of fifty-seven ships under Admiral Monk off the Flemish coast. The Dutch had the best of it for nearly two months, but on July 25 of that year they were badly beaten and driven back to their ports.

THE DEPARTMENT STORE

An interesting letter from a Glamis lady published in another column tells why she patronizes the department Stores and passes local merchants by. She makes out a very good one sided case against the country dealer. She omits to say anything in his favor. A good deal may be said to the advantage of the Department Store but when all is said and done the advantages which most people think they see in patronizing the catalogue house are a delusion. The buyer thinks he is getting better value. As a matter of a fact there are few country stores that get as good prices in all lines as the Department houses. This is proven in black and white in every town every day. The Department Store regularly gets a margin that no country merchant would dream of. An indication of their profits, in spite of immense overhead expense, is furnished by the new war-tax, which has revealed the fact that the big stores have been splitting immense dividends. Every dollar that is sent from the rural community goes to impoverish that community and build up the big city. If that dollar were kept at home its good influence, traced to the last analysis, would be felt by every man, woman and child in the community and would help the local merchant to give better service.

The local merchant "has the goods", even if he often lacks enterprise in letting the public know about it. His wares may not be attractively displayed, his premises may be uninviting. While the department Stores are the livest advertisers in Canada, and have lately doubled up on their advertising (since Aug. 1914), a good many local merchants have not sufficient enterprise to keep their advertising in the local papers from going to seed. But we believe the live country merchant has possibly less to fear in the future from the catalogue houses than he has in the past. The novelty at least of making selections out of an illustrated catalogue wears off. People are coming to realize that they can get better value at home. Local dealers are picking up new ideas about how best to serve the public. We believe that the country merchant has a good future in store but he will have to show more of the enterprise of the Department house to keep in the swim.

EDITORIAL COMMENT

In England gasoline has gone up to $1.25 a gallon. That makes 30c or 33c look cheap.

+ + +

Farmers who have had the enterprise to invest money in under-drainage are doubly reaping the benefit this season.

+ + +

It is estimated that there is still in the hands of the farmers of the Northwest sixty million bushels of last year's wheat.

+ + +

Seven, and probably eight, of the nine Provinces of Canada will have prohibition before a year passes. Who would have dreamt it a year ago?

+ + +

If the weather keeps on we'll soon see that the song "Keep the Home Fires Burning" has a brand new meaning in it that the writer never dreamed of.

+ + +

Premier Asquith's statement that Kitchener leaves a place no one else can fill looks like a deliberate slap at General Sir Sam Hughes.—Montreal Mail.

+ + +

A Government Butter Inspector is on his rounds in the Counties to the east of us. Dealers who happen to have pound-prints under weight, or butter put up in unprinted wrappers, are getting into trouble.

+ + +

Is there an elector in this country foolish enough to believe that the rake-off amounting to a million dollars divided between Caldwell, Allison, Yoakum and Bassick, after they landed the fuse contracts, did not add just a million dollars to the price that could have been obtained by a close buyer?—Toronto Globe.

+ + +

Beefsteak at 35 cents a pound compels a sober consideration of the advantages of nut-steak so long maintained by vegetarians. When beefsteak hits $1 a pound, as one butcher promises, peanut cutlets and walnut joints, browned in oleo, may be matters of course. And why not? Primitive man thrived on the cocoanut, the only nut that carries its own gravy.—Simcoe Reformer.

+ + +

Under conceivable circumstances advertising may be unnecessary as the following newspaper yarn shows: The proprietor of a fish store had a new sign: "Fresh Fish for sale Here". "Why say 'here'?" said the first customer, "It's unnecessary." He paints 'here' out. Said the second customer, "Why 'for sale'? Of course they're for sale". He painted out two words more. "Why 'fresh'?" said a third customer. "You wouldn't sell them if they were not fresh, would you?" At last the sign read just "Fish." Along came a fourth customer. "What's the use of having that sign," he asked, "when you can smell them a block away?"

WILD THINGS OF the FOREST ROAM IN SAFETY in this land of a thousand lakes

[By G. W. BARTLETT, Superintendent of Algonquin Park]

Nature lovers mourn the passing of wild life under the iron heel of industrial progress and the profound concern of these lovers of out-door life would certainly be justified if there were no national reserves within the broad Dominion.

Among the most popular of these glorious national heritages of the people is the Algonquin Provincial Park, 1,754,473 acres in extent, situated two thousand feet above the level of the sea, up in the "Highlands of Ontario." This lovely region, set apart by the Ontario Government in 1893, remains today unspoiled, a perfect refuge for the creatures of the forest, and an ideal pleasure-ground for the people.

It is almost impossible to walk for half an hour from any of the camps or hotels without seeing one or more deer, or coming across a beaver dam or other evidence of the existence of wild things.

At the time this territory was set aside for a breeding ground and preserve, all kinds of fur-bearing animals in this section had become almost extinct. Today they have not only filled the park, but have so overrun its boundaries that many adjacent townships are now well stocked with game. This is especially the case with regard to the industrious beaver, who has followed the numerous rivers in the park for hundreds of miles, and is now to be found in sections that had none in the memory of the oldest inhabitants. It is estimated that the increase in beaver for 1916 will be several thousands. Other fur-bearing animals have increased in proportion, and a number of pelts of beaver and other animals are now being taken out annually without any apparent decrease in their numbers. It is expected that a considerable revenue will be realized by the Ontario Government in the future from this source.

Included among the fur-bearing animals to be found in the park, besides the beaver, are the otter, mink, marten, fisher, raccoon, lynx, fox, ermine, musk rat, skunk, wolf and bear. Virginia deer are very abundant, notwithstanding the fact that large hunting parties are to be found each year on all sides, right up to the boundary line of the park. No hunting is allowed in the park, the object being to allow the deer to overflow and thus replenish the hunting grounds outside. Those roaming unmolested inside the park have now become so numerous and tame that splendid pictures are taken of them by the hundreds of people who spend their holidays in cruising from lake to lake through the vast chain of waterways. At nearly every turn of the river or lake, wild life of some kind is to be seen. Moose have also become numerous in most sections and are often photographed as they feed on the lily pads. Indeed, the prohibition against hunting in the park greatly adds to the opportunities of the picture-hunter, since the wild creatures are much more approachable than in localities where they are persistently hunted.

To the excellence of the fishing to be enjoyed in the park there is undisputed testimony. Fish caught in the waters of the park have won each year many of the national competitions open to the anglers of the continent.

At the Park Headquarters, at Algonquin Park Station, there is a private collection of mounted specimens of animals and birds that represent all the fur-bearing animals and feathered denizens in this section, and we are always glad to have visitors call in and study them during the summer. Some living specimens will generally be found in the large house erected for the purpose at headquarters by the Government.

The accommodation in the park is such that the most varied tastes can be pleased. There are hotels for those who want to be in the wilderness, yet enjoy all the comforts that good service and social companionship can bring; there are groups of log cabin camps, comfortably furnished and ideal for family parties, with central lodges containing everything ready for you on your return from the tramp; or if you have planned to camp under your own canvas you may step into a canoe at one of the little railway stations on the Grand Trunk which serves the whole of the park, and after a short paddle find a site unmarred by the hand of man yet within easy reach of the park outfitting stores.

Many families now go into the park expressly for the camping, making their headquarters at the hotels long enough to get supplies and camping outfit ready for the trip. Then in canoes, and with guides or without them, they launch bravely out into the deep woods, camping where fancy prompts.

12 lb. Salmon Trout Caught in Algonquin Park

OUR OTTAWA LETTER

BY H. F. G.

OTTAWA, June 25th.—By some chain of accidents Sir Sam never produces a witness to his military genius until that witness is down among the dead and cannot talk back. Of course, no one impugns Sir Sam's veracity, but it is certainly an unfortunate coincidence that no sooner does a great man pass out the due meed of praise to Sir Sam than the grave closes over the corroborative evidence.

It was not so long ago that Sir Sam visited London and was seated at Lord Roberts' elbow at one of those banquets which make the English climate so agreeable to our War Lord. At the stage of the dinner when truth will out, Lord Roberts just naturally had to tell Sir Sam that he was the greatest Driving Force in history. Lord Roberts probably whispered—at all events he did not deliver the sentiment in a loud tone of voice, for nobody has come forward since to back Sir Sam's statement up.

But look what happened afterwards. Lord Roberts had no sooner relieved his bosom of that ineluctable admiration for Sir Sam, which was doubtless engendered by studying his exploits with "any man Turpin" in South Africa, than the British Empire's most beloved Field Marshall went to France to look the Indian troops over, took sick there and died.

Now comes the next tragedy in the fatal series. In April last Sir Sam again in London, this time tete-a-tete with Lord Kitchener, who listened with proper respect to his opinions on the conduct of the war. The talk—this is Sam's own story we are giving—turned on Ypres salient and the thousands of brave lives that had gone out there in defence of that dangerous position. It was Sir Sam's belief that the Ypres salient was being held for sentimental and political reasons and that Joffre, Haig and inferentially Kitchener himself were making a mistake in hanging on.

Kitchener might have replied—and it would have been the truth—that the chief political reason for holding the Ypres salient was that it was the key to Calais, and therefore to England and British supremacy on the seas, and the continuance of the British Empire—but he refrained. Instead—and we have Sam's word for it—he admitted "with tears in his eyes" that it was so. Kitchener was like Lord Roberts—once under the spell of Sir Sam's glittering eye and warlike record, he had to acknowledge that the best talent in England and Europe was all wrong and that Sir Sam had the right bull by the horns. This was a curious departure from the ordinary course of history, because nowhere do we read that Alexander backed down when his generals talked straight to him, or that Julius Caesar acknowledged the corn when his general staff told him that it was foolish to cross the Rubicon or that Napoleon reneged when his marshals told him the plain truth. No indeed all those beatified heroes held to their own opinions and conquered.

Kitchener, however, was not made of such stern stuff. In the presence of a really great military genius like Sir Sam, tears sprang to his eyes—or it may have been that his eyes watered as he gazed at the sun—and he confessed that the strategy board of the Allies was in error. He was, it is presumed, in a fair way to repent and tell Joffre to surrender the salient and let the Huns make another salient just as dangerous somewhere else, when Sir Sam was recalled to Canada to explain why his friend Colonel John Wesley Allison was "scratching gravel" to the extent that he did.

Sir Sam's castle of fame thus rests on the word of Kitchener and Lord Roberts, two dead men, and one man very much alive, Sir Sam himself. Could any legend have a nobler foundation? We trow not. Another thing we trow is that it must be true because Sir Sam told it himself—He didn't allow any false delicacy to intervene and cause him to wait until Lord Kitchener and Lord Roberts spoke up. Or rather, as some put it, he waited until they were both dead and surely that is long enough for any man to wait, let alone an impatient hero like Sir Sam.

However, the moral of Lord Robert's death and also of Lord Kitchener's is plain enough. In fact there are two morals. One is that nobody should speak the real truth about Sir Sam if he wants to go on living; the other is that death has a new sting so long as Sir Sam is above ground to take advantage of it.

Now mark what followed. With these remarks of the greatest Driving Force in History rankling in his breast, Lord Kitchener boarded the Hampshire for Russia, was overtaken by tempests and German torpedoes and perished. But not before he had, as Lord Roberts did before him, delivered his supreme Message to the world, namely that Major General Sir Sam Hughes was the Best Ever. Thus neither of them had lived entirely in vain.

It is quite true that Premier Borden agrees with Kitchener, Joffre, Haig and the others as to the propriety of holding the Ypres salient, and to that extent disagrees with Sir Sam, but Premier Borden at present is only the nominal Minister of Militia and Sir Sam is the real one. Consequently Sir Sam must be right. Although Sir Sam has ostensibly resigned, he has never surrendered the reins of office. Borden has the name, but Sam plays the game as usual. Sam is in his office at the Militia Department at 7.30 a. m. and works from early morn to dewy eve and often much later. Even when he is not telling the British War Office its mistakes, he has plenty to do not only in the way of routine business but making speeches, holding reviews and prancing in the limelight.

Some people are wondering why he doesn't concentrate his great genius on the recruiting problem and solve it good and plenty. Recruiting by the present methods seem to be at a standstill. The Borden Government is still 150,000 short of its promised 500,000. Sam, of course, could solve the problem in short order, but the question arises will they let him? Many clear thinkers in this country believe that five hundred thousand is an imaginary figure, issued for advertising purposes only.

Another problem the Great Driving Force in History might tackle is the delay experienced by dead soldiers' dependents in getting their back pay, also the delay experienced in the transmission of separation allowances. It is not on the record that Allison and his fellow profiteers have any trouble collecting their gains, but soldiers' wives and mothers have found that the Militia Department takes a lot of nagging before it comes across with the coin.

H. F. GADSBY.

The soldiers who have been staying with Mr. and Mrs. Thos. Hyslop presented Mrs. Hyslop before leaving with a beautiful bible. The boys were Will Weidner, Sam. Wesley, Morgan Hahn, James Scott, Stewart Pinkey, Herb Woods.

In announcing that its $1.50 subscription rate will come into force on August 1st, the editor of the Mildmay Gazette says his business lost money last year, and he has had either to raise the subscription price or cease publication. Editor Johnston is publishing a bright little paper and we venture to predict that he will not lose 2 per cent of his subscribers by making the raise. We have come to the point where no local weekly paper in Canada can pay its way at the one dollar rate.

A Complete Car in Every Particular
And It's a Car You Will Be Proud to Own

It's the first complete car at anywhere near so low a price.

It stands out alone—boldly—unapproached—a powerful five-passenger touring car complete for only $850.

Note that word "complete."

That means Electric Starter, Electric Lights, Electric Horn, Magnetic Speedometer—in fact, every necessary item. Nothing is lacking. There are no extras to buy.

Note that it is not a small car. The wheelbase is 104 inches. The tires are four-inch size—many cars costing more have smaller tires.

And it is a perfect beauty—snappy, stylish, speedy.

In every way it's a car you will be proud to own and ride in.

No wonder there's a rush to possess the car the world has been waiting for.

Don't delay—see us at once and talk it over.

The Hackneyed Old Phrase

Now Is the Time To Advertise

HAS special pertinence just now. It is in time of prosperity that money is made. As a result of big crops, demand for war munitions, etc., the country has reached a high stage of prosperity. There is plenty of money in circulation and the people are in a mood to buy liberally.

In such times as these advertising pays more generously than ever. The people are hopeful and confident, disposed to anticipate their wants, to buy the best qualities, and to purchase things they would not have felt they could afford a year ago:

Merchants ought to be able to double their trade under these conditions. But they can't get it by waiting for it. They must attract more attention; take a little more newspaper space, describe their goods a little more fully. A great deal of money will be spent in the next six months, the bulk of it with those dealers who court the most publicity.

POETS' CORNER

O TIME AND CHANGE

When we were kids together, Jane—
Can you that time recall?
And played along the shady lane,
Beneath the maples tall,
You then were nine and I was ten,
And oft I'd say in fun—
"Just think, Jane—you'll be 20 when
I come to 21!"
But when I came to 21,
A gawky youth and green,
I wondered how the trick was done—
For you were just 18!
Then luring fortune beckoned me—
The world I wandered o'er;
I got home at 33,
And found you 24!
And now I'm getting old indeed—
Those grey hairs make that plain:
My flower of youth has gone to seed—
Pray, what's the secret, Jane?
I'm lost—I know not what to do—
O cruel fate that's mine!
For lo! I now am 42,
While you're but 29!

+ + +

IT'S YOU.

If you want to live in the kind of a town,
Like the kind of a town you like,
You needn't slip your clothes in a grip
And start on a long, long hike,
You'll only find what you left behind,
For there's nothing that's really new
It's a knock at yourself when you knock your town,
It isn't your town—it's YOU.
R all towns are not made by men afraid
Lest somebody else gets ahead.
Where everybody works and nobody shirks
You can raise a town from the dead,
And if, while you make your personal stake,
Your neighbours can make one too,
Your town will be what you want to see,
It isn't your town—IT'S YOU.

—Pottery and Glass Journal.

A Day at the Lakeside

July 1st is always Port Elgin's Day. Last year 5,000 people took the opportunity to spend a day at the beautiful park on the lake, to witness the races and other big attractions. This year they offer horsemen purses amounting to $1,000 and already horses in the 2.10 and 2.18 class are entered. Then, too, an opportunity will be given to witness a fireworks display excelled only at Toronto Fair. These with other platform performances, band music, etc promise a day and evening everyone will enjoy. Plan to spend the day at Port Elgin. Entrance fee is low, only 15c and 25c. Good accommodation for all. Special train home. Cheap fares. We want you. Bring the family. Give them a day at the lake and enjoy the fun. 23 24.

A Veteran of '70

The death occurred recently at Hibbing, Minnesota, of an old Bruce boy, and former member of the 32nd Batt. Mr. Duncan Kerr, who had been ill for ten weeks with a complication of diseases, was in his 68th year. He was born at Durham and as a young man served in the 32nd. He fought in the rebellion of 1870 at which time, it is recalled, he was detailed by Col. Wolsley, as messenger and rode the Colonel's horse. In 1871 he married Miss Jane Ellen Rawson and in 1888 removed to Dollarville, Mich. In 1902 he removed to Minnesota where he was employed by the United States Steel Corporation. He is survived by his wife, seven sons and three daughters. The deceased was an uncle of Mrs. Best, Miss A. Smith, and Duncan K. Smith of Walkerton.

TELESCOPE LETTER BOX

LOCAL STORES vs DEPARTMENTAL

Dr. Mr. Editor:—

I notice in your valuable paper, there are many comments made frequently, why do people in the surrounding country patronize Departmental Stores instead of their local merchants. Well there are various reasons and as I have never known any one to take time or trouble to explain why, I thought I would give you a few facts. In the first place it is usually a necessity as well as a duty of every good house-keeper to spend every dollar to the best advantage and she is usually endowed with enough common sense to know where and how to spend it. As I have dealt with Departmental stores for over 20 years, I can only speak of them with every respect. Also having from five to eight cows each year and churning the cream all the year. Until the previous summer, I have had some experience with the local merchants. Near the middle of August, 1915, my daughter received word she had passed all examinations duly qualifying her to attend Normal. But having to secure a Dr's. certificate as well as numerous other papers before she could enter. With a certain town in view, the first day possible to go happened to be a very wet, also the merchants weekly holiday. Fearing to wait any longer we decided to go, finding the faithful doctor who never goes on strike and securing the necessary papers. We then turned our attention to buying some clothing. We made our way to a certain store I had frequently patronized leaving as high as $25 in trade at one time, and to my knowledge he never had my name on his credit list in over 20 years with one exception when my daughter overran her due bill by two cents and when I sold him my Christmas fowl, I paid my bill. When I arrived at the door I found it locked. Finding a side entrance open, and feeling I was neither a thief nor a beggar had no hesitation entering with a basket of produce, where I found Mr. and Mrs. Merchant and others reclining their weary forms against the wall. To say the least it was a great shock to them, lest any of their neighbors should see me enter with a basket. However Mr. Merchant soon recovered and asked me in whispering tones, did I not know this was their holiday. I assured him I was aware of the fact, but to what extent it was binding I was quite ignorant. He was so very sorry I should not have known better and he was also sure I could have come another day if I had tried. But he told me that he and all other merchants had signed this solemn declaration that they would not sell to anyone on their weekly holiday. With many regrets he told me I must go home today 10 or 11 miles and come back tomorrow or the next day or some other fine harvest day, when it would be a decided pleasure to wait on me, and I was whispered out again, feeling that I must have transgressed worse than a beggar or a thief against merchants rules. Well I went home and some way I have managed to get along very nicely so far without even going back to the same town. But not so with the Department stores, for the next mail carried $40 from me to a city store and the following week $20 more and I have sent a good large number since, (of course my few cents are neither here nor there) and I received the worth of my money, also the correct change back, and the goods left at the gate in good shape for the sum of 25 cents.

Has the home merchant ever thought of how prominent a part he plays in the credit system. He is so very pleased to have you out again, he has not seen you for so long a time, he is sure you want a long list of goods, but when told you did not intend to purchase much, just then he is sure you want a new suit, coat, hat, dress or all of them. He has the right shade, the proper tint to suit you complexion, all the New York ladies are wearing that special garment this year and he is sure you will never regret buying it, and it cannot be procured again at the same price, and pay day is tabooed for the time being. Usually people who are induced to buy under such conditions will buy plenty. Presently they remember they might have got along without such goods. When pay day arrives, which is very soon, they find that they are still unable to pay and you read something like this in the local paper, all bills owing to Mr. So and So must be settled by cash or note by the middle of the month or will be placed in other hands for collection, and one is as much to blame as the other. There are always a few old "stand-bys" who are ever ready to wait on the farmers six days in the week in reasonable hours, but they may not always have just what you want, and again the city store comes to your rescue. You will also say the departmental stores have their weekly holiday. Quite so, but you will remember the circumstances are quite different. There the farmer goes to market sells his produce for cash and he pockets his money and buys where he thinks best. He does not have to allow 15 and 18 per cent discount as I have had to do before now in order to receive a small amount of cash on produce.

Now if it is necessary to have a weekly holiday, why all go on strike at one time, but if you all shut up shop at once. Then it is a mystery to many why you should complain where they buy when you lock the door and stand guard against it.

I think those are a few of the sentiments of many good housekeepers of today.

Yours respectfully,
Mrs. George Webb.
Glamis, Ont.

Farewell to the Soldiers

TO THE OFFICERS, NON-COMMISSIONED OFFICERS AND MEN OF THE 160TH (BRUCE) OVERSEAS BATTALION, CAN. EXP. FORCE:—

Gentlemen:—

The removal of your Battalion from the town of Walkerton to the Divisional Military Headquarters at London, is an event which cannot be permitted to pass, without some signal expression of general good will, and pride in the fact that you are about to take your place in the defence of the honour of our Empire, our homes and our Country.

In order to provide comforts for the men of the 160th Battalion while in London, the 24th of May Military Demonstration Committee was formed, and with good efforts and organization, supported by loyal citizens throughout the County, splendid results were obtained, with $1400 cash to the good. It was the intention and purpose of the committee to vote this sum of money to purchase mess tents for your men during their stay in London.

The Bruce Battalion, today, is recognized in all military circles throughout Ontario as one of the best that has been raised in Canada, and well deserves the compliment by Col. Shannon that "they are a hand picked body of men." Every member of the 160th can always take pride in the fact that he has belonged to such a fine regiment of soldiers. The exemplary conduct of the boys while in Walkerton is a striking evidence that they have come from good homes and raised from the plain folk of Bruce County.

No doubt your ardent desire is to be on the firing line, somewhere in France or Belgium, to do your bit with the brave fellows now there, but we hope our Armies of the Allied forces will have achieved the purpose of their efforts, and will have crushed once and for all the attempt of Prussian despotism for world domination and that you will not be called upon to risk your lives but will be restored to us in good health and vigor.

While we recognize the results in this matter have been from the workings of one committee of men, yet we wish to express our strongest feelings of admiration and appreciation of the work of the many ladies' organizations throughout the county who have so nobly spent many long hours, tireless and self-sacrificing efforts to assist the many causes connected with the soldiers.

We are pleased to meet you here this afternoon to say "Good Bye" to you, and we hope and pray, no matter where your Army duties may place you, that an All Wise Providence will keep you and protect you. We have much pleasure in handing you the cheque for the proceeds of the Victoria Day Celebration with the wish that pleasant recollections will always be associated with the benefits derived from it.

Signed on behalf of the Committee
JOHN HENDERSON, Chairman.
K. M. TAYLOR, Treasurer.
GEO. D. MACKAY, Secretary.
Walkerton, Ont., June 20th, 1916.

Eighteen Hundred And Frozen to Death

The year 1816, that is, 100 years ago, says the Perth Expositor, was known as the "summerless summer." Snow commenced falling in the middle of June, by the middle of August it was one foot in depth, and from the first fall of snow in June until the following summer the earth remained under the covering of the wintry blanket. Absolutely nothing in the way of harvest was garnered. Everything in the way of crops rotted in the ground. What did the people live on? Meat—meat and fish—there were no vegetables and there was no flour. It was venison and fish today, relieved by fish and flesh tomorrow, taken from slaughter-cattle. Hay had to be shipped from Ireland to Quebec, and it sold there at $43 per ton; flour sold at $17 per barrel in Quebec, and potatoes were only a penny a pound. This year was called "the year eighteen hundred and frozen to death." The cause of the cold was believed to be sunspots, which were so large that for the first time in their history they could be seen without the aid of a telescope. It was also known as "poverty year." In New Hampshire hay sold $180 a ton. The next spring the market price of corn was $2; a bushel of wheat, $2.50; rye, $2; oats, 90c; beans, $3; butter, 25c per pound. (It usually sold in those days at eight and ten cents.) Further particulars of the "summerless summer," The Expositor adds, are among the files of the Granville Historical Society.

THE MAIL AND EMPIRE

The Weekly Mail and Empire ceased publication with its last issue on May 30th, 1916, and many thousands of readers have been transferred for the remainder of their Weekly subscription period to the list of subscribers to the Daily Edition. The increasing operation of Rural Mail Delivery in Canada, and especially in Ontario, has rendered the Daily paper an imperative necessity, hence the passing of the Weekly. All the main features of the Weekly, including the Farming Section, will be continued in the Saturday Mail and Empire.

No less than four radiating surfaces gath every scrap of heat and send it through your c rooms.

WIT AND HUMOR

KEEP IT DARK.

(Bore)

Simplicity—Is the light out in the [illegible]? Dulness—Yes, shall I bring it in.

USUAL CASE.

(Browning's Magazine)

"Poor fellow! He says he never closed an eye all night!"

"Too bad—he must snore with his eyes open."

THOSE OLD FRIENDS.

(Record)

"Met an old friend of yours the other day. Had a long talk about you."

"Well, he's a darn liar!"

SAME THING.

(Baltimore American)

"Can you play the lyre?"

"I can tell a good fish story."

AGAINST IT.

(Club Fellow)

Jake—"She's decidedly against vivisection."

Jenks—I found it out the minute I tried to open my heart to her.

DIFFERENT NOW.

(Boston Transcript)

Mrs. A.—How marriage changes a man.

Mrs. B.—Doesn't it? Take my husband. He used to offer me a penny for my thoughts and now he offers me [illegible] to shut up.

ITS VOCABULARY.

(Browning's Magazine)

"That parrot of theirs! Why, it rattles off all the gossip of the neighborhood."

"Yes. When it was learning to talk they forgot to take it out of the room the day the sewing society met."

PLENTY OF RINGS.

(Kansas City Journal)

"They tell me she has seven engagement rings?"

"Yep. Life is a merry-go-round for her."

NEEDLESS ADVICE.

(Philadelphia Enquirer)

Some women physician says that a baby's sleep should not be disturbed.

WAR.

(Philadelphia Record)

War is a regulated and limited savagery at best.

Retribution.

To-day the boy who is sassing mother will grow up and marry a woman who will not stand for any pert talk.—New Orleans States.

DOING THEIR BIT.

(London Advertiser)

Among the soldiers Canada is providing should be counted some of the [illegible] persons employed in making shells.

NEAT.

(Brantford Courier)

Oil is now $5 a gallon in Constantinople, and the average Turk hates to make light of it.

A PROBABLE CONTINGENCY.

(Baltimore American)

"What do you think would have happened if the ancient Romans had known any thing about baseball?"

"Why they would have had lots of fun killing the umpires."

PART OF THE LANGUAGE.

(Browning's Magazine)

"Gibbs has given up trying to talk French."

"How's that? He's got the accent and the pronunciation down fine."

"But he can't get the shrug of the shoulders."

IT RESISTED.

(Browning's Magazine)

"What was the piece de resistance?"

"I heard the man who carved it say it was the duck."

HONEST.

(Life)

"What kind of a time did you have talking over your neighbors yesterday?"

"Ripping."

NOT QUALIFIED.

(Browning's Magazine)

"Is he a composer of classical music?"

"I think not. I can pronounce his name."

THE SAME SPECIES.

(Princeton Tiger)

He—My dear, where did this awful big spider come from?

She—James, you have been drinking those horrid cocktails again. That's my new spring hat.

CAUGHT.

(Kansas City Journal)

"I never hobnob with strangers, even when I'm drinking."

"Um. Then I suppose that wooden Indian you were talking to last night was an old friend?"

HER SILENCE.

(Life)

Young Aldrich was waiting in the parlor for his loved one to appear, when the small brother came in and took a seat.

"Well, Chester," said Aldrich, "what did your sister say when you told her I was waiting?"

"Why, she didn't say nothing," replied the smaller brother. "She just took a ring off one finger an' put it on another."

AT THE RACES.

(Life)

Mother—Tommie, you ought to let your governess have the field-glasses first.

Tommie—Why, mother! You know you said she was to look after me.

ONE OF THEM.

(Browning's Magazine)

"Why in the world did you name your baby Bill?"

"Because he came on the first of the month."

PLAYING THE GRAPHOPHONE.

(Kansas City Journal)

"That record seems to scratch. What's the name of it?"

"'Turkey in the Straw.'"

"No wonder it scratches."

NOT A PRACTICAL PEOPLE.

(Ladie's Homes Journal)

"You know," said the student sententiously, "the Romans had a strong sense of the beautiful."

"Yes," agreed Mr. McGundley, "but then they wasn't very practical. Them Romans candles is very pretty to look at, but it's tranation hard to read by 'em."

Golf Defined.

On the terrace of a country club a group of nongolfers were taking tea.

A male nongolfer said thoughtfully: "Golf might be defined as old fools going to grass."

"Spleen on the green, I'd call it," said a female nongolfer.

"Or the last flicker in the lamp of athletics," sneered a young football player.

"The misuse of land and language," suggested a tennis champion.

"No, no; you're all wrong," said a famous angler. "Golf is simply a game wherein the ball lies badly and the player well."

In storing away a colored silk garment, never wrap it in white paper, but use blue paper or brown.

'TWIXT LOVE AND PRIDE

Mildred's foot having been examined and pronounced "likely to be tedious, but not serious," she was comfortably ensconced on a sofa in her mother's sitting-room, whence, after dinner, she sent word that she would be very glad to see them all if they would come and sit with her. So consequently, about nine o'clock, considerable noise and laughter might have been heard issuing from the boudoir, where they had all assembled obedient to her command—all, that is, save Eddie, Miss Lisle and Denzil Younge, with one or two others, who had lingered in the billiard-room. Lord Lyndon had, of course, been the first to approach Mildred to inquire how she was and express his tender, loving regrets that she should have so injured herself; but, finding her, though sweet and gracious as usual, somewhat disinclined for conversation, he had left her presently with the entreaty that she would try to sleep, and to subdue all feverish symptoms. But she was flushed and restless, and could not compose herself, so lay open-eyed, though silent, with her gaze fixed upon the door.

When ten o'clock struck, Lady Caroline made a move.

"Mildred, darling," she said, bending over her, "would you not like to go to bed? You are looking so feverish—and I know you are suffering pain. Let me persuade you, dearest, to do what is wise. Are you waiting for anyone? Would you like to see Lyndon before going?"

"No—no," answered Mildred, blushing vividly; "I do not want anyone, but I am not tired yet, mamma"—pleadingly—"I wish to sit up a little longer."

So Lady Caroline, giving her her own way, said nothing more, until at length, another half hour was tolled out by the small clock. And, even as it struck, feet came rapidly up the stairs, and then nearer and nearer, until they passed the door, when there came in there within a gay, ringing laugh, irrepressible in its joyousness, which was heard by all.

"I think Mr. Younge had the most charming laugh I ever heard," said Jane Deverill. "Don't you, Captain Harvey?"

"Mamma," said Mildred, wearily, "I am tired now; I should like to go to bed."

CHAPTER XXI.

"Mildred," said Sir George, one night about a fortnight later on, "if you really mean hunting to-morrow, you will have to be up betimes, as we shall have to start more than usually early, on account of the distance we have to go."

"I shall be ready," answered Mildred.

Accordingly, the next morning, true to her word, she was down-stairs, equipped, even to the dainty little whip she carried in her hand, before any one but Denzil had put in an appearance.

Lyndon arriving shortly afterward in time for breakfast, they hastily despatched that meal, and started directly after for the meet, which was at some considerable distance—Miss Trevanion and the acknowledged lover in front, Sir George with the discarded in the background.

On their way they fell in with Frances Sylverton, attended only by a groom—Charlie having gone to rejoin his regiment some days before—who called out gaily that she had come this route on the mere chance of meeting them, and was therefore, for once in her life, unfeignedly glad to see them.

"And what has happened to you, O knight of the rueful countenance?" she asked, merrily, of Denzil, reining in her horse beside him.

"I had no idea I was looking so lugubrious," he said, laughing; "and I don't believe I am either. It is the morning mist that has got into your bright eyes."

"No, it is not," persisted Miss Sylverton, emphatically, shaking her head; "the signs of woe upon your face are unmistakable. I suppose you have a presentiment that you will be slain to-day, and naturally don't relish it."

"You are wrong," said he—"entirely wrong. If I felt even the shadow of such a feeling upon me, I should go straight home again, and wait for the dawning of some luckier day."

"What a coward!" cried Miss Silverton, scornfully.

"I am that," returned Denzil, comfortably; "is it possible you have never before made the discovery?"

"I wonder," thought Sir George, "if young people nowadays ever talk sense?"

And then immediately afterward they came within full view of the hounds, as they stood clustered together in the hollow, for the most part seeming one mass of spotted skin and waving restless tail.

Three hours later, and Miss Trevanion, with heightened color and warmed blood, was riding excitedly along to the occasional music of the forward hounds. A little in front, Sir George and Lyndon gave her the lead, while behind there were none, for of all those who had met that morning but few now remained to be in at the "death." Some, finding the pace too hot in the beginning, had wisely drawn rein, and solemnly plodded home again; others, more adventurous but scarcely so well judging, trusting to fickle fortune to favor the brave, had come to a violent end, and now sat, or stood, lamenting their fate, and chiding their cuddies in no measured terms; while of those who still held on—among whom was Frances Sylverton—most of them rode to Mildred's left, down deep in the hollow of Hart's Chase, leaving to her right but one, and that was Denzil.

A passionate lover of riding, and devoted to sport, Younge's keenest enjoyment was to feel a good horse under him, with the certainty of a hard day's run in view; and to-day, his mount being undeniable, he was growing almost happy again.

Having made a false move about half an hour before he was now crashing through, or over, everything that came in his way, to make up for lost time, and gain on Sir George and Lyndon, who—clever and wary sportsmen both—had sailed along from the beginning straight in the line of victory, without a moment's swerve.

Just as Denzil at last caught sight of them, and knew himself to be once more in the right way, he found he was on the same ground with Mildred Trevanion, only considerably higher up. It was a lengthy meadow, straggling and untidy in form, and Mildred, entering at the lower end, could scarcely distinguish her companion above, but succeeded in making a shrewd conjecture nevertheless.

From where she was it was easy enough to get into the adjoining field, but with Denzil it was far different. A short ugly wall rose before him, surmounted by a hedge of some sort, thick and prickly, which effectually concealed from view the heavy fall on the other side. Still, it was not exactly an impossible thing to take, though decidedly a "facer"; and Denzil, understanding the danger, and trusting to his horse to carry him safely through, determined to risk it, come what might.

Miss Trevanion, slightly ahead of him now—having managed her last jump satisfactorily—turned nervously in her saddle to see how it would end. She wondered breathlessly whether—whoever he was—he knew of the— And then she saw the horse rise, land at the other side, stagger, and then, plunging helplessly forward, bring itself and its rider heavily to the ground.

Mildred shut her eyes, and pressed her teeth cruelly on her under lip to suppress the scream that rose so naturally from her heart; and when she summoned courage to look up, she found the horse had risen, and stood trembling at some little distance off, while on the grass lay motionless a mass of brilliant scarlet cloth and a gleam of golden hair.

CHAPTER XXII.

In but few minutes' time after the accident Mildred was beside Denzil, and down on her knees, her horse idly wandering away. She stooped, and placed her hand upon his heart, but failed to detect the faintest beat. She drew her fingers across his forehead—cold and damp with the chilling wintery wind—but to her it seemed touched by the cold hand of Death.

A terrible feeling took possession of her. Was he dead? Was he speechless, deaf, blind, beyond love, life, hope, for evermore?

Lifting his head on to her lap and pushing back the hair from his beautiful forhead, she murmured to him tenderly, almost reproachfully, half believing the cruel voice he had loved so well on earth would recall him even from the grave. But there was no answer.

She looked up wildly. Would nobody ever come? How long they were—how long! And, when they did come, would it, perchance, be only to tell her that help was needless—that he was indeed dead, as he appeared—lifeless within her very arms?

Oh, to speak with him once more, if only for a moment—just for so long as it would take to let him know how well she loved him, and to beg on her knees for his forgiveness!

Why did he lie so silent at her feet? Surely that calm, half smile had no sympathy with death. Was she never to hear his voice again—never to see the loving tenderness that grew in his eyes for her alone?

Was all the world dead or insensible, that none would come to her call, while perhaps each precious moment was stealing another chance from his life? This thought was maddening: she glanced all round her, but as yet no one was in sight. And then she began to cry and wring her hands.

"Denzil, speak to me!" she sobbed. "Denzil—darling—darling!"

* * * *

Lord Lyndon, shortly after the accident had occurred, turning round in his saddle to discover whether Miss Trevanion was coming up with them, and not seeing her, raised himself in his stirrups to survey the ground behind, and beheld two horses riderless, and something he could not discern clearly upon the grass.

"Sir George, look!" he called to his companion. "What is it—what has happened? Can you see Mildred?"

He waited for nothing more, but, putting spurs to the astonished animal under him, rode furiously back, leaving Sir George to follow him almost as swiftly.

And this was what they saw.

Lying apparently lifeless, with one arm twisted half under him, in that horrible, formless way a broken limb will sometimes take, lay Denzil Younge, with Miss Trevanion holding his head upon her lap, and smoothing back his hair, while she moaned over him words and entreaties that made Lyndon's heart grow cold.

"Mildred!" he cried, sharply, putting his hand on her arm with the intention of raising her from the ground; but she shook him off roughly.

"Let me alone," she said; "what have you to do with us? I loved him. Oh, Denzil, my darling, speak to me—speak to me!"

"What is the meaning of this?" Lyndon asked, hoarsely. "Trevanion, you should know."

Sir George, who was bending over the prostrate man, raised his eyes for a moment.

"I suppose, as she says it, it is true," he answered, simply. "But I give you my word of honor as a gentleman, I was unaware of it. All I know is that she refused him long before you proposed for her—for what reason I am as ignorant as yourself. It has been her own secret from first to last."

As Sir George spoke, Mildred looked up for the first time.

"Is he dead?" she asked, with terrible calmness.

"No, no—I hope not; a broken arm seldom kills," answered her father, hurriedly, drawing the broken limb from beneath the wounded man with great gentleness. "Lyndon, the brandy."

Lyndon, who was almost as white as Denzil at the moment, resolutely putting his own grievance behind him for the time being, knelt down beside Sir George, and giving him his flask, began to help in the task of resuscitation.

"How will it be?" he asked, in a whisper.

"I cannot tell," answered Sir George, "we can only hope for the best. I don't like the look on the poor lad's face. I have seen such a look before. Do you remember little Polly Stuart of the Guards? I was on the ground when he was killed very much in the same manner, and saw him lying there with just that sort of strange, calm half smile upon his face as though defying death.

"But he was stone dead at the time, poor boy."

"How shall we get him home?" asked Lyndon. "I wish some doctor could be found to see him. Was not Stubber on the field this morning?"

"Yes, but was called off early in the day, I think."

"His heart!" cried Miss Trevanion, suddenly. "His heart! It is beating!"

She raised her eyes to her father's as she gave utterance to the sweet words, and Lyndon saw all the glorious light of the hope that had kindled in them. Her white fingers were pressed closely against Denzil's chest; her breath was coming and going rapturously at quick, short intervals; her whole face was full of passionate, glad expectation.

"So it is," said Sir George, excitedly. "Lyndon, more brandy."

So life, struggling slowly back into Denzil's frame, began its swift course once more for him; while for Lyndon, turning away sick at heart and miserable, its joys and promises were but as rotten fruit, ending in bitterness and mockery.

CHAPTER XXIII.

It was late the same evening, and Mildred, sitting in her mother's room, with one hand clasped in Lady Caroline's, was gazing idly into the fire, seeming pale and dejected in the red light of the flames, that ever and anon blazed up and sunk, and almost died, and brightened up again. Yet in her heart there was a great well of thankfulness, of joy unutterable—for had not the doctor, fully an hour before, declared Denzil out of any immediate danger, assuring the anxious watchers that with care and time his recovery would be a certainty?

Up to that moment Miss Trevanion had remained in her own apartment, not caring to encounter the gaze of curious observers—now walking feverishly backward and forward with unspoken prayers within her breast, now sitting stunned and wretched waiting for the tidings she yet dreaded to hear.

But when Lady Caroline came to tell her all was well for the present, she could say nothing; she only followed her mother back to her own room, where she fell upon her knees and cried as though her heart would break.

Here, too, she confessed all that had laid so heavily on her mind for the past few months, while the mother sat silent, listening and wondering, and caressing with tender, encouraging fingers the fair bent head that lay upon her lap.

Sir George, on his return, had told his wife all that had occurred—and probably more—together with a good deal of information on the subject of his own feelings, which he described at length, as having received a shock not to be easily forgotten.

He had been extremely fussy and discursive altogether, but the mother's heart had divined the truth, and went out in pitying love to her child. Now, here, in the gathering darkness of this cold, unhappy day, a silence fell upon them both, while thoughts rose thick and agitating.

Suddenly the door opened and a servant stood revealed.

"Lord Lyndon's compliments to Miss Trevanion, and he would be glad to see her for a few minutes in the north drawing-room," he said, and lingered for a reply.

"I will be down directly," Mildred answered, tremulously, and when he had withdrawn, turned nervously toward Lady Caroline. "Oh, mother," she said, "what can I say to him? What must he think of me? How miserable it all is!"

"Have courage, my darling," whispered Lady Caroline, "and own the truth—plain speaking is ever the best and wisest. Afterward he will forgive you. Remember how impatiently I shall be waiting here for your return."

"Of course he will understand that it is now all over between us?" Mildred asked, half anxiously, as she reached the door.

"Of course he will," said Lady Caroline, with a suppressed sigh. How could she help regretting this good thing that was passing away from her daughter? "Now go, and do not keep him in suspense any longer."

So Mildred went; but, as she passed the threshold of the room that contained Lord Lyndon, a sudden rush of memory almost overpowered her, carrying her back, as it did, to that other night, a few short weeks ago, when she had similarly stood, but in how different a position in the sight of the man now standing opposite to her. Then she had come to offer him all that was dearest to him on earth, now she was come to deprive him, of that boon—was standing before him, judged and condemned as having given away that which in nowise belonged to her.

She scarcely dared to raise her head, but waited, shame-stricken, for him to arraign her, with eyes bent sorrowfully downward. Her attitude, though she knew it not, was perfect. She looked a broken lily—a beautiful, although repentant sinner.

"I have very little to say to you," said Lyndon, hoarsely, in a voice that was strange and cold, all the youth being gone out of it, "but I thought it better to get it over at once—to end this farce that has been playing so long."

No answer from Miss Trevanion—no movement—no sound even, beyond a slight catching of the breath.

"Why should you have treated me as you have is altogether beyond my fathoming," he went on. "Surely I could never have deserved it at your hands. When I gave you that paltry money a few weeks ago, I little thought it was accepted as the price of your affection. Affection! Nay, rather toleration. Had I known it I would have flung it into the sea before it should have degraded both yourself and me. Had you no compassion—no thought of the dreary future you were so coldly planning for us both—I ever striving to gain a love that was not to be gained—you perpetually remembering past days that contained all the sweetness of your life! There—it is of small use my reproaching you now; the thing is done, and cannot be undone. You have only acted as hundreds of women have acted before you—ruined one man's happiness completely, and very nearly wrecked another's, all for the want of a little honesty."

He made a few steps forward, as though to pass her, but she arrested him by laying both her hands upon his arm.

(To be continued.)

"Sir," said the beggar, "will you'se give a pore old blind man er dime?" "But," protested the citizen, "you can see out of one eye." "Oh, well," rejoined the beggar, "make it a nickel, then."—Indianapolis Star.

Lantic Sugar

is packed by automatic machinery in strong white cotton bags and cartons at the refinery.

This is far safer and more sanitary than sugar packed by hand in a weak paper bag which breaks at a touch. No hand touches LANTIC SUGAR until you open it yourself. *Just cut off the corner of the carton* and pour out the sugar as you need it.

2 and 5-lb Cartons
10 and 20-lb Bags

ATLAS AND HIS LOAD.

Was the Heavens, Not the Earth, the Titan of Mythology Upheld.

Strictly speaking, "atlas" is a mishomer for a map book, since it was not the world, but the heavens, that the Atlas of mythology upheld. Mercator, the famous Dutch geographer, who made globes for Emperor Charles V. of Germany, was the first to use the name in this connection, choosing it as a convenient and in some sort an appropriate title, because Atlas, the demigod, figures with a world upon his shoulders as a frontispiece of some early works on geography.

Atlas, it was said, made war with other Titans upon Zeus and, being conquered, was condemned to bear heaven upon his head and hands. Later tradition represented him as a man changed by means of Medusa's head into a mountain, upon which rested heaven and all its stars.

In any case, Atlas was always associated with a heavy burden strongly borne. Thus Shakespeare makes Warwick say to Gloucester, "Thou art no Atlas for so great a weight."

It is not difficult to see how by an association of ideas this came to be chosen as the name for a book of maps which upholds and exhibits to use the whole world.

Do Long Breaths Hurt?

DANGEROUS PLEURISY ALWAYS BEGINS THIS WAY.

Speediest Cure Is Nerviline.

Ouch, that stab-like pain in the side is like a hot knife blade in the ribs!

Probably got overheated—cooled too fast—now there is congestion, tightness, such soreness you can't draw a long breath.

This is the beginning of pleurisy.

Pleurisy is far too serious to neglect a single instant.

Quickest relief will come from a vigorous rubbing with Nerviline. This trusty old pain reliever will fix you up in no time—will take away the congestion—make you well just as it did Mr. Samuel St. Johns, of Stamford, who says: "In running to catch a train last week I became much overheated. I put up the train window and rode that way in order to get cooled off. In an hour my side was so full of pain and my breathing hurt so much that I thought I had pneumonia. I always carry Nerviline in my grip, and at destination I rubbed my side thoroughly three times. The warm, penetrating effect was soon noticeable and I quickly got relief. Nerviline, I consider, saved me from an serious illness.

Any sort of a cold can be quickly broken up with Nerviline, which is a marvel for reducing inflammation, for relieving congestion in the throat and chest, for curing stitch in the side, lumbago, neuralgia, sciatica or rheumatism. Nothing more soothing or powerful. The 50c large family size is the most economical. Small trial size 25c, at all dealers everywhere.

"Dear Old Ladies" and Other Kinds.

There are as many kinds of old ladies as there are girls, men, automobiles, books and remedies for a cold. There are kindly old ladies, ill natured old ladies, sharp old ladies, witty old ladies, stupid old ladies, musty fusty old ladies, dainty old ladies, wise old ladies, silly old ladies, Whistler's mother old ladies, Betsy Tretwood old ladies, white spatted old ladies, churchy old ladies, sit-by-the-fire old ladies, tangoing old ladies and old ladies who don't wish to be called old ladies at all.

Nowadays most of them are so busy working in public causes that they have not time to protect their own interests as they should. But let us hope that after a while they will organize a new association, to be called the Society for the Promotion of Distinctive Characterizations for Old Ladies, and that it will have displayed prominently on its banners the slogan "Down With the Word 'Dear!'"

Minard's Liniment Cures Garget in Cows.

To keep a nice comfortable or blanket clean on a child's bed, turn the upper sheet over about one foot and pin with safety pins.

Spoiling the Tobacco.

Winchcombe St. Peter, in Gloucestershire, began the cultivation of tobacco in England toward the end of the sixteenth century, and the inhabitants are said to have derived considerable profit from it until the trade was placed under restrictions. An entry in Pepy's Diary on Sept. 19, 1667, concerning the coming of a cousin of his to town proceeds: "She tells me how the life guard which we thought a little while since was senth down into the country about some insurrection was sent to Winchcombe to spoil the tobacco there, which, it seems, the people there do plant contrary to law and have always done and still been under force and danger of having it spoiled, they will continue to plaint it. The place, she says, is a miserable poor place."—London Globe.

NO MEDICINE AS GOOD FOR LITTLE ONES

Once a mother has used Baby's Own Tablets for her little ones she will use nothing else. The first few doses make her realize there is nothing to equal them in making baby well and keeping him well. Concerning them Mrs. C. E. Stilwell, Winthrope, Sask., writes: "I have used Baby's Own Tablets for the past ten years and have found them so good for my little ones that I always keep a box in the house." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

O Time and Change!

When we were kids together, Jane—
Can you that time recall?
And played along the shady lane,
Beneath the maples tall.
You then were nine and I was ten,
And oft I'd say, in fun—
"Just think, Jane—you'll be twenty
When I come to twenty-one!"

But when I came to twenty-one,
A gawky youth and green,
I wondered how the trick was done—
For you were just eighteen!
Then luring fortune beckoned me—
The world I wandered o'er;
I got back home at thirty-three
And found you twenty-four!

And now I'm getting old, indeed—
These gray hairs make that plain;
My flower of youth has gone to seed—
Pray, what's the secret, Jane?
I'm lost—I know not what to do—
O cruel fate that's mine!
For lo, I now am forty-two,
While you're but twenty-nine.
—Cleveland Leader.

Minard's Liniment Cures Diphtheria.

The Four Great Sauces.

A French epicure has declared that "man has created the culinary art; he does not feed like an animol—he breakfasts, dines and sups."

The French are particularly eloquent on the subject of sauces. Among their famous chefs are recognized four great sauces, Spanish, veloute, bechamel and German. The Spanish and veloute weer known as far back as the seventeenth century. In the eighteenth they were moulded by the masters of cookery, particularly by Careme, who was called "the Raphael of the kitchen."

The Spanish sauce is composed of juices extracted from a mixture of ham, veal, chicken and pheasant. Veloute is similar, but is not colored. Bechamel is veloute to which cream has been added, and the German sauce is veloute plus the yolks of eggs.

Minard's Liniment Co., Limited.

Gentlemen,—I have used MINARD'S LINIMENT on my vessel and in my family for years, and for the every-day ills and accidents of life I consider it has no equal. I would not start on a voyage without it, if it cost a dollar a bottle.

CAPT. F. R. DESJARDIN.
Schr. Storke, St. Andre, Kamouraska.

Effects of Lying.

Lying is a great sin against God, who gave us a tongue to speak the truth and not falsehood. It is a great offense against humanity itself; for where there is no regard to truth there can be no safe society between man and man. And it is an injury to the speaker; for besides the disgrace which it brings upon him, it occasions so much baseness of mind that he can scarcely tell the truth or avoid lying, even when he had no color of necessity for it, and in time he comes to such a pass that as other people cannot believe he speaks the truth, so he himself scarcely knows when he tells a falsehood. As you must be careful not to lie, so you must avoid coming near it. You must not equivocate, nor speak anything positively for which you have no authority but report, or conjecture or opinion.—Sir Matthew Hale.

An Eccentric Bishop.

Bishop Wilson, of Calcutta, had as housekeeper a venerable lady who remembered the duel between Sir Philip Frances and Warren Hastings on Aug. 17, 1780. On entering the cathedral on a Sunday morning, fully robed, lawn sleeves and all, and passing the pew where the old lady sat he would pause and give her the "kiss of peace" before all the congregation and this although he had met her at breakfast.

His sermons, too, were racy. Preaching against Dishonesty, especially in horseflesh, as one of the great English failings in India, he went on "Nor are we, servants of the altar, free from yielding to this temptation." Pointing to the occupant of the reading desk below him: "There is my dear and venerable brother, the archdeacon, down there. He is an instance of it. He once sold me a horse. It was unsound. I was a stranger, and he took me in.'"

No More Corns

Cure Guaranteed

Never known to fail; acts without pain in 24 hours. Is soothing, healing; takes the sting right out. No remedy so quick, safe and sure as Putnam's Painless Corn Extractor. Sold everywhere—25c per bottle.

To Make Delicious Date Bread.

Mix one cupful of warm wheat mush, one-fourth cupful of brown sugar, one-half teaspoonful of butter, then add one-fourth yeast cake, broken in pieces and dissolved in one-fourth cupful of lukewarm water, and two and one-fourth cupfuls of bread flour, once sifted. Toss on a slightly floured board and knead. Return to the mixing bowl, cover and let rise overnight. In the morning cut down and add two-thirds cupful of dates stoned and cut in pieces and two-thirds cupful of chopped English walnut meats. Shape into a loaf, put in buttered bread pan, cover and again let rise. Bake in a moderate oven fifty minutes.—Woman's Home Companion.

Argentina's Natural Bridge.

In Argentina there is a natural bridge that is one of the most wonderful in the world. It spans the Rio Mendoza and is known as the Inca bridge. But it is the work of nature, says the Scientific American, and not, as was popularly supposed, of the Incas. The road on which it occurs was probably a colonial highway made by the Peruvian Incas, who took advantage of the phenomenon by leading their road over this natural viaduct.

They All Went Away Together

P. A. BONNOT'S RHEUMATISM CURED BY DODD'S KIDNEY PILLS.

And With It Went All Those Symptoms Which Mark the Earlier Stages of Kidney Trouble.

Grand Clairiere, Que., June 26.—(Special)—"All persons who suffer from rheumatism should use Dodd's Kidney Pills." This is the statement volunteered by Mr. P. A. Bonnot, a well-known resident of this place. Asked to give the reasons why Mr. Bonnot said:

"I suffered for three years from rheumatism. I consulted a doctor without getting any results. Four boxes of Dodd's Kidney Pills fixed me up."

That rheumatism is caused by sick kidneys failing to strain the uric acid out of the blood was again shown in Mr. Bonnot's case. His earlier symptoms were: Heart fluttering, broken and unrefreshing sleep, fitful appetite, a tired nervous feeling, a heaviness after meals, neuralgia and backache.

When he cured his kidneys with Dodd's Kidney Pills the rheumatism and all the other symptoms of kidney trouble disappeared.

Laundry Marks in Europe.

Laundry marks vary greatly in Europe. Those used in Britain consist of certain small letters or figures stitched in red thread. Not all continental laundries are so considerate. In some parts of France linen is defaced by having the whole name and address of the laundry stamped upon it and an additional geometrical design to indicate the owner.

In Bavaria every piece has a number stamped on in large characters. In other parts of Germany a small cotton label is attached by means of a waterproof (hot) adhesive. In Bulgaria each laundry has a large number of stamps engraved with designs, and in Russia the laundries mark linen with threads worked in arrow shapes.

In some Russian towns the police periodically issue regulations for laundries while in Odessa books of marks are furnished annually to the laundry proprietors, and these marks and no others may be used. By this system criminals and revolutionary agitators are often traced.—London Mail.

Minard's Liniment Cures Distemper.

THE FLY ON THE PANE.

It Will Crawl to the Top, but Will Fly Back to the Bottom.

A fly on a window pane will crawl to the top, fly back to the bottom and crawl up again. This order is seldom reversed—why no one knows. It is on record that a fly crawled up a window pane thirty-two times, returning each time a-wing.

Hens scratch for food with the sun behind them, the reason being that the rays reflect on the minute particles. A blind hen will pick grain and not miss a kernel.

Cats seldom lie with their feet to the fire. Usually they lie on the left side. Dogs lie with their fore paws to the fire.

A mouse will ignore a food supply sufficient for a meal and run great risks to nibble at a wholesale supply. It will hide at the source of food supply and not travel therefrom until actually disturbed. It isn't true that a mouse runs to its hole at the first alarm.

Find a harmless little snake the length of the lead pencil and provide a box for it in the house, visit it daily and at the end of three months it will crawl to you for food.

Goldfish usually swim round a globe to the right. They can be taught to take a fly out of the hand in six week's time. The presence of other fish in the globe is generally ignored by goldfish. Drop a piece of chip on the surface of the water and it will frighten a fish.

Sheep spend more time grazing than do cattle and horses. Sheep will eat for twelve hours out of twenty-four—New York World.

Babylonia.

The northern part of Babylonia is generally dry during the greater part of the year. The lower part, near the junction of the rivers, is generally a great malarial swamp overgrown with reeds. In the springtime one may still [illegible] almost anywhere across the country from the Tigris to the Euphrates, and in the dry season great herds of camels, buffaloes, donkeys, sheep and goats graze over the same place.

A Tasty Summer "Snack" for the warm days when the appetite craves "something different" for luncheon, for picnics or any kind of outdoor excursion is Triscuit, the Shredded Whole Wheat Wafer. It is made of the whole wheat steam-cooked, shredded and baked. Toast it in the oven to restore its crispness and spread over it butter, soft cheese or marmalade. Its snappy, tasty aroma is a delight to the palate, supplying the greatest amount of nutriment in smallest bulk. A deliciously wholesome toast. It is ready-cooked, easily carried, is strengthening and satisfying.

Made in Canada.

"Ah-vyoainth," "The New Life"

(Chicago Tribune.)

The subjoined article is from the pen of a well-known writer who enjoys a wide acquaintance among the men who instigated the recent Irish rebellion in Dublin and who is a sympathetic student of the Irish Nationalist movement. The men who have been executed for participation in the uprising were well known to the writer, whose name is withheld for obvious reasons. The article, "Ah-vyoainth," which in the Gaelic tongue means "The New Life," throws a new light upon the recent rebellion and attempts to clear away some of the misrepresentations which have been circulated about the motives behind the Irish uprisings.

EVE[illegible] Irish revolution is past, and [illegible] wreckage it is now possible [illegible]ly what lies behind it, but [illegible] what is ahead. Some [illegible] Fein leaders have passed [illegible]; those who remain alive will [illegible] be in the forefront of the new Irish Parliament, as Sir Etienne Cartier—the giant partner of Macdonald—became a Canadian constitutional leader after he lay down his gun [illegible] the Papineau rebellion of 1837.

"The Sinn Fein leaders are not by nature revolutionists—nor even agitators. Had a satisfactory measure of Home Rule come into operation before or since the war, this rising never could have been. That I know.

"Had the three or four nominal leaders of the Irish people (resident ten or twelve months a year in London!) made a sincere effort in the past three years to meet the so-called young irreconcilables half way instead of treating them as pariahs, this Easter rebellion never would have been.

"This also I have reason to know.

This insurrection in Ireland has not set back the hour of home rule. The man is playing with words—or with votes—who says so. Men of pure purpose offering their lives for their country do not defer its legislative liberty in this century.

The insurrection was not, as we have variously read, a movement urged by a self-seeking Germany or a few remote Irish-Americans upon hot, unthinking young Irishmen. It is something vastly more complicated.

The men who led it are not mere catspaws of Germany, as the parliamentary spokesman Redmond has stated. They used, and were used by Germany in 1916 exactly as their prototypes used, and were used by, France in 1798. Their one aim was Irish freedom.

They are of two classes—the leaders in Connolly's small Socialist-Labor party, which is identical with such parties in every country, and some of the more ardent from that distinctively Irish body, the Sinn Feins.

These last are not wild-eyed men with knives and bombs, agitating force. Their Gaelic name signifies "ourselves alone," or "in our own fashion." Their aim is to revive in Ireland Irish laws, thought, speech, and ideals, as opposed to the past century of Anglicization. Intellectual, not physical, force was the weapon they normally advocated.

The party has been led by a group of highly spirited young men of remarkably keen intellectual powers who in any country more happily placed would be the leaders of a progressive constitutional party. The rank and file have been merely incredulous as to the sincerity of England's promises to give Ireland its rights. But all alike objected vigorously to the subtle Anglicization of Ireland which until the last decade had proceeded so rapidly ever since the famine.

Ireland as a whole did not rise; most Irishmen have learned the inefficacy of physical rebellions. Yet the Sinn Feins have the personal love, the sympathy, open or covert, of 70 per cent. of the people of Ireland as well as of the Irish abroad. That is particularly true since the 1914 antics in the home rule drama, the threat of conscription, and the early 1916 threat of disarmament of volunteers—as well as several instruments recently of speaking Ir-

I have had the pleasure of an acquaintance with several Sinn Feins. To one somewhat disillusioned with the methods and achievements of professional politicians on two continents it was a mental tonic to come upon a group of men as high-minded, single in aim, and absolutely unselfish as these young intellectuals of Belfast and Dublin.

They were of many callings—alert business men, writers, artists, professional men. I expected to find them dreamers. They amazed me by being shrewd, hard-headed men with only the national feeling over-developed by the friction of alien rule.

They did not, as their critics accuse them, live in the memory of the seventeenth and eighteenth centuries, recalling penal laws, persecutions, and depopulation by sword and slave trade. They were living intensely in the present and future, with but occasional reference to parents or grandparents evicted or dead in the famine.

But they often did talk of the result of the heavy impost of taxes after the Napoleonic wars and of the £200,000,000 of taxes—as acknowledged by the royal commission of investigation—raised in Ireland and spent outside of it in the last hundred years. They were bitter about that, as yet unreturned, and made short work of my argument that the loan advance of £15,000,000 to small farmers purchasing land was a step of restitution.

Nothing but a great, unmistakable act of friendliness and justice, like a complete measure of home rule put into operation, would have made those men believe in England's friendliness or the parliamentary party's effectiveness (they were wearied of words). But a complete scheme of home rule on the Canadian plan was the last thing they were likely to get; and they knew it.

Then came 1914, and their troubles grew acute.

Redmond's acquiescence in the deferring of the emasculated home rule bill, which could only come into force after the war and when Carson had had another chance to hack it, was a red rag to the temper of men never fully credulous of the success of his efforts.

Then the parliamentary party agreed to go recruiting, which the Sinn Feins said openly might be very good for constituents in England or France, but was exceedingly bad and improvident for man depleted Ireland. They said much stronger things as well.

Finally, when the alienation could go no farther, in the end of 1915 the Sinn Feins united with the anti-Carson volunteers and clamored for Eoin MacNeill, the founder of the volunteers, as leader of the Irish nation, instead of Redmond as leader of the Irish parliamentary party. They wanted him as a constitutional leader, for MacNeill is no agitator. It was the one compromise with England which the Sinn Fein party would make. Had this demand been met by Redmond and the parliamentary party the rising never would have been. MacNeill could have, as the recognized leader of Ireland, kept even the hottest young Sinn Feins in leash, so profound was their respect for the man and so firm their faith in his Irish vision. The Irish party, like all other political machines from all time, will yield to revolt within the machine if need be, but never to demands from without. It did not now.

There followed in the early months of this year the warning that arms might presently be taken—the arms that were their one safeguard against conscription or a Carson made home rule bill.

Then came days when Ireland was ripe for anything. Even for—with a little outside encouragement—for that reckless, futile rising of Easter.

But from this period of insurrection and bitterness revert to a more normal Ireland. In the last three years I have had occasion to study the people of Ireland and other European countries in connection with some literary work. I found there, as did another student from the other side of the world, a Japanese scholar of note, what each of us agreed was the most remarkable national and literary movement in Europe to-day—a renaissance of Irish Gaelic thought and spirit and customs which caused the English thinker Gilbert Chesterton to exclaim to me: "Ireland is going to be the salvation of western Europe."

The flower of this movement of rebirth—the Gaelic ahvyoainth (the new life)—is not the Abbey theatre, nor the Russell or Yeats groups, nor Sir Horace Plunkett's worthy efforts to help the farmer help himself, but the Gaelic league, which combines in itself the essence of all these with the revival of the race spirit and the ancient language.

The man who conceived the idea of the Gaelic league and has been for two decades the unadvertised dynamo generating the first forces of this national revival is a quiet, detached university professor, an Ulster Irishman, with a cold and aloof manner, but with a steady Gaelic fire of soul beneath.

For more than a quarter of a century this man has been content to devote his years to the Gaelic movement. He has held himself apart from all political parties, doing his duty as he sees it and asking neither favor nor praise from any. He joined neither the Sinn Fein party of Dublin nor the parliamentary forces of London. Neither Sinn Fein nor Redmondite—he has been just plain patriot, and as such commanded the respect of all of them has Eoin MacNeil, or, as he is frequently called, "the new Parnell of Ireland."

Three years ago, when the Anglo-Irish Carson threatened to invade the south with his volunteers opposed to Irish nationalism—this Irish professor organized the Irish volunteers. They are computed to number now over 160,000 men. MacNeil's idea was to make them a force for defence, not an instrument of attack.

Ever since the war the volunteers and the majority of Irish people, in fact, held it as their gospel that Ireland could send no more recruits to die in France. Ireland, they argued, had undergone economic conscription ever since 1847. She had been bled of her young and fit for seventy years; she had in 1914 less than 200,000 men of military age fit for service.

They reminded the sergeants that of all the civilized countries of Europe, Ireland alone had seen her population in seventy years reduced from 10,000,000 to 4,000,000.

Knowing these things and much more, it was gospel to MacNeil's volunteers to hold their forces together for Ireland, for the development and re-population of their country; for the struggle after the war that Carson has publicly stated he still will wage if home rule is granted.

And it is these men who have apparently in few instances and then only locally joined in the recent rising, who will form with the Gaelic league the backbone of the Irish Ireland of tomorrow. The subdued and decimated Sinn Feins will—until such time as a complete home rule measure is given—remain suspicious and irreconcilable. Just as the Canadian party did between the years of 1837 and the confederation of Canada.

Ireland is practically situated now as Canada was after 1837. Conditions will more and more clearly define and develop the two main parties usual to every country; the conservative and the progressive.

Ireland's condition of a subject country will throw in to her progressive party the additional temper of an intensified national feeling. It is out of this progressive party the next leader is due. Who will be the man of destiny? Meanwhile the Irish Ahvyoainth has received its baptism of fire and blood. It is born again.

It has already produced an infant school of art based on the old Celtic that is equaled in significance and brilliance of design only by Bakst and his followers of the Russian school.

It has produced the most artistic theatrical movement in western Europe. It has made certain the revival of the Irish language which next to the Persian is the purest Aryan language in existence. It has sent young Irish manhood with new zest and self-respect and temperance in the agricultural industrial development of Ireland. It has made the soul of Ireland rise out of a slumber that was the gateway to death. Its future success is beyond question.

Taffeta shoulder capes such as our grandmothers wore, almost as quaint and old fashioned, are back in popular favor. They are shown in fascinating colors and trimmed with old little ruffles and ruchings.

DANGER IN MUSHY FOODS.

They Affect the Saliva and Lack Necessary Mineral Elements.

If you want to prevent your teeth from decaying keep your saliva alkaline. The saliva has two functions, the functions of which is to saturate the food while it is being chewed and to prepare it for action of the gastric juice. The second, and no less important, is to keep the teeth and the cavities of the mouth clean.

In an article in the Medical Review of Reviews, T. Bendict Furniss says that we have got so far away from natural life that only five persons in 100 have alkaline saliva.

Chewing stimulates the salivary glands. Soft, starchy, mushy foods, from which the mineral salts have been extracted, need little or no chewing, so the salivary glands are not stimulated. And they do not supply the mineral elements that are necessary to the fluids of the body. Such foods stick between the teeth and in the recesses of the mouth, where they ferment and decay and become the breeding ground for bacteria. The bacteria generate acids which eat away the substance of the teeth, making holes in which more food lodges, and so the evil process goes on.

The normal alkaline saliva is one of the best of the protectors of the body against the attack of bacteria. Not only is the saliva slightly bactericidal, but its alkalinity counteracts the acids produced by these bacteria.

Starchy foods should always be accompanied by fruits or berries, for the acid in these has the peculiar property of changing to an alkali in the body, and besides, they are the best of stimulants for the salivary glands.

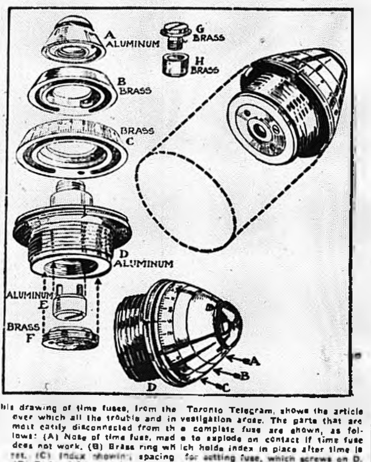
THE SEVEN DAYS' KING.

Short and Tumultuous Career of a Neapolitan Fisherman.

In 1647, when the kingdom of Naples was under the grinding rule of Spain, a fisherman of Sorrento was stung to madness by the indignities offered his wife by Spanish officials because she had attempted to smuggle a few handfuls of flour. So furious was he that he tore down an edict that had just been posted by the authorities.

The whole population, including women and children, rallied around him. Forty years of Spanish oppression had made them frantic. They terrified the viceroy, resisted the soldiers successfully and killed many of the Spanish residents. They secured a revocation of oppressive edicts, the abolishment of oppressive taxes and full pardon for all who engaged in the insurrection.

The fisherman, whose name was Masaniello, was the leader in all this and became the idol of the people. He ruled Naples for seven days, but his success seems to have turned his head. He became dictatorial and oppressive and was put to death by the populace. Hence he is called the "seven days' king."—Argonaut.



This drawing of time fuses, from the Toronto Telegram, shows the article over which all the trouble and investigation arose. The parts that are most easily disconnected from the complete fuse are shown, as follows: (A) Nose of time fuse, made to explode on contact if time fuse does not work. (B) Brass ring which holds index in place after time is set. (C) Index showing spacing for setting fuse, which screws on D. (D) Body of fuse, made of cast aluminum. Complete fuse parts in position at bottom drawing.

"K. of K."

Perhaps the thing that one would say first of Lord Kitchener is that he, more than any other man, served in Britain as the symbol of strength, of determination of the will to bear and to do in the terrible first months of the great war. When, with the coming of war, there was the whisper, then the assertion, that Lord Haldane would go back to his old post, Britain and Britain's allies alike felt a sense of apprehension, of doubt. All this was dispelled when the fact was established that "K. of K." was to go to the War Office.

In the months that followed, when England had to create out of nothing armies, officers, a system and a machine, it was Kitchener who in the public mind stood for the success of the tremendous undertaking. The first force that crossed the seas after the expeditionary army had fought itself to a shadow was "K1." The very posters that bade men enlist bore the face and name of the man who had conquered the Soudan and brought civilization back to the land where Gordon perished.

Never in history, not even in our own American civil war history, has there been a more marvellous or more splendid voluntary raising of a nation than that which answered the call to the colors in Great Britain in the early months of the war. Those who volunteered were numbered by the millions. Not only did all that was best in Britain respond, but the host that marched was beyond the calculation of any who based estimates of British response upon records of volunteering in the past.

The task that was Kitchener's was in magnitude beyond that which any general has confronted. In character it was like that which was faced by the elder Carnot in France and by McClellan in our own civil war. It was the task of finding the guns, the officers, the munitions, not for an army, but for a nation long given over to the habit of peace, and never before in history confronted by such an immediate and tremendous peril.

In the present time men talk about mistakes. Mistakes were made, Kitchener himself was responsible for some, but the main mistake was not his. It was after the mistakes had been made that were possible that he was called in to perform a miracle, and while the miracle itself was performed men criticised the incidental mistakes, but hereafter men will equally marvel at what was accomplished.

In a very definite and enduring fashion Lord Kitchener will be indistinguishable from that great national response which England, Scotland and Wales made to the call to the colors. Generals failed at the front and at the rear, exactly as generals failed us in the civil war and with the French in the revolution. Statesman and politicians blundered and faltered, but behind this, underneath this, the millions of British men, slowly, steadily transformed themselves voluntarily from civilians into uniformed servants of the state.

It is a wrong idea that any man, any soldier, can transform a civilian population into an army, speedily victorious, immediately efficient. Napoleon the Great found Carnot's army at his hand when he began his wonderful career, but Carnot, who made the army, bore a full burden of defeat. It was not Kitchener's fault that the first armies were not the rivals in achievement of the Napoleonic. It was his claim to distinction, and it will be an enduring claim, that under his direction armies were created which could take the field so promptly and hold the German armies in check.

What Kitchener did will be tested hereafter, so far as the quality of his armies is concerned. But what Kitchener did, what Britain did, in providing these armies is a final answer to the challenge of the Germans that the British were a decadent people who would not defend their possessions or their liberties and that British armies were and would remain mercenary.

On the military side, Kitchener was a successful colonial soldier. He was not a great general; in the old fashioned sense he was hardly a general at all. He was the man who carried a railroad into the desert, created an instrument which had accomplished its main task before the Battle of Omdurman was fought, for the result of the battle was inevitable once his army was ready. South Africa did not add greatly to the name of "K. of K." He was never the commander of large armies in the field, and he never fought a battle comparable, not with the Marne of Flanders, but with those of Marlborough or Wellington.

Yet men will recall now that when England was still in the dark as to the extent and length of the war it was Kitchener whose grim forecast of three years first told the truth—a truth that seems now certain to be realized—that three years was the shortest time in which victory could be obtained.

About soldiers almost infallibly legends gather. Kitchener was not wholly fortunate in the legend that grew about him. He was neither as grim nor as taciturn as men fancied. He was by no means as reserved and as unapproachable in fact as in fiction. But in the nerve-racking hours of the opening of the world war the legend served the most useful of purposes. What Englishmen believed of Kitchener was the thing that Englishmen desired to believe of some one in authority. What men held true of him it was necessary men should hold true of some one in the midst of crumbling reputations and broken dreams.

The passing of "K. of K." will leave the British military situation unchanged. Already Robertson has become the real force in the military establishment. In the larger sense Lord Kitchener's work was done. If McClellan had died on the morning of Antietam his fame would have endured in our own country as the man who made the Army of the Potomac and prepared the way for Grant and Appomattox. It is difficult not to feel that Kitchener was more fortunate that McClennan and that he lived to finish his part of a stupendous task and at the end found the death which insures undying fame.

When "K. of K." came to his post, he found an expeditionary army of 161,000 and a reserve of some hundreds of thousands poorly equipped and imperfectly trained. Almost 5,000,000 men have since joined the colors. A nation has responded voluntarily in a fashion which will remain a thing of wonder forever. The work has been completed by conscription, as we in the Civil war had recourse to the draft when those who were willing had marched. So far this is the great, the enduring fact in British history in the present war, and it is the fact that men will hereafter associate with Kitchener. No man ever died with a fame more secure, and whatever passing sorrow his death may bring to his country, no soldier was ever more fortunate in his fate.—New York Tribune.

Earth's Dust Blanket.

When the air is very thick and hazy it may contain floating dust particles to the number of from 10,000 to 20,000 in every cubic centimeter, while a cubic centimeter of very clear air may contain only from a dozen to a few hundred particles.

One observer's data indicate that there is a relation between the quantity of dust and the temperature of the air. A great amount of dust, it is thought, increases the temperature in the daytime and checks the fall of temperature at night.

The reason is that the presence of dust serves as an obstruction to the free radiations of heat through the air. The sunbeams pass through very pure, clear air without lending much heat to it, and at night the heat received by the ground during the day readily escapes through the same air; but if the atmosphere is heavily laden with dust, the sun's rays are partially arrested by the particles which, become heated, in turn warm the air, and in like manner heat radiated from the earth at night is retained in the hazy layers of air in contact with its surface.

Without its atmosphere, which serves as a coverlet to protect it against the fearful cold of space, the surface of the earth would be frozen like that of the airless moon. But the data gathered by reliable observers show that the atmospheric blanket wrapped around our planet varies in its power to retain heat in proportion to the amount of dust particles that it contains.

Influence of College Men.

An educated men filter through the community reforms are obtained that twenty years ago seemed millennial. The separation of local from state sources of revenue, the separation of local from national elections, the treatment of a franchise as valuable property, the discriminating between ordinary industry and natural monopoly, the practice of scientific charity and penology, the concentration of responsibility in government—these and a score of other good things which once seemed as far above popular comprehension as four dimensional space have come to pass, thanks chiefly to the radiations from the classrooms.—Century Magazine.

It's as hard for a young woman to lose a millionaire as it is for a young man to lose an heiress.

THE GOLD SOVEREIGN

The sovereign is a coin struck at the Mint. It is composed of eleven twelfths of pure gold and an alloy of one-twelfth of copper, the alloy being added to make it harder and thus render it more durable, writes Mr. A. W. Gallie in the "Fortnightly Review." It is the standard of value of the Empire. When quite new it weighs 123.27447 grains, but in the early days of its existence the contact of its sharply milled edges with the sharp and harder steel-edged shovel of the banker's cashier soon clips it of its decimal points. To meet this difficulty of wear and tear, and to allow it a sufficient length of legal life, a sovereign remains a legal sovereign until it is worn down in weight to 122.5 grains. It then becomes "standard gold"—standard gold means eleven-twelfths pure gold and one-twelfth of alloy, usually copper, and the Bank of England is under statutory obligations to buy it at three pounds seventeen shillings and ninepence per ounce.

The value of an ounce of standard gold is three pounds seventeen shillings and tenpence halfpenny, quoting it in terms of itself.

In the matter of half sovereigns the margin allowed for wear and tear is greater. A half sovereign, when new, weighs 61.63723 grains, and remains legal tender until reduced to 61.125 grains; below this weight it ceases to be legal tender.

The extra margin allowed in the case of half sovereigns is on account of the greater superficial area of metal exposed, the surface of two half sovereigns being much greater in extent than the surface of one sovereign. The statutory obligations of the Bank of England are alike applicable to the half sovereign and the sovereign.

Tokens mean all silver and bronze pieces struck at the Mint, and recognizable as having been so struck. They differ from coins in having a face value in no way related to their intrinsic value—for example a new half crown is of no greater value considered as a token than an old half crown which is worn down to two thirds of its original weight. Both old and new half crowns are worth on their face value one-eighth of a sovereign. The value of the metal contained in a new half crown is about one shilling and three pence and the value of the metal contained in the old half crown is about ten pence.

It will be seen from the foregoing definition of a sovereign that its wastage during its legal life is a little more than half a grain, about one penny. These differences in value are so small where the use of one or a dozen or so of coins is involved, as to pass unrecognized by the general public and unheeded by those who are fully alive to the fact. It is partly due to non-recognition for the varying intrinsic values of gold coin, and partly due to non-recognition of the cumbersomeness of large masses of metal that much misconception arises as to the actual function performed by gold coin.

Gold coin (and its tokens, shillings and pence) is used among neighbors in small cash transactions, but it is not used, nor could it be used, among merchants in settlement of accounts. This latter function it is a part of the bankers' business to discharge, and it is carried out by them in the cheapest, quickest and safest way possible, by the interchange of cheques and bills entrusted to them by their clients at a place called the Bankers' Clearing House.

The Bankers' Clearing House is a large room in the city where bankers "settle up" accounts with each other every day. Every banker brings all the cheques, etc., he holds, drawn on other bankers, to the Clearing House, and the Clearing House gives him credit for the whole amount. The Clearing House (on behalf of all the other bankers) holds documents drawn on this banker, and the total of these is placed on the other side of the account. A memorandum of the difference between the two totals, either for or against the banker, is forwarded to the Bank of England at the end of the day, and the banker's account in the ledger of the Bank of England is either debited or credited with the amount of that difference, one way or the other. These differences are, as a rule, small, and the labor involved in recording them is insignificant. A few strokes of the pen and the thing is done. In this way the wholesale business of London is settled in a currency of promises—promises far too valuable to be broken, but the cheapest currency in the world. Cargoes of merchandise have changed hands, but the gold in terms of which the values of these cargoes have been quoted, has remained stock still on a number of trucks in a cellar in the Bank of England.

Squeaky Shoes.

While conducting a research for information on the origin of certain fashions of the past I discovered the reason for the existence of the squeak in shoes.

The squeak was once deemed fashionable, and men of great importance in the affairs of the country demanded it in their footwear, and cobblers were paid two shillings extra for putting it in. The squeaky boot denoted the approach of some one of importance, and the way was made clear at once in the same manner as a bicycler's shrill whistle warns you to look to your interests.

During the squeaky period men found it difficult to sneak into the house after 12 midnight without being discovered and disgraced. Removing the shoes before entering the house is an invention which followed the squeaky shoe era, and while the former is now almost obsolete, the latter is still in vogue and as popular as ever with married men.—Zim in Cartoons Magazine.

Pasteur's Gift to Society.

The normal death rate of civilized countries before the days of Pasteur was about thirty in a thousand of the population. To-day it is about fifteen in a thousand in the more progressive nations. Think what a saving of fifteen lives a year for every thousand of population means when applied to half the earth! It means the averting of 12,000,000 untimely deaths annually. It means more than 25,000,000 cases of illness avoided. It means health and happiness in 20,000,000 homes rather than disease and distress.—Bulletin of National Geographical Society.

TREASURE OF LAHM

The fascination of buried treasure is one of the romances of the world. It is given to very few to find a hidden jewel of fabulous value; and when discovered, it is generally conveyed away by stealth, and few besides the finders ever see it. But a scientific excavator is sometimes rewarded beyond all expectation by the finding of treasure worth a king's ransome. This has been notably the case with the British School of Archaeology in Egypt; for, winter, when digging round the pyramid of King Senusert II. at Lahun, Professor Flinders Petrie and his students came upon the tomb of a princess. Mud half filled the chamber, in the centre of which stood the great granite sarcophagus. At a glance it was obvious that the inevitable tomb-robber of ancient days had been there, for the lid of the sarcophagus had been pushed slightly back and a hole large enough to admit a boy had been roughly broken through the solid stone. The sarcophagus was empty; not a vestige remained of the body of of the princess, not a fragment of the wrappings. The plunderers had evidently removed the mummy whole, to unwrap and rifle at their leisure in a safer place.

In the side wall of the burial chamber, within arm's length of the sarcophagus, was a small recently, insignificant and of no account to all appearance. But appearances are proverbially deceitful, and this poor little niche contained some of the finest and most magnificent pieces of jewelry that the ancient world ever produced. Three caskets of ebony and ivory had been set here, each casket adorned with designs in gold, carnelian and turquoise. The weight of gradually-accumulating mud proved too much for the fragile material, and the caskets collapsed, and were reduced to innumerable slips of ivory mingled with fragments of ebony, gold and cut stone. Above the caskets, and even above the layer of mud which completely hid them, lay a crown, of a design unique in Egypt. This diadem consists of a plain circlet of pure gold, encrusted with rosettes inlaid with colored stones; in the front of the circlet, so placed as to stand above the brow of the wearer, is the head of a cobra-snake with hood outspread, worked in pure gold and inlaid with cut stones; at the back rise the two tall straight feathers—emblems of the god Amon—also in gold; and from the back and the two sides fall long streamers of gold.

Inextricably mixed with the fragments of the caskets were the jewels to be worn on the neck and arms; bracelets, armlets, necklets, strings of amethyst beads of an exquisite dark purple, and two pectorals or breast ornaments. These two last would, alone, prove the ancient jeweler to be, both in design and technique, the equal if not the superior of the modern craftsman. The design is somewhat heraldic, the device of the Royal cartouche supported on either side by a falcon and upheld by the emblem of eternity. The whole design is carried out in gold wire soldered on a plate of gold, every little detail of the hieroglyphs and of the feathers of the falcons being outlined in the wire. The tiny spaces thus left were then filled with minute pieces of lapis lazuli, turquoise, and carnelian of a deep and glaring red. The workmanship is so exquisite that the effect is that of the finest and most delicately-worked cloisonne enamel.

The bracelets are made of tiny beads of turquoise and carnelian, each cut out separately by hand. These had been threaded with gold beads of the same size between long "spacers" of gold. The armlets were made in the same way, and were fastened by "slides," decorated with the King's name in the same kind of inlay work as the pectorals. Two great necklaces of huge gold beads in the form of cowrie shells and of double lions' heads show that the ancient Egyptian jeweler could make ornaments which should be effectively gorgeous when seen from a distance quite as well as the exquisitely delicate pectorals, which require a magnifier to reveal their amazing workmanship.

Some pieces of the toilet apparatus of the princess were placed in the tomb with her, and we can see that no modern lady can compare with Pharaoh's daughter in the beauty of her toilet implements. The mirror is of silver, the handle of black obsidian, inlaid with gold and colored stones, and surmounted by the head of the Goddess Hathor in gold. Such a mirror is unique in the history of the goldsmith's art. The little perfume vases and the pot for eye-paint are of black obsidian, with wide bands of gold.

As the hair of Egyptian ladies was cut short to be worn with comfort under the fashionable wig, the princess owned two knives for this purpose; these have bronze blades and handles of pure gold, and accompanying each knife is a little stone slip for sharpening.

The Egyptian Government has claimed the crown, the mirror, and one pectoral for the Cairo Museum, but the rest of the treasure has been brought to England and is now being shown by Professor Petrie, with all the other objects found by the British School in Egypt. Among the other finds are some charming little statuettes in wood and stone, wide collar necklaces of the beautiful blue fayence beads so characteristic of Egypt in ancient days, gold beads and ornaments, and amethyst necklaces.

Of historical interest are the fragments of Kamares ware from Crete, showing the connection between Egypt and that island in the twelfth dynasty, a connection which has been shown before by Professor Petrie, and is further confirmed by the present find.

The most interesting object as illustrating the religious beliefs are the "garden of Adonis," pans of earth in which corn has been grown to the height of a few inches as an emblem of the resurrection. These were deposited beside the tomb, in the same way as the peasants in some parts of Italy at the present day deposit similar "gardens" in the churches beside the tomb of the dead Christ on Good Friday.

A true friend embraces our objects as his own. We feel another mind bent the same end, enjoying it, insuring it, reflecting it and delighting in our devotion to it.—Channing.

COULD NOT SLEEP
Nerves Were So Bad.

To the thousands of people who are tossing on sleepless beds night after night, and to whose eyes sleep will not come, Milburn's Heart and Nerve Pills offer the blessing of sound, refreshing slumber, because they restore the equilibrium of the deranged nerve centres, thus restoring strength and vitality to the whole system.

Mr. Arthur McCutcheon, Mt. Pisgah, N.B., writes: "I have been much troubled with my nerves, and could not sleep for hours after I would go to bed. I would toss and turn from one side to the other before I could go to sleep. I would then wake up in the night, and lie awake a long time before I would [illegible] again. I thought I [illegible] try Milburn's Heart and Nerve Pills, as they were recommended so highly. I now get to sleep without any trouble; my nerves seem quieted, and when I lie down I go to sleep quickly. Anyone who is bothered with their nerves should keep a box on hand."

Milburn's Heart and Nerve Pills are 50 cents per box, 3 boxes for $1.25; at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

SIR WM. ROBERTSON.

Something About the British Chief of Staff.

Some time ago an English general found himself at dinner beside a woman for many years famous in London society. In the course of conversation he mentioned, quite naturally, that the last time he had seen her he was standing behind her chair in "uniform"—not the King's, but a private employer's, and not of khaki, but of plush. He had been a footman before he became a soldier.

The general was Sir William Robertson, whose name has been so frequently quoted in recent speeches.

The story has more meaning than most anecdotes of great men, because it does illustrate the simplicity and unaffected character of this gifted organizer. He does not, like some self-made and self-educated men, weary all and sundry with the miracle of his success; he does not like others, shrink from all recollection of humble beginnings. He simply accepts the fact, as all others, with perfect balance, it is nothing to be ashamed of, but nothing very remarkable after all. Was not Murat a stable lad, Lannes a dyer, and Ney a peasant?

Balance—the balance of energies and not of doubts or hesitations—is in fact, the leading characteristic of Sir William Robertson's character. His face bespeaks quiet strength, the massive head set on broad, square shoulders, the marked and rather heavy features, the shaggy eyebrows, the penetrating physical strength. His ordinary expression is one of purposeful gravity, but there is humor and sympathy in his clear eyes when occasion calls, and he knows how to laugh as well as any north countryman. He belongs, in short, to that plain, simple type, strong and kindly, but forceful in word and deed, common in Northern Britain.

But though he belongs to the Highland Robertsons, the only mountain clan of Saxon blood, he himself was born 56 years ago at Woburn, being the eldest son of Mr. Thomas C. Robertson. After the start in life to which reference has been made, he enlisted in the Royal Scots Greys, and soon attracted attention by his ability, his extreme thoroughness and his high sense of duty. In 1888 he was given a commission in the 3rd Dragoon Guards, and from that time his career has been one of ever-increasing distinction. Yet the man is so modest, so averse from any kind of display, that outside of the army few had heard of him until he became one of the greatest figures of the war.

Sir William was railway transport officer in the Miranzai and Black Mountain expeditions on the north west frontier of India in 1891, and almost immediately after was appointed a staff captain and D. A. Q. M. G. in the intelligence department at army headquarters at Simla. He served as intelligence officer with the Chitral relief force in 1895, and then nearly lost his life. His party was treacherously attacked, and he was left for dead by his escort. He survived, however, his very serious wounds, and came out with a reputation that ensured his employment as D. A. A. G., for intelligence with army headquarters in South Africa during the Boer war.

Six years at the War Office and six at Aldershot added to Sir William's reputation as an administrator. His three years as commandant of the Staff College made his name a household word among the corps of officers. He was strict without undue severity, thorough without pedantry. As a lecturer, this highly practical soldier, the ideal of a man of action, was a most conspicuous success.

In 1913 Sir William Robertson went to the War Office as director of military training. On the outbreak of war he joined Lord French's staff as quartermaster-general, and was specially mentioned for his services during the retreat from Mons and the subsequent advance to the Aisne.

He is now chief of the imperial general staff.

KEEP THE BOWELS REGULAR AND AVOID CONSTIPATION.

When the bowels are not kept regular they become clogged up with waste and poisonous matter, causing constipation, biliousness, sick headaches, piles, and all kinds of liver troubles.

Milburn's Laxa-Liver Pills will regulate the bowels so that you may have a free and easy motion every day. One pill every night for thirty days will cure the worst cases of constipation.

Mr. John J. Smith, Elginburg, Ont., writes: "I had been troubled for a great while with constipation, and tried many different remedies which did me no good. I happened to try Milburn's Laxa-Liver Pills, and I have found them most beneficial."

Milburn's Laxa-Liver Pills are 25 cents per vial, or five vials for $1.00; for sale at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Saturday being DOMINION DAY this store will be closed all day

Children's Wash Hats

New American Shapes that look very chic and are very serviceable. They come in white and colored, the latter in very becoming shades, others with white crowns and colored brim. They are very new and certainly stylish. Prices... **50c, 75c and $1.00**

NEIGHBORING VILLAGES & COUNTRYSIDE

News of the Week Collected by Staff of Live Correspondents

DUNKELD

The people of Dunkeld school section held their annual picnic on Friday afternoon in Mr. John Chisholm's bush. In spite of the showery appearance of the weather, there was a large crowd, and all report a good time.

Bernice Garland, on behalf of the pupils of the school presented the teacher, Miss Keith, with a beautiful brooch. The address which was read by Ellen Waechter is appended:

Dear Miss Keith,

The time has come when our relation as teacher and pupils is about to be severed and we feel that we cannot let the separation take place without expressing our appreciation of your services among us for the past three years. The school has been a heavy one, and we know we have often taxed both your strength and your patience to the utmost with our carelessness and indifference. To some of us you are our first teacher and to some of the others the last one, but we will all remember you as a kind and faithful teacher. We hope you will forgive and forget all the unpleasant things that have happened in our school life and cherish only the pleasant memories. We all look forward to seeing you and hearing of you often and you will have our best wishes for your welfare wherever you are. We would now ask you to accept this brooch as a token of our affection and esteem for you. Also accept our heartfelt thanks for the interest you have always taken in our welfare and we hope that the blessing of God will go with you wherever in His good providence your lot may be cast to dwell. Signed on behalf of the school.—Abbey Boddy, Marjorie Abell, Bernice Garland, Rosetta Chesney, Ellen Waechter, Vera Abell, Aileen Chisholm, Lizzie Symonds.

GLAMIS

Miss Jessie Irwig returned to her home in Berlin on Monday.

Mrs. J. Crawford of Detroit arrived her Monday to see here sister, Mrs. C. McKinnon.

Miss Margaret Symons spent a few days with her brother, Pte. James Symons, Walkerton, last week.

Pte. Hector McLean, Winnipeg, of the 12th Ambulance Corps. paid a flying visit here last week.

We regret to report the very critical condition of Mrs. C. McKinnon. Nurse Russell of Paisley is in attendance. All hope for her speedy recovery.

Mrs. Madden of Hamilton was here last week packing and shipping their household effects to Hamilton where they purpose residing.

Don't forget the Union S. S. picnic at Inver Huron on Tuesday July 4th. Let everyone come, young and old, and enjoy the day together.

Miss M. McLean and nieces, Misses Mary J. and Jessie McLean of Tiverton Sundayed with friends on the boundary.

Mr. R. H. Maber returned from Ottawa on Saturday owing to the illness of his mother-in-law.

Miss Mable Kirktown and friend of Enniskillen were Sunday visitors at her home here.

Pte. Elgar Pyke of Toronto, visited at the home of Mr. J. Cunningham a few days and renewed acquaintances. Mr. Pyke has enlisted with the 167th University Artillery.

Miss Nettie Gunn had charge of S. S. No. 4 school last week during the absence of Miss McDonald who was called home through the death of her aunt.

Messrs Lorne Carr and Victor Kidd of Kincardine were Sunday visitors at their homes.

Messrs Robt. and Dan McDonald of Ripley Sundayed at the home of Mr. C. McKinnon.

All will be pleased to learn that Mr. Neil C. McFarlane who was so ill, is able to be up, and all hope to see him out before long.

The B. Y. P. U. Society invite one and all to their literary and musical program on Friday evening when Miss Harrison of Toronto, Miss Oliver of New York and Miss M. McLennan of Detroit will furnish the music for the evening. Local talent will assist in the program. A free-will offering.

Mr. and Mrs. Dan A. McLean and family and Mr. and Mrs. Roy Kennedy motored to Southampton on Sunday and visited friends there.

Mr. Hugh McKinnon has been working on Mr. Robt. Keys's new house for a few weeks.

On Wednesday evening a number of friends met at the home of Mr. and Mrs. James Thompson, 2nd con. Bruce to spend a social time with their cousin Private Hector McLean of Winnipeg (a former Glamis boy) who was here a couple of days bidding good-bye to relatives and friends before leaving for Overseas service on Friday. The following address was read by Mr. Grant McGregor while Miss Susie Thompson made the presentation of a Masonic and Oddfellow's ring.

To Private Hector McLean:
Dear Hector:—

We have assembled here tonight to spend a few social hours with you, as our appreciation of you before leaving for Overseas service.

It is with mingled feelings, pride, and regret, that we learned a short time ago of your enlistment with the 12th Ambulance corps. Your task will not be an easy one, but when you called on to endure the hardships and suffering incident to a military campaign, we believe you will measure up to whatever occasion may arise, and do your duty nobly and well. During the years it has been our privilege, we have seen ample proof of your honest and upright character and feel sure that you will acquit yourself honorably in your new soldier life. We hope when the conflict is over and the victory won, that the Kind Father that guides us may permit you to return in health and strength to your many friends.

We therefore ask you to accept this ring which shall be to you a remembrance of your friends and acquaintances around Glamis.

Signed on behalf of your many friends.

Jas. Thompson, Richard McGregor,
Jno. Currie,
Glamis, June 21st, 1916.

Private McLean, who was taken by surprise, replied briefly by a few kindly remarks and expressed his feelings of gratitude and appreciation of his friends for their gift and good wishes.

A short program followed. Lunch was served and all joined hands in singing a verse of "Auld Lang Syne."

His many friends wish him a safe journey across the sea and hope to see him back safe again.

On Sunday Mr. and Mrs. S. Stevenson were visited by relatives from London and Port Huron, who motored here in Mr. Pocock's touring car from London.

Mr. and Mrs. McKay and family of Bruce, Sundayed at J. K. McLennan's.

HANOVER

Mr. Ross Young received a cable last week from his brother, Lieut. R. C. Young, recently wounded, that he was was doing well and was being sent to England for treatment.

A womanly woman of gracious and kindly personality who was identified with this vicinity for nearly half a century, passed away on Tuesday evening last at 6.15 o'clock in the person of Mrs. P. O'Neill. Death occurred at the home of her daughter, Mrs. C. J. Habermehl at the advanced age of 79 years and 6 months.

The election of officers of Hanover Lodge, No 432, A. F. & A. M. resulted as follows: Dr. Staples, I.P.M.; R. C. Schaabarough, W. M.; W. Laidlaw, S W.; H. A. Doubt, J. W.; G. A. Rozel Sec-Treas. Chas Coppinger, Treas.; P. W. Mitchell, Tyler; H. H. Engel, Chaplain.

Pte. Murray Hamilton of Hamilton who made his home with Mrs. Arthur Ellis sr. is reported wounded. He enlisted in the 37th battalion of Hamilton, but was transferred to the 42nd. Black Watch. He took part in the recent severe fighting on the western front. He received a bullet in his left hand and a shrapnel wound in his right arm.

MILDMAY

Mr. Fred Filsinger son of the Reeve came up from Berlin to spend Sunday with friends.

CARGILL

Mrs. Dr. Harrison and daughter of Clifford are visiting with Mrs. E. D. Baillie.

Mrs. Alex. Thompson and Mrs. Karl Cliff attended a funeral in Forest last week.

Messrs. Cargill, Clancy, Cameron and Sirrs attended the funeral of the late Dunc McKerracher in Paisley on Sunday.

Miss Nellie Clancy left on Monday for Hanover where she has taken a position as stenographer with the Hanover Cement Co.

Messrs. W. J. Loughleen, Roy Hood John Keyes and J. Brown autoed to Kincardine on Sunday with Chaffeur Henmore and attended the Masonic Parade.

Mr. W. J. McCallum of Brampton was here on Friday.

License Inspector White of Walkerton was a caller in our burg on Friday.

Wm. Alexander of Eden Grove is building the cement walls at Mrs. Elders for the barn they are remodelling.

Miss Ida Overend went to Stratford on Thursday on a few week's visit.

Neil Coutt's held a very successful sale of cattle here on Saturday. John Hall wielded the hammer.

A number from here attended the School Picnic held in Chisholm's Grove on Friday last.

PINKERTON

Mr. A. McKinnon and Miss M. McMillan of Holyrood spent a few days at the home of Mr. Adam Knox.

Misses Jennie and Kathleen Pinkerton, Zila Clark, Messrs Lloyd Pinkerton and Horace Clark autoed to Inverhuron on Sunday.

The Foresters held their annual march to the Anglican Church here on Sunday last when about forty members of the court were present. Rev. Mr. Homer preached an excellent sermon to the Foresters.

The roads in this part of the country are being fixed up properly this year, the grader being much in evidence.

A patriotic service will be held in the Presbyterian Church here on Sunday afternoon next. An address entitled "Heroes" will be given by Rev. Mr. Gale. An honour roll will be presented at the service by the Young People's Society.

We understand that Mr. Fred Paxton has given up his job at the mill with the intention of enlisting in the course of the next couple of weeks.

Miss Sadie Colwell spent Sunday at her home in Kincardine Township.

Mrs. (Capt.) J. A. Reid left on Saturday for a visit to Fort William.

Mr. Herb Fiddes was a Sunday visitor in town.

Mr. Amsey Gregg attended the High Court Meeting of the Foresters in London last week.

A number from here tried the entrance examinations last week. We wish them success.

SOLWAY

S. S. No. 6 are holding their school picnic in Mr. Ormiston's bush on Thursday, June 29th.

Miss M. Weir spent a few days last week with friends in Durham.

Mr. and Mrs. Noah Stroeder and Miss Stroeder from the South Line spent Sunday with Mr. John Stroeder.

Mr. Dave Coates spent Sunday with friends in Chesley.

Mr. and Mrs. A. Weir and Mr. and Mrs. J. Holm attended the funeral of the late Mr. McKerracher in Paisley on Sunday.

Mrs. H. Brandon who has been staying with her sister, Mrs. M. Thomson for the past month returned to her home in Toronto last week.

Miss Gertrude McGarrity returned to Toronto last week after spending a few days at her home here.

Mr. and Mrs. Ben Mitchell and babe spent Sunday with Chesley friends.

Mr. and Mrs. Koester and babe spent Sunday with friends near Maple Hill.

BORN—To Mr. and Mrs. Jas. Cahoon, on Sunday, June 18th, a son.

Mr. Alex. McIntyre had a bee drawing lumber for his new barn on Monday.

OTTER CREEK

The Carrick Camp-meeting which ended on Monday p. m. last, was a great success. It was well attended especially on Sunday, there being over 200 autos. The Rev. S. M. Haugh of Chesley, Rev. H. D. Gischler of Port Elgin, Rev. Rupple from Bruce, Rev. J. S. Burn of Waterloo, Rev. F. D. Becker of Crediton, Rev. A. Sauer of Hanover, Rev. Liebold of Listowel, Rev. Litt of Berlin, Rev. S. Shrader of Ashfeldt, Rev. A. Pletsch of Elmwood and the Bishop Spring of Naperville, Illinois, who rendered some very profitable sermons which were well worth hearing. On the whole the Camp-meeting was well worth while attending.

MACLEAN'S

The MAGAZINE For Real Canadians

Every phase of present day Canadian life is reflected in the July issue of MacLean's Magazine. It is vibrant with the spirit of Canada to-day, interpreted by the Canadian writers of first rank best fitted to treat of the topics assigned them. It is a Magazine with a universal appeal, a live interest for every member of the family. It is the Magazine you have been looking for.

Consider the following list of writers and articles in the July issue, and ask your news dealer for the July MacLean's.

Robert W. Service Whose virile verse places his books at the head of the best sellers, is driving an ambulance car at the front in Flanders, and his war poems, appearing exclusively in MacLean's Magazine, are informed with the spirit and color of the trenches. "The Maggie of Private McPhee" in the July Number is a humorous and yet pathetic treatment of a subject dear to the heart of every Scotchman. C. W. Jefferys illustrations make it more realistic.

Agnes C. Laut Well known to MacLean's readers for her amazing revelations of German machinations in the United States, and whose [illegible] connection with those high up in financial, business and diplomatic circles in the neighboring Republic, has given her series of articles in MacLean's [illegible] positively startling, contributes to the July MacLean's yet another of outstanding import under the heading of "Canada's Greatest service to the Empire."

Brigadier-General Logie A fascinating character sketch of the Hamilton lawyer, who, casting aside his gown and his briefs, is organizing and training as head of Number Two Division, a Canadian army larger than that Britain took to Waterloo under Wellington. By Hugh S. Eayrs.

Immigration after the War Some plain facts are given and deductions drawn by Fisher King. No more vital question is occupying the minds of Canadian statesmen. Every business man should read this article.

Nellie McClung Raises the startling question, "Now that women have the vote in Western Canada, will they will they want to sit in Parliament?" Mrs. McClung, herself a leader in the Western feminist movement, answers this question in a characteristic article in the July MacLean's.

Stringer and McFarlane Continue in the July MacLean's their captivating stories. "The Anatomy of Love" and "Behind the Bolted Door?" Both these men are first flight fiction writers, and both Canadian born and bred, and both with continental reputations.

Then there is that ever-popular department, The Review of Reviews, which gives the busy reader the cream of the world's best periodical literature.

Buy the July MacLean's. Learn at first hand just how good and how interesting this thoroughly Canadian Magazine is.

THE RUNSTADTLER BOYS

Have "Done Their Bit" in King's Service—Mother Has Been Consumed With Anxious Doubt Regarding Fate of Bert and Louis.

Few homes have been touched so closely by that awful conflict on June 2nd in which our heroic Canadians won undying glory, as the little Runstadtler home across the river, where a widowed mother anxiously awaits word of her two boys. That neither son came through safely she knows. "Wounded" was the official news that came to her from her son, Louis, on June 14th. Further than that she has heard nothing of her second boy. Another message came on Friday last announcing that her eldest son, Bert, was "missing." Left a widow when her children were but babes, Mrs. Runstadtler has idolized her boys and the anxiety with which she awaits definite news, may well be imagined.

The Runstadtlers have set an example of which any family might be exceedingly proud. Of the three boys, two are in khaki, and the third, Herman, is as anxious as his brothers ever were to join the colors, but under the present circumstances his place is at home. Mrs. Runstadtler's son-in-law, Pte. Alex Gross, formerly of Hanover, is also on the firing line with the 58th Batt., and in a recent letter from Louis, he stated that he had run across his brother-in-law at the Front.

LATER—Since the above paragraphs were put into type, Mrs. Runstadtler has heard from both of the boys. She was greatly relieved to hear from Bert, writing under date of June 5th, that he is alive and well, though a prisoner of war at Dulmen, Westphalia, Germany. Louis also wrote from a military hospital at Boulogne, stating that his wound was in the left shoulder and that he expects to be sent to England in a few weeks. His wound is apparently of a rather serious nature.

Milliner Assigns

Mrs. Gardiner, milliner, is making an assignment to Mr. James Whitehead for the benefit of her creditors.

◆ ◆ ◆

Major Jones Dead

Major Stanley Jones died prisoner of the Germans on June 8th according to a cablegram received at Calgary from his wife who is a nurse at the Front. Major Jones was wounded three times before the engagement in June in which he was wounded and captured.

◆ ◆ ◆

Acting Brigadier

Lt.-Col. Weir is acting as brigadier of four infantry battalions at London Camp. We understand that the Colonel has been offered a permanent appointment as brigadier, but as it would necessitate his relinquishing connection with the 160th, we understand the Col. has no intention of accepting it.

◆ ◆ ◆

Chaplain Not Appointed.

The rumor that Rev. Dr. Johnston of Montreal had received the appointment of Chaplain to the 160th Batt. is incorrect. It arose no doubt from the suggestion that was made at Chesley on June 3rd that the Dept. be asked to make the Doctor honorary chaplain as a token of the battalion's appreciation of the interest which the distinguished Divine has taken in it. Rev. Dr. [illegible]nston is at present Hon. Chaplain to th[illegible] Minister of Militia, Sir Sam Hughe[illegible]. No chaplain has yet been named fo[illegible] the 160th.

◆ ◆ ◆

Meeting of C[illegible]vass Committee

A meeting o[illegible] the Committee including Captains and [illegible] Canvassers in connection with the [illegible] Patriotic Fund and Red Cross Canvass [illegible] will be held in the Town Hall on Tuesda[illegible] evening next at 8 o'clock. Captains [illegible] who have not yet returned completed lists to the Secretary, will please do so on or before that date as the Commi[illegible] intend to have final list made o[illegible] that date for insertion in the town pa[illegible]

Any accounts outstanding shou[illegible] also be presented on or before th[illegible] above date.

A. E. McNab, Chairman. L. O. Benton, Secretary.

BORN

ZUBER—In Walkerton on Saturday July 1st to Mr. and Mrs. T. Zuber, a daughter.

Miss Verna Donnelly of Pinkerton, a graduate of the Walkerton High School, has been successful in passing the Normal examinations.

Mrs. M. G. Parsons and little daughter, Margaret of Toronto, are spending a week with Mrs. Parsons sister, Mrs. John H. Appel.

Mr. and Mrs. McDonald and children motored up from Toronto this week and visited Mrs. McDonald's parents, Mr. and Mrs. S. A. Rife.

Mrs. Vail, Mrs. A. D. Nelson and Mrs. Creamer and daughter of Montreal are spending two weeks at the home of Mr. Norman Robertson.

Mr. Armand Whitehead who is attending Law School at Osgoode Hall, Toronto, spent Sunday with his parents, Mr. and Mrs. James Whitehead.

Mr. and Mrs. John King, who have left their house in Grange road for a flat in Avenue road, leave to-day for Walkerton to stay with their daughter, Mrs. Harry Lay. Afterwards they will visit Mrs. MacKenzie King in Ottawa.—Toronto Star.

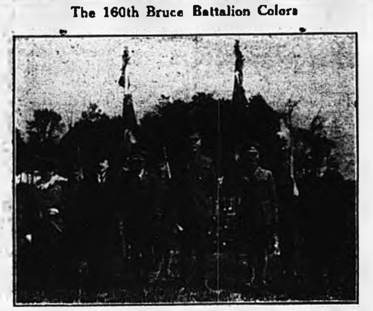
At a Special Meeting called by the executive of the Ontario Historical Society held in their rooms in the Normal Schools Toronto, Lt. Col. A. E. Belcher was appointed Treasurer of the Society to succeed the late lamented C. C. James, C.M.G., L.L.D., F. R.C.S.

Mr. and Mrs. W. H. Adams and babe, came up from Toronto last week, Mrs. Adams will remain with her parents, Mr. and Mrs. R. E. Truax for a month, while Mr. Adams, who is Provincial Organizer for the Liberal Ass'n of Ontario, left on Monday to take up the cudgels in the North Perth by-election.

The Methodist Sunday School has re-elected officers for the coming year. Mr. John McCool was reappointed Supt. by an unanimous vote by ballot. The other officers are:—Ass't Supt. W. G. Bearle; Sec. Claire Hugill; ass't Sec. V[illegible] Tovell; pianist Clayton Tovell; a[illegible] pianist, Miss Florence Cunningham. The School is meeting at 9.55 a. m. [illegible] during the summer months.

Five hundred members [illegible] the 160th were off on leave for the [illegible]ek-end. The boys marched in a body to the station at London, practically all of them heading for points in Bruce County. Among those who visited their homes in Walkerton were.—Capt. A. Todd, Capt. R. Clarke, Sergts Harry Watts, Harry McDougall and Thos. Lamb and Ptes. Bil. Sparling, Joseph Rennie. Andy Zuber, Frank Waechter. Geo. Bluhm, S. Reinhart, Jno. O'Neill, Adam Denny. Wm. Carson, Jack Clarke, Wm. Thompson, Dave Disch, Archie Ferguson, Jack Ferguson, Cortney Knepflar, Fred Anderson and Jack Clancy.

The 160th Bruce Battalion Colors



The Colors for the Bruce Battalion were donated by Mr. M. A. Halliday of Chesley, at a cost of $500. Mr. Halliday's only son, Lieut. A. A. Halliday, is now with the Royal Army Medical Corps with the Field Ambulance, three miles from the firing line, in a French village. From left to right, Mrs. M. A. Halliday, Premier Hearst, Lieut. Hay, Dr. Johnston of Montreal, Chaplain of the 160th Battalion, Lieut. Little of B. Co., and Mr. M. A. Halliday.

Mr. Alf Schnurr spent over the holiday in Berlin.

Mr. Walter Collins of Chicago is visiting at his old home here.

Mr. and Mrs. John Leggett are removing here from Hepworth to-day.

Patterson Bros. are having a fine new plate glass front put in their hardware store.

Knox Church Mission Band presented a life certificate to Mrs. James Coulter.

Mr. N. O. McKay addressed a Farmer's Institute Meeting at Clifford on Tuesday.

Mr. and Mrs. Fulton of Toronto, visited the latter's father Mr. A. Hass last week.

THE RUNSTADTLER BOYS

"Bert," on the left of the picture was officially reported missing in the Battle on June 2nd. He enlisted with the Canadian Mounted Rifles at Peterborough. A finer looking soldier never left Walkerton than the same Bert. "Louis," on the right, went over with the Machine Gun Section of the 34th. He also was in the casualties in June 2nd, being reported wounded. The third brother, Herman, wears civilian clothes, but was just as keen as his brothers to go to the Front.

Mr. Kamer of the Can. Bank of Commerce is holidaying at his home in Cornwall.

The trustees of S. S. No. 1 Brant, (Johnston's Corner School) are advertising for a teacher.

Herman Runstadtler had the tip of his left thumb taken off at the Bobbin factory yesterday.

Mrs. M. Mohr and daughter of Detroit returned on Monday and will spend the summer here.

Miss Grayce Van Horne returned last week from Cape Chin where she has been teaching school.

Mr. and Mrs. J. J. Lemke and Oscar Bergmiller of Berlin were holiday visitors at Mr. Adam Bergmiller's.

Mr. A. J. Wesley removed on Friday to the residential quarters over the Herald and Times office.

Mr. Joe. Betts, lumberman of Wisconsin, who has been visiting at Jos. Betts, sr. left for home on Monday.

Mrs. W. B. Beatty, M. A., D. L. S. of Le Pas, Manitoba, spent the past week at the home of Mrs. Wm. Van Horne.

Rev. and Mrs. G. C. Rock have received word from their son, Sergt. George Rock, that he has been promoted to the rank of Sergeant-Major and has been made an instructor in the School of Instruction at Shorncliffe. His promotion comes as a disappointment to Sergt. Rock who was very anxious to get to the Front but he was assured that his services were more in need at Shorncliffe.

Mr. and Mrs. Hy. Green of Ayton accompanied by Mr. and Mrs. Werner and children motored here on Sunday and spent the day at Mr. Justus Holm's.

Mrs. Harris Lutons and her daughters, Misses Alberta, Florence, and Dorothea of Newmarket were visitors with Rev. and Mrs. J. W. Sanderson the past week.

Mr. and Mrs. Liesmer and babe, accompanied by Mrs. O. Liesmer, and Mrs. H. Schultheis and three children of Mildmay and Miss C. Klemmer of Clifford, motored to the home of Mr. Jno. Ball at Otter Creek on Sunday last and spent the day there.

Misses Gertrude and Kathleen Oberle and Miss Tillie Hartlieb were among those who went on the trip to St. Anne de Beaupre, on Friday. On the return journey the Misses Oberle will visit friends at Galt and Berlin, and Miss Hartlieb will spend a few days at Preston.

Mr. Antoine Mosack of Gagetown, Mich. spent a few days the past week with his brother, Mr. John Mosack. Mr. Mosack conducted a wagon shop at Chepstowe at one time. He is now living retired at Gagetown. This was his first visit to Walkerton in over thirty-years and he enjoyed meeting old friends. He was accompanied from Berlin, by his sister-in-law Mrs. Scalbauser.

McCrum—Yethers

A quiet wedding took place at Saint Peters Church, Toronto, on Tuesday, when Miss Isabel Mathers and Mr. Richard McCrum jr. of Walkerton were united in marriage by Rev. Frederick Wilkinson. Mr. and Mrs. McCrum will make their home in California.

◆ ◆ ◆

160th in Clover.

Mr. Geo. D. McKay, who returned from London, Monday night reports that the 160th Battalion is ideally situated at London. Their camp is well drained and convenient and for general equipment, no battalion at London has anything to compare with the boys from Bruce. They have a cook-house 80x20, fitted with a dozen of the best cooking ranges, gas, hot and cold water. The men have shower baths with hot and cold water, and in fact everything that makes for their comfort and welfare. Mr. McKay is returning to London in a few days to go into the matter of planning a recruiting campaign for Wester Ontario.

◆ ◆ ◆

For Children's Shelter

The old Schnurr property, on the road to the Cemetery will be purchased by the Children's Aid Society and converted into a Children's Shelter. This decision was reached by the Children's Aid and County Council Committee on Tuesday after a good deal of consideration. The Committee has an option on the property at $3450. An architect will be engaged to look over the property and arrange for certain improvements. In case the house can be put in shape to suit the Committee for a moderate sum the deal will be closed. The Schnurr residence, which has been one of the most palatial homes in Walkerton, was originally built by former Registrar Cooper.

◆ ◆ ◆

With the 71st

The latest letters received from the boys of the 71st Batt., written on June 19th, state that although a large number of members of that battalion were then in the trenches, those who have been drafted to the 47th were at that time still in England at Bramshott Camp. However, they are now probably in France as at time of writing they had received their full equipment including gas helmets, etc., and had been confined to their camp awaiting marching orders for several days. The 47th Battalion was recruited in British Columbia and although the local boys deplore the breaking up of their own battalion, they are beginning to like their new associations.

News About Town

Miss E. Beattie left for Toronto on Monday.

Vic Edt left on Tuesday to spend a few weeks at Allenford.

Miss M. Mosack of Preston is spending a week with her parents.

Mrs. McNamara and Hilda are spending a week at Mount Forest.

Miss Jean Todd of Toronto is spending the holidays at her home here.

Mr. A. Everett of Stratford spent the holiday with his family here.

Mr. Fahey of Toronto was a holiday visitor at the home of Mrs. P. Todd.

Mrs. Eli Myles and son Harry, spent the week-end with friends at Toronto.

Rev. John Watt and wife and children were visitors here on the holiday.

Mr. and Mrs. Jos. Morgan left yesterday to spend the summer in Toronto.

Mr. and Mrs. Byers of Listowel visited Mr. and Mrs. Justus Holm this week.

Mr. Jack Player of Philadelphia has been visiting his brother, Mr. R. M. Player.

Mr. Harold Best of Regina spent Saturday and Sunday with his mother, here.

Mr. and Mrs. Sandhauer and daughter, Elsie, were visitors in Toronto this week.

Gunner Geo. Billers of Petewawa Camp spent the holidays with his parents, here.

Mr. Herb Hergott who has a position in Port Credit spent Sunday at his home here.

Mr. and Mrs. R. J. Hepburn and two children spent the week-end at Southampton.

Miss Annie Crawford went to Detroit on Monday to visit her brother, Mr. Harold Crawford.

Mrs. Gould has returned from a short visit to her daughter Mrs. J. J. Cooke of Toronto.

Mrs. Stewart, of Winnipeg, accompanied by two daughters is visiting her mother, Mrs. John McLean.

Mr. and Mrs. Chas. Annis of Toronto spent the week-end with Mrs. Annis' parents, Mr. and Mrs. Dan Wilton.

Pte. Chas. Hopkins of Southampton who is well known here, was among the missing in Monday's casualty list.

Mrs. Paxton, who has been visiting her parents, Mr. and Mrs. Harry McCrum, returned to Port Huron on Tuesday.

Miss O'Drowski of Guelph, accompanied by the Misses Cleghorne, spent Dominion Day with her sister, Mrs. N. C. McKay.

Mr. and Mrs. W. R. Truax and family of Thamesville spent the week-end with Mr. Truax's parents, Mr. and Mrs. Samuel Truax.

Mr. and Mrs. I. Glintz and family accompanied by Miss A. Smith motored to Port Elgin on Saturday and spent the day at the lakeside.

Capt. A. McConnell of Toronto visited his parents, Mr. and Mrs. O. McConnell over the holiday. Capt. McConnell leaves in a few days for Overseas.

P. S. Inspector Campbell and family of Durham motored through town on Tuesday and spent a short time here with friends on their way to Port Elgin.

Mrs. Best leaves on Saturday for Toronto where she will join her son, Harold and accompany him to his home in Regina, where she will spend the summer months.

Mr. Justus Holm enjoyed a visit recently from his brother, Mr. Charles Holm of Clifford. Although he is in his 86th year, Mr. Holm is quite active and made the journey unaccompanied.

Large Congregations greeted the new pastor, Rev. C. W. Cosens, at the Methodist Church on Sunday. The reverend gentleman delivered practical inspiring messages and made a good impression.

Mrs. Jewell received a snapshot from her son, Fred last week showing a hospital group in which he is easily recognizable. Although his legs are entirely paralyzed by shell-shock, and he has to be wheeled in an invalid's chair, "Spot" looks well in the photo and has lost none of his old-time cheerfulness.

The streets were treated to a liberal dose of oil on Tuesday. Some of the grimy fluid was soon transferred to the floors of shops and houses by sticky feet but this condition does not last long. Oil is becoming everywhere recognized as the most satisfactory dust killer and is coming into more general use each year.

Pte. J. Vernard Cooke of Toronto, grandson of Mrs. Geo. Gould of Walkerton, who is known here, who joined the 35th. Battery of Canadian Artillery, at Kingston in January, is now in England at Shorncliffe. Pte. Cooke cabled his parents, Mr. and Mrs. J. J. Cooke of Toronto stating that his battery had a very enjoyable trip across the ocean.

KILLED BY LIGHTNING

Telegram Announces Death of Gordon Craig, Son of Mr. and Mrs. Wm. Craig, Near Haileybury

A fatal accident which touched very closely two of Brant's oldest and most highly respected families, the Craigs and Nesbitts occurred near Haileybury on Sunday. All the information yet received was contained in a telegram from Mr. William Craig, stating that his son, Gordon, had been killed by lightning. Gordon was a bright young lad, of fourteen, the pride of the home, in whom many hopes were centred. The sudden cutting off of this young life will prove a heart-breaking blow to the parents, in which they have the sympathy of the old home community. Gordon had been going to school and during the holidays, had been helping his father on the farm. Mr. and Mrs. Craig are both well-known in Walkerton and Brant, the latter being the eldest daughter of Mrs. Nesbitt, Osborne St. The funeral is being held at Haileybury, to-day (Thursday).

Lost

Buys Durham St Block.

An important real estate deal on Durham St. was put through this week. Mrs. Erdman bought from Mr. Chas. Fox, the old Shaw Block, at present occupied by Mr. M. G. Woodman, merchant tailor, and Miss Beattie, milliner. Mrs. Erdman, who will get possession in August, will convert the block into one large store, where she will continue her Confectionery and ice cream business with the addition of a restaurant. A fine new front will be put in and Mrs. Erdman will have one of the nicest establishments in the town. The second and third storeys, which have been recently overhauled by Mr. Fox, will be used as living apartments. Mr. Fox retains a right of way [illegible] and the vault underneath, and expects to remove the stairway at the west of his property some time soon, thereby adding considerably to the width of his jewelry store.

◆ ◆ ◆

Respected Resident Gone

Mr. Hugh Fraser, whose death was reported in last week's Telescope, was a worthy son of Auld Scotia. He was born and raised in Lochinbard, Scotland, coming to this country with his wife thirty four years ago. They lived for a short time in Oxford County, moving then to Muskoka where Mr. Fraser followed his trade as a mill-wright, until he came to Walkerton to retire thirteen years ago. He was a thorough-going Scot and a man of sterling character. Once a year he was accustomed to go to Ripley to hear a sermon in Gaelic. Besides his widow, he leaves three sons and two daughters, Murdoch, John and Archibald of Walkerton, Mrs. Malcolm Matheson of Ripley and Mrs. Jas. L. Smith of London, all of whom were present at the funeral which was conducted last Thursday after by Rev. Thos. Wilson. The remains were interred in the family plot in the Ripley cemetery.

CARRICK CAMP MEETING

Editor Telescope,
Dear Sir:—

With reference to an article which appeared in the Bruce Herald and Times referring to the Carrick Camp Meeting as probably being on its last legs, we have a few comments to make. The Carrick Camp Meeting was started nearly a half-century ago. The place where the Camp Meeting is held at the present time was bought about thirty years ago. About eight or ten years ago a large tabernacle was built which furnishes sitting room comfortably five or six hundred. In the last thirty years it has always been kept about 6 days. As far as we know it was never held for two weeks. It was decided at the close of this last successful Camp Meeting to again hold it next year, commencing the last Wednesday in June. Now in conclusion we hope the Editor of the Times will be spared another year and be able to be out to the camp ground and see for himself, for seeing is believing. Yes, the Camp Meeting has been a blessing to many. Long live the Carrick Camp Meeting.

ISSUE NO. 27. 1916

WIT AND HUMOR

THE FITTING SORT.

(Baltimore American)

"My glover told me that he [illegible]"

"Most extraordinary. A pal [illegible]"

YES.

(Browning's Magazine)

I. N. Kwizitive—Did you ever [illegible] something for nothing.

I. M. P. Konious—Yes, a pocketbook.

THE NATURAL THING.

(Punch, London)

Visitor—And what did you do when the shell struck you?

Bored Tommy—Sent mother a postcard to have my bed aired.

FREE MEDICAL ADVICE.

(The Christian Herald)

"Doctor, my brother slipped on a [illegible] and wrenched his knee and now he [illegible]. What would you do in a case like th[illegible]"

"I'm afraid I should limp, too!"

MAKING PROGRESS.

(The Christian Herald)

"Hurry, Tommy!" called mamma; we're late. Are your shoes on?"

"Yes, mamma, all but one!"

A DIFFERENCE.

(Browning's Magazine)

"Ezekiel is making a collection of antiques."

"He thinks he is, but they are nothing but a lot of old furniture."

MADE UP TO DATE.

(Life)

Maj. Blocker—Was that a new girl of yours you had at the theatre last night?

Capt. Rashers—No, just the old one repainted.

THEY NEVER SAY THANK YOU.

(The Siren)

Mike—I did an extraordinary thing today. I had the last word with a woman.

Ike—That so? How'd it occur?

Mike—Coming home on the car I said, "Won't you have my seat, madam?"

PROPER SIGN.

(Baltimore American)

"I think instead of tobacco stores having them, cut-rate ticket offices ought to have wooden Indians as signs."

"Why so?"

"To show there is a scalping business going on inside."

PAPA EXCEPTED.

(Punch Bowl)

Bella—Don't worry about Jack, dear! All the world loves a lover!

Stella—Yes. But Papa acts so unworldly at times!

QUALIFIED.

(Baltimore American)

"I saw the bride next door throw things at her husband yesterday morning."

"Good heavens! Not dishes?"

"No, kisses."

THE REASON.

(Browning's Magazine)

"Wonder how he came to make such a bull?"

"Got the wrong steer, may be."

ACCOMPLISHED.

(Life)

Randalls—After 25 years of married life she loves her husband, as much as ever.

Rogers—Yes, and she annoys him in other ways too.

LIMITED HOSPITALITY.

(London Answers)

Burglar (just acquitted, to his lawyer)—I will drop in soon and see you.

Lawyer—Very good; but in the day time, please.

THE SPECIES.

(Baltimore American)

"The fruit of political activity is always in doubt."

"Of course. It may be a lemon or it may be a plum."

OUR PHASE OF EFFICIENCY.

(Washington Star)

"And you have had the same servant for two years?"

"Yes," replied Mr. Crosslots. "She says she doesn't believe in changing after she had gone to the trouble of training the family her ways."

NEVER HAD IT FILLED.

(Detroit Free Press)

"How much gasoline does the tank in your car hold?"

"I don't know. I've never been able to afford more than five gallons at one time."

ENTERTAINING THE SLUMS

(Birmingham Age-Herald)

"Arabella Twubble went down into the tenement district yesterday to brighten the lives of the slum dwellers."

"Highly commendable. What did she do for them?"

"She told them about the good times she'd been having at Palm Beach."

BAD LUCK.

(Browning's Magazine)

"What makes you think your husband is coming back, Mandy? Have you heard from him?"

"No'm, but Ah jes' knows something's gwine to happen. Ah broke a mirror dis mawnin'."

REASON FOR ADMIRATION.

(Washington Star)

"You seem to have a certain admiration for the man who cheated you and got out of town?"

"Yes," replied Three-Finger Sam. "I have. The fact that he could put it over me convinces me that he was [illegible] uncommon smart."

"A LONG LIFE AND A RAPID ONE"

(Harper's Magazine)

Sunday School Teacher—Willie, you may recite your lesson.

Willie—And the children of Israel arose and said unto the King, O then, King, live forever—

Sunday School Teacher (prompting)—And—

Willie (grinning)—And immediately the King lived forever.

A NEW IDEA OF ECONOMY.

(The Christian Herald)

"Tommy," said the fond mother, "isn't it rather an extravagance to eat both butter and jam on your bread at the same time?"

"No, mamma, it's economy," Tommy answered. "The same piece of bread does for both."

A WAR-TIME PUZZLE.

(Youth's Companion)

A company of soldiers dressed in khaki with the bandage-like puttees about their legs, were waiting for their train at a station in Wiltshire. Among the onlookers were an old countryman and his wife.

"Look, Garge!" the old lady whispered, "there's something I can't understand about they sodgers."

"What be it, lass?"

"I can't think how they got their legs into they twisted trousers."

THE SHOWER.

(Detroit Free Press)

"Ma, our son certainly has made good in the city. He's got a fine home there."

"[illegible] it's might swell, Pa?"

"I guess it is."

"Got everything anybody could wish for?"

"Yep. Everything."

"Must be mighty comfortable."

"Tis. [illegible] Ma, would you believe it, [illegible] my bath-[illegible] up!"

WISDOM OF WILLIE.

(Boston Transcript)

Mother (angrily)—Why didn't you come when I called you the first time?

Willie—'Cause I didn't hear you till you called the third time.

Mother—Now how could you know it was the third call unless you heard the other two?

Willie—Easy enough, ma. I knew it was the third time 'cause you sounded so mad.

'TWIXT LOVE AND PRIDE

"Oh, Henry, forgive me!" she exclaimed, with deep emotion. "You cannot leave me like this. I know I have been bad, wicked, deceitful, in every way, but, oh, forgive me. I know well you would never marry me now; and"—lowering her voice—"neither could I ever marry you having once shown you my heart; so there can be no misconception about that. But if you knew everything — how wretched I was, how hopeless, how essential it was that the money should be procured, how terrible it was to me to have to borrow it, and how just and right a thing it seemed to me to give you myself in exchange, having no other means of repayment—you might, perhaps, pity me. Could you only have seen into my heart, you would have read there how real was my determination to be true to you, to make you a good wife, and love you eventually as well as I loved that other."

She broke down and covered her face with her hands. And Lyndon, who had never yet learned the art of being consistently unkind to anything, felt his wrath and wrongs melt away together, while a choking sensation arose in his throat. To see Mildred cry was to him the nearest pain and misery the world could afford. What was he that he should be the cause of tears to her?

He forgot all his own deep injuries, and taking the pretty golden head between his hands, he drew it down upon his breast, where she began to cry right heartily.

"Mildred, how could you do it?" he whispered, presently, in a broken voice. "Had you hated me, you could have done nothing more cruel. Child, did you never think of the consequences?"

"I know I have behaved basely to you," sobbed Mildred. "But I never thought that this would be the end. All might have turned out so differently had—had this day never been."

"I shall never cease to be thankful that this day did come," he answered, earnestly. "Better to wake from a happy dream in time than rest unconscious until the waking is too late. Bitter as it is to lose you now—and no one but myself can guess how bitter that is—would it not be far worse to discover that my wife had no sympathy with me, no thought akin to mine?" He paused for a moment, and then he said, sadly. "It seems a hard thing for me to say, but yet—oh, Mildred, I wish we had never met."

"Is there nothing I can do to make it up to you?" she asked, despairingly.

"No, there is nothing," he answered, regretfully; "all that could be said or done would not obliterate the past. You are crying still, Mildred," raising her face, and regarding it mournfully: "are you very sorry then for your work? And yet a few plain words would have prevented all this. Tell me—when returning the money, which you insisted on doing after your grandaunt's death, why, then, did you not honestly speak the truth? Was that not a good opportunity?"

"Oh, how could I do it, then?" she asked, turning away her head with a little shiver of distaste, "that would have appeared so detestable in your eyes. What?" she exclaimed, accept your kindness gratefully when I was in sore need of it, and then, when I had no further want of it, to throw you off without the slightest compunction? Surely you would have thought that a very unworthy action."

"Still it would have been better than this," he answered, gloomily, beginning to walk slowly up and down the room, while she stood, weaving her fingers restlessly in and out, watching him.

Poor Mildred, the bitterness of her remorse just then made half atonement for her sin. With a heart at once affectionate and deeply feeling, it was to her the intensest agony to see Lyndon, so crushed and heartbroken, and know it was her own handiwork.

For a few minutes there was silence except for the faint sound of Lyndon's footsteps, as he paced heavily to and fro on the thick carpet. At length she could bear it no longer.

"Why do you not reproach me?" she cried, passionately. "Abuse me, speak harshly to me—do anything but act toward me as you are doing; your kindness is killing me. Not all the epithets you could heap upon me would punish me sufficiently for all I have made you suffer. Have you forgotten that I actually thrust myself upon you? That it was I who offered myself to you that fatal night, not you who asked for me? Why do you not taunt me with all this? Have I to put these cruel thoughts into your head, or is it that you are too noble to use them against a woman? If you would only be unkind to me, I think I should not feel quite so wretched."

Lyndon smiled, though rather sadly.

"I am afraid you will have to go on being wretched forever if you are waiting for me to be unkind to you," he said. "Do you know, strange as it may seem, all the displeasure I felt in my heart against you has somehow disappeared, leaving only love and forgiveness in its place. I am not angry with you now, my darling; I am only sad, and a little lonely, perhaps," he concluded, turning abruptly away.

After a short interval he came back to her side again, and went on with a forced cheerfulness that in nowise deceived her.

"However," he said, "of course this state of affairs will not last forever. Time, they say, cures all things. In the meantime I will get through a little traveling, I think, and refresh my memory about certain foreign cities, so good-by for a while, and do not quite forget me during my absence. And"—in a low tone—"remember, Mildred, that whatever you do, or whomsoever you marry, I wish you all the good fortune and happiness that can possibly befall you."

"Are you sure you forgive me?" whispered Mildred, tremulously. "Think of all that has happened."

"I do, with all my heart," he answered.

"And you will promise to think no more of me, but try to love some other girl worthier and better?"

"How shall I find her?" said he, a deep yearning breaking through the lightness of his tone.

"Ah, very easily," she answered; "there will be no difficulty about that. But give me your promise that when you do meet with her you will not shut your heart against her, nor consider all women unlovable because one proved false. I shall feel happier when you have said that."

"Very well," he said, "be happy then. I give you my word that, under such circumstances, I will do my best."

"And"—hesitatingly—"do you forgive me?"

"I do, indeed," he said for the second time.

"Will you not kiss me then?" whispered Mildred.

So he kissed her once again, for the last time, upon her lips, and it was thus they parted.

CHAPTER XXIV.

Denzil did not appear to recover quite so rapidly as had been, at first, confidently expected, the inward injuries he had received—though slight—telling on him more seriously than the doctors had anticipated.

Mrs. Younge had been telegraphed for on the evening of the accident, and had arrived at King's Abbott early the following morning, having elected to travel all night rather than endure the agonies of suspense, though the telegram had been very reassuring.

Her husband came with her, but, having seen his son, and been recognized by him, and comforted by the doctor's report, which was very favorable, had returned home, content to leave him in his mother's and Lady Caroline's care, who sat with him alternately, assisted by a hired nurse of the most substantial dimensions.

The third day showed their patient apparently better than on the preceding one. There had been more decided symptoms of amendment, and he had gone through the dressing of his wounds with wonderful composure and stoicism. But toward evening he grew depressed and irritable, and evinced a faint inclination to wander; whereupon the doctor looked grave, shook his head, and made certain changes in his medicine—but all to no purpose. The next day he was in a raging fever.

So another doctor was hastily summoned from London—one of the greatest men of his day—who came and went through very much the same formula as old Stubber—shook his head, looked grave, said his brother physician had done everything that was necessary, except for so and so, and so and so—took a pinch of snuff, implored the anxious mother in terms of the deepest solicitude to compose herself, and, having pocketed his fee, went back to London again, leaving them all terribly alarmed and dispirited by the pomposity of his manner.

The fifth day after the fever first declared itself Lady Caroline, having insisted on the poor mother's lying down for an hour or two, was sitting in Denzil's room as the time wore on toward evening. Bending over his bed, she noticed a certain change in his face.

"What is it?" she asked, tenderly.

"Mildred," he whispered, with deep entreaty in his tone, and holding out his hand.

"I am not Mildred, dear Denzil," said Lady Caroline, thinking that he still raved; but he said:

"I know you are not," quite distinctly; and then again, "I want her—why does she never come to me?"

Poor Lady Caroline was greatly perplexed; she knew not what to do. Had things been different, she would have followed the dictates of her own kind heart, and sent for Mildred on the spot; but, as it was, she remembered former scenes and Lyndon's recent sad departure, and did not care to take the responsibility on herself of bringing her daughter and Denzil together in such a manner.

"Mildred, Mildred!" called the sick man, impatiently, and then the little ray of reason that had come to him in connection with her face vanished, and he wandered off once more into the terrible feverland, bearing with him the name of her he loved.

For two hours he lay thus, calling, sometimes wildly, sometimes feebly, but always for her, until his loving nurse's heart was smitten to the core.

At length came Stubber, the family doctor, and seeing Denzil in this state, he regarded him silently for several minutes.

"Lady Caroline," he said, with decision, "Miss Trevanion must be sent for, be it right or wrong."

For which command Lady Caroline blessed him secretly and sent for Mildred forthwith.

She came without a moment's delay, and, even as her foot crossed the threshold, a sudden silence fell upon Denzil. He turned—the fever for a time sank conquered—while his beautiful eyes lit up with passionate expectation and fond hope.

Slowly and with hesitation Mildred advanced to the side of the bed, and then Lady Caroline went over to the window, followed hurriedly by the doctor.

What happened after that nobody knew, for Lady Caroline and Stubber, standing with their backs to the bed, and their faces turned to the chilly outer world, could tell nothing.

When at length they returned to the bed, they found Mildred pale and trembling, the heavy tears coursing each other down her cheeks in rapid succession, which are hastily brushed away as they drew nearer, her hand tightly clasped in Denzil's. He had even made an effort to hold her with the poor injured fingers, and had brought them so far that the tips touched hers.

He was quite sane now. His face, slightly flushed, was looking upward; his eyes, glad and happy, were fixed on hers, while she answered back the gaze, forgetful of all else but that he lay before her sick, it might be, unto death.

"Denzil, you are exciting yourself," said Lady Caroline, nervously.

"No, I am not," answered Denzil, his voice clear and distinct, but without moving his eyes from Mildred's; "leave me for a moment."

He waved them back, impatiently, to the window, and neither Lady Caroline nor the doctor could bring themselves to disobey the command.

But Stubber, who was becoming seriously uneasy about his patient, glancing round at him cautiously and surreptitiously, saw what followed. He said that when he and Lady Caroline had again withdrawn, Denzil looked at Miss Trevanion, and that then Miss Trevanion stooped and kissed him, not once, but twice.

This was what Stubber said, but he also added that it was his firm belief that she did it out of pure humanity and nothing more. When two minutes later, he again approached Younge, he found that Mildred had disappeared, and that Denzil was lying perfectly composed, his face turned toward the half-open door. He sighed heavily, but contentedly, and then came back to the realities of life.

"Dr. Stubber," said he, "do you know that I am better?"

"Time will tell," answered the little doctor, sententiously; "and now you must go to sleep if you wish to keep in that much-to-be-desired condition. Lady Caroline, I trust to you to let no more young ladies into the room this evening."

Denzil laughed rather rationally, and, changing over to the other side, in a few minutes fell into a sound refreshing slumber.

* * * * *

Not once again during all the remainder of his illness did Miss Trevanion enter Denzil's room; neither did he ask for nor allude to her in any way, although Lady Caroline noticed the intense look of interest that came into his face whenever her name was casually mentioned.

After a week or two the remembrance of her visit faded, or came to him only as a shadow from the fevered past he had gone through, and not until the doctor had given him permission to quit his bed for an hour or so every day, to lie on a lounge in the adjoining apartment, did he venture to speak of it and try to discover the truth.

It was one morning, when he was feeling considerably stronger, and had Mabel beside his couch, reading to him scraps of poetry that every now and then struck her fancy as she glanced through the volume in her hand, that he approached the subject.

"Is your sister away from home?" he asked, in the middle of a most pathetic subject.

And Mabel answered "No," reddening a little.

"Then I think she might have come to see me before this," he said, with all the fretfulness of an invalid.

"Well, you see, she has all the housekeeping to attend to, now mamma is so much your slave," returned Mabel, smiling; "that keeps her away. She always asks for you, though, and is so glad to hear of your getting on so rapidly."

This sounded rather lame, and Mabel, feeling it to be so, tried once more to resort to her book.

"I suppose it would give her too much trouble to make her inquiries in person," he said, bitterly, "every one else comes in to see me except herself. Surely Lyndon could not object to that?"

"Have you not heard, then?" asked Mabel, hesitatingly. "I fancied you would have known before this. Her engagement with Lord Lyndon is at an end. He has been abroad for the last four weeks."

CHAPTER XXV.

"Mildred's engagement is at an end with Lord Lyndon!" Denzil's pale, haggard face flushed crimson; he put up his uninjured hand and brushed back his hair impetuously, fixing his eyes on Mabel the while. "What caused it?" he asked, with suppressed agitation. "It must have been very sudden. Four weeks ago, you say—why, that was just after——" he paused.

"Just after your accident occurred," said Mabel, slowly; and then she grew frightened, fearing that Mildred would condemn the remark if she heard of it, and determined to make no more admissions, whatever happened. "You are talking too much," she went on, hurriedly; "you are looking very pale. Your mother will say it is all my fault when she comes in. Lie back amongst your cushions comfortably, and I will go on with my reading.

"'We look before and after,
And pine for what is not;
Our——'"

"No," interrupted Denzil, putting his hand hastily over the open page. "I am tired of reading." Then, with a short laugh—"I am afraid you think me a savage—do you?—and are wondering whether I have sadly deteriorated during this illness, or whether I am now, for the first time, showing myself in my real character. The fact is, I like talking to you better than listening to the most perfect poetry that could be written. Now you cannot call that uncomplimentary at all events, can you? I feel as though I had left the world for years, and, having come unexpectedly back to it, am now hearing all the strange things that have happened during my absence—a sort of Rip-van-Winklish feeling, I suppose; so I want you to educate me before I make my way downstairs. Miss Sylverton was with me yesterday, and told me of Charlie's promotion. She said nothing of her marriage, however; but no doubt that will follow, as a matter of course."

"It is almost arranged to take place next month," observed Mabel.

"Queenie," said Denzil, in a low voice, "tell me this—when did I last see Mildred?"

"It was she that saw you fall, and went to your assistance, you know," returned "the queen," evasively.

"I know that," said Denzil—"your mother told me the whole story. But have I never seen her since—in any way?"

"Oh, where could you have seen her?" asked Mabel Jesuitically, and with considerable confusion, turning to arrange some flowers in the small table near her.

"It was only a dream then," murmured Denzil, disappointedly, and said no more on the subject, to his companion's great relief. But the next day he tormented little Stubber to allow him to go downstairs.

"Do, doctor," he implored, earnestly; "I feel I shall never progress toward recovery so long as you compel me to remain in this room."

"And where, may I ask, do you want to go?" demanded Dr. Stubber, irritably.

He had grown wonderfully fond of his patient during the past few weeks, and could not bear to deny him anything but what was impossible.

"To the library," said Denzil, "they can wheel the sofa up to the fire, and I promise you faithfully I will not try to walk. Give me your permission, and then my mother and Lady Caroline can say nothing. I want to go down to-morrow."

(To be continued.)

Thorough mixing is what makes cake delicate and tender

Lantic Sugar

makes the best cake because it creams quickly and thoroughly with the butter which is the hardest part of the mixing. Its purity and extra *"fine"* granulation make it dissolve at once.

"The All-Purpose Sugar"

Never Eat What You Dislike.

I am constrained to protest against the advice given mothers to oblige their children to eat food which they dislike. Most grown people have their likes and dislikes, and if it were punishment to them to eat a despised article how much more so it is to a child to whom small troubles loom as tragedies! The child's distaste should not be discussed, simply ignored until he has forgotten how much he hated a certain article. There are so many good and nourishing things that if one is at all disliked how much better to substitute something else, thereby avoiding issues and friction, which everyone knows are harmful to a child's nerves and health and disposition as well. And, as for letting a child go without his needed nourishment till next meal if he refuses one article, the injustice of it is too apparent to need comment.—Woman's Home Companion.

Minard's Liniment Cures Garget In Cows.

The Simple Faith.

O give me yet the simple faith in
which the fathers trod,
The gospel of the rugged paths that
led our feet to God,
The blood-red road of cross and pain
that we must go—and then,
That doctrine of forgiving love for
men that war with men.

I want that faith that makes no qualms
of creed for you and me,
The Scripture truths that children
learn at some good mother's
knee,
That doctrine of old-fashioned trust in
saving grace and love,
The lessons that the Bible taught of
realms of grace above.

Then mock such simple faith, I know,
and peer at those who pray:
But somehow it seems sweeter here
to live our lives that way,
To Try to keep the golden rule, and
help as best we can
To gain a little joy ourselves and help
our fellow-man.

And so beyond the stilly deeps of wisdom and its scorn
Sometimes unto my ears it seems a
sweeter music's borne
Because that hunger in my heart turns
everything to gold
Beneath the sweet, old-fashioned faith
to which I long to hold.
—Baltimore Sun.

INCREASES YOUR WEIGHT, RESTORES LOST STRENGTH, PREVENTS ILLNESS

Every day come new converts to that great army of men and women who rejoice in new-found health that came to them through the use of that wonderful, blood-renewing preparation called "Ferrozone." Very simple how it acts, all you have to do is take two small chocolate-coated tablets with a sip of water at the close of each meal.

Ferrozone is a marvel. It contains just what thin blood lacks—lots of iron, but mark you, the kind of iron your blood is able to absorb. Ferrozone puts life and vim into the blood. Makes it rich, red and nourishing. Naturally the body is better fed and grows stronger day by day.

Of course digestion must be improved, and probably the stomach will require aid as well. Ferrozone serves the purpose admirably. Those who use it, enjoy appetite and digestive powers far beyond the ordinary.

That tired feeling is replaced by the buoyant, joyous sensation of health and vigor. Day by day as your strength increases, you feel new energy surging through your veins, and know that a great tonic of great merit is at work.

No remedy more nourishing or uplifting, no treatment so sure to bring lasting health, good spirits and contentment. Ferrozone contains just what run-down folks need; it cures because it supplies more nutriment than you can get in any other way. 50c per box or 6 for $2.50 at all dealers, or by mail from The Catarrhozone Co., Kingston, Ont.

Wonderful.

It was in the Boston Museum of Fine Arts. The little man with the hunted look on his face was standing before the mummy of an Egyptian princess. "Isn't that wonderful," he sighed, "to think that any one could make a woman dry up and stay that way!" And silently wiping away a tear he hurried out and caught a car, for it was only twenty minutes to dinner time.

OUR UNRULY SUN.

It Seems to be Trying to Dilate to the Bursting Point.

The French astronomer Puiseux has been busying himself with the constitution of the sun. He finds that, instead of condensing and shrinking little by little, as was formerly supposed, the sun is constantly dilating more and more and approaching the point of bursting. And if the sun blew up there would be no more need for us poor mortals to worry about worldly affairs.

Big suns every whit as important in their own constellations as ours are frequently victims of an explosion. There was one in the constellation of Perseus early in 1901, and since then two at least have occurred in other celestial groups.

Observation has shown long since that the great orb which is our all in all is a most uncertain character. Sun spots, fire blasts and such like phenomena are by no means the most of which he is capable. The manner in which the sun throws off atomic energy and transforms the heavy into light elements, hydrogen, helium, nebulium, archonium and what not spells nothing good for this world, and a mere nothing might lead to a disaster any day.

In short, it is bound to come at some time or other. Unfortunately science can give us no idea as to when. Centuries and even hundreds of centuries are as but a moment in the history of the universe, says Professor Flammarion, and for all we know the sun may have millions of years' more life before it. No man can tell, though, and, just as the strongest of us are struck down in a moment, so the all powerful planet may give out at any time, and when it dies it will make but short work of all of us here below.

A WOMAN'S HEALTH NEEDS CONSTANT CARE

When the Blood Becomes Poor Disease Speedily Follows

Every woman's health is peculiarly dependent upon the condition of her blood. How many women suffer with headache, pain in the back, poor appetite, weak digestion, a constant feeling of weariness, palpitation of the heart, shortness of breath, pallor and nervousness. Of course all these symptoms may not be present—the more there are the worse the condition of the blood, and the more necessary that you should begin to enrich it without delay. Dr. Williams' Pink Pills are beyond doubt the greatest blood-building tonic offered to the public to-day. Every dose helps to make new, rich, red blood which goes to every part of the body and brings new health and strength to weak, despondent people. Dr. Williams' Pink Pills are valuable to all women, but they are particularly useful to girls of school age who become pale, languid and nervous. Thin blood during the growing years of a girl's life usually means a flat-chested, hollow-cheeked womanhood. There can be neither health nor beauty without red blood, which gives brightness to the eyes and color to the cheeks and lips. Dr. Williams' Pink Pills do all this, as is proved in thousands of cases. Mrs. William Rowe, Carlaw avenue, Toronto, says: "I have received so much benefit from Dr. Williams' Pink Pills that I feel it my duty to recommend them to others. I was about completely prostrated with anaemia. I had no appetite, was terribly weak and subject to fainting spells. I suffered greatly from dizziness, and the various other symptoms that accompany a bloodless condition. Remedy after remedy was tried, but to no avail, until a friend advised me to try Dr. Wisallim theram thetamw z z Dr. Williams' Pink Pills. Before completing the second box, I was again enjoying splendid health, and have since remained in that happy condition."

You can get Dr. Williams' Pink Pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

Big Guns Not New.

Modern howitzers and siege guns are giants of destruction, yet, making allowance for time and experience, we must still admire the good old burghers of Ghent, who 500 years and more ago turned out an iron "bombarde" that weighed thirteen tons. This prototype of the up-to-date siege gun had a bore twenty-five inches in diameter. Out of it was projected a granite ball that weighed 700 pounds.

Bronze guns as big were cast half a century later at Constantinople. And when only a little over 100 years since an earlier British fleet was fighting its way into the Dardanelles these big guns crippled six of the English men-of-war and killed or wounded 126 of those on board. One gun of this type weighed eighteen and three-quarter tons, had a twenty-five inch bore and fired a 672-pound stone shot.

Minard's Liniment Cures Colds, Etc.

Poe and the Magazine.

With his stories and his criticisms during the meagre two years of his connection with the magazine Poe was certainly able to reflect that at no time in her previous literary history had put Richmond on the map. But the letter he wrote to Anthon when projecting the Stylus was somewhat flamboyant: "I had joined the Messenger, as you know then in its second year, with 700 subscribers, and the general outcry was that because a magazine had never succeeded south of the Potomac, therefore a magazine never could succeed. Yet in spite of this and the wretched taste of the proprietor, which hampered and controlled me at all points, I increased the circulation in fifteen months to 5,500 subscribers, paying an annual profit of $10,000 when I left it."—Algernon Tassin in Bookman.

Corns Cured Quick Applied in 5 Seconds

Sore, blistering feet from corn-pinched toes can be cured by Putnam's Extractor in 24 hours. "Putnam's" soothes away that drawing pain, eases instantly, makes the feet feel good at once. Get a 25c bottle of "Putnam's" to-day.

ANTIQUES

No industry of the present day offers so many opportunities for keeping alive an interest in the work of ancient craftsmen as does that of the potter, and no craft has been so prolific in competent workers able and willing to accept those opportunities than has this same business of pottery making in its many and varied phases and ramifications.

When the Josiah Wedgwood Museum was opened at Etruria (Staffordshire, England) about ten years ago, a feature that seemed to impress visitors very strongly was the wide variety of objects the master potter had experimented with, from his earliest to his latest days, objects that few other potters had previously given serious consideration to, and objects not usually associated with the pottery industry, yet one and all suggestive of helping to increase its scope and volume and calculated to open out paths of commerce on hitherto untrodden ground. The care with which his experiments were recorded helps us to the conclusion that Josiah Wedgwood hardly knew what ultimate failure meant, for among the proofs of his skill it is possible to trace the greatest final successes from the most persistent initial failures, and wherever we find an experiment tried there is evidence somewhere among records of the Museum of success in the end. His active mind was ever at work to find some new use for one or other of his inventions, utility apparently being his first thought, and many of his earliest successes were in articles in which his pottery only formed a part and in some cases a minor part, but yet calculated to add to the number of ways in which trade might be cultivated and his productions more widely distributed.

Competition with several old-time industries was entered upon and perhaps the art metal workers were the first to feel its beneficial effects. Knife-handle making in pottery was one of Wedgwood's first ventures; snuff boxes were also an important item in those days and this class of production was developed in pottery effects imitative of agates, tortoise-shell and porphyry.

Wedgwood's association with the art metal workers of London, Birmingham, Sheffield, Wolverhampton, Uttoxeter, etc., opened fields of operation it is possible he may not have reached simply with his regular pottery products. Very early in his career we find him working in association with Matthew Boulton and others who labored to advance the art metal industries.

Crabs and Lobsters.

There are many curious points about crabs and lobsters. Every one of either genus is provided with a big claw for crushing and a small claw adapted by its shape for cutting as scissors do. With those two claws they tear the food they capture into fragments and feed themselves literally from "hand to mouth." But there is every reason to suppose that the claws are intended quite as much for fighting as for eating purposes, inasmuch as such powerful hands are not needed for devouring the soft food they prefer.

Is Your Tongue Furred? Have You Headache?

How few feel well this time of the year? The whole system needs housecleaning; the blood is impure; it needs enriching. Nothing will do the work more effectively than Dr. Hamilton's Pills. Take them at night and you feel better next morning. They work wonders in the body while you sleep. Being composed of pure vegetable extracts and juices, Dr. Hamilton's Pills are safe for the young and old alike. Try this wonderful family medicine to-day, it will do you a world of good. Whether for biliousness, headache, lack of appetite or constipation, Dr. Hamilton's Pills will quickly cure, 25c per box at all dealers.

Origin of the Gypsies.

When the gypsies first appeared in England in the fifteenth century the name gypsy was given to them by the English people, who believed them to have come from Egypt. The French, by a similar mistake, called them Bohemians. But a careful study of this race, and especially of their language, shows that they came originally from India. The gypsy language is derived from the San[illegible] as are the other Aryan languages [illegible] India. A similar error was ma[illegible] the English when they call[illegible] American bird a tur[illegible] the impression that it w[illegible] from the Ottoman [illegible] by the French when they [illegible] the same bird coq d'Inde, believing that it came from India.—Christian Herald.

Slavery in England.

Slavery existed in England without any mitigating features worth speaking of until the time of the wars of the roses. Bracton, the famous lawyer of the time of Henry VIII., informs us that the condition of slaves was fearful. It was indeed slavery, pure and simple. All the goods a slave acquired belonged to his master, who could take them from him whenever he pleased, the slave having no redress at law; hence the impossibility of a man's purchasing his own freedom. The only hope for the slave was to try and get into one of the walled towns, when he became free, the townsmen granting him liberty on the condition of his helping them fight the nobles.

Odd Tobacco Pipe Borer.

Travelers among the Sioux Indians are much impressed with the perfect smoothness of the bore in their pipe stems. Without the use of a tool of any kind they make a perfect bore in the twigs of ash trees, which they use for musical instruments and for pipes. To accomplish this end they employ the larvae of a butterfly which inhabits the ash tree. The Indians remove the pith from about three inches from the stick they wish bored, into the cavity they place one of the larvae of a brown butterfly, which gradually eats its way down through the stem until the bore is completed. A little heat applied to the wood expedites the work of the larvae. The Indians consider both the tube made in the and the larvae as sacred Allar. Idols.—Popular Science Month

Up After Zeppelins

The orderly from the telephone com brought the news. Zeppelins ad been sighted at—and were proceeding in a northerly direction. This ant that they would be overhead t any moment."

A few sharp orders and the station gan to throb with life.

Mechanics hurried hither and thither, some to the sheds to get out the achines, others to fetch the bombs and a Very pistol from the armory; t others to lay out the light flares across the aerodrome in order that when our return we might perchance be able to define the right landing ground.

Compasses, electric-light torches, and maps were dragged hurriedly m their hiding place in the lockers. eral bearing taken of the enecourse, and we ran out onto the line, where a searchlight had begun to work, sending long, illating beams of light across the night sky, turning and twisting, in one quarter, then in another, ring the heavens in the twinkof an eye, but never disclosing true object of its search.

last there is a shout from one of men by the light. He has dised the whereabouts of the Zep. Yes, there she is! A long, cigar-shaped object far up in clouds.

e hurried to the machine, and e I examined the bombs in the mb-rack beneath the fuselage body) and attended to the fitting in the Lewis machine gun the pilot ted the engine. And before five nutes had elapsed since the first rm we were off the ground.

ho can well and truly describe first sensations of night flying? denly one is hurled from the and into an unbounded space of kness at the rate of fifty miles an r. It is like jumping off a cliff n a dark night and plunging on and one knows not whither. It is ossible to see beyond one's nose. the only thing that seems real nd natural is the incessantly loud um of the engine. It is by no eans a pleasant task, this night flying.

ssing the ground, we miss a top by inches, and, feeling conerably shaken, climb rapidly. At it is dark, pitch dark. We see ing, we know not where we are. would lose one's reason were it not for the hum of the racing engine.

At last there breaks through the ing shadows of darkness beneath us long, narrow winding ribbon of mmering gray. The young moon s broken through the clouds, and the reflection of its light upon the water gives us the position of the river. On either side or moving slowly along the surfaces are small pinpricks of colored lights; I switch on my electric light in front of the observer's seat, glance at the altimetre and discover that we are already 500 feet up.

The glare of that light, feeble though it be when contrasted with the black darkness of the atmosphere around, has got into my eyes, and for a moment or two I can distinguish absolutely nothing. Then lights began to make themselves visible.

The street lamps can easily be distinguished, as being darkened at the top the light is concentrated downwards in a circle on to the pavement beneath, which serves the purpose of reflecting it heavenwards and upwards. The main streets can be picked out by the two parallel lines of colored lights; the windows of shops, the lights of which have been covered with red and green shades.

I have another look at the altimeter. Only a thousand, but still climbing steadily. Into a dark bare patch of land far below there comes rushing a flaring, glaring giant of light, followed by a string of smaller lights. Puzzle out what this strange apparition may be. It is a railway train!

As we mount yet higher we begin to lose all our bearings and all sight of the earth beneath. A much more beautiful earth when compared with the dull, prosaic, everyday affair, looking for all the world like a huge garden decorated with a myriad of multi-colored lights. It is difficult to realize that those few, straggling, irregular rows of lamps encompass 7,000,000 living souls; that there far below us sleepily blinking and winking is the greatest city of the world.

No signs of the enemy airship yet. I fill the tray of the Lewis gun with ammunition and fix it atop of the barrel ready for the fray. The altimeter registers 5,000 feet. Getting nearer to the Zeppelin altitude, yet no sign! The anxiety of waiting and suspense is becoming insufferable. Nothing but the incessant throb of the engine. But I have spoken too soon! Out of the darkness and blackness there rushes past with the speed of an express train black, unholy shape.

As it clears away in the distance and I have had time to draw my , I discover that it was another ane, also presumably scouting ppelins, that came so near to ng us hurtling down to a most ant death.

is tempted to imagine that a idea to avoid collisions in midair ing the darkness would be to place lunt light in some prominent in the machine, thus avoiding necessary accidents.

Suddenly there is the most violent cannonade. A rare sight that the anti gunners have spotted their ay. Searchlights from all directions are in a second of time concentrated upon ourselves, while they are endeavoring to get the range. This latter, much to the disgust of the pilot, blinded by the glare, banks too ly, just in time saves her from a dise and consigns all anti-aircraft gunners to a certain well-known locality possessed of a permanent and extremely warm climate. Further, to his yet greater disgust, the Archie merchants try their 'prentice hands upon us; but luckily having aimed dead at us, we remain in comparative safety. The moment they begin to fire at the Zeppelin, however, our danger begins.

We are in luck's way, however, for presently the guns were all silenced. The searchlights go out one by one. All becomes quiet and dark, dismally dark. We cruise around for another ten minutes or so, then descend cautiously and gradually. With one eye glued to the altimeter to make certain of the height, I peer over the side with the other to pick up the first sign of lights or landmarks.

Eight thousand feet! Seven thousand feet! Getting horribly cold! Six thousand! Five thousand! Shall we never get down! Four thousand! Three thousand? It seems like an age. Two thousand! One thousand! Cautious now, or our necks will be broken.

No lights or landmarks yet. Though I crane and peer around in all directions I can see absolutely nothing! As usual, the landing fires have not been relit. I began to lose heart and to get "cold feet," when I am struck with a brilliant idea. My Very pistol, hastily I cram a red star-ball cartridge into the barrel and fire. It fizzes and sizzles earthward in a crimson streak of light.

We wait anxiously for the result. But still no lights! Altimeter shows 500 feet. This is beginning to get extremely serious. Try a green cartridge. More luck this time. In the distance I can make out a long irregular line of flares—point them out to the pilot; but he has already noticed them.

After a great deal of trouble and anxiety we land, having had to guess at the direction of the wind for ourselves, and thus risking a serious smash.

Incidentally, this difficulty could easily be obviated if a large arrow composed of red electric lights were placed across the landing ground pointing in the direction of the wind. At last we are safe back on Mother Earth again, and very thankfully seek the refuge of our beds!—London Daily Mail.

Fascinating lingerie frocks are shown in white net with some form of detail trimming that proves most effective as contrast. This one is developed in white net, bound with narrow folds of satin.

COUNTERFEITING.

Big Risks and Often Small Returns to the Criminal.

"Suppose you noticed the announcement of three new counterfeit bills having appeared recently, did you not?" yawned the secret-service agent as he dived into a big purse and extracted three pieces of paper which could properly be labeled "green goods." After giving them a contemptuous glance and passing them over to his caller, the agent continued:

"They do not look very tempting, do they? And yet, strange to relate, hundreds of persons can be fooled by them and others will have the nerve to try to pass them. This counterfeiting game has simmered down to a few rascals who are doing their best to break into federal prisons and it is no boast to say that they will eventually succeed."

Just then the telephone rang and the agent was informed that a certain bank had received a $5 gold piece which was "spurious because it did not have a true ring." The agent asked the date, the description and then assured the worried clerk the money was good, despite the absence of the ring. These agents are somewhat uncanny in their knowledge of money and seldom, if ever, are they fooled.

"This counterfeiting game is a funny proposition, and punishment may be two feet behind the guilty man or several years," smiled the agent as he hung up the receiver. "The quickest work I know of is the case of Harry Taylor, who, one Saturday in April, started in to circulate some fine $20 counterfeit treasury notes, the product of the skill of his brother Arthur, then an inmate of the Moyamensing prison in Philadelphia. The character of the notes was detected the following Tuesday. Harry Taylor was arrested on Wednesday and the plates were in the possession of the government the next day.

Some months ago an effort was made to obtain some definite figures on the amount of counterfeit money actually in circulation, and to this end circular letters of inquiry were sent out to all national banks. The information related to coin and paper counterfeits. The replies were carefully tabulated and the totals were doubled in order to allow generously for banks other than the national institutions.

"The results indicated that for each $100,000 of genuine paper money in circulation there was about one counterfeit dollar, and for each $100,000 in silver coin there was a trifle less than three counterfeit dollars.

"That this average is not far from the true one has been indicated by returns from the subtreasuries showing just about this proportion in the enormous sums handled there from week to week. If these figures are not misleading it means that counterfeiting is on the decrease and that the measures of suppression adopted by the secret-service division are not without effect."—Indianapolis News.

Newpop—Well, my dear, did the photographer succeed in making the baby look pleasant? Mrs. Newpop—No; the baby succeeded in making the photographer look unpleasant.—Boston Transcript.

SELECTION, FEED AND MANAGEMENT OF BOAR

Why the Pure-Bred is a Good Investment—What to Look for When Buying—Methods That Have Proven Their Value by the Acid Test of Practice.

(From the Canadian Countryman.)

It is to be hoped that the present prices for hogs will have as much influence at least in persuading raisers to improve the quality of their stock as in increasing the numbers. And as in all cases of live stock improvement the beginning should be made with a pure-bred sire. His value in stamping his characteristics upon his offspring and in producing in the pen a type of animal that finishes early and economically and sells for the highest price is pretty generally recognized, and in these days when pure-bred males of the leading breeds can be secured at a reasonable price there is little excuse for having a grade or mongrel upon the farm.

If the sows are good grades and the sire healthy and vigorous, profitable pigs will result although the pure-bred sow pays her way too. We were talking to a farmer not long ago who had kept a pure-bred boar for years and some time before had bought a pure-bred Yorkshire sow as a sort of experiment. He had sold his pigs for bacon, but was so pleased with results that he intended to keep pure breds entirely. He had proven to his own satisfaction they paid.

In his bulletin entitled "Swine," Professor George E. Day gives timely information regarding the selection feeding and management of the boar which is valuable to each hog raiser. The present seems an opportune moment to present it to our readers. It is thoroughly reliable and has been written for the practical farmer who wishes to improve the quality of his stock without going to undue expense. In part it reads as follows:

The pure-bred male will transmit his own qualities to his progeny with greater certainty than a grade or cross bred, and will get pigs of more uniform quality and excellence, so that it pays to use a pure-bred boar even for producing market hogs. It is true many pure-bred boars should not be used for breeding, but this affords no reason for using a grade boar. The "scrub" pure-bred should be rejected along with the grade and cross-bred, and there are reasonably good pure-breds always available to the man who will make an effort to get one.

CONSIDER THESE WHEN BUYING BOAR.

When selecting a boar to head a pure-bred herd, it will not do to be too economical regarding price. That does not mean that we are to pay fancy prices, running into the thousands, such as sometimes we read about; but it is well to bear in mind that a boar which is not good enough to command a fair price is seldom good enough to put at the head of a pure-bred herd. The importance of the herd will determine the price which the owner can afford to pay for a boar, but a few extra dollars on the price of a boar is a small matter when it is the means of securing something that the breeder really needs. The mere size of the price, however, is not a safe criterion of the merit of the boar, but it rests with the man who makes the selection to see that he gets value for his money. It is right here that a wide experience and a seasoned judgment count for so much in stock breeding. Sometimes aged boars, which have proved their excellence as stock getters, are to be had at a very reasonable price, and if they are still active they are much safer to buy than young, untried boars. There is much unreasonable prejudice against aged boars, and many an excellent aged boar is sent to the butcher long before his usefulness is past simply because no one would buy him for breeding purposes, and many young boars, which should have gone to the butchers before being used at all, are taken in preference.

When buying a young boar, it will be found safer to buy one from eight to twelve months old than a pig two or three months old. The reason for this recommendation is plain, it being impossible to foretell just how the very young pig is going to develop. Highly-fitted show boars had better be avoided. It is more satisfactory to select by personal inspection than to buy through correspondence. A visit to the herd which produced the boar enables one to judge the general quality of the hogs produced in the herd and one can pick up information regarding the sire and dam that could not otherwise be obtained.

If the boar is shipped some distance and arrives excited and tired he should be fed very lightly at first, and not used for several weeks after his arrival.

The desirable conformation of the boar will depend upon whether he belongs to the fat type or the bacon type, and will also be influenced, more or less, by the breed to which he belongs, but we expect a boar to be stronger in the head and to possess a more muscular neck, more massive shoulders and heavier bone than a sow or barrow. He should conform to the best type of the breed to which he belongs, and should have a bold, impressive carriage and general appearance. There should be nothing effeminate about his appearance and general makeup. Coarseness and roughness are not desirable, but if it came to a choice between two boars, one of which was fine and effeminate and the other inclining to coarseness, but strongly masculine, the writer's experience would lead him to choose the latter, other things being equal.

Probably nothing is more essential to the health and vigor of an animal than exercise. In summer it is usually a comparatively simple matter to provide exercise in a paddock or pasture, but in winter it is more difficult. A roomy pen should be provided, with a sheltered outside yard. When practicable, it is a good plan to feed the boar outdoors at some distance from his sleeping quarters, thus compelling him to take exercise in walking back and forth between his pen and the feeding place. Icy ground is the greatest drawback to this method, but this can be overcome by littering the walk with some strawy horse manure. Sometimes the boar can be fed in a well-littered barnyard, which makes a very good arrangement when practicable.

When several boars are kept, it is difficult to provide separate runs for each boar, and it simplifies matters if they are taught to run together. The tusks should be removed, and a cool day selected for turning them together for the first time. It takes a very short time, as a rule, to settle the question of supremacy, and when once settled no further disputes arise. The writer has had considerable experience with this method, and has never known bad results to follow. The two mentioned conditions are necessary—namely, the tusks must be broken off and a cool day selected for the tournament. After the first struggle the boars will live together as peaceably as sows.

HOW TO REMOVE THE TUSKS.

Armed with long, sharp tusks, the boar is capable of inflicting serious injury upon man or beast should he take the notion, but deprived of his tusks he becomes comparatively harmless. It is the part of wisdom, therefore, to remove these tusks before any damage is done, because we never know what the quietest boar may do under provocation. Several methods may be employed, and the following one will answer very well. The boar is first made fast to a post by means of a rope noosed about his upper jaw back of the upper tusks. Then one man takes a crowbar and another a sharp cold chisel and a hammer. The sharp edge of the crowbar is placed against the tusk near its base and held firmly in position, and the edge of the cold chisel is placed on the opposite side of the tusk directly opposite to the edge of the crowbar. A sharp blow with the hammer on the cold chisel does the job.

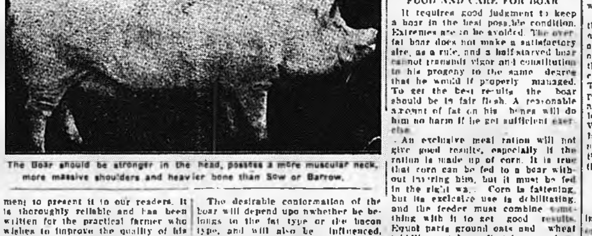
FOOD AND CARE FOR BOAR

It requires good judgment to keep a boar in the best possible condition. Extremes are to be avoided. The over-fat boar does not make a satisfactory sire, as a rule, and a half-starved boar cannot transmit vigor and constitution to his progeny to the same degree that he would if properly managed. To get the best results the boar should be in fair flesh. A reasonable amount of fat on his bones will do him no harm if he get sufficient exercise.

An exclusive meal ration will not give good results, especially if the ration is made up of corn. It is true that corn can be fed to a boar without injuring him, but it must be fed in the right way. Corn is fattening, but its exclusive use is debilitating, and the feeder must combine something with it to get good results. Equal parts ground oats and wheat middlings make a firstclass meal ration when corn is not used. It gives sufficient bulk, is nutritious without being heating or too fattening. Ground oats, middlings, or bran may be used singly to dilute corn or other heavy meal; in fact, a very great variety of grains may be fed so long as the feeder uses judgment.

Summer management is usually simpler than winter. A pasture lot provided with shade is one of the best places to keep a boar. The grass or clover, or whatever the pasture may consist of, will furnish the bulk of succulent feed necessary for health and gathering part of his food from pasture compels the boar to take exercise. If it is not possible to provide the pasture, he should be liberally supplied with green feed in his pen.

The quantity of meal to feed a boar will vary with circumstances. During the season when he is used most, he will require liberal treatment, but at no time should he be fed more than he will eat up clean before leaving the trough. During comparatively idle seasons a very light meal ration will be sufficient, and if on good pasture he will require but little food in addition. It is entirely a matter of judgment, and the feeder must be guided by the condition of the boar. It is never wise to make sudden changes in the ration—that is, to change suddenly from a light ration to a heavy one, or from a heavy ration to a light one. Changes should be made gradually, and the feeder, knowing about when the heaviest season commences, should start in plenty of time to prepare the boar for it.



The Boar should be stronger in the head, possess a more muscular neck, more massive shoulders and heavier bone than Sow or Barrow.

THE ATTACK UFON ITALY

(New York Tribune.)

In the minds of all observers of the war the Austrian attack upon Italy will seem a natural and normal expansion of a policy well defined in the case of Verdun. The policy may be described as a decision on the part of Germany to renounce grandiose operations like the campaign against Russia last summer and confine herself to a general defensive, supplemented by a limited offence on a narrow front.

In the case of Verdun we are now pretty familiar with the German method. Attacking on a narrow front, with a colossal concentration of artillery and only a relatively considerable infantry force, they endeavored to take, first by main force and by surprise and then by a slow and steady push, one of the best known of French fortresses, which, although no longer of military value, preserved its hold upon the imagination of the French and German publics.

Both the surprise attack and the slow and steady pounding have failed at Verdun. Despite oscillations and fluctuations the Germans have made no real progress for two months. Now their military experts have fallen back on a third line of argument to justify the attack and to sustain a claim for success. It is this third line of argument which is most interesting to watch, with the Austrian attack on Italy in progress.

The effect of the German attack upon Verdun the German experts assert, has been to disarrange the whole Allied plan for a general offensive this spring. The losses of the French, the expenditure of ammunition, have been so great that France is now out of the running for the year, and the Allied general offensive is impossible.

Add to this the German belief that France is exhausted, in men, in spirit, in resources, and it is easy to explain why Germany keeps on pounding at Verdun, when all hope of military success is at an end, and at most only a moral value can attach to any local victory. The German conception as to French exhaustion is, in the view of the Tribune, mistaken. But Germany and German writers cling to it firmly.

Now, an Austrian attack upon Italy is plainly predicated on the same conception. France is out of the running. Italy is the next in line. An attack upon Italy by the Southern Tyrol carries with it the possibility, the maximum possibility, of an advance to Verona or Vicenza, the isolation of all the Italian armies east of Vicenza on the Isonzo front, the complete dislocation of Italian plans and of Italian participation in a general Allied offensive.

Such a maximum profit is at best unlikely, but there remains the chance that Italy will lose so heavily in men, in munitions, that she will also be eliminated, as the Germans assert France is eliminated for the balance of the year.

Meantime, it is clear that Germany is standing on the defensive in Russia and on the British front. She is using only small forces against Verdun, and the Austrian army actually in the Tyrol is not considerable, according to contemporary standards. Germany has failed to take Verdun, Austria will possibly fail to get Verona. But neither failure will be out of the running for the present season.

Now the converse of the German view is freely stated by Allied commentators, with whom the Tribune mainly agrees. These declare that Germany has lost far more men and expended far more ammunition than the French have done at Verdun, that she has failed to precipitate a premature and ill-coordinated Allied offensive, and when their time comes the Allies will be able to launch a general offensive from all points.

Remember, always, that hitherto the chief German advantage has been the possession of the interior lines which enabled her to move troops quickly from the east to the west, from France to Russia, to meet an attack. The Allies have not co-ordinated their efforts. The South in the civil war possessed the same advantage, and used it successfully, until Grant instituted the policy of attacking on all fronts simultaneously, and then the end was relatively prompt.

If the Allies are correct in their assertions, they possess the power to strike at their own moment on all fronts. Germany has failed to disorganize their plans or break up their arrangements by the Verdun operation. If Germany is accurate, the policy of limited local offensives, succeeding the old general attack of the Marne and of the Russian campaigns, is proving fatal to an allied offensive this year.

It is fair to conclude that the change in German policy represents a recognition that it is no longer possible to win the war on the old scale. It is no longer possible to destroy the military forces of France or of Russia, and thereby eliminate them from the war. On the other hand, it seems to indicate that the Germans have no larger hope than that of maintaining what they now hold until allied exhaustion compels a settlement by diplomats, not by soldiers.

Germany is now ready to make peace. She cannot conquer Europe. She no longer believes she can dispose of France or of Russia permanently, but she believes that she can hold her present lines indefinitely and disorganize and wear out her opponents by small offensives like the Verdun attack. She counts on the moral effect upon France and Italy of steady losses without profit, and she expects that France first, Italy next, will consent to peace when peace offers them integrity and war no possible profit.

If Germany could provoke the Allies to a premature attack which failed, she would reap large profit and might get peace on terms that would leave her supreme in the Near East. If she can hold on her present line until winter and prevent a general offensive, she may get material gain out of the war.

But it is essential to recognize that her position is weakened by her manifest eagerness for peace, which has combined with the Verdun campaign to inspirit the Allies, and an absence of all success, coupled with steady casualties, may have as profound effect upon her population as she has hoped it would have upon the French.

As far as one can judge, Germany and her Austrian ally are now trying to cut their losses while holding on to their conquests against the day of settlement by negotiation. This is a complete break with the method of 1914 and 1915. In both of these years Germany tried to win by a general and colossal attack that would not defeat, but annihilate.

Apparently we are coming to a change in the history of the great war. A similar change came after Gettysburg in the civil war. The South renounced the idea of conquering peace on the enemy's territory. It clung for two years more to the idea that it would win freedom by defending the territory its armies held. This was the last phase of the Confederacy.

It is worth recalling, too, that in this last phase Europe, and even not a few Northerners talked of peace and of the fatal folly of going on with a hopeless struggle. To the very end the South clung to the belief that it could not be beaten on its own lines. The new German policy, if it is a policy, cannot be taken as other than a confession of weakness. The problem which remains to be faced is: Will allied strength or will endure? If it does, it is not hard to foresee new German suggestions of peace, this time based on the prospects, not on the present situation.

A charming gown is here shown, in which black silk net, gold lace and gold tissue cloth are combined.

Queer Fish at Palm Beach.

The oddest looking fish ever taken in Palm Beach, and probably the only one of its kind ever caught in American waters, was harpooned in the Gulf Stream the other day by Ambrose Monnell, Jun., President of the Midvale Steel Company. It was an elephant eared sunfish, estimated to have been spawned anywhere from 200 to 400 years ago and to have weighed then about one sixty thousandth part of its weight when captured, which was close to a ton. Both John D. Crimmins, of New York, and F. H. Mugill, of Cincinnati, each an authority on fish, expressed such an opinion. The American Museum of Natural History wired for a plaster cast of the fish and its brain for research work.

It was shaped and formed like the little sunfish that swims in a glass bowl, except that it had ears like an elephant and that they were folded close to the skin. The hide was like emery paper in color and texture. The fish is native to African waters.

SOME IMPORTED WORDS.

Their Use Here and Their Meanings in Their Native Land.

You are so familiar with those three imported words, chauffeur, tonneau and limousine that it would never occur to you to ask whether they really apply to the objects which they have been made to describe.

You know that a chauffeur is the man who is hired to drive a motorcar. The mere driving of the car is not the thing which gives the name its significance, for it does not apply to the owner of the car when he drives. In like manner you know that the tonneau is the part of the machine which is behind the driver's seat and accommodates three or five persons. When the possessor of an automobile is sufficiently opulent he has a limousine body for winter use, and probably it is electric heated and has a bunch of fresh flowers in the wall vase every morning. To these three vocables, with their smell of greenbacks and their rattle of silks, we might add another, even more suggestive of the expenditure of money, the word "hangar," which was dragged into the language when the gilded youth wearied of sixty horsepower speed and took to the air.

Would you be shocked to learn that a hangar, in rural France, where aeroplanes are almost unknown, is nothing but a shed for the farm cart? And what of the chauffeur? The high school girl was horrified to find, by consulting her dictionary, that he was either a fireman or a braggart. Almost as disconcerting was the revelation that a "tonneau" was nothing but a vat or tub. But the cruelest blow of all fell when the limousine was shown up as rough goatskin, worn by peasants near Limoges.

His Crushed Cigar.

"Yes," said the man with the open countenance. "I married a girl in the mutilated currency bureau of the treasury department at Washington. Quite a little romance it was too."

"How did it happen?" asked the man with the crumpled necktie.

"It was her deft fingers, her marvelous skill, that chiefly attracted me."

"Patching together ragged old dollar bills? Faugh!"

"Restrain your sarcasm, if you please. She could do much finer work than that. I had seen her once or twice and thought her a pretty girl, but was not particularly impressed. One evening, though, when I was calling on her at the boarding house where she lived I happened to notice that in some way I had crushed a twenty-five cent cigar in my upper left vest pocket, and I showed it to her.

"'That's nothing,' she said. 'I can mend that and make it all right in a jiffy.'

"It was a shapeless mass, but I told her to go ahead. She got a little paste and in five minutes she fixed it up as good as new. Well, sir, that caught me, and I proposed to her on the spot. She said 'Yes,' and we were married the following week."

"Old chap," said the man in the mackintosh after a long pause, "how had you crushed that cigar?"

"That's none of your business!"—Chicago Tribune.

The fewer scruples a man has the more drams he takes.

Pengiun the Missing Link

"Is Johnny Penguin, of the Antarctic the nearest approach to man in the animal kingdom?"

This is the question that scientists are asking themselves to-day and, because of the remarkable tales reported by returning explorers, who have lived in the Antarctic, these big water birds are being subjected to the closest scrutiny by those who are constantly seeking that missing link between man and his dumb friends.

That the penguin possesses faculties not common to any other animal, not even in the monkey, who is supposed to be nearly human—is advanced by Dr. G. Murray Levick, R. N., zoologist of the British Antarctic expedition of 1910-1913. All animals especially young ones, play, and seemingly enjoy themselves, but their play is only part of the duties they will perform in later life. The dog worrying a piece of rag is only learning how to worry some enemy; the cat chasing a ball, creeping up on it and springing to pounce on it, is doing just what it will do as a full grown animal. But penguins are different. They play for the sheer love of playing, and they live in communities with a neighborliness that is very much akin to the cities and manners of humans. A full grown penguin stands about two feet in height. The wings are short, not suitable for flying, but as flappers are used to hurry through snow or water. The legs are far back and are used to keep the bird standing upright. The penguin is equally at home on land or water, finding its food in all small sea life.

One of the most remarkable traits of the penguin is the way they apparently talk to one another. A dozen birds will meet on one of the beaches, and, gathering in groups of two or three, spend 15 or 20 minutes in animated conversation—uttering cries distinctly different in tone. As they "talk," other birds joined them, and frequently they play on the ice just as bathers at Palm Beach sport before they enter the water.

One of the choicest games with the penguins is to force one another into the water. They push and duck, two or three birds making a concerted attack on two or three others. Sometimes a bird is immersed, only to hop out a second later and try to push in the bird responsible for its ducking.

This sport occupies some time, and then, as if from a signal, the whole crowd decides to get into the water. They dive deep and swim under water, sometimes coming to the surface more than 60 feet from the shore. Here they resume their fun, washing themselves in the icy water, and feeding on small fish. So incredibly human is their attempt to have a good time that watchers seem to understand what they are saying.

These bathing parties are part of the penguins' everyday existence. Even in nesting time the bird has to bathe, the male looking after the eggs while his partner goes to the shore. Snow slides are popular forms of amusement, the birds making the slides by packing the snow with their strong breasts till the slide is smooth.

During the breeding periods the birds live in big rookeries, generally on some rocky headland, not far from the water. When the mating season begins the penguins arrive singly and in groups, the early comers picking out the choice places for nests and then setting to work to defend their positions. Some of the birds travel 100 miles to nest at a certain point, but they are always in the best of condition, fat and with sleek plumage.

The nest is an untidy affair, consisting of pebbles laid to form a hollow and is carefully built by both the male and his mate. There are two eggs, and both birds care for them, the female generally leaving her eggs with reluctance and much scolding. As the weather, when the eggs are hatched, is generally below freezing, the eggs must be kept very warm. This is done by burying one in the thick feathers of the breast, while the feet cover the other.

When a young hen is desirous of obtaining a mate she signifies the fact by sitting on one of last year's nests and waiting for her admirers to pay her court. This is done by approaching her with an offering of a pebble, the sign of the new home. The pebbles she accepts for her new home all belong to one bird, and this bird is her mate. Often there are bitter discussions as to the right of suitors, and much whirling of flappers and sometimes nasty beak bites.

There is something very human in such an action, and equally human is the action of a crowd of penguins in endeavoring to stop a fight between two rival birds for a handsome hen. The birds did not enter into the conflict in anyway, but they pushed themselves between the combatants and separated them.

It may only be a case of mistaken imagination, but it certainly seems to the men of the British Antarctic expedition that the penguins of the South Pole have some remarkably human traits. At any rate scientists are much interested, and special note is to be taken of the birds, their habits and modes of existence by explorers, who are preparing to visit the great continent of frozen ice that has so far baffled mankind, and which may produce the greatest mystery ever known.

Jupiter's Moons.

The statement that Jupiter's moons can occasionally be seen without optical aid by keen-sighted persons needs some qualification. Within the last quarter of a century the space penetrating power of the camera, combined with the world's giant telescopes, has added no fewer than five Jovian satellites to the four which Galileo discovered 300 years ago. Four of the new five moons were "netted" at the famous Lick Observatory, on Mount Hamilton, California, and the fifth is to the credit of Greenwich Observatory. But all of the new discoveries are so small and, with one exception, so distant from Jupiter that they are beyond the range of naked eye vision, even from Jupiter itself, unless an observer on the planet had better eyesight than we terrestrials. Indeed, to see Satellite IX. (the latest addition to Jupiter's family of moons) a hypothetical observer on Jupiter would need eyesight capable of seeing a star 300 times fainter than the faintest visible to human eyesight.—London Chronicle.

Drive six brass-headed tacks in the ironing board to take the place of a flat-iron stand.

Nearly Lost Little Girl from

DYSENTERY

She Was Cured By Using

DR. FOWLER'S

Extract of Wild Strawberry.

Dysentery manifests itself with varying degrees of intensity, but in well marked cases the attack is commonly preceded by loss of appetite, and some amount of diarrhoea, which gradually increases in severity, and is accompanied with griping pains in the abdomen. The discharges from the bowels succeed each other with great frequency, and the matter passed from the bowels, which at first resemble those of ordinary diarrhoea, soon change their character, becoming scanty, mucous or slimy, and subsequently mixed with, or consisting wholly of, blood.

Never neglect what at first appears to be a slight attack of diarrhoea or dysentery may set in. Cure the first symptoms by the use of Dr. Fowler's Extract of Wild Strawberry.

Mrs. John Peterson, Radville, Sask., writes: "I cannot speak too highly for Dr. Fowler's Extract of Wild Strawberry. I nearly lost my little girl, aged three years. I took her to the doctor, and he told me her temperature was 104, and forbid me taking her out to our home, six miles from town, but I was forced to go on account of leaving my small baby home. We managed to get her home, but the fever did not go any lower, and we thought we would lose her sure, as she was so bad with dysentery she even passed blood. A neighbor came in and brought Dr. Fowler's Extract of Wild Strawberry, and told me to give her a few doses. This we did, and the next day she took a change for the better, but it was quite a time before she was on her feet again. I do believe if it had not been for 'Dr. Fowler's,' my little one would have died."

The genuine "Dr. Fowler's" is manufactured only by the T. Milburn Co., Limited, Toronto, Ont. Price, 35 cents.

Bradstreet's Trade Review.

TORONTO—General business conditions continue good. There is a seasonable let up in drygoods houses after an unusually good spring and early summer trade. The grocery trade is normally active, fruits, dried and fresh, being firm. Eggs and butter remain relatively firm, export trade being a bullish factor. Hardware men state that the aggregate trade this season has been normal, but it has been confined to specialties. Leather firms have pretty well filled old war contracts, but others are impending. Prices are tending higher, as the world's demands are heavy.

MONTREAL—Business is keeping up in a satisfactory manner in most lines of trade. Manufacturers are busy, and statements continue to show large operations and good profits. Especially have war industries done well, such as boot and shoe, iron and steel and textile concerns. Employment has been steady and the public have the wherewithal to buy. This is reflected definitely in retail and wholesale trade in staples, and even luxuries. Drygoods houses report a fairly active business even up to the time of writing, with the position as to fall orders promising. Hardware houses have had a good season. The boot and shoe trade is normal in wholesale houses. The grain trade and flour trade are slow and prices easier.

WINNIPEG—Trade in the Middle West shows improvement. A good demand comes for fall lines of drygoods. Weather conditions have been excellent for the young crop and the outlook is encouraging. Provided the West secures another good crop this fall, financial and commercial conditions will naturally swing back towards the old prosperous normal. Both manufacturers and dealers report a steady incoming of orders. Hardware men are doing a good, steady business now at advancing prices, in many lines.

CALGARY—Cities in the far Middle West are enjoying better business conditions.

VANCOUVER—Trade in wholesale and retail firms is slowly improving, with a fair outside demand for staple merchandise.

HAMILTON—Business continues fairly active in the city. Local retail trade keeps apace and wholesalers report a normal volume of orders from country points.

LONDON—Orders from the country trade to wholesalers have been normally large right up to date and the outlook is encouraging.

Artillery of Antiquity.

"Engines to shoot great stones" were no doubt the progenitors of the "catapult" of Greek and Roman times and the devices to use to-day for hurling "hand grenades." In a recent visit to the island of Rhodes I was amazed at the great number of stone balls in the edge of the sea, among the ancient towers and battlements, and indeed all over the island. They ranged in size from five inches in diameter to more than two feet, and the largest must have weighed at least a ton. The smashing power of such a mass must have been very great. Such stones are found about the walls of Constantinople and other cities of the Orient.

An Impartial Student.

We were walking through the apartments of his excellency Mr. Samarth, the Prime Minister of the Gaekwar of Baroda, about two years ago, and noticed an open Bible on a table at the head of the Prime Minister's bed. I asked why he, a devout Hindu, was interested in the Bible. He replied: "I spend a half hour each day reading this book along with the sacred book of Hinduism. I have found it one of the greatest influences in developing my intellectual as well as my spiritual life. You may be interested to know," he continued, "that the educated men of India know the Bible, as a rule, quite as well as they know any one of their own sacred classics."—Christian Herald.

When it comes to kissing, it is doubtful if a girl admires a man who keeps a stiff upper lip.

A Sluggish Liver

CAUSES LOTS OF TROUBLE.

Unless the liver is working properly you may look forward to a great many troubles arising, such as constipation, severe headaches, bilious headaches, sick headaches, jaundice, sick stomach, etc.

Mrs. I. Shellsworth, 227 Albemarle St., Halifax, N.S., writes: "I take pleasure in writing you concerning the great value I have received by using your Milburn's Laxa-Liver Pills for a sluggish liver. When my liver got bad I would have severe headaches, but after using a couple of vials of your pills I have not been bothered with the headaches any more."

Milburn's Laxa-Liver Pills are, without a doubt, the best liver regulator on the market to-day. Twenty-five years of a reputation should surely prove this.

Milburn's Laxa-Liver Pills are 25 cents per vial, 5 vials for $1.00; for sale at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

If registration comes in Canada the proposal is that Quebec shall be eliminated. Yes, certainly. Leave Quebec free to carry on its bilingual campaign, while the rest of the Dominion is up to the neck in the struggle of life or death for the empire.—Guelph Mercury.

+ + +

"Soldiers' heart" is a new trouble very prevalent to the defenders of the British trenches, caused by excessive use of tobacco. The tobacco manufacturers' advertising campaign has apparently brought results. "Tommy needs the Smokes" is a very catchy headline.

+ + +

The Liberals of Canada, if they want to be aggressive, have an opportunity of doing so by placing themselves on record as positively opposed to grants to railway corporations of a private character. If money to assist in developing railways must be provided for out of the public funds, then the government that provided it should see that the utility developed belongs to the people. Public aid to private owned railways may have been necessary in the early stages of the development of Canada, but it would appear that the result has been too much railway development. The new locale for Liberalism should be, "No further grants to Railway Corporations." Will our Liberal leaders rise to the occasion?—Kincardine Repotter

OUR OTTAWA LETTER

BY H. F. G.

Ottawa, July 1st—From Major-General Sir Sam's evidence before the Davidson Commission it appears that he doesn't know, and what's more, that he doesn't give a hoot how Colonel John Wesley Allison skins the British Admiralty in his little business dealings with them. Those who have heard Eva Tanguay sing "I don't care," will admit that Eva has nothing on Sir Sam when it comes to aggressive indifference.

Meanwhile things occur from time to time which indicate that the country at large cares a great deal. Since the war started and the Parliament at Ottawa became the House of a Thousand Scandals, four provincial elections have been pulled off, all of which may be taken as backslaps at the Borden Government. Last summer Manitoba got busy, with the result that the rollicking Roblin band of privateers was turned out and three cabinet ministers and a contractor are walking the plank right now. Last fall Prince Edward Island trimmed its Conservative majority to four. This spring Quebec practically wiped out the Conservative Opposition and only last week Nova Scotia increased its Liberal majority by fifty per cent. Sir Richard McBride fled from the wrath to come to a fifteen thousand dollar a year job in London some months ago, and now the heir of his troubles cannot defer the day of judgment more than a month longer. British Columbia is only waiting for a chance to get even. Premier Bowser will make the fatal plunge thirty days from now or thereabouts. The stars in their courses seem to be fighting against the Borden Government's friends wherever they linger.

Meanwhile the Borden Government itself is none too eager to try whether the water is cold or not. It has been shivering on the brink of a general election ever since the war began and it will probably go on shivering until its extended term is up in October, 1917, and then some, if it can get another reprieve. The Borden Government has evidently decided to stay the limit. It has heard of the dog that tried to cross the well in two jumps. Its fears are not confined to general elections. By-elections are held to be just as bad. Although fourteen vacancies have occurred in the House of Commons in the last two years, ten of which were Conservative according to the complexion of the sitting member, the Government refrains from opening any of these constituencies for test purposes. They are satisfied to leave well enough alone, even if it does whittle their majority. Like Hamlet they stick to the ills they know, sooner than fly to others that they wot not of.

The causes and effects of some of these vacancies are an interesting study. Sir James Aikens, for example, resigned his constituency of Brandon to lead the shattered remnants of the Roblin army to defeat in Manitoba. Sir James tried to lift his party up, but alas, his platform was too high and the thing couldn't be done. Sir James is now supposed to be waiting around until the Lieutenant Governorship of Manitoba falls in, when his wounds will be bound up. Meanwhile the important constituency of Brandon has no representative in Parliament and is not likely to have until Sir James Aikens is safely settled in his new job.

William Sharpe, M. P., of Lisgar, resigned his seat at the same time as Sir James and for the same purpose—to dig the Conservative party in Manitoba out of the mud. Billy made a good try, but somehow or other his foot slipped and he landed in the Slough of Despond himself. However, he did not have to despond long. He had put his hand to the work with a fat promise in his pocket, which was cashed very soon afterwards. Billy is now a Senator and a Colonel with blushing honors full upon him.

Kings County, N. S., has lacked a member ever since Arthur DeWitt Foster resigned under pressure during the session of 1915. Arthur is selling stock now, black fox and patent mausoleums, but looks forward to a glorious resurrection at the next general election, when he will run again for Kings if he gets the Conservative nomination.

W. F. Garland, of Carleton County, who passed out along with Arthur, is in a similar case. He finds now that he was too hasty. Beside the transactions of the Bertram Shell Committee and the fuse contracts, his little forty per cent flutter in medical supplies—most of which he coughed up—looks like thirty cents. W. F. Garland is a wronged man. He feels it. He is flirting with Carleton County for another nomination, but is in no dread of a by-election at the present time.

J. O. Lavallee, Conservative member for Bellechasse, resigned his seat last month for two reasons, so far as I can make out—that he had no chance of being re-elected for the Federal Parliament and the other that he had still less chance of being elected for the Quebec Legislature. He seems to have guessed right.

The constituency of East Grey has lost an old friend in Speaker Sproule, who pleaded ill health and was transferred to the Senate before he could get caught in the rain. It is satisfactory to learn that the Senate has had a soothing and recuperative influence on Dr. Sproule, and that his health is in a fair way to be as good as it was before dark thoughts of disaster for the Borden Government interfered with his digestion.

Wm. Chisolm Liberal member for Antigonish, N. S., resigned in order to win a seat in the Nova Scotia Legislature. This feat he successfully accomplished. William is fond of public life and he had to sit somewhere, a thing he couldn't have done for Antigonish in the Federal Parliament after the next general election because the Redistribution Act had gerrymandered him out of his seat.

The other half dozen members have been removed by death. Altogether with fourteen constituencies vacant, it is a safe estimate to say that half a million Canadians are at present unrepresented in the Federal Parliament at Ottawa.

The Most Popular Overland

There is already an enormous demand for this big four cylinder Overland.

With certain improvements, it is the same car of which 55,000 Overlands were sold last season for $1050.

The price is $85 less.

Standardization of product and the purchase of raw materials at before-the-war prices, made this reduction in price possible.

It will not be lower, for materials are rising in price.

So order your Overland now, to make sure of getting it.

Enbloc 31 horsepower motor	Demountable rims, with one extra
Electric starting and lighting system	106-inch wheelbase
Electric control buttons on steering column	Deep divan upholstery
Four inch tires	One man top; top cover

London Camp

Overseas Battalions of Western Ontario Make Forward Move Toward Britain's Firing Line

OFFICIAL bulletins, Canadian "Eyewitness'" reports and private letters from the Front are doing much more than add glorious pages to Canada's history. These tales of dogged defence and victorious counter-attack are bringing out thousands of splendid recruits, and thrilling the Battalions in training with a growing impatience to get into the thick of it.

As a big step towards Flanders, the move to London Camp has been warmly welcomed. The facilities for more advanced training, and broader comradeship with the flower of Old Ontario's manhood, mean much to the boys.

As they "pal" together, comparing notes and equipment, those who are without cannot help envying the men who have Gillette Safety Razors. For if ever anything proved its worth, the Gillette has done so in this war.

In training camps—at "the back of the Front"—even in the first-line trenches, where shaving would seem out of the question—the Gillette is helping thousands of our gallant officers and men to maintain their usual standards of personal cleanliness.

If there's a lad in London Camp whose comfort interests you, SEND HIM A GILLETTE SAFETY RAZOR—or if he has one already, then a good supply of blades.

SEVEN YEARS TORTURE

Nothing Helped Him Until He Took "FRUIT-A-TIVES"

ALBERT VARNER

Buckingham, Que., May 3rd, 1915.

For seven years, I suffered terribly from Severe *Headaches and Indigestion*. I had belching gas from the stomach, bitter stuff would come up into my mouth after eating, while at times I had nausea and vomiting, and had chronic Constipation. I went to several doctors and wrote to a specialist in Boston but without benefit. I tried many remedies but nothing did me good. *Finally, a friend advised* "Fruit-a-tives". I took this grand fruit medicine and it made me well. I am grateful to "Fruit-a-tives", and to everyone who has miserable health with Constipation and Indigestion and Bad Stomach, I say take "Fruit-a-tives", and you will get well".

ALBERT VARNER.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

POETS' CORNER

THE RED RED ROAD TO HOOGE

This gripping bit of verse was sent home from the trenches by Art. Taggart. His parents, Mr. and Mrs. David Taggart, received it the same day that the telegram came announcing that Art. was one of the missing after the terrible battle June 2nd to 5th.

On Parade—Get your spade,
Fall in the Shovel and Pick Brigade.
There's a carry fatigue for a half a league
And a trench to dig with a spade
Through the dust and ruins of Ypres town
The seventeen inch still battering down,
Spewing death with its fiery breath
On the Red Red Road to Hooge.
Who is the one whose time has come
Who won't return when the work is done,
Who will leave his bones on the blood stained stones
Of the Red Red Road to Hooge?
Onward he Staffords—never a stop
To the sand-bagged trench and over the top,
Over the top—If a packet you stop
On the Red Red Road to Hooge.
The burst and the roar of a hand grenade
Welcome us on the death parade.
The pot of gloom, the valley of doom:
The crater—down at Hooge.
Full many a soldier from the Rhine
Must sleep tonight in a bed of lime.
'Tis a pitiless grave for a Brave or a Knave
In the Crater—down at Hooge.
Hark to the stand to fusilade!
Sling your rifle, bring your spade,
And fade away—ere break of day—
Or a hole you'll fill at Hooge.
Call the roll—and another name
Is sent to swell the Roll of Fame.
So we came across to work the loss
Of a chum who fell at Hooge.
Not a deed for the paper man to write!
The glorious charge in the dawning light:
The press who wail won't tell the tale
Of the night work out at Hooge.
Our General knows and his praise we've won;
He's pleased with the work the 10th Batt. has done
In the shot and shell at the gate of Hell,
On the Red Red Road at Hooge.

News About Town

July.

Grey County Council voted $4,000 a month for two years to the Patriotic Fund and Red Cross by an unanimous vote.

If you have dandruff baldness is underway. Try the Rexall "93" Hair Tonic, which all Rexall Drug Stores fully guarantee—50c and $1.00 bottles. A. P. Sieveright.

Mr. Alph. Stevens had his shoulder dislocated while playing football in the School grounds one evening last week. It happened very simply and a couple of sharp jerks by the doctor put the shoulder back in position.

The soldiers who have been staying with Mrs. John Wolfe, Durham St., West, consider they have been the luckiest fellows in the whole battalion. Mrs. Wolfe has been a second mother to the boys. Two of her sons are on the way to the Front and in her estimation the best is scarcely good enough for the boys in khaki. On the Monday night before the Battalion left the soldiers got up a little surprise for Mrs. Wolfe, Sergt. Ken. Matheson, on behalf of all the boys, presenting her with a purse of $25 as a token of their appreciation and regard.

Mr. Alma Ashley drove Mr. and Mrs. J. H. Hunter and Mrs. Andrew Kirstine in his car up north of Paisley last week, where they spent a few hours with Richard and Alfred Tanner. Mr. Hunter states that a good deal of the land in that section is not under crop owing to the adverse conditions during seeding time. No township in Western Ontario appears to have fared better thus far than Brant where the crops are looking fine in most sections.

Wanted

At once, a reliable man of good address with some experience among farmers, to act as county representative for Bruce County.—Stone & Wellington, Nurserymen, Toronto. 10-23

+ + +

Address to Rev. Walker.

At a Special Meeting of the Ministerial Association of Walkerton held on the 21st of June, 1916. The following resolution was unanimously carried, viz: "That we the Ministers of this Association place on record our high esteem of the Rev. D. A. Walker, B. A. Pastor of the Methodist Church here for the past four years. As a brother of culture and Christian Character, always ready to take part in every philanthropic and Christian work, so that we regret his removal from our midst, but feel assured that his social and Christian intercourse will merit the confidence and fellowship of the people of the town to which he is called as it has in the town of Walkerton and so we commend him to God and to the word of his grace praying that he may be abundantly blessed in his person, in his family and in the church over which he is to preside.—Rev. J. W. Sanderson, Pres.; Rev. D. McLennan, Sec.

Rexall Orderlies are a pleasant, safe and sure laxative. Sold and guaranteed by all Rexall Drug Stores, 15c and 25c.—A. P. Sieveright.

Southampton people are real angry according to the Beacon, because the G. T. R. wouldn't give them a special train from Palmerston for the 12th July. The Celebration has been cancelled.

Mrs. J. H. Brown of Cashmere, Wash, writes the Telescope:—If possible please send me a copy of Telescope, June 8th. My copy has failed to arrive. The third time in nine years. Not a bad record.

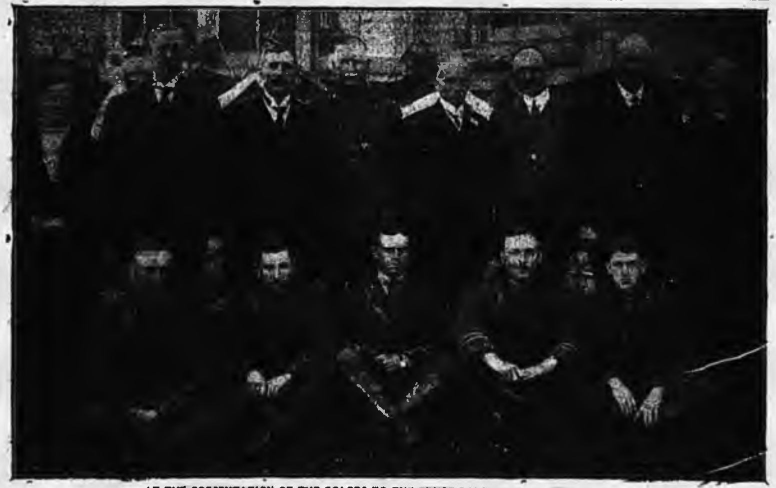
Corp. Ralph Glave was home for a few days from London where he has been acting as instructor in Signalling at the School of Instruction. The School is now over and Ralph reported for duty in the 160th on Monday.

An advertisement is to a merchant very much like what sowing seed is to a farmer. It may take a little time for the results to become apparent, but they are sure to come. The wise farmer is not sparing with his seed, nor the wise merchant with his advertising.

Chas. Calhoun, an Elderslie farmer, was found guilty of criminal assault by Judge Klein at Court here last Wednesday, and fined $110. The charge was laid by a neighbor, Samuel Kingston. Crown Attorney Dixon prosecuted, and D. Robertson K. C. appeared for Calhoun.

Special War Time Holiday Classes will open at the Northern Business College, Owen Sound, July 3rd, to prepare young people to fill places left vacant by those who have enlisted for Overseas Service. Instruction in Book keeping, Shorthand, Typewriting and other Business Subjects.

Joe Armstrong has been dismissed from the country constabulary. The Kincardine Reporter says there are others besides Armstrong who could be spared from that body. You are right, Bro. Hunter, the country officials should let Tom Hodgins out on the gallop—Ripley Express.



AT THE PRESENTATION OF THE COLORS TO THE BRUCE BATTALION AT CHESLEY, ONT.

Guests at the home of Wm. McDonald, M. P. P. for North Bruce, at the Presentation of Colors to the Bruce Battalion in Chesley. From left to right (standing) Mrs. Wm. McDonald, M. P. P., Wm. McDonald, M. P. P., Premier Hearst, Lieut.-Col. Weir, W. D. Cargill M. P. P., C. M. Bowman, M. P. P., W. C. Chambers, M. P. P., Dr. Williamson. Sitting (left to right) Lieut. Little, Lieut. McLeod, Lieut. Cameron, Capt. Veith, Lieut. J. C. McDonald,

BRUCE BATT. IN CAMP

London Advertiser Tells How the Boys of the 160th Batt. are Getting Their Quarters at Grosvenor Camp into Neat Shape

Although the 160th Battalion has been in its new quarters on Grosvenor Camp but a few days, decorations are much in evidence. There has been no opportunity to obtain flowers so far so stones and building bricks have supplied most of the material. D Company has raised a mound in the shape of a shield which bears the company and battalion name. All the other companies have equally artistic designs. The legend in front of the bugle band quarters reads: Bruce Battalion Bugle Band," One large "B" supplies the initial letters for all the words.

The machine-gun section, after making the usual decoration in front of its quarters, erected a dummy machine gun made from a gas pipe and pieces of wood. From a distance, the imitation would deceive even those thoroly conversant with military weapons. It is made after the old style, being set on a high base. A tin case is used for the dummy ammunition.

Until real weapons are issued this will be used for practice by the machine gun section, teaching the men proper positions and other details for which the actual weapons are not required.

Other camp improvements are continuing rapidly. The orderly room and several of the other main tents have had floors placed in them. The work is handicapped a little by scarcity of material, as no new lumber has been purchased. Lawn mowers are commencing to make the guard and tent lines respectable, and a few days drill has completely flattened the grass on the drill ground. It is thought, however, that a scraper will be used to clear the ground, as the sandy surface is preferred to the turf.

The battalion boasts some good athletes, and when organized will make a bid for athletic honors.

LETTER FROM JIM LEECH

Mr. Amos Leech had a letter last week from his brother Jim who has been at the Front nine months, and is now in the 6th Canadian Howitzer Brigade.

My Dear Sister and Brother:—

Just a line to let you know I am well at present and I hope this will find you all well. I have not had time to write lately and when I get an hour I want to go to sleep. I have not had my clothes off, only one night since I have been out here, nearly nine months now. There has been a lot of fighting here this last two weeks again. Big guns going all the time and then we butt in with our little guns. I have been in one place over three months. There are shell holes all around us and they are going over our heads all the time, night and day. I was on duty yesterday at four o'clock and the officer came and told me to lay the gun on a working party, the gun beside me also fired two rounds. He went to the telephone and came back and told us we got six of them and made the others run. The guns are going now as hard as they can. I have not seen any of the boys since I wrote to you before but I got a letter from Louis Runstadtler. He was well then. I do not know where he is but not far away from me. All the Canadians are not far from one another and I have not had a leave yet. I got a parcel from the Daughters of the Empire, Walkerton, two pairs of socks and will write and thank them.

Capt. Milner Matheson of St. Marys, who was recommended recently for the Military Medal for conspicuous bravery, is a first cousin of Lt.-Col. D. M. Sutherland, of the 71st.

A. D. THOMPSON, Teacher.

"THE LISTENING POST"

Sergeant calls up first man:—

M. O.—"What's the matter with you?"

Pte.—"Chilblains, Sir."

M. O.—"Take off your boots." Examines feet carefully. "What did you say you had? Chilblains? The girls at home go to a dance with worse feet than those, then go home and cry themselves to sleep; they don't go to a doctor. Grease your feet and carry on."

Next man:—

M. O.—"What do you complain of?"

M. O.—"Insomnia, what's that?"

Pte.—"That's what our doctor says it is; when I hear a shell explode at night I can't sleep."

M. O.—"How long have you been out here?"

Pte.—"Two weeks."

M. O.—Pats him on the back. "That's all right, my boy, after a while you'll wake up on a quiet night and wonder what's wrong; run away and learn that song—'Sing me to sleep where bombs explode'—it's great. Next?

M. O.—"What is your trouble?"

Pte.—"Sick in de head, de fevair, de bowel she don't move, the pipe she run up de leg. Oh, mon Dieu, beaucoup malade."

M. O.—"You' got the 'Flu,' Grippe."

Pte.—"Oh de Greep, she one bad seekness. When mon Frere Jean—"

M. O.—"Never mind your brother John, take these." He is put to bed still talking, for if a Frenchman were tonguetied, he'd still talk with his hands.

You can feed the fire with utmost ease owing to the generous double feed doors—no scattering of fuel and room to insert big chunks of wood.

McClary's Sunshine Furnace

If you have five or ten minutes to spare come in and I'll show you the other advantages of this splendid furnace.

AN EVIL HERITAGE

CHAPTER V.

It was not more than five miles from Thornton to the Monastery, and Bernard, who never got into a carriage unless he could not help it, decided to walk. Having traversed about half the distance, he almost repented his resolution, for the bitter wind against which he was battling began to sting his face with a fine powdery snow. It was a December day which by mistake had strayed into March: one of those uncancelled debts of winter of which the innocent spring has to pay the penalty.

The grand, desolate park of the Monastery looked, by this weather, yet grander and more desolate. The great open spaces where trees had once stood, and where now only stumps marked the places of the fallen monarchs, showed already a thin coat of snow. In the more sheltered spots among the bushes some of the very boldest of the blue hepaticas were pushing through the moist dead leaves of last year.

Once in sight of the house—a great grey square building—Bernard's pace grew faster. Not only would it be unquestionably pleasant to get under shelter, but also there was no denying despite the defiant attitude of his mind, a faint feeling of curiosity was astir within him. It is not every day, after all, that a man sets off to inspect a possible wife.

Having rung the bell twice, and listened to its echo through the huge house, Bernard tried the door, and found it unfastened.

He was standing in a wide passage which apparently ran the length of the house. The signs of a comparatively recent arrival were evident on every side. Packing cases, both empty and full, were piled upon each other; a mountain of matting almost blocked one side; pictures stood with their faces against the wall, and carpets were as yet rolled up under tables, leaving bare the flagstones with which the gallery was paved. There was no one in sight, either to the right or to the left, but from the latter direction there came a sound of hammering so resonant that Bernard could not wonder at the voice of the door-bell having been drowned.

Following this guiding sound and turning the corner, he came in sight of a group of men and women gathered round a ladder at the far end of the gallery, and busy hanging up pictures.

When Bernard had taken this in at a glance, his eye returned to another figure which was somewhat nearer to him than the others, but whose back was turned. It was that of a lady, a young lady, as he could see immediately, and she was occupied with the arrangement of the flowers that littered one of the tables.

Bernard could see absolutely nothing of her except the curve of her shoulders, the outline of one of her ears and a heavy plait of hair, which seemed to be very dark, if not quite black. Was it that he wished to clear up all doubt upon this subject or was it his curiosity, unknown to himself, had received some further stimulus? Certain it is that he mended his pace once more, and stepped cautiously over the echoing stone flags.

But Bernard was not destined to reach the end of the gallery that day. Scarcely had he turned the corner when he was already perceived, and ere he had traversed half the space between him, a footman, hastily summoned from some neighboring region, had met him and enquired his wishes.

"Was Mrs. Durrant at home? Yes, she was. "This way, if you please." If Bernard had hoped to be led past the lady standing at the table, he was disappointed, being, on the contrary, requested to retrace his steps for a considerable distance. If she would at least turn her head!—perhaps if he dropped his cane. There—wasn't she doing it now? No, scarcely halfway, not even enough to show her profile. What a strange absence of curiosity in a young girl!

The room into which Bernard was ushered was an agreeable contrast to what he had seen of the rest of the house—an oasis of comfort in the midst of a wilderness of discomfort. Too large indeed to be called cosy, it was yet one of those rooms which seem to welcome their guests with open arms. Bernard had come expecting to be overpowered by the blare of satin and the glitter of gilding, his teeth set, as it were, against what he was quite certain would be the soap-boiler's love of display. To his astonishment he now found himself in an apartment handsomely furnished, indeed, but almost gloomy in its complete absence of the bright and the light. Not so much as a gilt picture-frame or a white curtain broke the universal sombreness.

Bernard made this observation standing in the middle of the room and looking around him. The footman had retired presumably in order to summon his mistress. Was that Miss Durrant out there in the gallery? And supposing it was, would she come in with her mamma? Who else could it be except Miss Durrant?

More than three minutes had passed in these reflections when the door opened once more and a calm and dignified elderly gentleman entered the room, and with a bow which was a study in itself, introduced himself as Mr. Durrant.

"Eliza," he added, in a tone of gentle reproach, "why have you not asked Mr. Berrincott to sit down?"

Following the direction of his host's eyes, Bernard now to his astonishment perceived a movement in one of the deep window embrasures, and, looking more closely, he saw that a middle-aged woman was sitting there in an arm-chair—a dark, bulky woman, with a shawl round her shoulders and her hands lying in her lap. While he had been making his observations, was it possible that, on the other hand, observations had been made upon him? The thought passed through his mind, but faded again as he approached the embrasure. Not [illegible] of any unpleasantly close observation here. The woman in the arm-chair had apparently been having a snooze; to Bernard it seemed that she was only imperfectly awake now. And yet he could not rid himself of a feeling of annoyance. It is always irritating to discover that you have not been alone when you have believed yourself so.

Introductions and greetings being over, Bernard sat down on a chair which Mr. Durrant pushed forward in the most exquisite manner, and wondered what was going to happen next. Nothing happened to begin with, except that Mr. Durrant sat down on another chair and began to make most irreproachable conversation. Mrs. Durrant to all appearance had dozed off again in her corner.

Bernard had sat down with his face towards the door, and without being exactly aware of it, was listening to every sound in the passage. It was Mr. Durrant who bore almost the entire brunt of the conversation.

"So your father had an easier night," the retired soap-boiler was saying, in an accent of well-mannered sympathy. "I understand that he suffers from sleeplessness."

"Very much," answered Bernard, lending an ear to what he thought was an approaching step.

"I hope you did not find him seriously altered for the worse?"

"No—yes; I beg your pardon, I don't think I caught your question."

Mr. Durrant repeated it, and presently launched into civil but hopelessly unsportsmanlike enquiries regarding Bernard's recent shooting expedition. He wanted to know whether it had been grouse that Bernard had been in search of in Norway.

"Grouse in February?" gasped the young man, with his attention arrested perforce. "It was wolves I was after."

Then Mr. Durrant wished to know how wolves were caught—in traps or in nets?

Was it for this sort of thing that he had walked over these five miles in the teeth of that wind? Bernard began to think seriously of cutting short his visit. He was beginning to look round for his hat, when just outside the door there was heard that gently subdued rattle of cups which presages the approach of a tea-table, and instantaneously a new hope was born in his mind.

Neither was it a false hope this time, for close upon the tea-table the same lady entered the room of whom Bernard had had a glimpse in the gallery.

"My daughter," Mr. Durrant said, with a gesture of introduction, and the young girl inclined her head in silence.

Bernard had risen, but in his astonishment he forgot to bow. He was in general more, rather than less self-possessed than most young men of his age, but he had not been prepared for anything like a vision of beauty, for the first minute or so Sybil Durrant literally dazzled his young eyes.

It was not only that she was beautiful, but that she was beautiful in a way which could not possibly be overlooked. Hers was a brilliant—what ill-natured people sometimes called a showy—style of beauty: tall, stately, queen-like, in figure as well as movements; a brow that seemed intended by nature for the wearing of a crown; a step and gestures which suggested the folds of royal purple robes. And yet, despite this tragedy-queen air which pervaded her entire personality, Sybil Durrant was innocent of self-consciousness; it was only that she was so made that she did not know how to move or look otherwise. An admirable calmness breathed from out of her; her dark eyes were serene, her white brow was serene, the smile upon her red lips was serenely sweet. In the moment of introduction it was she who was by far the more self-possessed of the two.

"She is generally considered good-looking, but it is all a matter of taste." What could his father have meant by such absurdly faint praise? This was the thought which principally occupied Bernard during the first few minutes after his great discovery. As yet he had not exchanged a single word with Miss Durrant.

"Sybil," said the sleepy voice from the window, speaking in deep bass tones, "will you pour out the tea, my dear?"

Sybil said, "Yes, mamma," and went towards the tea-table. Her voice exactly matched her appearance; rich and musical, without being as deep as that of her mother. The right tones for issuing commands, or ordering slaves about, thought Bernard.

It was from her hands that he received his teacup, and, although he was not used to drinking tea in the afternoon, he was rather astonished to find himself accepting it without hesitation. Mr. Durrant meanwhile has recommenced talking; Miss Durrant had sat down at the tea-table and was eating bread and butter, only occasionally joining in the conversation. Her hair was quite black, as Bernard was able at last to ascertain, having calmed down sufficiently to make the noting of details possible—black as ebony and brilliant as satin. She wore it in a shining plait, which crowned her head like a diadem.

"She knows she is a queen," thought Bernard, "and she has crowned herself."

"Sybil, my dear," said the sleepy voice from the window once more, "have you done with the flowers for the dinner table?"

"Not quite all, mamma. There are two troughs over."

"Then, if you have drunk your tea, you had better finish them."

"Very well, mamma," said Sybil, as it struck Bernard a trifle resignedly, whereupon she rose and swept from the room.

"Bother the flowers for the dinner table," Bernard could not help inwardly ejaculating. Of course, he had not been keen about coming over and inspecting the soap-boiler's daughter; but once having condescended to this step, he had never for a moment doubted that he should be able to gaze his fill. It was a decided liberty on the part of the soap-boiler or his wife to withdraw their daughter in this way from his sight. What on earth did they mean by this extraordinary conduct? He supposed that old woman in the window recess was a fool; but why did Mr. Durrant himself not interfere? How long would he wait and see? At first he thought he would, but having sat for three minutes twirling savagely at his moustache, ill-temper got the upper hand, and he rose to his feet somewhat abruptly.

"Don't bother to see me to the door, please," he said to Mr. Durrant, and, somewhat to his own astonishment, Mr. Durrant took him at his word.

"Thank you. I have unfortunately caught a chill lately, and these long passages are exceedingly draughty. So if you will not think me uncivil——"

Bernard was already out of the door, thankful to get rid of Mr. Durrant's society on any pretext. The footman had turned to the right, and was showing him the way down the passage. Bernard was on the very point of following him with a sort of sulky resignation when a new idea struck him, and he turned abruptly to the left. He had caught sight of Miss Durrant bending over her hepaticas and snowdrops at the other end of the gallery. Somehow he had never thought of this chance coming his way. And what more natural that he should take leave of the daughter of the house? It struck him at this moment that not only was it allowable to approach her, but that it would be reprehensibly rude of him not to do so.

In a comparatively small number of strides he had reached the table beside which she was occupied.

"Miss Durrant," he began, a little breathlessly, "do you know that I was in a regular rage with the dinner-table flowers? I thought they were horrid nuisances, but now I have changed my mind, and think they are most charming things."

"Really?" said Miss Durrant, raising her serene eyes from the scattered flowers with an expression of perfectly genuine surprise. "Why were you in a rage?"

"Because—well, because I thought I was going to be cheated of the chance of saying good-bye to you."

"Oh, I see. Well, good-bye, then," and she held out a beautifully moulded hand, which, however, Bernard did not immediately take.

"Yes, all right—I am going," he said, a little taken aback at this promptitude. Was the girl a flirt? It did not look like it. She was looking at him quite frankly, and with an utter absence of embarrassment. "I am just off, but I wanted first to ask you—(what the deuce did I want to ask her?)—whether—no, what are you doing with these flowers here?"

"Don't you see what I am doing?" she answered in an accent of mild surprise; "I am arranging them for the dining room table."

"To be sure—I had forgotten. Are you fond of doing these sort of things?"

"Rather," she replied, in a tone which scarcely sounded enthusiastic.

"Then if you dont care for them much, why do you do them?"

For a moment the perfect serenity of her face was troubled. But the cloud passed as quickly as it had come. "Because I have got to," she said, in that same musical voice.

"But there are other things that you like doing better, I am sure. Do you play tennis?"

"Not much; it makes me so hot."

"Are you a great walker?"

"Well, I don't know; I take a walk every day."

"In what direction?"

The words were out before he was aware of meaning to say them. Now he glanced somewhat apprehensively at Miss Durrant, conscious of having gone a little further than a very strict propriety would approve. But Miss Durrant did not seem aware of anything offensive in his question, for she answered without hesitation, "Oh, in different directions. It depends upon the wind and the state of the roads, of course."

"Of course," agreed Bernard, somewhat foolishly, and then was silent for a minute.

"Do you ride?" And to himself he added, "What a perfect figure for the saddle!"

"Not much; it tires me rather."

"But you really should ride," said Bernard, who was never more in his element than when he could give good advice. "I am sure the exercise would be good for you, and I can lend you a horse, Miss Durrant, a horse that is sure to suit you. If you would only allow me to——"

"Thank you, Mr. Berrincott, but I really don't want to ride," interrupted the girl, in a tone almost of distress. "I tell you that I don't care about riding."

This was too plain to admit of any misconstruction, and, somewhat against the grain, Bernard had to drop his new idea.

Several more minutes passed, during which he said several other things, none of which, however, was that word, "good-bye," which, as he declared, had been the sole cause of his invading this end of the gallery. Miss Durrant was giving the finishing touches to the last crystal trough. Bernard watched her while he made small talk, and told himself that it would be time enough to go when the last flower was in. Hepaticas and snowdrops still littered the table, and in the folds of Sybil's dark-blue serge a stray white or blue flower-head hung here and there, caught against the rough surface.

It was the sound of a distant door which at last brought Bernard to his senses. Good-bye was now said hastily, and with something of a guilty feeling he hurried homewards.

He was in anything but a good temper when he reached home, not only astonished at, but thoroughly dissatisfied with himself. Looking back at his behaviour that afternoon, he could find no explanation for it—none, at least, that he would accept. Of course there was one explanation ready to obtrude itself, and that might possibly make everything clear, but he was not going to admit anything of the sort just yet.

Simon asked no questions at first, but quietly watched his son and talked upon different subjects. To Bernard the evening appeared interminable. He sat there beside his father's sofa, feeling hot and cold by turns, believing, because he was able to sit still, and because he gave rational answers to his father's remarks, that his outward appearance did not betray him.

The hour was approaching at which the sick man was used to be settled for the night. Bernard had risen to ring for the nurse, but at that moment Simon's self-control gave way. Curiosity carried the day, after all.

"Well, Bernard?" he said, turning towards him and stretching out his feeble arms.

That was all; but Bernard understood him perfectly, and attempted no evasion. Possibly it was a relief to him to be done with the comedy of the last two hours.

(To be continued.)

SUNDAY SCHOOL LESSON

Lesson II. June 9, 1916.

The Thessalonian Christians.—Thessalonians 1: 1-10; 2: 17-20; 4: 13-18.

Commentary.—I. Christian faithfulness (1: 1-10.) 1. Paul, the Silvanus, and Timotheus—Paul was the author of this epistle, but he includes the others in this address because they were laboring with him in Corinth. Silvanus was the name by which Paul called Silas, his fellow worker. Timothy had been with Paul on the second missionary journey, having joined him and Silas at Lystra. Paul had gone on to Athens from Berea alone and Silas and Timothy came later. Paul sent them back to Thessalonica to learn how the Christians there were prospering. They had brought a favorable report and Paul addressed this epistle to the church of the Thessalonians. In God the Father—God's children dwell in him (1 John 4: 12, 16.) And in the Lord Jesus Christ—The apostle does not forget to magnify Jesus. Grace be unto you, and peace—Paul uses a similar form of greeting in his several epistles. 2. We give thanks to God always for you all. The apostles recognized the fact that it was through God's direction and grace that the Thessalonians had been saved, and their salvation was a source of intense satisfaction to him. Making mention of you in our prayers—Paul named over the saints at Thessalonica and prayed for each of them. He prayed for them as a church and as individuals. 3. Remembering without ceasing—He did not, even amid all his labors and perplexities, allow himself to forget for an instant the faith, piety and activity of his children in the gospel. Your work of faith—Their faith was strong and led them to work for the advancement of Christ's kingdom. labor of love—Love prompted them to acts of self-sacrifice for the Master. Patience of hope—Their hope had a good foundation and hence had power of endurance. Faith, love and hope are prime and essential qualities in the child of God. 4. Knowing .... your election of God—The apostle was convinced that God had chosen them unto salvation on the ground of their having made choice of God.

5. Our gospel—The gospel which Paul and his fellow workers preached. The good news of salvation was given first to the Jews and became good news likewise to the Gentiles. Came not .... in word only—The good news came in the words of the apostles, but there was divine power connected with it. In power—The gospel message was delivered by the aid of the Spirit and powerfully affected the hearers. In the Holy Ghost—The anointing of the Spirit was upon the speakers, and those who received the gospel were wrought upon by the Holy Spirit to change their natures. In much assurance—The apostles were confident that they were delivering God's message. What manner of men we were—The apostles were examples of what the gospel could do. They lived the gospel they preached. For your sake—The labors and sacrifices of the apostles were for the sake of those among whom they preached. 6. In much affliction—The gospel was received by the Thessalonians in the midst of bitter persecution. With joy of the Holy Ghost—The apostles had joy when they were persecuted and the converts were joyful in the Holy Spirit. 7. Ye were ensamples—They were examples of what the grace of God in Christ could accomplish and they became patterns for others to follow. 8. From you sounded out—Their testimony, preaching the Spirit-filled lives proclaimed afar the power of the gospel which they had embraced. Macedonia—Northern Greece. Achaia—Southern Greece. 9. They—Those who saw and heard the converts. Show of us—Report. Turned to God from idols—This expression shows clearly that the most of those who were converted in Thessalonica were not Jews or Jewish proselytes, but pagans. 10. To wait for his Son from heaven—A clear intimation of the doctrine of Christ's coming again to earth. Raised from the dead—Paul never got away from his great, central, gospel theme, Jesus Christ and his resurrection.

II. Paul's joy in the Thessalonians (2. 17-20). The apostle had not been away from the Thessalonians long before he found himself yearning to visit them again. More than once he made an effort to go there, but he was unable to do so. The only explanation he gives is that Satan hindered him. He may refer to the persecution that Satan raised against him, which would make it unsafe for him to visit Thessalonica. His great joy was the converts there. He saw them redeemed by the blood of Christ and saved from idolatry and every other form of sin. He had confidence that they would be faithful to the end and he would rejoice in them in glory.

III. Certainty of Christ's coming (4: 13-18). 13. I would not—I do not desire. Asleep—Sleep is used here as in many other scripture passages as an emblem of death. The body is in the grave, but the soul is in conscious existence. That ye sorrow not—It is thought that some of the Christians at Thessalonica had lost friends and they grieved for them, not comprehending the doctrine that they would be raised in the general resurrection. As others which have no hope—The pagans had no hope of thought of a resurrection. 14. Will God bring with him—The resurrection of Jesus is the sure ground of the hope of a final resurrection. 15. By the word of the Lord—The apostle was delivering the message which the Lord gave him. We which are alive and remain—Paul was speaking in general terms and did not intend to be understood that he should live until Christ's coming. Shall not prevent them which are asleep—Shall not precede those who are dead. The old meaning of the word prevent is to go before. At the coming of the Lord the dead shall be raised to life and the living shall be caught up in the air with them. 16. The Lord himself shall descend from heaven—Jesus will come in person and not by a representative, and will come from glory. With a shout—The shout of the mighty host that will attend him. Voice of an archangel—The highest in position of the angelic host will herald the coming of the Lord. The trump of God—God will sound the command to the dead to arise. The dead in Christ shall rise first—The righteous dead will come to life at the divine command before the living are caught up into the air. 17. Then—This word is in correlation with "first" of v. 16. The dead in Christ shall first rise and then those that are alive and remain shall be caught up with them in the clouds. So shall we ever be with the Lord—There will be an assembling of those who were already dead when Paul wrote, and these who should afterward die, and those who should be alive at Christ's coming. 18. Comfort one another with these words—It would be comforting to know that Christ was coming again, that there would be a reunion of all the saints and that they would dwell forever with the Lord.

Questions.—When and by whom was the First Epistle to the Thessalonians written? Who was Silvanus? Timothy? For what did the apostle give thanks to God? In what manner did the gospel come to the people of Thessalonica? How desirous was Paul to revisit the church there? What encouragement did he give those who were mourning the death of friends? What did he say about the coming of Christ?

PRACTICAL SURVEY.

Topic.—Living epistles.

I. Exemplified apostolic preaching.
II. Received apostolic consolation.

I. Exemplified apostolic preaching. This lesson presents a very interesting and beautiful account of the triumph of the truth, and the progress of Christianity in Thessalonica. The work of grace which was evident in the lives of the converts afforded Paul sufficient recompense for all he had done and suffered for their sakes. Paul's thanksgivings were to God for the spiritual prosperity at Thessalonica. The reputation of the Christian converts was of a high order. Their achievements were enduring. They reached the grand ideal of a community of believers. They were but a handful, comparatively, in the very centre of a strong, compact, organized heathenism. They showed the martyr spirit. They were willing to share in the sufferings that attended the embracing and profession of Christianity. The report of their faith received a wide publicity, even outside the borders of Greece. By patient continuance in well-doing they were making their calling and election sure. They were learning in their own experience the meaning of that seeming contradiction, "Sorrowful, yet always rejoicing." They had joy amid tears. Their faith had the stamp of reality, though they were attacked with swift, sharp persecution upon their acceptance of the gospel. In spite of persecution, a peculiar joy possessed them. Their trials tested and revealed their faith and thus led to the fuller proclamation of the gospel. Their zeal so prevailed that they were themselves examples to others. By the eloquence of their lives their proclamation of the gospel was clear and ringing. Paul declared that they had filled Macedonia with knowledge and wonder at their steadfastness in the truth; that they had triumphed among the people by their patience and suffering for the gospel's sake. Under Paul's teaching, they had laid hold of the great fact of the atonement. The graces they exercised were manifestly wrought in them by the power of God. They were examples to the other churches which Paul raised up. The founding of the Thessalonian Church was a most marvelous work.

II. Received apostolic consolation. We may regard Paul as a true philanthropist, as one who lost sight of himself in seeking the good of others. No man ever entered more deeply into the feelings of others. The joy of his life was bound up with the salvation of souls. His supreme pleasure was the loving sympathy of his converts. Neither time nor distance could diminish his interest in them. His grief at being separated from them was a proof of his affection for them. None were more tenderly loved than the Christians of Macedonia, none addressed with more endearing words. The apostle's hope was to see his converts complete in Christ at the resurrection. His words show that he believed in the mutual recognition of friends in the future life. He looked to an everlasting bond of union between himself and his flock. Beyond the bounds of time Paul eagerly anticipated eternity. He lived in expectation of the appearance of the Saviour. That great hope was his own perpetual inspiration, and by the teaching of it, he ever urged his disciples to live consecrated lives. Throughout his epistle the thought of the Lord's concerning the coming of the Lord being of all true believers. Ignorance concerning the coming of the Lord had cast some of the Thessalonians into deep sorrow in respect to their departed friends. Paul's encouragement and exhortation were timely. His statement would afford much consolation. He declared only what was revealed to him. He prefaced his declaration by distinctly claiming the authority of inspiration for it. On a subject of such vast moment Paul was careful to show that he spoke on the highest authority, under the immediate inspiration of the divine Spirit. Paul's assurance was that their departed loved ones would share the glories of Christ's advent as certainly as those who lived at his appearing. So far from being placed at a disadvantage they were to occupy a position of privilege. Paul presented the final state of two classes which were to be united in a meeting without a parting in intimate fellowship with the Lord in fulfilment of Christ's prayer.—T. R. A.

NORTH AMERICAN ALPS.

The attention of the public is directed to the new publication just issued, dealing with the wonderful Alpine Playgrounds in the Rockies served by the Grand Trunk Pacific Ry., and with the route of the Grand Trunk Pacific Steamships through the "Norway of America" to Alaska. This new booklet is of 45 pages and has striking cover designs in color with gold embossed lettering. The booklet contains more than 40 half tone illustrations and carries maps of Jasper and Mount Parks, of the Grand Trunk System and its connections and the routes of the Grand Trunk Pacific Steamships in the North Pacific coast waters. It is a worthy representation of the "Route of Character Service." Copy of this book can be obtained on application to Jas. Anderson, City Passenger and Ticket Agent, James street, Hamilton, or C. E. Horning, D. P. A., Toronto.

CANADA'S BUSINESS FIRST.

(Toronto Telegram)

Tariff problems and other so-called imperial problems can best be settled for the whole British Empire when each British nation settles these problems in the strength of its own independent sovereignty and individual common sense. Canada's immediate local problems can provide full employment for all the ability Canada is able to develop. Canada has no surplus ability for export to Westminster.

Tommy Atkins to Captain Bunkum

The following poem, a parody on "You Are Old, Father William," appears in the Hawick News (Scotland) of April 21st.

"We are cold, Captain Bunkum," the private groans,
"And we slept in wet blankets last night,
Yet we stand on parade till we're chilled to the bone.
Do you think that is treating us right?"

"The Canadian Contingent," the Captain replied,
"Is tough, as you'll see by the news,
And will flinch from no hardships, however they're tried,
If you don't believe me, ask Sam Hughes."

"We drill every day in the wet, Captain B.,
And the clothes we put on remain damp.
This tells on one's stock of endurance, you see.
Say, why don't we shift from this camp?"

"The huts are not ready yet," came the reply,
"And we'll miss a parade if we move.
Be patient, take hardships, as soldiers and I.
By next spring things ought to improve."

"Is the cooks, Captain Bunkum, should vary our meals,
With Hamburg steak, sausage and such,
An occasional spud or two boiled without peels,
Would the Government mind very much?"

"To grumble at rations with your scale of pay,
Seems to me, my man, quite idiotic.
You can buy extra chuck with your dollar a day.
Besides, Hamburg steak's unpatriotic."

"Just one moment, Captain," the private called out,
"I've one problem more then I'll quit.
If we're fit for the front as is rumored about,
Are our officers equally fit?"

"I've answered three questions and that is enough,"
The Captain with energy roars.
"Say, do you think we are throwing a bluff?
DISMISS, or I'll make you form fours."
—Galt Reporter

TRENCH RINGS.

Soldiers' Souvenirs and How They Have Developed.

Some unusual rings have recently been brought from France. They are not of any special intrinsic value. Their interest rather lies in what they are, namely, rings from the trenches made by French soldiers from the fuses of German shells.

Mrs. Daniel Gregory Mason, an American woman, was the first to have specimens of these rings gathered into a collection and brought to this country, where they were sold for the benefit of the French soldiers. The collection was made by workers among the soldiers attached to the various relief commissions in France. Mme. Charles Le Verrier became its custodian and was the one who brought it to America.

In France these rings are among most sought for souvenirs from the front, the soldiers reserving them as a rule for their families, for dear friends and for those to whom they wish to express grateful appreciation for special services rendered. The number of rings in Mrs. Mason's collection was 200, and they included eighteen different designs. Most of them were very simple, but all displayed the ingenuity of their makers, who wrought them, it has been explained, "in their calm moments to amuse themselves."

The story of the rings from their beginning is worth giving. After the first battles the soldiers seeking souvenirs of the war often found fuses which had formed part of German shells. These fuses were generally of aluminum, sometimes of copper and aluminum, and sometimes they included a ring of aluminum. These rings approached somewhat the size of the finger, and were the first trench rings. But they were too large for any finger except that of a big man. So little by little the soldiers began to work on them, first with a knife, and then with a sharp pointed implement.

Wishing to make rings of a smaller diameter, they found it necessary to melt the metal of the fuses in order to cast it in round slugs of suitable size. The metal was melted either in a ladle or a steel helmet over a wood fire. The first moulds were of earth, of wood or of soft limestone. The metal was cast in round bars, which were cut into disks of the proper thickness. Afterward the centres of the disks were cut out. The rings thus formed were smoothed and polished with much labor. Some of the rings are engraved with a knife or other implement and into some pieces of copper are set.—New York Sun.

THEIR EYES OPEN.

German Troops in Russia Blame Kaiser for War.

Copies of the Kaiser's latest manifesto to his troops have been found on German prisoners taken in the recent fighting near Lake Naroch (Northern Russia).

In it the German troops are asked to strain all their efforts in order to defeat the enemy, "who has planned to annihilate Germany." The manifesto was issued on the occasion of the Easter holidays, and embodies the usual expressions concerning the "God of the Germans," who wins their battles and permits them to obtain one victory after another.

Prisoners state that the manifesto, unaccompanied as it was by the customary Easter presents, produced no impression at all on the soldiers, the majority not even taking the trouble to read it.

German prisoners recently captured near Dvinsk appear to have lost all respect for the Kaiser. They are haggard and half famished, and complain of the hardships experienced in the trenches. "The Kaiser is the enemy of Germany," they say. "We are peaceful people, and when we entered the army we thought we were protecting the country from foreign aggression; but in reality we are only tools for the execution of his sanguinary plans."—Central News from Petrograd.

Christening Boats.

The modern custom of christening vessels is without doubt an adaptation of an ancient custom, just as so many of our other customs and habits have been adapted from ancient ones. The ancients used to place the image of a titular deity at the stern of their vessels, in the tutela, or shrine. Do you remember that the boat mentioned in the twenty-eighth chapter of the Acts, the boat that carried Paul from Malta to Rome, was "under the sign of Castor and Pollux?" It was so says Acts.

The ceremony of breaking a bottle of wine on the bow of a new vessel as it is launched is another ancient adapted custom for the ancient offered a libation to Neptune or Poseidon, who ruled the seas as they launched their boats.—Exchange.

SUNDAY AT HOME

BEGIN AT HOME.

If thou wouldst right the world,
And banish all its evils and all its woes.
Make its wild places bloom,
And its drear deserts blossom as the rose—
Then right thyself.

If thou wouldst turn the world
From its long, long captivity in sin,
Restore all broken hearts,
Slay grief and let sweet consolation in—
Turn thou thyself.

If thou wouldst cure the world
Of of long sickness, end its grief and pain,
Bring in all-healing joy, and give to the afflicted rest again—
Then cure thyself.

If thou wouldst wake the world
Out of its dream of death and darkening strife
Bring it love and peace,
And light and brightness of immortal life—
Wake thou thyself.
—James Allen in New York Mail.

TAKE HEED UNTO THYSELF.

Every man that striveth for the mastery is temperate in all things. Now they do it to obtain a corruptible crown; but we an incorruptible. I therefore so run, not as uncertainly; so fight I, not as one that beateth the air; but I keep under my body and bring it into subjection; lest that by any means, when I have preached to others, I myself should be castaway.

Put on the whole armour of God, that ye may be able to stand against the wiles of the devil. For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of the world, against spiritual wickedness in high places.

They that are Christ's have crucified the flesh with the affections and lusts. If we live in the Spirit, let us also walk in the Spirit.—For as many as are led by the Spirit of God, they are the sons of God.—Meditate upon these things; give thyself wholly to them; that thy profiting may appear to all.

ERRORS.

"Who can understand his errors? Cleanse thou me from secret faults," says the Psalmist (xix, 21). We must be careful that we do not stand in the presence of a cluster of negations. Sinai says, "Come not near." The flashes are terrible, the thunder is appalling. The burden is "thou shalt not." These dismal disclaimers land me in desolation. I am empty, poor and cold, I stand aghast, and trouble is near.

In trying to understand my errors, principle, I must take care not to go to the wrong place, or person or principle. I must remember my limits. I must be certain that my attitude is sincere, adequate, and open. Aforetime men ran to an altar, to a man in priestly garments, to ablutions, and sacraments. May a man stand between me and God; can a man lead me into the presence of the Holy One; can a man fill my mouth with arguments? "Cease from man, whose breath is in his nostrils."

What is an error? It is a mistake, a blunder, a weakness. It is to deviate from the right course, it is to violate the law of duty. Conscience condemns, but Christ delivers. We stand before Sinai and feel the curse; we stand before Calvary and appropriate a blessing. It is our duty not to hunt for heresies, but for consolations.

Who can understand his errors? There is perplexity. Cleanse Thou me from secret faults. There is a turn in the tide. Where there is cleansing, there is life, and vision and hope. Hiding behind errors are a cluster of virtues ready to be revealed: excellence, work, goodness, purity and greatness. Behind a frowning providence He hides a smiling face. To begin to count your errors and feel the cleansing power of a new affection is to be on the threshold of a new home and a larger life. The darkest hour is before the dawn, and night opens out into day. To know all about our disease is half the cure—nay, it is the beginning of a new life. Conviction is not conversion, but it is the porter at the gate of the House Beautiful. The prayer that asks for cleansing is born of heaven, it is the beginning of grace, and grace is the bud that opens out and blooms in everlasting glory.

Do not try to count your errors; look away from yourself; look unto Jesus, and your eye shall not be dim, but power will ever be given for you to see the King in His beauty.

H. T. Miller.

GOLD ACTUALLY GROWS.

In Certain Cases Nuggets Placed in Water Increase in Size.

It has been found gold nuggets under favorable conditions actually increase in size.

Gold is known to have grown on mine timbers which have long been immersed in mine water. In the California state mining bureau museum there is a specimen of a piece of jointed cap and post taken from the Comstock lode, where it had been under water for years. Gold had formed in the points and pores of the wood. Gold is constantly being formed in rocks and veins and placers. Just what it is that the baby gold formation feeds on is not known. If it were a new and wonderfully lucrative industry might be born.

As in the case of the animal or vegetable, existing gold has existed in some other state before assuming its present form. Waters which seep the earth's crust are said to contain substance from which gold is formed. Like animals and plants, gold must have water in order to thrive.

The gold in the water is deposited when it meets with the proper precipitant—an earth current of electricity, some vegetable growth or some chemical in the rocks.

It has been claimed that the nuggets found in placers are formed from the waters that percolate through the gravels and not from decomposed quartz, as generally supposed. Those who so contend cite the fact that in the centre of nuggets a small grain of iron sand can often be found. This was the nucleus around which the current of electricity created or deposited gold from the substance in the waters, just as it is deposited in electro plating.—Popular Science Monthly.

BURDOCK BLOOD BITTERS CURED DYSPEPSIA.

Unless the stomach is kept in good shape your food will not digest properly but will cause a rising and souring of food, a feeling of rawness in the stomach, pains in the stomach or a feeling as if a heavy weight were lying there.

Burdock Blood Bitters cannot be surpassed as a cure for dyspepsia and all its allied troubles.

Mr. James R. Burns, Balmoral, N.S., writes: "About two years ago I was badly troubled with dyspepsia, and could not get any relief. I tried most everything, not even the doctors seeming to do me any good. One day a friend told me to try Burdock Blood Bitters, as he had seen it advertised. I did so, and by the time the first bottle was gone I felt better, and after taking three bottles I was completely cured. I highly recommend it to all sufferers from dyspepsia."

THE TREE ON THE ROOF.

An Old Building Custom to Propitiate the Papan Gods.

Did you ever stop to think why a bit of ornament in the form of conventionalized fruit, grain or flowers is almost invariably added to the gable of a Gothic building and very frequently to the gable of ay old type of building? Do you know why the lightning rods of our grandfathers were branched at the ends like little trees and why the old fashioned Scandinavian, Danish and German contractors contrive to fasten a branch of a tree or an ear of corn to the topmost peak of a house that has progressed so far in the course of construction that the rafters are in place? Usually the contractor laughs sheepishly when he is asked about the matter, giving no other reason than that his father always provided the birds with some grain or offered them a green branch to rest in.

The fact is that the birds have nothin whatever to do with the custom. is purely religious in its significance entirely pagan. It has its beginning fore Christianity was "inflicted on barbarians of the north". The g of a building was exposed to both and lightning, so the gods must be pitiated. For Wotan there was a evergreen tree and for Thor ther a branch of flowers. If the favor god had been invoked while the was still incomplete, the ceremony be finished the day the house wa by the burning of the little tree withered flowers. Then a bunch o was tied to the gable to feed the horse of the death god, so that he would hasten on his journey without stoppin at the particular house.

SOCIABLE PENGUINS.

Visits Not Appreciated by Explorers in the Antarctic.

R. E. Priestley of Captain Scott's antarctic expedition relates an amusing experience with Adelie penguins off Flagstaff point. The Terra Nova ha landed a party to take off geologic specimens, but the men had some difficulty in keeping the penguins away from the boat.

"As we lay alongside the ice foo says the author in his "Antarctic Ad venture," we blocked the birds' acce to their rookery, but that did not see to bother the penguins in the least. They would rise out of the water a few yards off, take a glance at the boat, which they doubtless took for a stranded floe, and then disappear. From previous experience I knew what was coming and looked with interest for the next act, but the boatman who was helping me get the specimens on board was new to the vagaries of the Adelie.

I was unable to judge which was the more surprised, the sailor or the penguins, when the latter landed, half dozen at a time, upright in the bottom of the boat. Certainly the penguins were most annoyed, and dire they found that they were trap they assaulted the poor man with reasoning fury, so that it was no e matter to pitch them back into sea.

It was on a similar occasion that Adelie penguin, seeing what thought was a handy piece of ice, lea ed out of the water and landed on the knees of the boatswain who was the stern. He looked the man in t face, gave one hysterical squawk o horror and shot into the sea. I have never seen a face show greater astonishment than that of our respected boatswain unless it were the penguin's.

KITCHENER.

Are we downhearted yet? Lor' bless yer, no!
But aye—it's cruel 'ard to see 'im go.
'Im as the Good Book calls—what is it?
"Bulwark and strength,"
Doin' 'is bit for us day after weary day,
Until at length
Gawd called him:

And we blind fools without 'im [illegible] below,
Yet wait—I see 'im marshalling [illegible] there,
Those white battalions wingin' by 'im slow,
Called by his faith as though by bugle's blare,
To 'elp 'im strike a blow at England's foe
Because 'e loved us—and we loved 'im so!

Come on, boys, cut the tears and sing,
Tighten the Teuton ring,
Fight on the Victory as e'd 'ave us go;
God Save the King!
—Anonymous, in Montreal Star.

The office that seeks the man seems to be about it in a blind-man's-buff sort of way.

Heart Palpitated

Would Have to Sit Up in Bed.

FELT AS IF SMOTHERING.

Mrs. Francis Madore, Alma, P.E.I., writes: "My heart was in such a bad condition I could not stand any excitement, and at times when I would be talking my heart would palpitate so that I would feel like falling. At night, when I would go to bed and be lying down for a while, I would have to sit up for ten or fifteen minutes, as I would feel as though I was smothering. I read in the daily paper of a lady who had been in the same condition as I was, and was cured by using Milburn's Heart and Nerve Pills, so I bought a box, and they did me so much good, my husband got another, and before I had used half of the second box I was completely cured. I feel as though I can never say enough in favor of your Heart and Nerve Pills."

Milburn's Heart and Nerve Pills are composed of the very best heart and nerve tonics and stimulants known to medical science, and are for sale at all dealers, or will be mailed direct by The T. Milburn Co., Limited, Toronto, Ont.

Price, 50 cents per box, or 3 boxes for $1.25

FARM AND GARDEN

FRESHENED COW'S FEED.

Few farmers appreciate the real weight which care at calving time has upon both the productivity of the cow and the value of the offspring. If they did they would exert greater care and consideration. The dairy cow, when dry, should be fed chiefly on roughage. A small allowance of grain, about two pounds daily, will be quite enough, provided she is in reasonably good physical condition, and this ration should be rich in protein.

Bran or oats, or a mixture of bran and oats with a little meal, makes a good combination to be fed previous to calving. Corn silage and roots are very good feeds if the cow has no pasture, or if it be before pasture season. The succulent feed should include liberal allowances of clover or alfalfa hay, or a roughage rich in protein.

But the cow should not be fed more roughage than she will eat up clean. If fed too much there will be danger of her getting into the habit of eating the most palatable parts of the roughage and wasting much good feed. The cow on pasture will need no grain, but a little roughage is good. Of course, if the animal is thin in flesh it would be well to feed some grain; but the amount should depend upon her condition entirely.

When the cow has been properly fed there will be no necessity of medicine, contrary to the views of many dairymen. A bran mash over which some warm water has been poured is a very good ration, especially in cold weather. Ground oats mixed with grain and a pail of warm water should be given, for her feverish condition and exhausted body at this time demand considerable water, and this should be warm. Be careful that she is not exposed to cold draughts.

Feed very lightly on grain at the beginning of the milking period, allowing a liberal amount of silage, roots and hay. As the cow gains in strength and resumes her normal condition, the grain portion of her ration should be increased. Keep increasing gradually as long as she responds to the extra feed. When she has reached her maximum flow of milk she should be fed a little less grain.

It will take three or four weeks to bring her to a full flow of milk and to reach the stage where she is eating a full ration. The time to establish the milk flow of the cow is when she is fresh. There is no other time in the lactation period when care and judicious feeding have a more important bearing upon her year's record. Feed her liberally, but never overfeed or carry her beyond her capacity. This will work great injury to her milk function and breeding powers.—Prairie Farm and Home.

NUMBER OF PLANTS OR TREES TO ACRE.

Distance apart.	No. of Plants.
½ foot	174,240
1 foot	43,560
1½ foot	19,360
2 foot by 1 foot	21,780
2 foot	10,890
2½ foot	6,969
3 foot by 1 foot	14,520
3 foot by 2 foot	7,260
3 foot	4,840

QUANTITY OF SEED TO ACRE.

Beans, dwarf drills, 1 1-2 bushels.
Beans, pole hills, ½ bushel.
Beets, drills, four pounds.
Broom corn, hills, 8 quarts.
Buckwheat, broadcast, 1 bushel.
Cabbage hills, half pound.
Corn salad, drills, 6 pounds.
Corn field, hills, 6 quarts.
Corn, sweet, hills, 8 quarts.
Corn, sweet, for soiling, drills, 3 bushels.
Cucumber, hills, 1 1-2 pounds.
Melon, musk, hills, 2 pounds.
Melon, water, hills, 3 pounds.
Onion (for bulbs), drills, 6 pounds.
Onion (for sets), drills, 30 pounds.
Onion sets (small), drills, 20 bushels.
Parsnip, drills, 5 pounds.
Peas, drills, 2 bushels.
Peas, broadcast, 3 bushels.
Pumpkins, hills, 3 pounds.
Potatoes (cut tubers), hills, 10 bushels.
Radish, drills, 9 pounds.
Rye, broadcast, 1 1-2 bushels.
Salsify, drills, 8 pounds.
Spinach, drills, 15 pounds.
Squash (bush varieties), hills, 3 pounds.
Squash (running varieties) hills, 3 pounds.
Turnip, drills, 1 1-2 pounds.
Turnip, broadcast, 2 pounds.
Tomato (to transplant) 1-4 pound.
Wheat, broadcast, 2 bushels.

QUANTITY GRASS SEED TO ACRE.

White clover, 10 pounds.
Red clover, 15 pounds.
Lucerne clover, 20 pounds.
Alsike clover, 15 pounds.
Timothy, alone, 1-2 bushel.
Hungarian, 1 bushel.
Millet, 1 bushel.
Blue and green grass, 3 bushels.
Rye grass, 2 bushels.
Orchard grass, 2 bushels.
Red top or herd grass, 2 bushels.
Mixed lawn grass, 4 bushels.

NOTES.

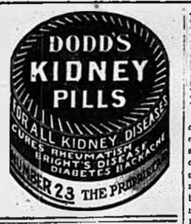
A veterinarian recommends for barb-wire cuts and similar injuries an ointment composed of the following: Pure carbolic acid, 1 part; iodine, 1 part; glycerine 50 parts, and alcohol sufficient to make 100 parts. Paint this on to the raw surface and keep it good and clean.

The cow that the dairy farmer needs is the one that converts feed into milk and butter as the feed increases. Cows of this kind are practically all found within the four great dairy breeds.

The trouble and cost of boiling the strainer cloth after every using is greater than the first cost of cotton cloth. Have a fresh cloth after each using.

Dirty feed pails are the most prolific source of summer scours in calves.

It is only natural that the difficulty of rearing calves should increase as the productive quality of the herd increases; the nervous organization is then more fully developed.



DODD'S KIDNEY PILLS
FOR ALL KIDNEY DISEASES
CURES RHEUMATISM BRIGHT'S DISEASE BACKACHE DIABETES
NUMBER 23 THE PROPRIETARY

The good herdsman is always on intimate terms with his charges. We have even known herdsmen to carry lumps of sugar in their pockets for nervous cows.

Necessarily, it costs more to produce clean milk than dirty milk but the additional cost is less than the profit realized from the increased price that can be asked, and the increase in custom.

President "Will-Soon."

An American reader sends from New York an amusing scrap of information. "In London," he says, "I see that you call him President 'Wilson.' Here we call him President 'Will-soon!'"

FUNNY, THIS.

Huns Despise Britain's Soldiers, but Can't Beat Them.

While German writers exalt their own people into demi-gods (why demi? Why not go the whole hog?)—while they call all Germans demi-gods, they use the British as a foil to show up by contrast their own brilliancy.

Here is an estimate of our soldiers, the men who will in due season will catch the Huns as they run for the Rhine.

The Daily Sheet, of Posen, thus delivers itself:

"So many thousands of the miserable wretches have been dragged from their slum hovels that the boozing kens of Whitechapel and the Borough are putting up their shutters.

"They have lost their best customers!

"It is these beer and gin-sodden youths, now hurried by Kitchener to the slaughter, that are to save the British Empire from the German heroes, compared with whom the famous Roman legions of antiquity were but babies in point of bravery and military skill."

We do not wish to boast, but one wonders why the German heroes have not long ago extinguished the British, if these be half so bad as the Posen editor declares.

Naturally we must arrive at the conclusion that however rotten the British may be, the Huns must be in a still more highly advanced stage of decomposition since they do not, with one grand advance, sweep us off the face of the earth.

Looking over Bernhardi's book I notice his claim for the great humanity of the German soldier.

But that would be contrary to the teaching of German military writers.

I read from General Hartmann:

"When war comes terrorism becomes an essential military principle."

I read from Bismarck:

"Inflict on the civilians of the enemy the maximum of suffering.

"Make the war so terrible for civilians of both sexes that they will be disheartened and will put pressure on their government to sue for peace."

I read from Clausewitz:

"War is unlimited. The side that uses every kind of force without scruple; yes, without any scruple whatever, must in the end beat an enemy who is hampered by foolish scruples."

I remember Bismarck's advice, "Leave the enemy nothing but his eyes to weep with."

I recognize that Germany has adopted this teaching.

The land that plumes itself on being the most refined and the best educated in the world is the land of the poison gas; of the Zeppelin; the land that sends out its nocturnal murderers of women and children.

Clausewitz says that war is "not heroic but the most cowardly thing imaginable."—Major, in Sheffield, Eng., Independent.

Joints Quit Aching
Soreness Beats It Away

NO MORE STIFFNESS, PAIN OR MISERY IN YOUR BACK OR SIDE OR LIMBS.

Wonderful "Nerviline" is the Remedy.

A marvelous pain reliever.

Not an ordinary liniment — just about five times more powerful, more penetrating, more pain subduing than any thick oily or ammonia liniment. Nerviline fairly eats up the pain and stiffness in chronic rheumatic joints, give quick relief to those throbbing pains, and never burns or even stains the skin.

"Rheumatism kept my joints swollen and sore for ten years. My right knee joint was often too painful to allow me to walk. In this crippled tortured condition I found Nerviline a blessing. Its warm, soothing action brought relief I had given up hoping for. I rubbed on quantities of Nerviline and improved steadily. I also took Ferrozone at meal time, in order to purify and enrich the blood. I am today well and can recommend my treatment most conscientiously.

(Signed) C. SPARKS,
Prince Albert.

Not an ache or pain in the muscles or joints that Nerviline won't cure. It's wonderful for lumbago or sciatica; for neuralgia, stiff neck, earache and toothache. Nerviline is simply a wonder. Best family liniment known and largely used for the past forty years. Sold by dealers everywhere, large family size bottle 50c., small size 25c. Refuse a substitute, take only "Nerviline."

The Fetich of German Efficiency

It has become the fashion of political thought to apologize for democracy in war, to compare it unfavorably with its opposite, which is autocracy, and to apostrophize the manner in which a mechanised nation meets its great emergencies. It has been particularly trite to contrast the municipality of counsels among the English, their "muddling" and general ineffectiveness, with the marvelous efficiency of the Germans. Democracies one hears, are slow to make up their minds and slow to act and waste their energies, whereas an autocracy, on the other hand, begins with its mind made up, acts swiftly, and conserves its energies.

By none more than by the English themselves are these conclusions asserted and the lessons abstracted. "The one condition of victory," said David Lloyd George in a recent speech, "is unity," as if that were a paramount enemy virtue. "Let us apply the enemy's methods to our means," he said, "and we win." Winston Churchill, attacking the British Government for its conduct of the war, counts the men supposed to be under arms, estimates the number that are in contact with the enemy, concludes that there is a "large margin not yet usefully applied to the prosecution of the war," and rises to a peak of bitterness in saying that, whereas the Government talks of "combing" the industries for more soldiers, he would say "Physician, comb thyself." One might think, to read what they say to each other, that the English were in a moral panic, divided in counsels, self discovered in their inefficiency, and now resolved to be efficient without knowing how to begin. But that is not so.

Earl Curzon said recently that there were two prerogatives of which they could never deprive an Englishman—the passion for depreciating himself and the right to abuse his Government. He spoke then of unity. The greatest contribution that Great Britain has made was not the number of men she put into the field, the munitions turned out, or the ships which sailed the seas, but the unbroken front, the solidarity, the stubborn tenacity of the nation as a whole. Of that unity and tenacity the Government was a symbol. That is the true picture of the English, the one which one knows instinctively to be true. The confusion is in the technique, and that is unimportant.

There are nations that might run a war better, there are perhaps few that could do worse in technique of conduct, but there is not one that could be more trusted to win a war, and that, after all, is the thing that counts. To be sure of this you have only to consider what would happen to the Allies in the event of England deserting them, and then, on the other hand, what England would do if her allies deserted her. She would not stop. She would go on alone, as she has been known to do before, because, as Earl Curzon says, she is united and tenacious, even in a mood of self depreciation, or perhaps more so in that mood than in any other. England, denouncing herself as inefficient, is yet the greatest moral asset of democracy in Europe.

Against her is arrayed what the world has been pleased to make a fetich of, namely, German efficiency. And what is that? How shall it be judged? By results, perhaps. Well, then, its first justification would be a victory. Being that quality wherein an autocracy may be superior to democracies in war, efficiency is obliged to triumph in war against inefficiency, so-called. In this it has failed so far, and is in danger of failing utterly. It may be argued that the test is not fair, because there is a point at which the highest efficiency will have to succumb to sheer numbers. Very well, we take it on other grounds.

A democracy, being inefficient politically, is unprepared for war, as England was; but in German preparedness there had been great efficiency. That is a thing now taken altogether for granted. True, Germany was reasonably prepared for war, but in her preparedness there were fatal defects not political and economic alone, but physical defects. Having put its trust in great guns and in the rapidity with which the enemy could be overwhelmed by their fire, German efficiency failed to provide itself with sufficient ammunition, so that by the end of September 1, 1914, the shortage of it was a calamity. By its own testimony this is true, and military plans had suddenly to be recast at a loss of precious time. It counted on a short war, which was a fatal miscalculation. It underestimated the strength and resources of its enemies, which is thought to be a vice of democracies. It failed to foresee the economic isolation of the German Empire, which was automatically bound to happen. Having been confronted with the fact of this isolation, and only after the lapse of nearly two years took the necessary arbitrary measures to conserve the means of life. In the meantime hopeless blunders had been made, as German critics of their own Government now unite in saying bitterly. There was first a great slaughter of swine, so that there was more pork than people could consume, and next there was a great scarcity of fat on that account, which apparently now cannot be made good. There was plenty in one place and scarcity in another, because the separate states were loath to yield control of their food to a Prussian dictator, now tardily appointed. These things might all have been done very much better. Doing them so badly in a democracy would be a mark of inefficiency.

German efficiency has failed to overwhelm either of its great enemies. It has conquered only Serbia and Belgium. On its second wind it does its mightiest against the French at Verdun and is nonplussed by the resistance of a democracy that was thought to be more valorous than efficient in war. It counted absurdly on the Zeppelin, an instrument of wanton frightfulness, capable of freezing the blood of the world, but powerless in the slightest degree to affect the outcome of the war. That is a symbol of ineffective efficiency.

What of German efficiency as reacted upon by the emotions of a people supposed to be disciplined beyond any unity of purpose and effort possible to be achieved in a democracy? Are divided counsels and embarrassments of government peculiar to England? Not at all. Only the technique is different in this picture. A member of the Reichstag is arrested in Potsdam Platz, Berlin, for denouncing the Imperial German Government. He has to be suppressed by force. Germany has her Irish problem within. The Admiralty and the Foreign Office come to an impasse, and the Kaiser has to decide between them, and off goes the head of von Tirpitz. The nation is then divided on the question of how submarine warfare shall be conducted, (though it has been already decided at Great Headquarters) and von Tirpitz papers openly and concertedly attack the Chancellor. There is at last a compromise in the Reichstag. Next the food problem comes to a head acutely, and there is another upset in the Government. The Minister of the Interior is interred, under a beautiful decoration, and in his place rises a food dictator, whose job will be thankless, because everybody undertakes to hate him beforehand. This would fairly answer as a summary of the views of a democracy at war. And in the meantime the great efficient war machine offers to a people on diminished rations a geographical situation called victory which the enemy strangely persists in ignoring!

So there is efficiency contrasted with inefficiency in war. Wherein is the triumph of one over the other? German efficiency will be less made of in the future. Its limitations are as obvious as those of an analytical conclusion. It solves a great problem, working from premises laid down, but it is baffled by the unexpected and lacks imagination to foresee new conditions. It sees narrowly in a straight line, and when deflected by unconsidered obstacles, which imagination might have provided for, it is like a locomotive off the track.—New York Times.

A CLEVER TOMMY.

How One British Soldier Escaped and "Did His Bit."

Reuter's correspondent, writing from the British Headquarters, says a certain soldier is now the pride of his regiment in consequence of the skill and daring with which he extricated himself from a very tight corner. Just where the adventure happened matters not. The man was sent out on patrol duty with another. They were surprised by a party of the enemy in considerably stronger force, and called upon to surrender. They replied by firing, and killed a German, after which the companion bolted.

The unnamed hero, coming to the conclusion that a live man is very much better than a dead one, permitted himself to be taken. But his captors failed to observe that, with sleight-of-hand skill, he was concealing a grenade in his capacious fist. This he dexterously returned to his pocket when the Boches had finished rummaging his tunic.

The disconsolate-looking Tommy was borne in triumph to the German lines. For some reason he appears to have been left in charge of a solitary sentinel, whilst the rest of the party moved away. Quietly withdrawing the bomb from his pocket, but without slipping out the safety-pin, he suddenly broke from his posture of cowed subjection and brought the object down with a tremendous whack upon the skull of his guard. The German dropped like a log, his rifle and bayonet clattering to the ground.

Tommy then took to his heels in the direction of the British lines, but had not gone far when he came upon another German patrol. Challenged to surrender, he stood still, and allowed the enemy to approach him close. Then suddenly poising the grenade, he hurled it right into the midst of the little group. There was an immediate explosion, followed by cries and groans, and the gallant soldier continued his sprint, returning safely to tell the story to his cheering comrades.

He Would Save Us Alone.

One political personage, with a great belief in his own powers, is said to have filled in his form in the "alternative occupation" space of the National Register in England, with "prepared to save the country." Which reminds one of the story that in the early stages of the war a certain political person approached the Prime Minister and said that he was convinced that war could only be carried on properly by one man with unlimited power in every direction. The P. M. thought it over gravely for some time, while the other pictured himself hurling thunderbolts by land and sea. "You may be right," was the final verdict. "But at my age I doubt whether I should be justified in undertaking such a burden." Which is probably the neatest snub ever administered.

FLEET FOOT SHOES ARE IDEAL FOR CAMPING and SPORTS
ALWAYS RESTFUL AND COOL
WORN BY EVERY MEMBER OF THE FAMILY
SOLD BY ALL GOOD SHOE DEALERS

FIGHTING NATURE.

What One Man's Patient Effort Wrung From a Desert in France.

In the southwest of France, between the rivers Adour and Garonne, are long stretches of pine woods, green and cool.

Where these pines now stand was a barren waste in the middle of the last century. Sun and wind vied with each other in making the land drier and dustier. Over the stormy bay of Biscay came winds that set up great sandstorms and sometimes buried whole villages. The whole region was one of hopelessness and despair. Fate was against it.

But finally there came a man who acknowledged fate only as something to be overcome. This man, one Bremontier, was an inspector of roads. He began fencing in the desert. He built a fence and behind it planted broom seeds. Behind the broom seeds he put seeds of the pine. The fence protected the broom seeds, and the broom grew. Then the broom in its turn afforded shelter to the delicate pine shoots.

Soon the pines spread, and their rough roots bound the sandy soil together. The first step was accomplished. Then canals were made to drain the wet parts and carry water to the dry.

Thus did one man by patient effort turn a dreary desert into a home for an industrious and healthy population. It was an instance of triumph over fate—New York Tribune.

HEALTHY BABIES SLEEP WELL AT NIGHTS

A well child sleeps well and during its waking hours is never cross but always happy and laughing. It is only the sickly child that is cross and peevish. Mothers, if your children do not sleep well; if they are cross and cry a great deal, give them Baby's Own Tablets and they will soon be well and happy again. Concerning the Tablets, Mrs. Chas. Diotte, North Temiscaming, Que., writes: "My baby was greatly troubled with constipation and cried night and day. I began giving her Baby's Own Tablets and now she is fat and healthy and sleeps well at night." The Tablets are sold by medicine dealers or by mail at 25 cents a box, from The Dr. Williams Medicine Co., Brockville, Ont.

SWORDS OF JAPAN.

Religious Rites in Their Making and a Final Blessing.

That the Japanese are past masters in the art of sword making is proved by the splendid weapons, equal to those of Toledo and Damascus, which they turn out. The actual methods of sword making in Japan are jealously guarded, an extraordinary feature of the industry being the religious ceremony which accompanies every process of their manufacture. The walls of every sword making shop in Japan will be found to be covered with allegorical representations of the sword makers and the chief goddess of the Shintos.

Evil spirits are kept away by charms consisting of bits of paper and wisps of straw, while, should any woman enter the shop, disaster would certainly come to the swords that are being made and to their wielders. Consequently women are absolutely debarred from entering business as sword makers, while not only is prayer offered up before the work begins, but various religious rites peculiar to the Japanese are performed in order that the swords, when finally completed, may be said to have been well and truly laid.

Even the final processes of polishing and sharpening are characterized by certain religious ceremonies, and finally the weapons are offered, one by one, to the sword god to be blessed. This ceremony consists in placing the swords in front of the goddess of the Shintos on the wall, with an offering of sake, rice and sweetmeats, after which prayer scrolls are read and blessing upon the work is invoked.

Religious Statistics of Japan.

According to statistics furnished by a Tokyo news agency as official, there are 13,600,000 Shintoists, 20,000,000 Buddhists and 161,000 Christians in Japan, which leaves some 20,000,000 with no profession of faith or otherwise unaccounted for. The returns also show one Shinto priest to every 200 adherents, but only one place of worship to 10,000. The Buddhists have one place of worship to 400 and one priest to 150. The Christians have one place of worship to 120 and one priest to seventy-five.—East and West News.

JOKING RELATIVES.

Peculiar and Embarrassing Custom of the Crow Indians.

The Crow Indians are divided into thirteen clans. In former times the number was probably greater. These groups are called by nickname-like designation, such as Whistling Waters, They Bring Game Without Having Killed It, Kicked In Their Stomach, and so forth. Every individual belongs to his mother's clan, and it is considered highly improper to marry a person of one's own clan, since all the marriageable women of that group are reckoned as belonging to the status of either a mother or a sister.

Those individuals whose fathers belong to the same clan stand to each other in a very special relation, which for want of a better name may be called the "joking relationship." They are privileged to play pranks and practical jokes on each other without giving offence, says the Southern Farmer. More particularly is it the function of one of them to administer a stinging rebuke when the other has transgressed some rule of tribal morality or etiquette.

In such a case the "joker" will bide his time until some public occasion arises. Then he will boldly come forward and twit the culprit with his deed in the face of the assembled throng and to his utter discomfiture. Against this punishment there is no redress, for nothing said by a joking relative can be resented. The only thing a man can do is to wait for an offence on the part of his denouncer and then treat him to a dose of his own medicine.

Effects of Frost.

An egg expands when it is frozen and breaks its shell. Apples contract so much that a full barrel will shrink until the top layer is a foot below the chine. When the frost is drawn out the apples assumes their normal size and fill up the barrel again. Some varieties are not appreciably injured by being frozen if the frost is drawn out gradually. Apples will carry safely in refrigerator car while the mercury is registering fully 20 degrees below zero. Potatoes, being so largely composed of water, are easily frozen. Once touched by frost they are ruined.—Northwest Trade.

ROYAL YEAST
MAKES PERFECT BREAD

MAKE YOUR MONEY WORK

And the Lesson the Small Investor Needs to Learn.

The advice of one of the large banks of the country is that every one should invest his surplus, whether large or small, in dividend securities of the best class, whether railroad, real estate or farm mortgages or public utilities, for "To keep money idle is a costly operation."

Let every reader of this article remember that with as little as $5 or $10 he can make first payment on the purchase of a first class $100 bond. Let every reader who has a few hundred dollars to spare put it in a good $500 or $1,000 bond on the partial payment plan and let it earn something. Five hundred dollars invested in a 6 per cent. bond (with the income deposited in a savings bank at 4 per cent.) will double itself in 12 years—that is, the $500 will have become $1,000 in that time. This $1,000 at 6 per cent. will earn $60 a year or over $1 a week for its possessor. Even at 5 per cent. it will double in fifteen years and at 4 per cent. in eighteen years.

The lesson the small investor wants to learn is that his money is just as good as that of the larger investor. The former has great need of being careful because he has less to spare. Learn to be a careful investor. The first thing a careful buyer does if he wants to buy a horse, a cow, a house or a farm, a bond or a share of stock is to make a careful investigation. Schoolboys may swap the jackknives they hold in their closed hands, but grownup men ought to know better. The humblest investor can buy with as great safety as the proudest, for both can deal with the same bankers or brokers in these days when small lots are popular with firms of established character.

WINGS OF A BIRD.

Compared to Them Flying Machine Planes Are but Toys.

Although the bird traveler has no trunk to pack, guidebook to study or ticket to buy, still he must make some preparations for the journey.

The warbler, which nests in Alaska and passes the winter in northern South America, should not begin an 8,000 mile voyage through the air over mountains, plains and seas unless its engine is in good order and it has a proper supply of fuel.

"But," you ask, "what is a bird's engine, and where does it carry fuel?"

A bird's engine is really its wings and the muscles which move them. It is one of the most perfect engines in the world. It is simple, but strong. It works easily, but it is powerful and rarely gets out of order.

For many years man tried to make flying machines which should have wings like those of birds. But he never succeeded. He could not make even a feather! Finally he discovered that if he would make a machine that would fly he must give it wings and an engine. So he constructed an aeroplane, which has wide, stiff wings, or "planes," measuring about thirty feet from tip to tip. These wings cannot be flapped, and in themselves they furnish no power. But to them man added an engine driven by gasoline and electricity. This engine turns a long bladed propeller, which urges the aeroplane forward, while the planes support it when it is in motion.

But a bird's wing, we must remember, is both plane and engine. It gives support as well as power. It is therefore a far more remarkable machine than the one made by man.—Frank M. Chapman in St. Nicholas.

TEN MINUTE COLD CURE
RELIEVES ALMOST INSTANTLY

Nothing cures so quickly as the healing pine essences in Catarrhozone. It fills the breathing organs with a healing, soothing vapor that relieves irritation at once. Ordinary colds are cured in ten minutes. Absolutely sure for catarrh, and in throat trouble it works like a charm. Catarrhozone is a permanent cure for bronchitis and throat trouble. Not an experiment—not a temporary relief—but a cure that's guaranteed. Get "Catarrhozone" to-day, and beware of substitutes. The dollar outfit is guaranteed, and small size, 50c; trial size, 25c. At all dealers.

HARD ON PRO-HUNS.

French Chef at Newport Played Trick On Them.

The latest story of Count Bernstorff, the German Ambassador, which happens to be perfectly true, is as follows: "Count Bernstorff and two of his attaches were invited to dinner by the well-known Mrs. ——, of ——, Fifth avenue, Newport. Covers were laid for twenty-four. The guests were all gathered from that small and curious body of upper class pro-Germans with whom we are afflicted. The soup was served, and then came a long, long pause. The butler was sent below to interrogate the French chef, who eventually, accompanied by his two French sous-chefs de cuisine presented himself in the dining-room, hat in hand. 'Good-night, ladies and gentlemen,' he said, 'there is going to be no more dinner. We hope you liked the soup, because we all spat in it.' Whereupon, after the manner of servants in the United States they left the house, to be eagerly snapped up by some competing hostess."

Homemade Gas.

Spanish peasants living in the cork oak region use homemade gas obtained from cork refuse. As described by one authority, the process consists in filling several large teakettles with the waste bark and placing each in turn over the fire during the evening, burning the volatile gas as it escapes from the spouts. The carbonized residue forms the fine black-brown pigment known to commerce as "Spanish brown."

We ought to consider the end in everything.—La Fontaine.

FOR LIVE STOCK MEN

Dominion Commissioner Gives Some Advice.

John Bright, Dominion live stock commissioner, writes:

"A study of the live stock situation of the world at the present time cannot fail to convince any practical person that Canadian stockmen will have, in the immediate future, an exceptional opportunity for profitable trade. The question as yet unanswered is whether they will realize the situation in time so as to conduct their operations as to take the fullest advantage of it. This is a matter of the utmost importance, not only from the standpoint of the individual farmer, but also from a national standpoint. While the national phase of the question may lie somewhat outside of the consideration of the average farmer, the matter of personal profit may be depended upon to make its own appeal. In considering the latter aspect of the case the stockman who is convinced that an unprecedented opportunity is presenting itself to develop the live stock business of Canada, should not lose sight of the essential factors that will make such development possible. The most important of these factors are:

1. The laying of the foundation now by conserving breeding stock.
2. Improvement in the quality of live stock products by intelligent breeding—the use of good sires, the weeding out of all scrubs both male and female, consistent adherence to one breed, early attention to calves and lambs.
3. Improvement in the care and feeding of young animals and improvement in the finishing of animals for market.
4. The providing of a steady volume of trade by remaining continuously in the ranks of live stock producers despite temporary and sometimes discouraging fluctuations in price as governed by the world's demand for live stock products.

HIGH COST OF LIVING.

Things That Are Mere Comforts Now Used to be Luxuries.

No economist has put enough emphasis on the fact that if the cost of living is higher now it is to a large extent because the average man is demanding more comforts and luxuries, and these must cost more. Before the days of plumbing and bathrooms the workman missed some onerous bills, but he is now ready to throw the plumbing out of the house.

Oil is cheaper for light than electricity, but people pay more for a modern light because they want the better service even at the higher prices. Workmen by the thousands have phonographs, a form of entertainment unknown until a very few years ago.

Even street cars are rather a new thing, and the poorest families spend many dollars every year for this service, which has become indispensable. Magazines are purchased now by many people who ten years ago had never subscribed for such a publication.

Thousands of articles are for sale in every department store, of which a large percentage are purchased at some time or other by the average wage earning family.

Modern living does cost more assuredly, but it also yields more.

Napoleon On Horseback.

Extraordinary were the precautions taken that Napoleon should never appear at a disadvantage on horseback. The emperor was not a first-class horseman, and his horses were always thoroughly broken in. Here is a description of the methods employed: "They were trained to remain perfectly steady under tortures of every description; to receive blows about the head; drums were beaten, pistols and crackers fired in their ears, flags waved before their eyes, clumsy packages and sometimes even sheep and pigs were thrown between their legs. None of the animals were deemed sufficiently trained till the emperor could without the least difficulty pull them up short at full gallop, which was his favorite pace."—London Chronicle.

FANCY AND FACT.

Is he livin' in the tre'nches, a-fighting of the Turks,
And a-servin' of his Majesty the King?
With a sun that's blazin' 'ot
And the chance of gettin' shot
Any minute, any minute as he hears the bullets sing.

Is he marchin' on the desert, doin' twenty miles a day,
With a tongue that's big and black with 'eat and flies?
And 'alf a pint o' water
or else—maybe a quarter—
To quench 'is thirst each day, until he dies.

Is he fightin'? Is he marchin'? Is he livin' in a camp?
Or is he in a dug-out, six by four?
With bombs a-dropping round 'im
And artillery to pound 'im
And blow him to the Ever Sunny Shore

No! He ain't fightin' now, and he won't be for a bit
And he ain't a-sniping Turcos from a stump
He's a-lyin' (this 'ere Bard)
In the Isolating Ward
With the measles—and a double dose of hump!

—F.N.P. in Manchester Eng., City News.

NERVOUS HEADACHE

Nervous, sick headaches tell of exhausted nerves, and warn you of approaching prostration or paralysis. By enriching the blood Dr. Chase's Nerve Food restores the wasted nerve cells and thoroughly cures headaches, sleeplessness and other nervous disorders.

CURRENT COMMENT

Nova Scotia leads the way once more.

The Rogers gang got gassed down by the sea.

British Columbia will be the next to tumble into the lap of the Liberals.

Brusiloff's great drive has been the great surprise of the war. We see now that the landing of Russian troops in France was merely a blind to divert the enemy's attention from the eastern front.

The Imperial Parliament will be asked to so amend the Rhodes Scholarship Act that German students will in future be denied the privilege of attendance at Oxford. Thus a portion of Rhodes' dream vanishes into thin air.

The astonishment of the British at the ill success of their fleet in the recent contest in the North Sea only reproduced that of the Germans after the battle of the Marne.—Rochester Times.

After the facts became known there was no astonishment. The people were quite satisfied with the work of the fleet.

The Chicago Tribune announces that in consequence of the mobilization of the national guard, the editors of the Tribune, Robert R. McCormick and Joseph Medill Patterson, are in service with their respective organizations, the First Illinois Cavalry and Battery C First Battalion of Artillery. Will the sword in their hands be mightier than the pen?

Russia has bagged in this latest drive 175,000 Austrians, and the bag is not yet full.

Bread riots in Germany and now in Greece show what the British blockade is doing.

Toronto Island is slowly disappearing, we are told, causing a slump in valuable real estate.

If Canada is to get a preference in Britain for its wheat, how is Russia to get closer trade relations with the old country?

The brutal Germans bayonetted wounded, helpless Canadian soldiers, and the men of the medical corps attending to them, and no doubt the Kaiser thanks heaven.

A false alarm caused the death of Capt. John Case, of the London fire department. The Advertiser asks the school teachers to tell every boy pupil the story so that such a thing may not occur again.

Russia believes in fighting the devil with fire. Brusiloff is said to have begun his great drive with a gas attack over thirty miles wide. The gas carried for miles and no mask is a preventive of suffocation by it.

Australia's new capital will not be called Canberra after all. It will be named Anzac, in honor of the heroes of Gallipoli. The new capital is to be smokeless, mudless, dustless and slumless. At least that is what the Minister of Public Works has promised.

Shareholders in a Lawrence hosiery mill are now enjoying a stock dividend of 400 per cent. Of all the protected interests the hosiery manufacturers have been squealing the loudest, but we trust that 100 per cent. stock dividend will keep the shareholders of one concern quiet for a time, says the Philadelphia Record. What sort of dividends are the Canadian sugar lords earning?

The Russians have already bagged over 50,000 Austrian prisoners in their present drive. Apparently the Kaiser cannot face all fronts with a superiority of men.

Gen. Joffre in London and the Germans knocking at Verdun's door. What's up?

The farmers may have lost millions of dollars by these rains. But many is the time that the rain has enabled them to make millions.

The Germans now talk of merchant submarines carrying goods to and from Germany, and thus breaking the British blockade. Stranger things have happened.

The 1,700 British sailors who were sent to death in the obsolete ships Monmouth and Good Hope in 1914 could have been sent to victory in the three dreadnoughts that Canada should have ordered in 1909. The blood of these sailors is on the head of Canada's failure to order dreadnoughts in 1909.—Toronto Telegram.

We wonder if the Telegram believes that rotten stuff.

Because a woman's clothes fit her it does not follow that she can't work as well and as hard as the slouchily dressed individual.

"Admiral of the Atlantic" is the German's new name for the Kaiser. Dealing with this the N. Y. Sun says: "If these boasts are well founded that fact will be presently disclosed. With Germany in command of the sea, and Britain deprived of her supremacy, Teutonic commerce will resume its ante-bellum freedom. The merchant ships tied up in neutral ports will load and sail; the vessels idle in their home harbors will set forth on their accustomed voyages." But the Sun knows that they will not. Britannia rules the waves.

Boys' Norfolk Suits in Serge and Fancy Tweed Effects

These are suits of reliable make. If they go wrong we are back of the sale. They're made in the new style pleated back coats and the new bloomer pants. The patterns are of the pleasing variety that will appeal to the boy who likes a dressy suit and the wear is in them too.
Prices $4.50 to $8.

Newly Arrived Ladies Fancy Collars

Made of sheer Organdies, plain or daintily embroidered, hemstitching, net footing and shell edge give a dainty finishing touch. **Prices 25c, 50c, 75c and $1.**

NEIGHBORING VILLAGES & COUNTRYSIDE

News of the Week Collected by Staff of Live Correspondents

CARGILL

Ptes. Anderson, Clancy, Grainger, Brownscombe, Kirvin, and Lance Corp. Garland of the 160th Bruce Batt. London spent the week end here.

Quite a number from here attended the Dominion Day Celebration in Port Elgin and report a good time.

Mr. Amos and Miss Lillian Purdy formerly of here but now of Tillsonburg spent the holiday here and at Narva.

Mr. and Mrs. Thos. Brownscombe spent the holiday in Stratford, Miss F. Newman in Owen Sound and Mr. C. W. Keeling in Ethel.

Mr. Joe. Clancy shipped a choice load of cattle from Chesley on Saturday.

Master Audrey Anderson left on Saturday for a month's visit in Brantford.

Misses M. & L. Powers of Blora spent the week end with their aunt Mrs. A. Powers.

Mrs. and Miss Keeling are spending a few weeks with the former's sister, Mrs. A. J. Halm in Cranbrook.

Rev. R. M. Gale occupied his own pulpit on Sunday after an absence of one month during which he attended the General Assembly at Winnipeg.

Mr. Art Schnurr of Walkerton sundayed with his friend Mr. Frank Smith.

Mr. and Mrs. Harold Ross, Mrs. Todd and Miss McDonald of Wingham called on friends here on Sunday.

Misses Clancy and Loughleen of Hanover Sundayed with their parents here.

Rev. W. C. Almack occupied the pulpit of the Methodist Church on Sunday for the first time and created a favorable impression.

Mrs. Ziegler of Waterloo spent a few days last week with her son M. L. Ziegler.

Mrs. Cantelon of Meaford and Miss H. Clark of Clinton spent some days visiting Mr. and Mrs. F. F. Baledon.

OTTER CREEK

Mr. John Berscht from Wescott, Alberta, was visiting friends and acquaintances in the neighborhood last week.

The school picnic of section No. 3, Carrick which was held in Mr. John Hogg's Bush was apparently successful as there were visitors from far and near.

Miss Inez Zoellner from Mount Forest, former teacher at No. 8 school, Carrick is visiting acquaintances here.

Miss Elsie Clendenning of Walkerton is visiting at Mr. David Bell this week.

Mr. and Mrs. Ferdinand Wichle took a trip to Port Elgin on Saturday last.

Mr. and Mrs. Thomas Hutton were visiting friends in Bruce last week.

MILDMAY

Miss Mary Buhlman spent the holiday in Berlin.

Miss Mary Cook and Miss A. Selwood of Walkerton spent a few days in town this week.

Mrs. John O. Miller of Buffalo is visiting relatives and friends here for a few weeks. She intends making an extended visit to all her children before returning to Buffalo.

The Union Jack Knitting Club purpose holding a strawberry social on Mrs. O. Liesmer's lawn on Wednesday July 5th from 7 to 10 p. m. Everyone come and help the Knitting Club.

Ptes. Schmidt, Heimbecher, and Hickling of the 160th Bruce Battalion spent over Sunday at their homes here.

Messrs Wm. Diebel and George Beabler of Kincardine spent Sunday in town.

Mr. and Mrs. R. H. Wendt and children of Ford, are spending a few weeks with relatives here.

Misses Mela and Sarah Fischer are spending a couple of weeks at Toronto and St. Anne de Beaupre.

Mr. S. F. Herringer received a message, informing him that his son Leo was wounded while in action in France.

Mr. and Mrs. Bechtel and family of Elmira are renewing acquaintances here this week.

Miss Laura Miller left for Buffalo on Saturday after spending a week with relatives here.

Messrs Isidor Uhrich of Toronto and A. B. Uhrich of Smith Falls were here attending the funeral of their sister, the late Mrs. Jos. Becker.

CLAMIS

Mrs. Francis and daughters, Mamie and Pearl, of Toronto, have been visitors here for past couple of weeks.

Mr. Peter McKinnon of Canora, Sask., and Pte. Allen McKinnon, 107th Batt. Camp Hughes, Man., were summoned home last week owing to the critical condition of their mother.

Mrs. (Rev.) P. Keith and Miss Louisa have returned home from a visit in Toronto.

Mr. Douglas McKay, a former Glamis boy, youngest brother of Lieut. Wilford L. McKay, has returned east from Port Arthur and enlisted with the 160th Bruce Batt. at London.

Mrs. Chittick and son of Stoney Creek were here on a visit to her sister Mrs. W. J. McKeeman over the holiday.

Misses Vera and Verna Harrison of Toronto spent the latter part of the week with their grandparents, Mr. and Mrs. J. C. McIntyre, before leaving for their home in Calgary, Alta. this week.

Privates James and Jno. Thompson, Albert Groves, Joe Sproule and Douglas McKay of Bruce Batt., London, spent the week-end at their homes here.

Quite a number from the village and vicinity took in the sports at Port Elgin on Saturday.

Mr. and Mrs. M. E. Peacock and family motored here from Meaford on Saturday and spent Sunday with her parents, Mr. and Mrs. N. O. McFarlane.

Rev. and Mrs. De Miller and family are attending Camp Meetings at Sarnia this week.

Miss Flaws of Rapid City, Man., and Miss McArthur of Brussels spent the latter end of the week with their friend, Miss McIntyre.

Misses Mabel and Alberta Kirktown are home for summer holidays.

Messrs. John and Alex. McKennitt and Mrs. Alex. Kirktown were called to Markdale on Tuesday to the bedside of their dying mother.

Miss Minnie McNally is home from Lapeer, Mich. for the summer vacation.

Mrs. Robert McFadyen of Toronto is renewing acquaintance here for a few days. All regret to hear Mr. McFadyen is not improving in health.

Mr. Dan A. McLean motored Mr. Kirktown and daughters and Mrs. Roy Kennedy to Markdale on Sunday to attend the funeral of Mrs. McKennitt.

Mr. and Mrs. Houlston of Owen Sound and Mr. and Mrs. Jackson of Markdale were Sunday visitors at R. J. Nesbitt's.

Miss McDonald of Kincardine, teacher at S. S. No. 4, has resigned her school to teach in her home school after holidays.

Mr. Jack McFarlane of Toronto spent over Sunday at his home here.

Miss Fletcher has been visiting Mrs. Alex. McKennitt for the past week.

Rev. F. McKinnon of Winnipeg, Man., called on relatives here the first of the week.

Mr. Jas. Begg has been in the vicinity with his wood-cutting machine.

School closed on Friday. Miss McLennan gave the scholars a picnic in the afternoon at McIntosh's grove.

HANOVER

Hanover's share of the County Grant of $4,000 a month to the Patriotic and Red Cross Funds will amount to 2¼ mills.

Mr. George Hollinger has been seriously ill. Dr. Howitt, the Guelph specialist, was called in consultation last week.

It is altogether likely that Mr. Wm. Wright, the present turn-key of the Grey County goal, will get the appointment of goaler, rendered vacant by the retirement of Mr. Miller on account of ill health.

Dr. Stanley Ball has cabled his father, Mr. R. J. Ball, M. P., from England that he is not coming home at present. The cable message said: "Not coming. Writing." It was reported a couple of weeks ago that Dr. Ball was on his way home.

St. Mathew's Lutheran church, Hanover, was the scene of a very pretty wedding on Saturday, June 24th, at 1 p. m., when Laura B. eldest daughter of Mr. and Mrs. Fred Heimbecker became the wife of C. Herbert Pirrheller of Toronto. The ceremony was performed by the Rev. H. Twellmeyer.

Major Miller of Washington, D. C., expected to come to Hanover shortly to pay a visit to his brother, Mr. H. H. Miller, but Mr. Miller received word last week that he will be unable to come owing to impending war between the United States and Mexico. Major Miller has been ordered to the mobolization camp to report for active duty.

The marriage of Mr. Percy B. Gilbert, assistant principal of the Sarnia Public School, formerly on the teaching staff of the Hanover school, to Miss Freeda Proctor of Sarnia, will take place on Aug. 9th.

Mr. D. E. Weir, C. P. R. station agent here for several years, left this week for the west where he proposes spending several months. He has not been feeling well for some time, and is going west to try and build up his health.

Mr. George G. Hardman passed away on Thursday, June 22nd at the home of Mrs. Barbara Russel where he boarded at the age of 7? years. Death was due to dropsy and other complications after an illness of six months or so. Deceased had worked for the Knechtel Furniture Co. for several years.

A highly respected aged resident of Hanover passed into the Great Beyond on Saturday, June 24th, in the person of Mrs. Anna Heimbecker at the age of 75 years, 9 months and 7 days. Death was due to dropsy after a week's severe illness. She had been ailing, however, for some months.

Mr. John Telford has sold his 3 storey block opposite the Queen's hotel, Hanover, which he has owned since 1885, also the two Shearman properties on main Street more recently acquired, to Mr. Frederick Deetschmann, jr., of Hanover for $12000 on a deal for Regina property. Mr. Telford may move west.

Mr. H. H. Engel and son, Mr. Jack Engel, left last week for Philadelphia to attend the annual convention of the Associated Ad. Clubs of the world. They will also visit New York, Atlantic City and other points.

PINKERTON

Miss Mertis Donnelly of Toronto is spending her vacation at her home here.

Rev. and Mrs. R. M. Gale and Misses Hattie and Gladys Gale returned home last week after spending their holidays.

A few from here spent Dominion Day at Port Elgin and report a good time.

Miss Mary McKee of Stratford and Pte. Gordon of London spent Saturday and Sunday at their respective homes here.

Anniversary Services will be held in the Presbyterian Church here next Sunday and will be conducted by Rev. Hay, D. D. of Elora. A garden party and supper will be held on Monday night when a good program will be provided.

Mr. John Houston of Toronto, Dr. Houston and Mrs. Houston of Paisley spent Sunday at Mr. F. Houston's.

Miss Sadie Colwell spent Saturday and Sunday at her home in Kincardine.

The Misses McNeil and Miss Font are visiting at Miss Lena Pinkerton's.

At the patriotic service on Sunday an honor roll was presented by the Young People's Society. It showed that 14 of our boys have answered the call of our country. Pinkerton has has done well considering the size of the village.

FORMOSA

Statute labour is finished. The roads were in a bad state.

A lot of our citizens attended the funeral of Mrs. Becker, (nee Clara Urich.) She was born and raised in the village.

They pulled down the stable near Truck's house last week and are building a new one further away.

Last Friday they had a great box social at Ambleside. Our young folks attended well.

Haying has started. It is a good crop this year.

Schools are closed. Now for the noise on the streets.

Mr. Sam Rife of Walkerton was here on business last Saturday.

Mrs. Tony Flach and daughter-in-law of Berlin came here on a visit on Friday. She was former citizen of our town.

Joe Deodinger of Walkerton Sundayed here.

Phil Weiler, Alex. Oberle and Mike Graf went per automobile to Neustadt on Sunday.

Mrs. Jacob Brick who visited in West Branch, Mich., came home last Saturday.

EDEN GROVE

Mr. Alex McLean, Paisley, was the guest of Mrs. Tennent, King St. this week.

Mrs. Smith, Chesley, spent the week end at the home of Mr. and Mrs. Wm. Farr.

June has passed and our young maidens are about all still with us.

Miss Mattie Desmond, graduate nurse, Toronto, enjoyed the holiday at her home, King St., West.

Messrs William Todd and Richard Baily have accepted positions on the G.T.R. at Palmerston.

Sergt. John Connell, London, was a welcome guest at the home of Mr. and Mrs. H. Pearson, cor. King St. and Railroad, Ave., last week.

The Teacher, Pupils and friends of our Public School held their Annual Picnic, Wednesday afternoon on the grounds, when a most enjoyable time was spent in games, etc.

Miss Gertrude O'Reilly, graduate nurse, Guelph, spent a pleasant week-end at her home, King St., East.

School closed Thursday and the kids are now enjoying themselves picking tato-bugs, etc. Blanche Powell, teacher, left for her home in Tara to spend the vacation.

This is a good place to have a girl—no ice cream in the good old summer time and no oyster stew in winter.

Mr. and Mrs. Burns, Mrs Roots and Miss Curran, Palmerston were guests of Mr. and Mrs. Rosseau at the Simcoe House over the holiday.

Mrs. Olive Seiler, is working at present at Lovat.

Mr. and Mrs. Campbell are spending their vacation at the home of Mrs. Emery.

No, Malinda, it wasn't the 'Hop' that was making all the noise it was the buyers, you could tell them, they had straw hats.

Mrs. Stevens and Miss Crawford, Paris, were week-end visitors at the home of Mr. and Mrs. Todd.

The garden party given under the auspices of the Methodist Church was a decided success. Mr. Blue's beautiful lawn was nicely decorated for the occasion, the ladies providing the supper, excelled themselves. Each selection on the program was well rendered and heartily enjoyed by the large gathering.

Mr. and Mrs. Ross of Wingham renewed old acquaintances in town on Sunday.

Mr. Sam Salasky spent the holiday with Hanover friends.

Jim Scott had the misfortune of having his head caught in a machine last week, requiring several stitches to close the wound.

Mrs D Gregg visited Paisley friends last week.

Hope this hot weather will be over by Sept 10th.

Mr Wm Fair of Palmerston sundayed at home.

Mr Thos Desmond has accepted a position at Chesley.

Mrs Rosseau accompanied Mr and Mrs Burns of Palmerston to Port Elgin for the holiday.

Rev. Mr Almack, the Methodist Minister preached his inaugural sermon to his new congregation here Sunday morning, which was attentively listened to by a large and appreciative audience.

Mr and Mrs Rosseau, Mrs Todd, Miss Laura Subject and Sunny Jim motored to Walkerton on Friday.

Mr George Childs of Kincardine spent the holiday at his home here.

Quite a number of our local sports spent Dominion Day in Port Elgin and report a good time.

Mrs. Chittick of Stoney Creek called on Eden Grove friends on Monday.

Rev Mr Litt of Kitchener, Presiding Elder of the Evangelical Church called on Mr Reynolds Monday.

Messrs Percy Fair and Harold Scott of Palmerston enjoyed a week's holidays at their homes here.

Privates George and Wm Bluhm and A McCaw, London spent the week-end at their homes.

Road work is the order of the day.

The straw hats and calico are having their outing at present.

◆ ◆ ◆

Sidersen—Zimmerman

Mr. Sam Siderson, who is associated with his cousin, Mr. F. Abell, in the junk business here, went to Toronto recently and brought back with him a pretty young bride in the person of Miss Dora Zimmerman of Toronto. The marriage ceremony was perfomed by Rabbi Kolman, at the home of the bride's parents in the presence of a large company of relatives and friends. Mr. and Mrs. Siderson will live in Walkerton.

The Best Yet

When Mrs. Best, of Walkerton, was making up shirts for the soldiers at the Front this Spring, she placed a little note in the pocket of each garment. Already she has received one quite clever as well as gracious acknowledgment from a soldier boy in Flanders.

Dear Mrs. Best :—

The shirt you made is now on me
And think not that I jest.
Of all the shirts I ever had,
The last one was the "Best."

Sergt. A. Lewis,
No. 10 Can. Field Amb.

◆ ◆ ◆

Ditner—O'Neill.

A pretty wedding took place in St. Peter and Paul's Cathedral, Detroit, on Monday, June 26th at 8.30 when Miss Elizabeth, daughter of Mr. Hugh J. O'Neill of Walkerton became the bride of Mr. Peter Ditner of Detroit, Rev. Father Dempsey officiating. The bride was given away by her father, and looked lovely in her wedding gown of white silk and white hat and carried white carnations and wore the groom's gift, a pearl necklace. Miss Mary O'Neill, sister of the bride, was bridesmaid and wore a gown of pale blue silk, white hat and carried pink carnations, Mr. Ed. Monahan, cousin of the bride, supported the groom. The groom's gift to the bridesmaid was a gold bar pin set with pearls, to the groomsman gold cuff links. A reception was held at the home of the bride's sister, Mrs. Frank Garmen, 23 Dorchester St. The bride received many beautiful presents. Mr. and Mrs. Ditner will reside in Detroit where groom is manager of a large garage.

KILLED IN ACTION

Popular Walkerton Boy Made the Supreme Sacrifice — Telegram States Reg. McCarter Fell In Battle On June 27th.

Word came to Coun. and Mrs. Alex McCarter by wire from Ottawa last Thursday morning that their young son, Andrew Reginald ("Reg,") McCarter, had been killed in action in Flanders on June 27th. "Reg" had been in the trenches for several months and only a few days previously he wrote home that he had been in the midst of desperately hard fighting and had many narrow escapes. His battalion, the 13th Royal Highlanders of Canada, (Black Watch,) a Montreal unit, has won a great name for unflinching courage, and many of his comrades, like "Reg" McCarter, have during the past few weeks found heroes' graves close to the pounding of the guns on the battle front.

Reg., was born in Walkerton, twenty one years ago. He enlisted with the 31th Batt. but on the breaking up of that Battalion in England, was transferred to the Montreal Highlanders. He was very proud of this Battalion and its reputation for courage, and yet those who knew young Reg. McCarter, doubt whether there was a braver or more courageous spirit in that or any other Battalion, than the young Walkerton lad who willingly laid down his life in the cause of liberty and justice. Although experiencing to the full, the keen sense of loss, which none but bereaved parents know, Mr. and Mrs. McCarter find solace in the fact that their son proved himself a man and a hero, offering his life, a willing sacrifice on the altar of his Country's good. Their surviving son, Milton, is also in the King's uniform, being a sergeant in the 160th Battalion. Reg's last letter home is published on page 4 of this week's Telescope.

REG'S LAST LETTER

Somewhere in France,
June 22nd 1916.

Dear Mother;—

Just a line to let you know I am well. Hope you are all the same. Received your letter yesterday. I got Milton's, six in all, and some cards when I came out of the trenches, so I will answer all together as green envelopes are scarce. I have had some narrow escapes since I wrote last. Our Battalion and another Scottish Batt. made a bayonet charge and took back three lines of trenches that the 3rd Div. lost. The 49th, a Western Batt. was all cut up, when the Germans took the trenches. You dont and cannot realize what I am going through out here, especially the night of the charge. It seems a terrible sight to see your comrades falling around you. I am in a Batt. that has a name. We took back the lost trenches.

I am sending you a clipping out of an English paper. This write-up was when the Germans took the trenches. After this is where glory for the 13th came in. There was a write-up later on about how the R. H. C's took back the lost trenches. We went over the parapet in the charge at 1 o'clock in the morning of June 13th. It was raining, cold, and mud up to our waist, but our Colonel said:- "Come on boys, no retire for the 13th R. H. C's." Well, I am out for a rest now, I received your box on June 10th same day as I went back in trenches, put a pair sox on, chewed some gum, smoked some Tuxedo cigarettes when the shells were flying thick. This is all the news just now.

Your Aff. Son, Reg

IN HOSPITAL AGAIN

Art Taggart Was Back On Firing Line In A Week After Being Buried By Shell—Now On Casualty List Again.

A service post card from Art Taggart, received from his parents this week states under date of July 5th, that he has just arrived in a hospital in England. And a letter received yesterday from Dr. J. J. Fraser, states that Art is "not seriously ill." A letter is expected from Art by first mail with full particulars. It appears that after being completely buried by a shell in the big fight on June 2nd and waking up to find himself in Dr. Fraser's hospital suffering from shell-shock, Art, went back to the firing-line again, a week or so later. He is now back in the hospital and this time was sent to England, suffering no doubt from shell-shock again. Art has been nearly two years in khaki now and has been through some of the worst of the fighting. It is thought possible that he may be given a lengthy leave. Dr. Fraser's letter states:—I saw personally that Arthur was evacuated to the clearing station on 23rd of June. On making enquiries there I find they evacuated him to the Base. You have probably heard from him there before this. He did good work here as a stretcher-bearer. He is not seriously ill and should be all right, away from the Front. We have no means of knowing what Base Hospital, he is in.

Cargill Garden Party

A garden party, supper and Concert will be given by the Ladies Aid of Cargill Methodist church of the Parsonage Lawn next Monday evening.

+ + +

Stephan; R.S.S., J. Bickel; J.S.S. F. Kennedy; Chas. W. Wells.

+ + +

A Soldier Pastor

The new pastor of Cargill Methodist Church, Rev. W. Almock, comes of a family that is very closely identified with the present war. One of his brothers, a captain of artillery, was killed in action in January last. His other brother is a lieutenant in a British battery. Mr. Almack himself would be fighting at the Front if he had his way. He enlisted in the Canadian Artillery last year, but at Halifax he contracted pleurisy and was discharged by the medical authorities. Rev. Mr. Almach was connected with the Hamilton Conference from his ordination six years ago until he enlisted, and now he returns to the Conference as pastor at Cargill.

BORN

DAHMS—In Carrick, on July 4th, to Mr. and Mrs. Louis C. Dahms, a daughter.

Lieutenant Col. McCrimmon of London, will address a meeting of the Bruce Preparedness League in the Town Hall this (Thursday) afternoon at 3 o'clock.

Magistrate Tolton fined Michael Dieboldt of Greenock $1 and costs, for taking cattle belonging to Timothy Hanley of Chepstowe off the road and using abusive language.

Mr. Jas. Clancy, the well known cattle dealer, Cargill, was in town on Friday. He shipped a fine load of cattle to Toronto. He got them from Warrie Hewitt.—Kincardine Reporter

Pte. George Helwig has completed his course at the military school, and will very shortly be given the lieutenant's title. George is to receive a commission in the 160th.—Mildmay Gazette.

Mr. J. R. Tinning, travelling passenger agent of the C.P.R. called on his old friend Mr L.H. McNamara on Tuesday. Twenty-odd years ago, these two men were fellow clerks in the C.P.R. offices at Toronto.

—Mr. John Houston, M.A, of Winnipeg, is visiting old friends in Bruce county, and is spending a few days at the home of his nephew, Dr Houston. Mr Houston is one of the veteran teachers of this Dominion, having followed the profession for over fifty years in public school, high school and collegiate institute positions.—Paisley Advocate.

Mr. Gordon Lee of the Echo Milling Co., Gladstone, Man. has been spending a few days here with his brother, Mr. Richard Lee the past week. Mr. Lee enjoys nothing better than to get back to the scene of his boyhood days occasionally, and swaps reminiscences with Andy McLean, Andy Johnston and some of the other fellows he used to go swimming with. Mr. Lee says the crop prospects in Manitoba are excellent.

Mr. and Mrs. W. A. Clark are visiting at Fergus.

Miss Velma Ritchie left on Friday last for Almonte.

Miss Lizzie Rennie returned to Woodstock yesterday.

Miss Hilda McNamara is visiting relatives at North Bay.

Miss Clara Messner of Berlin is visiting Miss Collette Jarvis.

Miss Carrie Mosack of Stephan Bros. staff is spending a holiday in Preston.

Miss Frances Brielan of Toronto is visiting her parents, Mr. and Mrs. Jas. Brielan.

Corn on the cob in July is a treat. We have it 15c a dozen. — The Central Grocery.

The Bishop of Huron will preach at St. Thomas' Church next Sunday morning.

Miss Mary Uhrich and sister of Mildmay spent Sunday with friends in Walkerton.

Mr. and Mrs. Frank Boylan left on Wednesday for their home in Weyburn, Sask.

Misses Bertha Schnurr and Jean Miller of Galt are visiting at their homes here.

The Misses Ruth, Silvia and Helen Grenzenbach are spending their vacation at Welland.

Mr. Paul Adler, of Hanover, spent a few days this week with his cousin, Miss Hilda Ermel.

Mr. John Vogt of the Queen's Hotel purchased a Dodge Bros. touring car from Kolpin & Ermel.

Sergt. Wilfrid McFarlane of the 142nd Batt., Camp Borden, spent the week-end at his home here.

Miss Ivy Taggart returned on Saturday from spending two week's vacation at Detroit and other points.

Mr. and Mrs. Emerald Emery of Detroit visited at the home of the latter's sister, Mrs. Fred Ermel, for a few days last week.

Mrs. David Bell very much enjoyed a visit Sunday, from Mrs. George Litt of Stratford, after not seeing her for thirty years.

Mr. Chas. Stephan, who has spent the past month at Algonquin Park, is expected home this week. He is much improved in health.

To stop your hair from falling use the Rexall "93" Hair Tonic, which all Rexall Drug Stores fully guarantee—50c. and 1.00 bottles.—A. P. Sieveright.

Miss Flo Mason, daughter of Mr. David Mason, formerly of Walkerton, visited friends here this week. Miss Mason, who is a trained nurse, is located at Rochester, N.Y.

Four rinks of bowlers from Hanover motored over on Monday night and enjoyed a friendly match on the local green. The scores were close, Walkerton being 10 shots up on the round.

Miss Jean Hogg returned home after spending an enjoyable time with her friend, Miss Sarah Little of Brant, at the home of the latter's sister, Mrs. Robinson of Barrow Bay.

Margaret, the little year and a half old daughter of Private Banister of the 160th Batt., has been quite sick with blood poisoning this week as the result of a pin scratch on the arm.

Mrs. Peltz is reported to be quite low at the home of her sister Miss Helm, Stratford, Paralysis of the lower limbs has set in and it is said that her recovery is despaired of.

Leonard Kelly got his sleeve caught in a threading machine at the Bobbin factory on Friday with rather serious results. His arm was badly cut by the small circular saw connected with the machine.

In last week's issue a record crop of hay was reported at Mr. Frank Rennie's farm in Brant. Some of Mr. Rennie's friends are now accusing him of having this hay, imported from North Perth.

All the letters in the Telescope Letter Box on page 4 are well worth reading. The comments of the Walkerton boys on the intense fighting in which the Canadians were engaged, will specialy interest Walkerton people.

Lightning was severe around here last Wednesday evening. There were no accidents, but Mr. Lindlerchmid, a Brant farmer, living on the old Garner place, was nearly struck by lightning, being knocked off his feet as he stood on the steps in front of the house.

Over in Old London, a man and wife, former Walkertonians, have a warm spot in their hearts for anything or anybody from the good old town. Mr. and Mrs. Thick, who left here only last year to reside again in the Old Land, have taken a great interest in the soldier boys from Walkerton and have shown many kindnesses to any who have called at their home. A letter from Mrs. Thick in this week's Telescope brings news from some of the boys and furnishes interesting reading.

Read Rourke's Slack Season Sale ad. on page 1.

The 160th (Bruce) Batt. is still quarantined in Camp at London with the measles and mumps.

The Canada Spool & Bobbin Co. are planning to make extensive improvements to their factory shortly.

Mr. and Mrs. C. Patrick of Walkerton made a friendly call at the home of John D. Bell's of Brant, last week.

The wheat is beginning to turn and will be ready for cutting next week. The crop will be good in most sections of Bruce.

Pilo. and Mrs. H. S. Sanderson and family of Chesley, spent Sunday with Mr. Sanderson's parents, Rev. and Mrs J. W. Sanderson.

Miss Vera Norrish, B.A., returned last week from Toronto where she had been examining papers for the Department of Education.

A Citizen asks why the temperance forces of Bruce are not following the example of other counties and organizing for after Sept. 15th.

A meeting of the Daughters of the Empire will be held in the Town Hall on Saturday afternoon at 3.30 o'clock. A large attendance is asked for.

The Red Cross Supplies are still being made at the Town Hall and all who can help with this work are asked to be there on Tuesday evenings and Friday afternoons.

The highest mark for an Entrance student in Bruce County was taken by Caroline Schlerholz, Port Elgin, 658 out of 650. Norman Shaw led the candidates in East Bruce with 547 marks.

Almond, the little six-year old son of Mr. Fred Glebe of Hanover, was operated upon by Dr. Hall on Saturday morning for hernia and appendicitis. The little fellow came through the trying ordeal well and is making a rapid recovery.

Miss Margaret Smith, daughter of Mr. Robert Smith, underwent an operation for appendicitis at the County Hospital on Saturday morning. Miss Smith is reported to be making a splendid recovery.

Karl Leeso, the five-year-old son of Mrs. C. Leeso of town, died on Monday of last week as a result of appendicitis. The funeral took place yesterday afternoon to the Hanover cemetery. Much sympathy is felt in town for the widowed mother.—Hanover Post.

All the women of Walkerton are urged to attend a meeting at the Town Hall this (Thursday) afternoon, at 3 o'clock with a view to organizing a Woman's Emergency Corps. The meeting is called by Mayor Lippert and will be addressed by Lt. Col. McCrimmon of London.

Mrs. C. A. Fox has been confined to her room all week as the result of a fall on Durham Street one evening last week. She slipped into a hole in the cement side walk near the Public Library and as a result of the fall was badly bruised and shaken up. This is a case where the town would no doubt be liable for damages if Mrs. Fox cared to prosecute.

Latest War News

London, Eng., July 19—(C. N. W)—

British War Office announces that Germans have recaptured portion of Delville Wood and obtained footing in northern outskirts of Longueval.

Reports from head quarters says British advance on both sides Bapaume Albert highway has thrown town of Pozieres into deep pocket and artillery is rapidly reducing German defence of town.

French War Office reports that on Verdun front French made progress at Saint Fine at intersection of Vaux and Fleury roads. Night was quiet on remainder of front.

Petrograd despatches say Russian forces have crossed the Carpathians and penetrated a day's march into Hungary threatening rear of Hungary and Austrian lines.

FINED $50 AND COSTS

Quack Doctor from Berlin Found Guilty of Practicing Medicine Illegally.

A [illegible] individual, named Julius [illegible] faced Magistrate Tolton in Police Court here on Thursday, charged with practicing medicine unlawfully. Wichels is about forty years of age, wears a smart-looking pointed beard, and eye-glasses and is quite professional looking. He speaks English with some difficulty. Wichels claims to be only a medicine seller, although the labels on his 200 varieties of medicine bear the inscription "Dr." The court held otherwise and assessed Wichels the sum of $50 and costs, in all $67. Wichel has been coming up here regularly once every three weeks for the past three years, and stopping at a local hotel. He has been doing a large business.

Two Brant farmers testified that they had called at Wichel's apartment at the hotel, had described their ailments to the "doctor" and had been supplied with medicine. The defendant, who had no lawyer, claimed that he was a medicine seller only. He had over 200 kinds of medicine and he sold his customers whatever kind they wanted. He did not attempt to diagnoise. The Magistrate held that in questioning his customers to find what kind of medicine they required, Wichels was diagnoising their case and practicing medicine without a certificate. Mr. O. E. Klein appeared for the Government, the charge having been laid by a Government Inspector, David Fife. Wichels was fined on similar charges at Berlin and Stratford, the last occasion being in 1914.

TALE OF A SHIRT

Note in Pocket Brings Kathleen Oberle a Grateful Acknowledgment from Canadian Tommy

In reply to a note which she placed in the pocket of a shirt which was forwarded to the soldiers in France, little Miss Kathleen Oberle, received a nice letter of thanks this week from a Canadian Sergeant at the Front. By a strange coincidence the letter was censored by an officer from Bruce County, Capt. John A. Reid, son of Mr. Adam Reid of Pinkerton. And the Captain sent along a little note too, which is also reproduced below—

June 28th, 1916

Dear Miss Oberle:—

Just a few lines as requested from a note found in the pocket of a shirt I got this morning. I may tell you the shirt got the length of the front and I was very glad of it, I can tell you. We are living in an underground place at the front and its sometimes quite cheery here and a clean shirt is very welcome. This is a fine old country but its getting a little cut up, you know, but we always have the dugouts and cellars, and they are very welcome although a little damp. How is Canada looking? I hope you are having good weather. I came from Calgary, Alta., and if you write a few lines, my address is the 8th Canadian Field Ambulance, B.E.F., France, and I hope these few lines will find you enjoying the very best of health and able to make another shirt for the Tommies. Thanking you so much, I guess I'll stop but remain yours sincerely,

Sergt. G. H. TAYLOR,
No. 509,108

Dear Miss Oberle:—

While censoring my Sergeant's letter, I noticed that it was addressed to "Walkerton" Ont. This evoked pleasant memories as my own home is in Pinkerton, not far from there. So is the name of the men, I wish to add my own thanks for the kindness of the Canadian people.

Yours sincerely,
John A. Reid,
Capt., C. A. M. C.
No. 8, Can. Field Ambulance.

Old Riversdale Boy

Mr. John Anderson, an old Greenock boy, now Chief of Police of the City of Aberdeen, North Dakota, is here on a visit this week to his cousins, Mr. John McKinnon and Mrs. Thos. Cunningham. Mr. Anderson was born at Riversdale. His father taught in the old log school house nearly sixty years ago, his pupils including Mr. Thomas Cunningham and some of the older residents of the Enniskillen neighborhood. Mr. Anderson has been in the States no less than thirty-six years. Before being appointed to his present position, he was County Sheriff for five and a half years.

WIT AND HUMOR

LIVING UP TO HIS NAME.

(Baltimore American)

"I am going to touch Guy [illegible]."

"Can't do it; he's a wise Guy."

TRIFLES.

(Life)

Mendicant—Sir, I have paralysis, six children to support, my wife is sick and we are about to be dispossessed!

Stalled Motorist—Trifles! Did you ever try to run a second-hand automobile?

THOSE CHILD ACTRESSES.

(Sydney Bulletin)

Gloomy Actor—What's the matter this morning, Albert?

Gloomier Manager—Baby Briggs is getting married, and the show's queered.

FUTILE.

(Life)

Hokus—A man should never try to keep secrets from his wife.

Pokus—No, it isn't much use. Some kind friend will tell her, anyhow.

THE VERY MAN.

(Baltimore American)

"I want to have my chirography read for character."

"Can I help you?"

"Yes; tell me where to find a good chiropodist."

BOBBY'S PRAYER.

(Sydney Bulletin)

"When I said my prayers last night didn't you hear me ask God to make me a good boy?"

"Yes, Bobby, I did."

"Well! He ain't done it."

QUICKEST WAY.

(Puck)

Agent—All the lower berths are taken.

Fat Man—That's all right. Give me an upper over some thin, nervous man. When he sees me, he'll be glad to exchange.

A GENTLE HINT.

(Atlantic Journal)

"When I don't want a man's attentions and he asks me where I live, I say in the suburbs."

"Ha, ha! Excellent; but where do you really live, Miss Brown?"

"In the suburbs, Mr. Short."

TOO KNOWING.

(Life)

"I've tried to teach my boy the value of money."

"Good thing!"

"Well, I don't know. He used to behave for ten cents, but now he wants a quarter."

TOO CLOSE.

(Birmingham Age-Herald)

"Why are you asking me for help? Haven't you any close relatives?"

"Yes. That's the reason why I'm appealing to you."

BENEFITS OF EDUCATION.

(Life)

"Do you think a college education really pays?"

"Sure it does. My son is earning $3 a day in a stone quarry, all because of the practice he got while in college at hammer-throwing."

KNEW THEM INTIMATELY.

(Farm and Ranch)

Mrs. Just Got Rich—Oh, we had the most delightful trip to Europe.

Mrs. Stay at Home—How lovely. Did you see the Dardanelles?

Mrs. Just Got Rich—Heavens, yes; why we took supper with them.

HARDLY.

(Yonkers Statesman)

Bill—Has he any friends among the stage people?

Jill—I guess not. You know he's a dramatic critic.

CONVERSATION.

(Washington Star)

"Interesting conversation?"

"Not very. One of those conversations in which each takes credit for phenomenal patience in an effort to instruct the other."

GOOD AND BAD.

(Longhorn)

"Funny language, English."

"Spill it."

"Heard a man yesterday say he wanted a good cook, and he wanted her bad."

STONE BLIND.

(Life)

Patience—What did you think of Peggy's new diamond ring?

Patrice—I didn't notice it.

Patience—Didn't notice it? Gee? Are you stone blind?

QUITE.

(Boston Globe)

"Mrs. Chatter seems to be quite a conversationalist."

"Yes. She has three cars to brag about and six servants to complain of."

THEIR FIRST QUARREL.

(Life)

Mr. Newed—Oh, well, you wanted me, Emily, and I wanted you. That's about the way of it, my dear.

Mrs. Newed—But you wanted me first, Jack, you know you did.

CHARM OF NOVELTY.

(Washington Star)

"Why do you insist on taking summer boarders?"

"I like to have 'em around," replied Mrs. Corntossel. "It's a comfort to have somebody criticise the table besides my own family."

DREADFUL.

(Life)

Isn't it dreadful! This is the third time I have won the same evening gown.

"Never mind my dear; remember that it is just that sort of self-denial that develops one's character."

TOO HIGH.

(Yonkers Statesman)

Bacon—The giraffe is said to be the only animal in nature that is entirely dumb, not being able to express itself by any sound whatever.

Egbert—It's just as well, for if it could speak it would talk over everybody's head.

A GOOD JUDGE.

(Boston Transcript)

Ethel—I was taken in to dinner by that Western gentleman you introduced to me. He was quite gallant and remarked upon my birdlike appetite.

Her friend—Well, he should be a good judge on that point, dear; he runs an ostrich farm in California.

STRANGE.

(Tit-Bits)

"Some people certainly have got queer ideas," observed the tramp, glancing up from the scrap of newspaper he had rescued from a rubbish heap.

"Referrin', I s'pose, to the guys wot insists on havin' a cold bath before breakfast every mornin'?" said his pal.

"Worse'n that! I was just readin' here about a bloke wot's raisin' a terrible rumpus 'cause somebody wants to build a brewery right across the street from his house."

WANTED TO FIND OUT.

(Baltimore American)

"I knew a man who was very much afraid he would be loved, not for himself, but for his advantages, so he put it to the test."

"How did he do that?"

"Wrote an anonymous letter to the girl he loved asking her to marry him."

SYMPATHY.

(London Opinion)

Diana—Is the man your sister's going to marry rich?

Dick—Not much. Every time mother talks about the wedding, father says, "Poor man!"

'TWIXT LOVE AND PRIDE

"No, no, I did not!" replied Mildred, vehemently, unable longer to restrain her fear of his next words, and trying passionately to withdraw her hands.

"Yes, you did!" exclaimed Denzil, excitedly; "I know it now—it was not fancy—how could I ever think it was?—it was reality. Oh, Mildred, you kissed me!"

"How dare you!" cried Miss Trevanion, bursting into tears. "You know I did not; it is untrue—a fevered dream—anything but the truth."

"Do you say that?" he said, releasing her. "Of course then it was mere imagination. Forgive me; I should not have said it, but the remembrance of it haunts me night and day. This room, too, fosters all memories. Here for the first time I told you how I loved you; and here, too, you refused me, letting me see how wild and unfounded had been my hope that you also loved me in return. Do you remember?"

"Yes, yes, I remember," Mildred answered, faintly, turning her face from him.

"Over there"—pointing to a distant couch—"we met again, after weeks of separation and oblivion—since you say that past thought of mine was but a dream—and I felt when you entered the room how undying a thing is love. You see this place is fraught with pain to me, and yet I like it. I like to sit here and think, and picture to myself those old scenes again, only giving them a kindlier ending."

"Do you still care to recall them?" she asked, in a low, broken voice.

"I shall always care to recall anything connected with you," he answered simply; then: "Did I ever thank you, Mildred, for coming to my assistance on that last hunting day? I think not. I have no recollection of all that occurred, but they told me how good to me you were."

"It was the very commonest humanity," she said.

"Of course that was all. You would have done the same for any one. I know that. Still I am grateful to you." Then suddenly—"Why did you break off with Lyndon?"

"You have asked me that question before," she said.

"I know I have, and I know also how rude a question it is to ask; and still I cannot help wishing to learn the answer. Will you tell me?"

She hesitated, and then said, slowly—

"He discovered, or fancied, that I did not care sufficiently for him; and he was too honorable to marry a woman who did not accept him willingly of her own accord."

"When did he make that discovery?"

"We ended our engagement the evening of your accident," she answered, evasively, and with evident reluctance.

"Mildred, if I thought," he began, passionately, trying to read her face—"if I dared to believe what your words appear to imply, I might be mad enough again to say to you words that have ever fallen coldly on your ear. I would again confess how fondly I love you—how faithfully during all these wretched months I have clung to the sweet memories of you that ever linger in my heart."

She shrunk away a little, and covered her face with her hands.

"Do you still turn from me, Mildred? Am I distressing you? Darling, I will say no more. It is indeed for the last time in my life that I have now spoken. Forgive me, Mildred—I am less than a man to pain you in this way, but, oh, my dearest, do not shrink from me, whatever you do; do not let me think I have taught you to hate me by my persistence. See, I am going, and for the future do not be afraid that I shall ever again allude to this subject." He drew near her, and gently kissed her hair. "God-bye," he said, once more, and then slowly, almost feebly, walked down the room toward the door.

Miss Trevanion stood gazing after him, her blue eyes large and bright with fear; she had an intense longing to say she knew not what. Oh, for words to express all that was in her heart!

Her hands were closely shaped together; her lips, pale and still, refused to move. It was the last time—he had said so; if she let him go now, it was a parting that must be forever; and yet she could not speak. Her love, her life was going, and she could not utter the word that would recall him. Already he had turned the handle of the door; the last moment had indeed come—would he not turn?

"Denzil!" she cried, desperately, breaking down by one passionate effort the barrier that had stood so long between them, and held out her hands to him.

"My love!" he said, turning. And then in another moment she was in his arms, and all the world was forgotten.

"Speak to me, beloved," he said.

"What am I to say to you?" she whispered, with her fair head resting happily against him.

"Tell me the one thing I have longed all these months to hear—tell me that you love me."

"I do love you," she answered, freely, earnestly. "You know it now. I have loved you a long time, I think—for months before I knew it myself."

"And yet you would have married Lyndon," he said, jealously.

And then she told him all that story about her fathers difficulties, the great necessity for the money, and her miserable pride and painful, hidden sorrow.

"I could not ask you for it," she finished, alluding to the money; "and yet I loved you then."

"My poor darling!" he murmured.

At this Mildred cried a little, and was comforted and petted for a while.

"Sometimes, do you know," he said, "I thought you did love me; and then again I persuaded myself I was a fool to believe anything of the sort. I shall never forget the day Paul told me of your intended marriage with Lyndon. But surely this makes up for everything," he concluded, fondly drawing her closer to him.

"Perhaps you will be sorry for it some day," she whispered, but she did not believe in her own prognostication.

"I do not fancy I shall," he answered. "Mildred, even now I cannot fully realize it. Am I indeed going to marry you, my own darling? Is it true? Look at me, and say again you mean to be my wife."

"I will not," said Mildred, with a happy laugh; "I have said enough. Besides, who knows but that I may change my mind, or you may change yours? Remember how unkind you were to me that day in the wood, when my poor foot was sprained. Did you hate me then?"

"No," he answered, absently, being busy thinking for the thousandth time what beautiful eyes she had.

His answer dissatisfied her.

"Denzil, tell me—did you never, at any time, even for a moment, when I was most cruel to you, feel that you detested me?"

"Never!" he answered, indignantly. "How could you imagine such a thing?"

"I wonder you did not," she persisted. "Surely every now and then you must have thought me at least heartless and unfeeling."

"I never thought you anything but the sweetest girl in all the world," he declared, earnestly. "I am only afraid now that I shall wake up suddenly and find all my happiness as unreal as that scene I described to you a while ago."

Mildred grew very red, and lowered her eyes, restlessly opening and clinching her hands in a hurried, undecided manner. She was evidently making up her mind to some difficult task, and finally buried her face on his breast so that it could not be seen.

"You mean your dream?" she said, in a low voice. "Denzil, I want to tell you something. It—it was all true. I did go into your room, because you called for me; and I did kiss you and—no, no—do not look at me, Denzil! It was horrid of me! You must not!"

But he did look at the exquisite blushing face and tear-dimmed eyes for all that, and kissed her until not a tear remained.

CHAPTER XXVI.

The excitement was considerable in the Trevanion household that evening. The news got about almost directly though neither Mildred nor Denzil could remember having been the informer; and everybody was astonished and pleased, and delighted in turn—especially old Blount, who dropped in just before dinner, and having heard the tidings, insisted on kissing Mildred, without asking permission of any person concerned.

Mrs. Younge and Lady Caroline had first a good cry together and afterwards arranged the entire wedding, trousseau, presents, and everything else, before there was time almost to breathe. Frances Sylverton, too, showed herself really happy about it, though she moderated the warmth of her congratulations by stigmatising them both as a pair of "muffs," and declared she had seen how it would end from the beginning.

"I don't believe you did," said Denzil; "for instance, your foresight must have received a severe shock when Lyndon was here."

"Not a bit of it," returned Frances. "I knew well she would never care for that nice Lyndon, just because he was the very sort of person any one else would love devotedly, and was far superior to yourself. He was too good for her—that's the fact; she was unable to appreciate him. Now don't abuse me, Denzil—it's not gentlemanly; and I cannot help it if I see through everything. You may recollect that I had a presentiment about you the day you nearly killed yourself."

"Well, Frances, you must not have any more presentiments," said Mildred, hastily; "I hate them. They are so stupid; no one should encourage the feeling."

"Oh, must I not?" cried Frances, with a gay laugh. "Is he quite your own property now? Very well, dear, you shall keep all the forebodings about him to yourself for the future, I promise you. But, as Charlie is determined to marry me to-morrow, I predict it will be a pouring wet day."

Poor Lyndon was very little thought of in these days of love-making and merriment. All his devotion, gentleness, and true nobility of character were forgotten, or counted as nothing beside the living, present love. Nevertheless, when, a little later, there came a letter from him to Mildred, telling her how he had heard, in his distant resting-place, of her happiness and wishing her every joy, it struck a repentant chord in her heart, and made her, for that one day at least, silent and thoughtful—nay, almost sad.

"Read it," she said to Denzil. "Ah, I fear he still thinks of me! And it is all my fault. How can I ever forgive myself?"

"It was very unfortunate, certainly," Denzil returned, with his most matter-of-fact air, when he had finished the letter; "but, you see, it could not be helped. Either he or I was bound to go to the wall and be miserable; and I cannot help feeling thankful that things have turned out as they now are. You know, darling, if you had married him it would have been two people made wretched instead of one, and that would have been worse; because you could not have been happy without me—could you?"

"I suppose not," she answered, sighing, only half persuaded by his specious reasoning; "but still I know I have behaved very badly to him."

After that they dismissed him from their conversation altogether, going back to gayer, tenderer themes, and thought no more of him, though far away he was ever thinking of her, and dwelling sadly upon faded hopes that never could be realised. Not that he died, or pined away, or lost all interests in life, but his disappointment saddened him forever. And though in later years he married and was calmly happy in his way, still he never loved his wife as he had loved Mildred Trevanion.

* * * * * * *

Words are not needful to describe the several weddings, with all the lace, flowers, satin and wedding-cake, that belonged to each of them; each wedding was, if possible, more perfect than the last. Some said Frances, some said Mildred, some said Mabel was the most beautiful bride; and indeed it would have been difficult to form any settled opinion, they were all so desirable. The following year, when the three appeared at the drawing-room together in their new character as wives, it was whispered in the very highest circles that her most gracious majesty had already seemed struck and charmed with their appearance, and had been pleased to say several very pretty things about them, while a few people declared it was on Mildred she had bent her kindliest glance. However that may be, each husband thought his own wife the loveliest—and surely that was all each cared for. So let them remain—fresh and fair in the memory, loving and being loved unto their lives' end.

(The End.)

BRITISH FISHERMEN.

How the Trawlers Have Come to the Aid of Their Country.

The birthplace of the British fishing industry was undoubtedly the English channel. But no better men ply the trade by net or line than those which hail from the western and northern isles and from the ports of Northern Scotland.

These places are, indeed, natural nurseries for the royal and merchant fleets, though it is interesting to note that by act of parliament whale fishermen were exempted during the Napoleonic wars from the activities of the press gang.

The coming of great ships of war and a standing navy ended to a great extent our country's early dependence on the larger fisher craft in sea battles.

In pre-Armada days the fishing ports of the channel provided the largest number of craft and seamen (London, even, was less important to the navy than a combination of west country ports with unfamiliar names), and when a British expedition was to be sent to France the fisher craft were requisitioned as transports.

Light, fast and seaworthy were the fishing boats of the channel—they were used as scouts and patrols, just as their compeers are being used to-day.

When war was declared in August, 1914, thousands of naval reservists travelled from the fishing ports and islands to rejoin, and though round the depots one heard many dialects, from Newquay to Scalloway, from Stornoway to Dover, there was only one argot of the sea. Donald might ejaculate in Gaelic and his Cornish neighbor in a dialect akin to the lost British language; but they had common ground in the speech of their calling, as a few days later they had a common dress in the uniform of the royal navy.

It was astonishing how smartly these fishermen leapt back into the drill and duties of Jack Tar, and how a uniformity of appearance was gained. Bushy beards were trimmed close, matted locks sacrificed, and the razor's steady labor produced a man little different on the surface, from a thousand of his fellows. Such were our fishermen warriors.

But the first month of war showed that our fleet was deficient in mine-sweepers, though, of course, with a nucleus squadron of these handy craft. So the trawlers and drifters and carriers of the Dogger bank, the Iceland and White sea fishermen were called upon and the surplus men of the fleet drafted back to their old service.

And none the less fighters did they prove, though at first their duties were but slow and mildly dangerous. At least so these men said, but handling a concussion bomb powerful enough to splinter their tiny craft cannot be held to be a pleasure.

The submarine war was, however, their opportunity. The Germans aimed at the destruction of every ship in the neighborhood of Britain, and certainly did serious damage.

But our fishermen warriors proved real sleuth-hounds; every certain evidence of the passing submarine was noted—the even waves in calm weather, the suddenly breaking wave when there was a capful of wind, the scared seafowl, the tiny plume of water where the periscope cut its way.

And no less ingenious and worthy were the methods of attack. The submarine was patiently followed for hours until compelled to seek the surface. He was located by kites and seaplanes.

The trawler soon gained the mastery of this monster of the under seas, and will continue to hold it despite the new inventions of the enemy.

There is an invention which assists the location of underwater craft, the coming of which swept von Tirpitz's invisible fleet from his grasp.

The latest declaration of the enemy will compel the men who use the Dogger bank to become warriors. Fishing craft have always been theoretically immune from sinking, now they are to be sunk on sight.

But we shall see the raider jerking out his machine guns just a few seconds too late, for the fisherman warrior, bereft of all other weapons, will certainly use the full power of his tiny craft to ram and destroy the enemy.—From Pearson's Weekly.

ORIGIN OF THE PERISCOPE.

The Reflecting Spyglass Used at the Siege of Sebastopol.

Speaking of the origin of the periscope, the following extract from the writings of the well known inventor of "Pepper Ghost" gives the credit to the clerical profession. Pepper wrote soon after the Crimean war.

"During the siege of Sebastopol numbers of our best artillerymen were continually picked off by the enemy's rifles as well as by cannon shot, and in order to put a stop to the foolhardiness and incautiousness of the men, a very ingenious contrivance was invented by the Rev. William Taylor, the coadjutor of Mr. Denison in constructing the first 'Big Ben' bell. It was called the reflecting spyglass, and by its simple construction rendered the exposure of the sailors and soldiers who would look over the parapet or other parts of the works to observe the effect of their shots perfectly unnecessary, while another form was constructed for the purpose of allowing the gunner to 'lay' or aim his gun in safety.

"The instruments were shown to Lord Panmure, who was so convinced of the importance of the invention that he immediately commissioned the Rev. William Taylor to have a number of these telescopes constructed, and if the siege had not terminated just at the time the invention was to have been used no doubt a great saving of the valuable lives of the skilled artillerymen would have been effected."—London Express.

Magical Effect on Neuralgia
Throbbing Pain Goes Quickly

A YEAR'S SUFFERER CURED BY "NERVILINE."

No person reading this need ever again suffer long from Neuralgia.

Nerviline will quickly cure the worst Neuralgia, and Mrs. G. Evans, in her strong letter written from Russel post office, says: "One long year, the longest of my life, was almost entirely given up to treating dreadful attacks of Neuralgia. The agony I experienced during some of the bad attacks was simply unmentionable. To use remedies by the score without permanent relief was mighty discouraging. At last I put my faith in Nerviline; I read of the wonderful pain-subduing power it possessed and made up my mind to prove it valuable or useless. Nerviline at once eased the pain and cured the headache. Continuous treatment with this magic-working remedy cured me entirely, and I have ever since stayed well."

Mrs. Evan's case is but one of hundreds that might be quoted. Nerviline is a specific for all nerve, muscular or joint pain. It quickly cures neuralgia, sciatica, lumbago, lame back, neuritis and rheumatism. Forty years in use, and to-day the most widely used liniment in the Dominion. Don't take anything but "Nerviline," which any dealer anywhere can supply in large 50c family size bottles, or in a small 25c trial size.

SAILORS DREAD JONAHS.

They Draw Only One Moral From the Biblical Story.

There is still firm belief in Jonahs at sea. Recently a sailor, who was prosecuted for failing to join a British admiralty transport, pleaded in excuse that he was known to seamen generally as Jonah, and that the sailors on the transport had threatened to throw him overboard if he did join.

Certainly if superstition ever could be rational, they had some reason for theirs. The sailor had served on the Titantic and the Empress of Ireland, both of which were wrecked, and on the Lusitania and Florizan, both of which were torpedoed.

It seems a pity that sailors should know the story of the prophet Jonah, since they get only one moral from it. The book was certainly not written to instruct seamen how to deal with Jonahs.

Yet it is unfortunately the only moral which sailors seem to draw. Jonah is probably the character best known to them in the Old Testament, and what they know about him is that he caused bad weather through his own fault, and was very properly dealt with by his fellow voyagers. They forgot, if they ever knew, that the sailors cast lots to discover who was the cause of the bad weather and that lot fell upon Jonah.

The Jonahs of modern times are not discovered by such means, nor do they ask to be thrown overboard. They are assumed to be Jonahs because they have been uncommonly unfortunately. Perhaps they are pitied as well as shunned for their misfortune, but have done something to deserve them, and then the superstitious fear of their fellows becomes cruel.

The worst of it is that a Jonah may himself share the superstition and may be unnerved by the thought that he is marked out for misfortune.

But even landsmen who believe themselves free of superstition are apt to be intimidated by a run of ill luck and that it must continue unless by some means the curse, whatever it may be, is removed.

The worst of superstitious tales is that they are often true, that men do have extraordinary runs of ill luck in life as at cards. The superstition lies in the conclusion that are drawn from them. For in life as in cards a run of ill luck is against the average, and sooner or later the average will right itself.

Superstition always suggests that there is something wrong. That is the devilish cunning of our animal fears, and the only way to frustrate it is to be against superstition altogether, in small things as in great—in fact, to cultivate an almost irrational unbelief in all superstitious tales.

We need to be almost superstitious in our fear of superstition, as a reformed drunkard needs to avoid wine.

Corns Drop Out

INSTANT RELIEF

Paint on Putnam's Corn Extractor tonight, and corns feel better in the morning. Magical, the way "Putnam's" eases the pain, destroys the roots, kills a corn for all time. No pain. Cure guaranteed. Get a 25c bottle of "Putnam's" Extractor to-day.

NO MAN'S LAND.

No Man's Land is an eerie sight
At early dawn in the pale gray light.
Never a house and never a hedge
In No Man's Land from edge to edge;
And never a living soul walked there
To taste the fresh of the morning air,
Only some lumps of rotten clay,
That were friends of foemen yesterday.

What are the bounds of No Man's Land?
You can see them clearly on either hand,
A mound of rag bags gray in the sun,
Or a furrow of brown where the earth works run
Through field or forest, o'er river or lea;
No man may pass them, but aim you well
And death rides across on the bullet or shell.

But No Man's Land is a goblin sight
When the patrol crawl over at dead o' night;
Boche or British, Belge or French,
You dice with death when you cross the trench.
When the "rapid," like fireflies in the dark,
Flits down the parapet spark by spark,
And you drop for cover to keep your head
With your face on the breast of the four months' dead.

The man who ranges in No Man's Land
Is dogged by the shadows on either hand
When the star shell's flare, as it bursts o'er head,
Scares the great gray rats that feed on the dead,
And the bursting bomb or the bayonet snatch
May answer the click of your safety catch,
For the lone patrol, with life in his hand,
Is hunting for blood in No Man's Land.

—Captain J. Knight Adkin, in London Spectator.

NAME ORIGINS.

How Some Well-Known Ones Were Originated.

Once upon a time given names were the only names in use. One was Tom, Dick or Harry, and that was all there was about it.

Our present surnames arose from nicknames. Thus Tom, the tailor, became in time Tom Taylor and his descendants used Taylor as a family name.

The most familiar of our surnames were taken from the occupations of our forefathers as Smiths, Bakers, Brewers, etc. Many men, moving to new towns, had the name of the town from which they had come fastened upon them.

Others took names like Pope, King and Bishop from playing those parts in plays. Hogg and Bacon are simple. Purcell developed from poucel, meaning little pig.

Galt and Grice are old dialect words of the same meaning. Tod meant fox, Fitchie was a pole cat, and so the keen student of languages traces the beginnings of our names in the old dialects.

Some of the nicknames were originally distinctly uncomplimentary, as Seely for silly, Cameron for crooked nose and Kennedy for ugly head. Grace developed from grass or fat.—Exchange.

SUMMER HEAT HARD ON BABY

No season of the year is so dangerous to the life of little ones as is the summer. The excessive heat throws the little stomach out of order so quickly that unless prompt aid is at hand the baby may be beyond all human help before the mother realizes he is ill. Summer is the season when diarrhoea, cholera infantum, dysentery and colic are most prevalent. Any one of these troubles may prove deadly if not promptly treated. During the summer the mother's best friend is Baby's Own Tablets. They regulate the bowels, sweeten the stomach and keep baby healthy. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

ANTIQUES

In a study of early motifs of decoration used at various periods, and in different countries, it is remarkable what a prominent place the rose has taken. As the emblem of the Plantagenet kings the red rose was used by the House of Lancaster—1359 to 1413—and the white rose represented the House of York—1461 to 1485.

When the Tudors came to the throne in 1485, the rose was conventionalized for their emblem, and in this form entered largely into decorative motifs of that period, and may be seen upon Tudor style furniture right up to the end of the Elizabethan reign—the last of the Tudors—in 1603.

The painter upon porcelain has perhaps done more to keep the rose to the front as a decorative feature than any other art industry, and it is a noteworthy circumstance that the most extensive rose growing centres in England are those contiguous to the pottery making towns.

With acre upon acre of the Queen of Flowers to select from in their almost infinite variety in size, form and color, the china painter, even though he is constantly portraying some new and exciting trick in light and shade, new tint, or hitherto unknown growth, the result of scientific cultivation a freak of inexhaustible nature, still has a long way to go before the beauties of his subject are exhausted. With perfect drawing of this beautiful flower the most delicate and natural tones of color are employed, resulting in very pleasing pictures, the natural arrangement of the blooms and the foliage, thrown into prominence or partly obscured by some subtle effect of light and shade appear to stand out from the background almost as though of natural growth.

No antique in English china is more highly prized than the specimen bearing the hall mark of William Billingsley, justly regarded as the premier rose painter of the early days of British porcelain, and an artist identified with the best work of more establishments than any other famous ceramic artist, his work being associated with Derby, Pinxton, Worcester, Nantgarw and Coalport.

Minard's Liniment Cures Dandruff.

From Medicine to the Drama.

The earlier part of Victorien Sardou's career was beset with many trials and difficulties. His parents wished him to take up a medical career, and he began his studies with some zeal. The love of the drama, however, was far greater than the love of the pill box, and in the interval of the other work Sardou was busy upon a play. Life was a struggle for him, for he had little money, though he managed to get journalistic work to supplement his more slender income. His first play was a failure, and Sardou rushed from the theatre vowing never to enter one again. He fell seriously ill, was nursed back to health by Mlle. de Brecourt, an actress who lived on a floor below, and from that time his fortune was made.

SINGING SANDS.

Peculiar Properties of These Curious Freaks of Nature.

The most notable of these curious freaks of nature, "singing sands," are those of the Hawaiian island of Kauai. When a small quantity of this sand is clapped between the hands it is said to give forth a sound so shrill as actually to resemble a hoot. Put into a bag and violently shaken, the sand emits a noise strangely like the bark of a dog.

Similar sands also occur in the Colorado desert, where also are to be found those curious nonsedentary sands that continually travel hither and thither over the vast plain of clay. Their movements are induced by the winds, and when a strong breeze is blowing the particles of which they are composed give out an audible humming or singing.

Under the microscope these sands show an almost perfectly spherical form, so that they roll upon each other at the slightest impulse, a circumstance that also accounts for the rapidity with which the sands travel over the desert. One theory advanced with respect to the "singing" of these sands is that it is due to an exceedingly thin film of gas that covers the grains. Gathered and removed from the desert, the sands lose their vocal properties.—Exchange.

This is to certify that I have used MINARD'S LINIMENT in my family for years, and consider it the best liniment on the market. I have found it excellent for horse flesh.

(Signed) W. S. PINEO.

"Woodlands," Middletown, N. S.

Munitions in the Long Ago.

The munition question was a simpler matter for our forefathers than for us, but they were acquainted with it. Richard III. ordained that with every ton of certain goods imported into England ten yew bows should be sent. Bowmakers, too, were not allowed to use our own yew wastefully, and some standard of skill had to be reached before one could possess a bow of that wood. The novice had to be content with ash or elm.—London Standard.

Minard's Liniment Cures Burns, Etc.

It Vagaries.

For month of roses,
And of beauty,
June doth sometimes
Pass its duty;
Like this present,
When its showers
Seem too violent
For just flowers.

All the poets
Sing her praises,
Rhyme about her
Glowing phrases
Of her sunlight,
Her skies glowing,
And her bright blooms
Radiant growing.

Just like other
Queens capricious,
Who, when wishing,
Are delicious,
She can also
Turn to frowning,
All her beauty
In storms drowning.

—Baltimore American.

EVER FEEL "DOPY" AFTER MEALS?

At times we feel dull and heavy. Just one thing to do — relax the bowels and cleanse the system with Dr. Hamilton's Pills. Unclean matter is flushed out, the liver is toned, blood is purified, and at once you feel better. Good health and jovial spirits are quickly found in this celebrated medicine. Enormous benefits flow the use of Dr. Hamilton's Pills in every case; they are very mild, very prompt, and guaranteed by the makers. Insist on getting Dr. Hamilton's Pills, 25c per box everywhere.

THE EARTH THAT GOD MADE.

This is the Earth that God made.
These are the Timber and Coal and Oil
And Water Powers and fertile Soil
That belongs to us all in spite of the gall
Of the Grabbers and Grafters who forestall
The natural rights and needs of all
Who live on the Earth that God made.

These are the Corporate Snakes that coil
Around the Timber and Coal and Oil
And Water Powers and fertile Soil
Which belong to us all in spite of the gall
Of the Grabbers and Grafters who forestall
The natural rights and needs of all
Who live on the Earth that God made.

These are the Lords of Mill and Mine
Who act as if they were divine,
Who can't read the writing on the wall
But admire the skill and excuse the gall
Of the Grabbers and Grafters who forestall
The natural rights and needs of all
Who live live on the Earth that God made.

These are those Parsons shaven and shorn
Who tell the workers all forlorn
To pray for contentment night and morn,
And to bear and to suffer want and scorn
And to be lowly and meek and humbly seek
For their just reward on the Heavenly shore,
But not on the Earth that God made.

—Will Herford in the Masses.

Minard's Liniment for sale everywhere

ISSUE NO. 29, 1916

HELP WANTED.

GIRLS WILLING TO WORK ON British Army Orders, knitted underwear. Seamers, plain stitchers and learners, bright, healthy employment. Good wages. Zimmerman Mfg. Co., Ltd., Aberdeen and Garth streets, Hamilton, Ont.

WANTED — HOUSEMAIDS AND waitresses. Previous experience not necessary. Apply, "The Welland", St. Catharines, Ontario.

WANTED—YOUNG GIRL TO ASsist with house work; wages [illegible]. Apply to Mrs. K. Bethune, [illegible] Queen street south, Hamilton, Ont.

WANTED—HELP FOR WOOLLEN mill; Carders, Weavers, Fullers and Napper Tenders. Good wages paid in all departments, and steady work assured. We have several openings for inexperienced help, where energy and ability will bring promotion. Wages paid to apprentices while learning weaving. Special inducement to family workers. Write, stating full experience, if any, age, etc., to The Slingsby Manufacturing Company, Ltd., Brantford, Ont.

WANTED—EXPERIENCED MAN TO take charge of Five Cop Winding Machines, and to look after Yarn. Must be good manager of help. Good position open to competent men. Only those with general experience need apply. The Slingsby Manufacturing Company, Ltd., Brantford, Ont.

MISCELLANEOUS.

WANTED—GIRLS OF GOOD EDUCAtion to train for nurses. Apply, Wellandra Hospital, St. Catharines, Ont.

GIRLS WANTED

Experienced knitters and loopers, also young girls to learn. Clean work and highest wages.

CHIPMAN-HOLTON KNITTING CO., LIMITED,
HAMILTON, ONTARIO.

WANTED
Platen and Cylinder Press Feeders
Steady Work; Union Wages.
APPLY TIMES JOB DEPARTMENT
Hamilton, Ont.

FOR SALE
A HIGH BRED, SOUND BAY HACKNEY

Well broken, thoroughly reliable, a lady can drive; also complete outfit, including phaeton and runabout. Apply,

J. M. EASTWOOD,
Times Office, Hamilton.

Maple Custard.

Beat five eggs; stir into them one cupful of maple sugar, one tablespoonful of flour, one-half teaspoonful of salt, one quarter teaspoonful of nutmeg. Stir all this into two quarts of lukewarm milk. Pour in baking dish; bake in a moderate oven until custard is set—that is, firm in the centre. This recipe makes a great deal of custard, but one can always cut downthe amount of ingredients if desired.

PERSONAL.

PERSONS SUFFERING OR THREATened with tuberculosis, appendicitis, indigestion, constipation, dyspepsia, anaemia, hemorrhoids, weak stomach, liver, kidneys. Write for particulars. John Galbraith, Crosyn Ave., Toronto, Canada.

Waterproofing Matches.

A waterproof matchbox is good for emergencies, but not for a smokers daily supply. I waterproof the matches themselves by dipping them half length in shellac varnish thinned with alcohol and laying them out separately on a newspaper to dry. Shellac is better than paraffin or collodion because it does not wear off, and it is itself inflammable, like sealing wax. Matches so treated can be left in water a long time without spoiling.—Outing.

Minard's Liniment Relieves Neuralgia.

The Generosity of Dolan.

Two Irishmen were discussing the death of a friend.

Said Malachi: "Sure, Dolan was a good fellow."

"He was that," assented Mike. "A good fellow, Dolan."

"And a cheerful man was Dolan," continued Malachi.

"A cheerful man was Dolan, the cheerfulest I ever knew," echoed Mike.

"Dolan was a generous man, too," said Michael.

"Ginerous, did ye say? Well, I don't know so much about that. Did Dolan ever buy you anything?"

"Well, nearly," said Malachi, scratching his head in thought. "One day he came into Casey's barroom, where me and me friends was drinkin', and he said to us: 'Well, men, what are we going to have—rain or snow?'"

Lashing a Lazy Liver with pills may give temporary relief—but the pill habit is not a health habit. It will put the liver out of business in time—and then everything else goes out of business. Get the health habit by eating **Shredded Wheat Biscuit** the ideal hot-weather food which contains more digestible brain-making, muscle-building material than beefsteak or eggs. The tasty, delicious crispness of the baked wheat gives palate joy and stomach comfort. It supplies the maximum of nutriment in smallest bulk, and its daily use keeps the bowels healthy and active. For breakfast with milk or cream, or for any meal with fresh fruits.

Made in Canada

About Live Stock

PRACTICAL HINTS FOR HORSE BREEDERS.

Pure-bred animals breed true to type; others do not. Cling to animals of known breeding and tried usefulness.

Weight, with quality fixes values of aft animals. Don't be afraid of elling them too large. The buyers emand size, and are willing to pay r it. If a farmer is fortunate enagh to produce an eighteen or nine en-hundred-pound horse his profit is sured.

Breed for delicate improvement in ype rather than a mere increase in e number of animals. It is hard ough to perpetuate the good quali s that an animal possesses; why pect the impossible, i.e., the transittal of absent characteristics? Indiual selection based on utility is only safe practice.

Draft foals should grow half their ght the first year. If they do not, y rarely make it up later, and it only with great care and liberal ding that they are able to make showing. Keep the colts gainand growing. You will be well l for the feed they consume.

roadster foal should show his m as a yearling, and a trained eye uld be able to detect evidences of ed and promises of development. eral feeding and activity are prime ors. Their growth must not be rfered with nor their exercise d. Flesh does them no injury if put on rightly. On the other d, scant rations dwarf development, and not only decrease size, but vitality and vigor, thus weakenhis endurance and stamina. A dster without staying qualities is a cartridge without powder.

TH THE SHEEP ON PASTURE.

If the flock of sheep have been ll wintered, and have been shorn rly in April as suggested in a rmer article, once they have reach pasture no other food should be quired. But the greater the variety f grasses the better the flock will do. If they are allowed the run of the ring grain fields until the grain is eeping through they will trim around e fences so close that a great numer of burdocks, goldenrods, etc., will e prevented from going to seed.

To prevent the terrible ravages of the tapeworm, which is largely a roduct of old pastures, the flock hould be kept as much as possible on ew pastures. Where this cannot be rranged the nursing ewes and their ambs should be pastured until the ambs are three months old, upon clover, rye, oats, etc., followed by rape as soon as it can be got ready. Most of the damage with tapeworm is among the lambs, while they are oung and tender. The lambs should be weaned at about four months of age and turned into a fresh field of new seeding or else turned into a corn rop and rape.

It is a good plan to shut the ewes on dry feed for about three days at this time to check the milk flow, where they can be conveniently milkd a few times, thus preventing caked dders. Salt and fresh water should within reach of the flock at all mes. While there is no positive pre tive for grub in the head, fine tar ared upon the nostrils of the ep is one of the best known reme. A rather sharp V shaped trough salt with the sides smeared with r is a common mode of having the ostrils smeared with tar while licking salt. As the summer advances toard the mating season the breeding ock should be thriving. In order to ive the best results in future lamb rop Rape is one of the best foods r that purpose, as early frosts do ot affect it.

SHORTAGE OF RENNET.

Having heard considerable lately out the shortage of rennet, I m inclined to ask what is the rean. The only conclusion that I n arrive at is that someone has corered the market. As I had occasion visit the small village of Jasper few days ago I found two carloads calves that day being loaded for w York, and I learned upon inquiry at over 500 head per month was aving that point during the spring nths or in the neighborhood of 1, calves left that one small village, ctly for American markets, during e summer months. It then occurred me that in the face of a rennet ortage the authorities should make me arrangement to either prevent ch calves as would be suitable to lp out the rennet situation, from ing shipped out of the country, or allow rennet extract into our ts duty free for the time being, or oint a commission, if one is not ady in existence, with power to stigate, and when necessary, to ulate prices that would insure y and a fair deal.

PROTECT THE BIRDS.

hile I do not pose as an expert ds and insects, yet as most live largely upon insects I realtheir value to the farmer. It is ecessary to open their stomachs unt the number of insects that contain; just watch them. They busy all day long catching flies, ts, bugs, etc. It is true that of them like corn and wheat well, but their usefulness in Associations and Farmers' overbalance the injury they him

estimated that the destruction ds has cost the cotton growers United States one hundred mildollars annually, and the wheat three hundred million dollars injury by chinch bugs and , most of which could have nted by a plentiful supply vorous birds. One quail killas had in its stomach 1,200 s; another in Kansas con Hessian flies and one in ois had 127 potato bugs in . Just such startling reports rnished nearer home, but e is sufficient to show the birds on the farm. In 1914 ts of our country were inth a pest known as the army Almost every year some parts ly swept clean of herbage by ppers, and we are constantly potato bugs. Would it not ood plan to put on a "Protect Bird" campaign by planting s of evergreen trees where they ot plentiful already, to provide birds nesting places and protection for their young, and by preventing the cruel practice of destroying nests and shooting birds? This is one of the many things that the Junior Clubs could take up in the interest of their several committees and the country at large without danger of clashing with the tariff. R. H. H.
Middlesex County.

—Canadian Countryman.

WHEN MILK IS 10c A QUART.

Sour milk was always a hot-weather vexation of the housewife, but now that milk is dearer, and economy more important, this particular form of waste should go on in any household. All precautions for keeping the milk sweet for a reasonable time should be taken, and if it does go sour it should still be used while it is wholesome.

If the milk is really fresh when it comes it will be found to keep even in hot weather if the vessels in which it stands have been thoroughly scalded with boiling water. After the scalding they may be kept in a crock of cold water until they are required. When there is no ice it is a good plan to set the jug or bowl of milk in a vessel of cold water, and to cover it with a piece of muslin, the ends of which hang in the water. These covers are soon made from squares of muslin. Beads or pearl buttons should be sewn at each corner to prevent the covers from being blown away. It is essential, of course, that the covers should be plunged into boiling water every day.

Milk should have a shelf of its own, for it has a way of absorbing the odors of fish or cheese or any highly-flavored food.

When milk is being used in cookery only the quantity required should be brought into the warm kitchen. The entire supply will soon sour if it has been standing for an hour or so near a hot oven, or with cooling pastry around it.

HOW TO USE SOUR MILK.

If the milk does go sour, in spite of all precautions, that is no excuse for throwing it away. Sour milk is a valuable food, and actually more digestible than sweet milk. Many people (the peasants of the Carpathians, for instance) do not consider milk fit for use until it has soured.

Sour cream may be used instead of sweet in mashing potatoes without anybody but the cook being aware of the fact. It may also be used in salad dressings and in making toffee, while it actually makes lighter cakes and buns than sweet milk. Here are a few simple and economical recipes in which sour milk may be used. Of course, the milk is not wholesome when it has got to the mouldy and watery stage.

Very many recipes which call for sweet milk and baking-powder may have sour milk and baking soda substituted. An even teaspoonful of soda with each pint of sour milk is a good general rule.

SOUR MILK PANCAKES.

Sift together well two breakfast cups of flour, quarter of a teaspoonful of salt and a teaspoonful of baking powder. Add gradually about two cupfuls of sour milk, beating well. Pour small rounds on a hot, well-greased griddle and turn with a knife when they bubble and are cooked on one side. Serve hot and well buttered.

SOUR MILK CHEESE.

Put the thick sour milk in a saucepan and pour over it boiling water. In a few minutes, if the saucepan is left at the back of the range, the curd will have separated from the whey. Pour through a well-scalded piece of white muslin so that the whey all drains away. Tie up the curds and hang them where they may drain until firm. Afterwards turn the cheese into a bowl and work into it a little seasoning and a little cream or melted butter to moisten if necessary. Chopped parsley may be added if liked, and the cheese should finally be rolled into nice pats.

SODA BISCUITS.

Mix two cups of flour, half a teaspoonful each of salt and soda, and two tablespoonfuls of baking powder. Sift well and rub in two tablespoonfuls of butter—or lard if butter is scarce. Stir in lightly and quickly enough sour milk to make a soft dough just stiff enough to handle. Roll out on a well-floured board and cut into small rounds. Bake about 20 minutes in a quick oven.

FACTS FOR THE CURIOUS.

Russia has 5,000,000 Jews.

A hummingbird, when stripped of its feathers, is no large than a bumblebee.

A huge boulder, having 10 acres of surface above ground, from which granite is being taken for building the new Oklahoma State Capitol is said once to have been a favorite bandit rendezvous. It is a solid mass towering above the tree-tops and formed of an excellent grade of stone.

A company of United States marines, skilled in high altitude gunnery, has been attached to the Advance Base Brigade of the United States Marine Corps, and will be known as the Anti-Aircraft Gun Company. That is the first aero-defense company organized in the Marine Corps, if not the first in the United States.

Recruits from the large cities make the best sea soldiers, according to Sergeant Walter E. Carel, of the United States Marine Corps recruiting station in Philadelphia. "I am perfectly willing to concede that love for country has a larger meaning in the rural community than in the large city—that the rural youth is a better physical specimen and is more patriotic than the city fellow, but the recruit from the large town is keener, wider awake, and will more rapidly adapt himself to conditions as he finds them. Therefore, he makes the best marine—especially in action." Sergeant Carel has had years of experience in Marine Corps recruiting.

The toad lives from 10 to 40 years, and it can lay over 1,000 eggs a year, declares the Indiana Farmer. It has lived two years without food, but cannot live long under water. It never takes dead or motionless food. It captures and devours wasps, yellow-jackets, ants, beetles, worms, spiders, snails, bugs, grasshoppers, cricket, weevils, caterpillars, moths, etc. In 24 hours the toad consumes enough food to fill its stomach four times. A single toad will in three months devour over 10,000 insects. If every 10 of these would have done one cent damage, the toad has saved $100. Evidently the toad is a valuable friend to the farmer, gardener and fruit grower, and can be made especially useful in the greenhouse, garden and berry patch.

Town life in Russia is as different as can be from life in the country districts. One curious custom is the after dinner call. People call on their friends after dinner at night or even after the theatre, paying calls at midnight being quite the thing to do. The Russian dinner always begins with a sideboard course of cold meats, hors-d'oeuvres, etc.—that is to say, the dishes are laid out on the sideboard and the guests help themselves before sitting down to partake of the regular meal. It is from this custom that we derive the term "service a la Russe" as applied to diners at which the carving is done from the sideboard. —London Answers.

A Cabin From a Redwood Log.

There is a cabin in Golden Gate Park, San Francisco, which is constructed of a single log of redwood. It is about twelve feet long and rests upon a heavy platform of timbers which supports the weight of the hollowed log. A doorway about five feet high and eighteen inches wide admits visitors to the interior, which forms a fair sized room. The appearance of the cabin is striking because the front presents a cross section of a large redwood tree with the bark intact.—Popular Science Monthly.

Around the Farm

DOCTORING POULTRY.

Professor Graham, who has charge of the poultry department at the Ontario Agricultural College, recommends a good sharp axe as the best and quickest method of dealing with poultry diseases. No greater misfortune can befall the poultry beginner than to have success in treating the first case of sickness. It gets him into the habit of doctoring and fussing with the birds, until in a very short time he has a flock of birds of enfeebled constitution pre-disposed to disease.

Mr. Robinson in his book on Poultry Craft gives some very good advice in this connection. He writes: "The poultryman needs to know enough of the symptoms of different diseases to be able to detect each at an early stage; enough of the causes of particular diseases to enable him to take effective preventive measures for the well fowl when sickness does appear in his flock; and something of the modes and effects of using the simple remedies which, when used in time, will often check a disease before it has reached a danger point. He needs to learn in which diseases (and at what stage) it will pay—both immediately and in the long run—to use drugs, and when it is best to resort to the hatchet and spade; and he needs to get firm hold of the fact that when once disease has become established in a flock, a good sharp hatchet, vigorously used, will do more for him than all the medical knowledge and all the drugs in the world. A considerable proportion of the cases of sickness in the fowl yard yield to very simple treatment if taken in time; the great trouble is that they are not taken soon enough, or there is nothing at hand to give a sick bird. It is possible to cure many bad cases, but the life of a well fowl is not as a rule worth much in dollars and cents, and the life of a sick fowl is worth so much less that a poultryman ought not to begin a course of doctoring, when circumstances call for individual treatment for many fowls or for a long course of treatment for one or several birds. It is not only the cost of the medicines and the value of the time spent in administering them, and giving the fowl the special care demanded by its condition that have to be taken into account. The cost of feeding and housing and caring for the convalescent fowl until again productive, must be reckoned upon. When to this is added the well established fact that a fowl once dangerously sick with an organic disease is afterwards worthless as a breeder it should not take the poultryman long to make up his mind that except in very mild attacks or unless the disease can be got in its early stages it pays better to kill than to cure."

HAYMAKING.

On account of the scarcity of farm labor many farmers will be using the tedder and hay loader this year who never used them before. Modern machinery has done much to make the farmer's work easier and more pleasant. Possibly no two machines have done more in this connection than these two machines.

For making the best hay the weather must not be too warm nor must it be too damp. When the sun is hot and scorching the leaves and finer parts of the stems dry out too quickly, with the result that if the hay is cured in the windrow and not cocked the leaves will break off and the hay will be dusty and unpalatable. The fact that clover hay is more dusty than timothy is very largely due to the fact that the leaves are allowed to dry out too quickly.

In good haying weather hay that is cut in the afternoon can be hauled to the barn the following afternoon. A few hours after the hay has been cut it should be shaken up with the tedder. It is not well to leave hay in the sward over night—especially if it is not shaken out with the tedder or fork before nine or ten o'clock next morning.

Much good hay is made by using the side delivery rake and letting the hay cure in the windrow. If the sun is too hot after the hay is raked up it will be necessary to put it into small cocks—this applies especially to alfalfa, and red clover. If there is a chance of the hay being rained on it should be cocked also. Many farmers have found that, when the cocks are not too large, by splitting the cocks in two the hay loader can be used almost as well as if the hay had been left in the windrow.

LAND FOR ALFALFA.

The more people know about alfalfa the better they like it. As Mr. Stewart of Menie, Ont., said to the writer the other day, one can just about cut one's feed bill in two by feeding it to the dairy cattle during the winter months. Alfalfa does best when sown alone about the middle of July. It should be sown at the rate of twenty pounds per acre. Up to this time the land should be kept well cultivated so as to germinate and kill the weeds. Alfalfa cannot thrive where weeds abound. For this reason it is best to sow alfalfa on land that was in a hoed crop the year before. The hoed crop has cleaned the land and the cultivation in the spring kills all the weeds that were left over from the year before. Sometimes a successful catch of alfalfa can be got on sod, but as a rule the land contains too many weeds. If there is the least chance that the land is acid it will pay to apply lime at the rate of about three tons of ground limestone per acre. Much of the lack of success in growing alfalfa has been through acidity in the soil.

PROTECT THE YOUNG CALVES FROM THE SUN.

To some of our readers it may seem rather foolish to be telling people to protect the calves from the sun, seeing that we have seen so little of him this year. However, we have most of the summer ahead of us yet, and we cannot tell what July and August will bring forth. Many successful cattle breeders keep their young calves in the stable all summer. Although this may be all right for pure-bred animals that one wants to give special attention the best place for the young growing calf is out on pasture. The skin of the calf is comparatively tender and cannot stand the flies and hot, scorching sun as well as the older animals. If the pasture has not got several good shade trees in it is better to keep the calves in the stable during the heat of the day and only turn them out for a few hours.—Canadian Countryman.

A charming dance frock for the debutante is shown in white Georgette crepe, the simplicity of which is the most notable feature.

MEXICO CITY POLICE.

Always Ready at Night to Answer a Clap of the Hands.

In Mexico City each of the 5,000 police, who won for it the reputation of the most thoroughly patrolled city in the world carries a lantern underneath his cape. After a certain hour, when traffic has virtually ceased the policemen put their lanterns in the middle of the roadways at the intersections of the streets.

Then they go into the nearest doorway, sit down and prepare to spend the rest of the night at their ease. If you want a policeman you simply step out on the sidewalk and clap your hands. Immediately with the suddenness of genii one appears from either side. Handclapping, by the way, is the universal method of attracting attention in Mexico. To insure wakefulness on the part of the police any one who brings a lantern or a policeman's cap to the nearest police station gets $5, which is deducted from the negligent patrolman's monthly pay.

In some cities the system of "keeping tab" on policemen is different. Every hour the sergeant at the station goes to the door and blows his whistle. The man on the nearest beat immediately responds. Number two follows, and so the whistle passes through the entire force and goes back to the station. If one whistle is missing the man who has the preceding beat investigates and reports at headquarters. The speed with which the hour can be blown and the watchfulness of the force determined is astonishing.

ONE MAY EAT HIS CLOTHES.

Explorer Points Out Advantages of Skin Garments.

There is naturally much talk in war-time of rations and food supply, and the possibility or probability of starving out one or other of the belligerents. But it is amazing what people will eat at a pinch.

A recent Arctic explorer seriously advised the wearing of skin clothing in preference to woolen, simply and solely because if the worst came to the worst, one's outfit could be stewed for a meal, or at any rate, given to the dogs!

Well, when a man finds enjoyment and a sort of inward satisfaction in a stew made of his vest, his shoe-laces, and his sledge-gear, he must be pretty "peckish," and when he gets back to civilization he will make a model husband, never likely to turn up his nose at cold mutton on washing days.

The Bishop of Yukon thinks nothing of eating his boots. He had probably declared he was ready for that operation many a time when he was a boy, but he has actually done it since he came to man's estate—in his case, the great cold-field or arctic Alaska.—Answers.

There is nothing new under the sun. Even New Year's resolutions are the same old ones worked over.

The most unusual black satin cape shown here is dubbed "The Dragoon" because of the richly embroidered counter on the brilliant satin.

THE TRENCHES

Those who see nothing in the great world war of to-day but the fighting of beasts at Ephesus, are walking through life with their eyes holden. The bloody ordeal of the field of battle may be horrible beyond human conception, but it at any rate brings into being such qualities as courage, endurance, self-sacrifice, and many others, all of which are lacking in the scheming of the political arena, the deception of the market-place, the scandal mongering of the club window, and in many other questionable industries of what the unlovely Richard termed the "piping time of peace." In an often quoted passage, on page 240 of Science and Health, Mrs. Eddy makes this clear enough. "Remember," she writes, "that mankind must sooner or later, either by suffering or by Science, be convinced of the error that is to be overcome."

Mankind, however, toying perpetually with the promises of the flesh, floating forever down the river of human existence to the cataract of crisis, and then struggling convulsively to recover itself, never seems to learn the lesson set out for it by the sixteenth century poet:

"O wearisome condition of humanity!
Born under one law, to another bound."

So when it has bitten its thumb too violently in the street, it betakes itself, after the manner of Verona, to the sword, whilst all the other wranglers in the market-place or idlers in the club windows, gather round to watch the fray, congratulating themselves they are at peace because they are not fighting with their fists. Of course, superficially speaking, they are correct. There is nothing, in the abstract, to be said for war that is not contained in the words of the old German proverb, "When war comes, the devil makes hell bigger." At the same time the peace of matter, considered in the abstract, is not exactly synonymous with spirituality. There is, indeed, a distinct element of veracity in that paraphrase of the book of Samuel, indulged in by that very unveracious Bishop of London, who wrote, "War its thousands slays; Peace, its ten thousands."

The simple fact, of course, is that, to use a truism, banal beyond words, there are war and wars. No one, it is to be presumed, would care to weigh in the scales of morality the campaigns of the Black Prince against those of the Maid of Orleans, or the wars of Timour the Tartar against those of William the Silent. It was all very well for Cicero to contend that an unjust peace was preferable to just war, but only a man who had got the value of human life hopelessly out of focus could maintain any such proposition. If it were true, then the Dutch burghers should have submitted their bodies and their consciences to the armies of Alva and the familiars of the Inquisition; the yeomen of England should have fitted their necks to the yoke of the Stewarts; and the farmers of the American colonies surrendered their liberties to the ministers of George Guelph. War, in short, everyone knows is terrible, but there are, none the less, circumstances which make war preferable to peace. That was what the Dutch burghers realised when they hoisted the drawbridges of Maestricht in the face of Alva's troops; that was why the train bands marched out of London to join the parliamentary forces; and that was how the minute men came to face Pitcairn and his redcoats on Lexington Common.

The simple fact is that the exponent of peace at any price seems commonly to imagine that a disinclination to use his fists provides him with letters of marque for his tongue. The stern Republican critics of George Washington and Abraham Lincoln were, for example, as generous in their precipitation of sanguinary epithets as if they had been dealing faithfully with "the grand monarch" or "the little corporal." It is a mistake of temper which ends in a hopeless confusion of values, and has, already, during the present war caused their descendants in all countries, in their Olympian ignorance, to lose the lesson of the trenches. For, whatever the merits of the struggle, it is in the trenches in Europe that the futures of the battling nations are being fashioned, and lines of men, gripping one another in desperate strife, were composed of mere barbarians.

Millions of men have marched into those trenches with the vision of the parish pump, and are sitting there, their rifles upon their knees, viewing "Iter coelo," the road to heaven, winding into infinity. These men are not resting comfortably at home counting their gains. They have cast, what they deemed, the dice of self-sacrifice on the battlefield, and they are finding the reward of self-sacrifice in an understanding of true patriotism. Out of those trenches, when the war is over, there will sound the tramp of the battalions of the victors of themselves. They are going to bring the vision of the "Iter coelo" back into the winding streets of the great cities, back to the villages, and to the uplands where the rooks follow the plow, and the day of a true democracy, founded on the respect of men who have looked daily together into the face of death and understood, in those moments, something of what is real in one another, will have dawned.

In the inferno of the trenches there are millions of men in hell in torment, or, as most people, nowadays, know that expression means, on the touchstone. The touchstone, which separates the permanent from the evanescent, the values of this world. The pessimist will tell you that this is a condition of things which will vanish with its temporary cause; and that, with the return to material luxury, the old selfishness will immediately begin to reassert itself. But the pessimist was ever conceived in fear, and brought forth in despondency. His influence is a vanishing factor in an era which is beginning to learn something of the truth which frees.

The future of half the world, then, is being forged in those shell drenched ditches which sever Europe into opposing camps. Here the rulers and the ruled of many countries are being born again. The future is theirs, and they will mold it; and in this labor they will be helped by those women at home, who also have burst their bonds, and have learned in a new and an enlarged way, the gospel of work. Nor does all this in any way make war a desirable pattern for human woes. What it does is to point to the unalterable fact that there are worse things than war. In other words to emphasize once more those words of Mrs. Eddy that either by suffering or science mankind must be convinced of the error that is to be overcome.—Christian Science Monitor.

SUPERB HEROISM OF CANADA'S MEN

British Correspondent Says Their Steadfastness at Sanctuary Wood is "Unsurpassed in War."

On Friday, June 2, a crescent-shaped line, extending from the little village of Hooge on the north to Hill 60 on the south, and passing through Sanctuary Wood, a distance roughly of a couple of miles, was held by soldiers from the overseas West. They were ranchers, farmers, and miners, and they were merchants and clerks from Winnipeg, Calgary and Vancouver. Some hailed from Toronto, and others from as far east as Montreal. On their extreme left, where it links up with a British division, was a famous regiment whose deeds have already thrilled the Empire, which, repeatedly shattered, has returned again and again to take up a post of danger on the firing line. Others were the Canadian Mounted Rifles and the Royal Canadian Regiment.

TRAGEDY-HAUNTED RUINS.

The two divisions to which these troops belong have been in the trenches for many months, watching, eagerly, and ardently, every move of the enemy's game. What that game was every man knew well. It was to push past them and gain that tragedy-haunted grey heap of crumbling masonry which a brief year ago was still called the city of Ypres. This each and every man of them was pledged to defend to the last drop of his life's blood. For weeks there had been a comparative lull: brigades, weary with work and tension, came in and out, as they were relieved or went to relieve. Yet uppermost in every mind was this: "When will the next big push come, and where? Twice the Germans have came on in smashing force to destroy the Ypres salient; two deadly battles have been fought. Am I fated to take part in the third?"

The question whether this battle in Sanctuary Wood was a real battle, an important battle, may be answered here once and for all. If you were to take all the actions along the British front, from the very beginning, there is none which illustrates so vividly, so intensely, the whole character of the fighting in this war. It combines the essential features of all, with the exception of poison gas. Brief, compact, and murderous, it was by for the greatest ordeal to which the Canadians have yet been subjected. As an exhibition of British steadfastness it is unsurpassed in the war. "Comparable only to Verdun" is the comment to me of a distinguished commander, when the fury of the German bombardment was mentioned.

"SILENT LIZZIES."

On this brilliant June morning, behind those hostile parapets 300 yards away, the enemy had been massing his artillery—guns of every age, shape and calibre, but chiefly the terrible 5.9, even naval guns, the "Silent Lizzies," mountains of shells, pyramids of bombs. Long rows of German gunners, along those two miles of front daily awaited the signal, and the time for the signal had come. General Mercer, ever alert, often astir soon after daybreak, had gone forward to the front trenches at so early an hour as half-past six. He was met by General Victor Williams, commanding the brigade then holding the front trenches. These, in company with the lamented Colonel Shaw, made the inspection.

The soil here is lose and damp and sandy, and only by rigid care and incessant exertion can the trenches be maintained in effectiveness. After breakfast the men were observed to be everywhere in high spirits, and went about their tasks of digging, repairing, rifle-cleaning, and general tidying up with great good humor. General Mercer visited a number of the officers' dug-outs. The day's work had begun well—all were at their appointed posts. Occasionally a sniper's rifle rang out or a bullet whizzed harmlessly overhead. A soldier told me he was watching a flight of birds immediately above him in the clear blue sky when "the thing" happened. He did not see the sky again for hours and when he did he was on his back being borne on a stretcher to the rear.

It was the lull before the storm. At twenty minutes to nine o'clock, without any warning, hell broke loose. The detonation was stunning, absolutely overwhelming. It did not come from one part, but from the whole length of the opposing line opposite the Canadian Division. It not only deafened the ear and paralyzed the nerves; but instantly the firmament became blackened. For the next few minutes dazed men groped about in the darkness, unable to hear any word of command from their officers, instinctively clutching their rifles and waiting for what was to happen. The two generals, attempting to reach the communication trench, found their retreat cut off. For the first minutes it appears that no shells, or very few, fell into the front trenches, and the machine gunners and trench mortar men held to their posts. But behind our front line a high wall of descending shells, screaming, crashing, exploding, emitting clouds of noxious smoke, seemed to shut off chance of escape.

Moments passed that seemed hours, and then the iron and steel missiles began to rain down and explode in the front line, scattering death and destruction. Nothing could live for long in such a tempest. The sides of the trenches began to crumble and fall in. Yet by a miracle our men held on, darting from one devastated section to another in order to gain refuge. A mine exploded, leaving a grim and enormous crater. The communication trench was by this time battered flat. Orders were conveyed to the men to withdraw, and some few hundreds attempted to beat a retreat through the deadly barrage. One, two, three hours passed; not for a moment—not for a single second—did the hideous thunder slacken.

On our own side the sound of our artillery was indistinguishable, but a at his post until a shell struck him and he was killed.

Seventy yards from the spot was the dressing station of his battalion. Here another brave officer toiled unceasingly all through that terrible morning, the wounded coming to him, many crawling on hands and knees, by scores. Before the war this R.A.M.C. captain was a jovial ship's surgeon in a steamer plying between Vancouver and Honolulu. He was a man of infinite courage—"nothing ever rattled him or upset his temper," said one survivor to me. When the dressing station was shelled he moved with his assistant. great volume of British shells pierced that infernal barrage and crashed eastward into the German line. Once, it is related, two shells from opposing sides collided in midair with a shriek that actually rose above the tempest. Our gunners worked madly, and it is certain they wrought great havoc among the enemy, but they were severely handicapped by the nature of the ground.

TERRIBLE MOMENTS.

It was now that there took place in the intervening ground between the enemy's barrage and our own a thousand struggles between brave men palpitating with health and life and hundreds of merciless hidden machines belching forth fragments of incessant metal. For this is modern warfare.

Meanwhile, on our side of the barrage, several battalions of desperate men were watching for a chance to cleave their way through to their comrades in peril. In the intervening territory several gallant men were ministering to the wounded. Stretcher-bearers were moving backwards and forwards as though their nerves were of steel. Officers were collecting their men together in places of uncertain refuge. Colonel Shaw, for instance, directed eighty of his men to Cumberland dug-outs—a little shallow square. When it became too hot there, he forced them all out through a gap and told them to get back. He refused to leave his wounded men, and remained there deliberately and coolly, to another on more exposed ground, and continued his humane work to the last.

A certain private hailing from Kamsack, in distant Saskatchewan, was ministering to an officer and three desperately wounded men. He refused to leave them when the lull came, and the Germans were seen advancing, although they urged him to do so. "I said I'll stand by you, boys," he said, "and I will." That was the last that was seen of him.

By this time—it was ten minutes to one o'clock—after four hours' steady bombardment—the storm of shell ceased as suddenly as it had begun. Forthright from the opposite trenches sprang a swarm of gray-coated Huns. Fully accoutred, and with overcoats and full packs, they advanced on the run, yelling wildly. They must have been firmly convinced that amid those rugged, battered, scarred and bloody mounds and ditches, which four hours before had been the British trenches, not one single human soul had escaped.

Of those advancing hordes certainly few were in proper fighting trim. They came forward gaily, lightheartedly, as victors after a victory. It was then the most wonderful thing happened. Out of the earth there sprang up a handful of wild-eyed soldiers, two officers among them, muddied and reeking with sweat, and running forward with upraised rifles and pistols, they bade defiance to the oncoming foe. On they ran, and having discharged their weapons, flung them in the very faces of the Huns. Death was inevitable for these—the only remaining occupants of the British front line—and it was better to die thus, breathing defiance to the enemy, than be shot in a ditch and spitted through with a Hun bayonet.

THE "PRINCESS PATS."

Only the wounded or those suffering from shell-shock fell into the hands of the enemy, and among these were General Williams and Colonel Usher, both of whom were in a communication trench. A Toronto officer himself in the very thick of the fight, and who performed wonders of valor, mentions that he had last seen General Mercer sitting dazed and deafened on the ground just as the shell fire ceased and the Germans were advancing. General Williams was slightly wounded in the face.

The cessation of fire was the signal for the Canadian supports to hasten forward to meet the enemy, who was now advancing in force and bringing up his machine gunners and bombers. The battalion holding Maple Copse planted itself firm, and refused to budge, and having dug itself in, still holds that position. Its commander, Colonel Baker, was unhappily hit by a shell in the lungs, and died later in the day. The Princess Patricias, holding Hooge, fought with all their accustomed gallantry, led by the brave Colonel Buller, and helped, although at great cost, to check the further German advance. Colonel Buller met his death in the most heroic fashion, and the second in command, Major Hamilton Gault, was wounded in two places, but it is hoped not seriously.

It would be impossible within these limits to recount even a tithe of the outstanding deeds of heroism of that day's battle, which waged without cessation until nine at night. I could relate many.

The outstanding feature of the day is, however, not the numerous traits of individual valor. It is the marvellous discipline and cohesion of the officers, non-commissioned officers and men, which I find evoke most praise from the survivors. When one was struck down and unable to give orders, another took his place automatically, and was obeyed implicitly and instantly.

In most of the battalions the losses have been very severe. But the morale of all ranks was unimpaired, and the men, who had been through an experience which might well weaken the purpose of the strongest and stoutest, were fit and ready at dawn on the morrow to undertake a counter-attack, the tale of which I must leave to be told.—Beckles Willson in London Daily Express.

Learning Spanish.

Spanish is the simplest language to learn in the world and commercially it is one of the most valuable. Six months' tuition should enable the average person to acquire a sufficient knowledge of Spanish for business purposes. It is quite simple, too, to compose an ordinary business letter in this language at the end of the period. One fact that makes the language so easy to English speaking people is that Spanish is pronounced exactly as it is spelt, there are no accents to trouble about, and the letter "h" is always silent. It is far easier to learn than French, and a knowledge of Latin helps one considerably.—London Globe.

A MIRACULOUS CURE OF CHOLERA INFANTUM

By DR. FOWLER'S EXTRACT of WILD STRAWBERRY.

Cholera Infantum is one of the most common summer complaints of infants, and many die who could be saved if properly looked after on the first sign of the trouble.

It begins with a profuse diarrhoea, very often accompanied by vomiting, and the matter ejected from the stomach has a bilious appearance. The child rapidly loses flesh and becomes weak and languid.

On the first sign of cholera infantum Dr. Fowler's Extract of Wild Strawberry should be administered, and thus check the diarrhoea before it becomes serious.

"Dr. Fowler's" has been on the market for the past seventy years, so you are not experimenting with some new and untried remedy when you use it, but be sure and get "Dr. Fowler's" when you ask for it.

Mrs. B. A. Clewell, Rossway, N.S., writes: "I can recommend Dr. Fowler's Extract of Wild Strawberry most highly. A friend of mine had a little daughter who was ill with cholera infantum, and was given up by the doctors. The little one's mother asked me to come in and see the child. I told her I had a bottle of "Dr. Fowler's," and asked her if she would try it. When the bottle was half used the child was well. This cure was a miraculous one, for I thought the child was dying at the time."

The genuine Dr. Fowler's Extract of Wild Strawberry is manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

Price, 35 cents.

A CLEAR CONSCIENCE.

Keep It Right and Happiness is Yours Through Life.

How's your conscience? All right? Good! Then you're all right. Keep it right, and you'll keep upright. Keep it clear, and you'll keep clear—of wrong. Don't mess about with the works; let it be an accurate register of right and wrong; a stern standard to measure moral conduct; a check; a brake.

Let your conscience have perfect freedom of speech. If it doesn't reproach you, you've nothing to reproach yourself with. Nor have others. A clear conscience means a clean life. "What is conscience?" No definition is needed. You may call it the inward monitor; the still small voice; the voice of God: what you will. A nuisance, if you like. It's there, and unless you drug it with soporifics, feed it with excuses, or kill it with neglect, it will tell you the truth, always. To be approved by conscience is praise indeed, and reward enough.

A working conscience is an asset, too. None of us desire any traffic with the man whom we hear has "no conscience," do we? It means that he has no inward tribunal to pass judgment on his acts. He's "conscienceless," and so a man to be afraid of. A clear conscience is a precious possession, and beats a misbegotten bank balance. It means that you can look back over your life and see that your path has been straightly trod, and your actions devoid of crookedness. It doesn't mean that you haven't made mistakes, but that in life's battle you were a clean fighter. That's everything, for an inward peace is better than ill-acquired prosperity and a conscience that gives you no peace. You see, it is quite permissible to pass other men, if you wish to "get on," but it's against conscience to kick other men down. And if you get to the top by foul means you don't go alone. You've a troubled conscience to keep you company. Give your conscience freedom to speak. It is quite possible to silence the still small voice, but the loss is irreparable. With no conscience to check you, you are loose on the world like a beast, with nothing to limit you save law and your own interests. And neither of these is equal to the check of a good working conscience.

Cultivate your conscience, then. When it "pricks," halt. When it rebukes, listen; and undo or don't do the wrong, the shabby trick, you have done or contemplated doing. Be thankful that in the scheme of things as Providence has settled them there is, quite apart from the laws of men, something mysterious, inward, unseen, which instantly tells us when we are offending against the unwritten law that that which is right is right, and that which is wrong is wrong. You can call that "public opinion" if you like; and what is public opinion but the harmony of many consciences?

A good conscience lives in a good man, and has made him good. And in all the harsh and hurried misjudgments of the world there is one supreme consolation which buoys a man up—"a clear conscience." Get it, and keep it!

For the first couple of months of married life a fellow has some difficulty in living up to his wife's opinion of him. After he has been married about five years he finds is comparatively easy.

Had Pimples and Festering Sores ON HER FACE.

When the blood gets bad, boils, pimples and festering sores are sure to break out on the face and body. To get rid of them the blood should be cleansed by Burdock Blood Bitters.

Mrs. Charles Jewell, Orrville, Ont., writes: "I feel it my duty to write and tell you about what Burdock Blood Bitters has done for me. I was so pale I had no color at all. I also had pimples and festering sores on my face, and my head ached nearly all the time. I had been reading in the paper, and saw that Burdock Blood Bitters was good for such troubles so I tried a bottle and before it was half done I felt fine, and when the bottle was finished I felt like a new woman. I tell all my friends about it, and advise everyone suffering from such trouble to use B.B.B."

There is only one B.B.B. That is the genuine, manufactured by The T. Milburn Co., Limited, Toronto, Ont.

WALKERTON, JULY 20th, 1916.

NORTH PERTH BYE ELECTION

Now that the smoke of battle has cleared away, an analysis of the North Perth bye-election would indicate that the Liberal victory was a spontaneous expression of resentment on the part of the electors against Toryism in Canada, as manifested by the extravagance and incompetence of of the present Ontario Government and the impotence and graft of the Conservative Government at Ottawa. During the short campaign of two weeks, rural North Perth was never busier, the farmers endeavouring to utilize the good hay-making weather following an exceptionally wet season; and nothing that was said or done in rural North Perth by either party influenced the voters to any great extent. The meetings that were held were poorly attended, and it is questionable whether much of the material printed in the party papers, pertaining to the bye-election, was read by the farmers during the campaign owing to the above. The Government endeavoured in every way possible to distract attention from the extravagance and incompetence of their administration, and tried to make Bi-lingualism and Prohibition the issues. They raised a big cry, because the Liberals saw fit to contest the riding, and used loyalty as a bogey in such a way that it appeared as a big stick over the heads of the electors to compel them to vote Tory or be branded as disloyal and Pro-German.

Undoubtedly the successful result of the North Perth election for the Liberal cause is in some measure due to the candidate's personal popularity. On the other hand, the tide of public opinion against Toryism, supplemented by the illogical claims of the Conservative campaign managers, is known to have contributed in a marked degree to the defeat of the Government candidate.

EDITORIAL COMMENT

The newspapers are telling of "a silent Irishman at Washington." Deaf and dumb, no doubt.

+ + +

The man who grumbles most about the weather and other things is generally the one who makes poorest use of ideal conditions.—Farmers Advocate.

+ + +

A strange thing happened at Cobourg last week. The Sentinel-Star tells of a man there who went to Toronto, and "secured a situation." Is the Sentinel-Star certain the man did not "accept a position?"—Orillia Packet.

+ + +

The Tory press has been having a particularly busy time these few days explaining the North Perth 'disaster. Their tremendous efforts are wasted. Everyone recognizes the outstanding fact that the Hearst government is doomed.

+ + +

Hydro surveyors are surveying the proposed hydro radial line in the neighborhood of Mildmay. The line will run from Wingham to Owen Sound, touching Mildmay, Walkerton, and Chesley. Construction will not be commenced until after the war.

+ + +

In the United Kingdom the present duty on tea is a shilling a pound, and on cocoa and coffee nine cents. Once more, let Canada compare what she is doing and paying with the Mother Country. Here a pound of tea can be bought for a shilling and fairly good tea for a few cents more.

+ + +

Recruiting in Grey is about at a standstill since the departure of the 147th Battalion in May. It is to be regretted that the Battalion has not been brought up to full strength and there does not seem to be a very bright prospect of making up the small shortage at the present.

+ + +

The Kincardine Reporter strongly favors a provincial convention of liberals for the purpose of laying down a party platform. It is only in this way, says the Reporter, that a representative platform of the true feelings and principles of Liberalism can be evolved and placed before the people.

+ + +

Mr. Hay's election is no more a triumph for the liquor interests than Mr. Makins' election would have been a triumph for prohibition. The truth is that Ontario is tiring of the sort of government that is provided from Queen's Park, and is turning toward Mr. Rowell as the ablest man in the public life of the province. Ever since the death of Sir James Whitney this tendency has been remarked.—Globe.

ECLIPSE OF THE MOON

Editor Telescope:
Walkerton, Ont.
Dear Sir:—

When you see an eclipse noted by Astronomers, [illegible] on your bulletin board, "On time." Such was the case with the eclipse on last Friday night, as exactly at 9.18 p. m., the moon entered the penumbra, and at 10.19 the eclipse proper began, and the darkened part increased till 11.46, when four fifths of the moon's surface was darkened. Then the darkened part decreased till 1.12 a. m. when the eclipse was over. The night was exceptionally favourable as the sky was clear, not a cloud to be seen. Anyone who did not see it, missed a very remarkable and long to be remembered sight.

Astro.

PTE. GABE HAAS

Flanders, June 6th, 1916

Dear Father:—

We came out of the trenches the night before last and we had a pretty quiet time in this time and will be out for a few days rest and I tell you we need it, because we were a pretty tired bunch. We were in a set of trenches that were just captured, so there were lots of souvenirs lying around, even to dead Huns, and I picked up one of Fritz's field cards and envelopes which I am enclosing and hope you get it all o.k., because it will be quite a novelty. As far as other stuff was concerned I was not bothered with because I have quite enough stuff to carry around and I will not get leave for about 6 months. We were down and had a bath this morning, and you feel just like a new man after having a bath and change. We get lots of tobacco and smokes issued to us, but I am not smoking much now because I got a bad cold. I received a letter from Frank Scherrer, dated May 23rd, also one from Wilma and Louise. I have not heard from you since I have been in France, but all our mail is delayed and it is just starting to find its way here. Give my best to all the folks, also Frank.

I remain your loving son,
Gabriel

+ + +

FROM PTE. JACK RUSSELL

France,
June 21st, 1916.

Dear Father:—

Just a few lines to let you know I am well and hoping you are the same. Well, the last time I wrote to you I had been in France for a few days and had not been in the trenches at that time but we are out now for rest. I don't know for how long but they can stay out for good as far as I am concerned. I never had any idea that such things could happen, that I have seen and gone through in those four days. We started up the line one night about nine o'clock and had about seven miles to walk and it was raining all the time and mud to our knees. It was all open ground we had to travel over for about six miles and we were being shelled all the way up, and the ground was full of shell holes and sometimes we would stumble into these and light into mud and water up to our middle and the shrapnel was sure flying around us. Whenever we heard a shell coming we had to flop flat on the ground no matter how deep the mud was and believe me I was glad to do that. Many a time lying there I would hear a whiz banger or coal box coming over, that is what we call the shells here, and I used to say to myself, "I wonder if this one will get me," but I was lucky I guess that night. We managed to get to the reserve trenches and we stayed in them 24 hours and the next night we started for the front line and got there alright for Fritz was pretty quiet that night, but next day we had some fun with him for our big lizzie shells tore things up pretty bad in his trenches. He don't like our shell fire a bit and I don't admire his very much either, I don't think I will ever forget that night going into the trenches. I thought sure I was sent for and my time had come. Believe me, what happened that night would make Hell look like a wheelbarrow in an automobile parade. I would certainly like to have had the pleasure of being back in good old Walkerton that night.

The Battalion we relieved had taken three lines of trenches the night before and captured a lot of prisoners of the Wurtenberger regiment and they were tickled to death to be taken prisoners. They are getting sick of it and some of them were mere boys of 15 or 16 years. One German officer that was taken said that they have lots of munitions but are short of men. And they will be far shorter of men before long.

Harry Wettlaufer was right beside me in the trenches and he has a big piece of shrapnel that lit just beside him. It was a close shave for Harry, alright.

Well, I think I have given you nearly all the news this time. We are having good weather just at present so I think I will close for this time and hope to hear from you soon and tell some things which are happening in the old town for it will all be good news to me and now I will say good-bye for the present.

Your loving son,
John.

Pte. John F. Russell,
C Co'y. 60th Batt.,
9th Brigade, 3rd Division,
France. B. E. F.

P.S. You will understand that we were drafted from the 30th Batt. into the 60th and it is a good one too. It is a Montreal Batt. and nearly all Scoth and Irishmen. We get lots of tobacco over here so don't send any more. It's reading we want. Love to all.

Jack.

+ + +

A WESTERN READER

Editor Telescope,
Dear Sir:—

We had a very cold, and wet spring. The crops look good, but are very short for this time of the year. Some wheat is about 15 inches high, and the late wheat and oats, are only about from 6 to 10 inches high. The weather is warm and the crops are coming fine this last three or four weeks. I hope we dont get quite as much straw as last year, for I don't see how the farmers are going to handle the crops, if it does, as help will be scarce here for harvest. We are having some very bad thunder storms, with some hail. A storm passed through here last Friday which killed cows at 3 different places. It also stunned a fellow on a water tank, hauling water for a Steam Traction Engine. I came to a close touch of getting struck myself. I am working for Albert F. Goetz for two months now, ploughing summer fallow and breaking some prairie.

It looked as if we were going to have a heavy thunder storm last Friday noon, and Mr. Goetz told me to pull the harness off the horses after dinner and help them to shingle until along, on the new house which he is building this summer. The shower came from the southeast and when it was nicely over us it came back again, and when it came back it sure was some thunder weather. It struck the new house where we were lathing. Five minutes before it struck it. It smashed three of the studding into kindling and toothpicks, just where we were lathing. There was one of the sheeting boards off the top of the building left off, so as to make it handier for shingling, and the lightning came down through there along the studding and went up the second one again and crossed over between the sheeting and the shingles to the valley rafter, on the galvanized tin, to the side studding and went down along the studding, tearing it to splinters.

It did not set the building on fire. It scared us a bit as it struck the new building only about three rods away, from the one, where we were in. Then the hail began to rattle but it did no damage to the crops, to amount to much. The garden vegetables don't amount to much, as yet, on account of the cold weather. Potatoes and turnips are not much yet, but they may come alright now.

I am troubled with appendicitis often this summer, I had a very bad attack of it about the 25th of April. The doctor told me to go to the Hospital at once, and he would send a good nurse to attend to me. After I got there, they got the hot flax poultice and hot water on me to take the inflammation and fever down. I soon got feeling better and easier. My fever was 100 then, and the inflammation was very high too, so they did not like to operate on me just then for a few days. I told them I would not let them operate on me, as I went through one operation and that was enough for me. I will likely have to undergo another operation.

So this is all for this time. So Bye Bye, best regards to all.

Yours very truly,
Jos. W. Fritz,
Shaunavon P. O.
Saskatchewan.

LETTER FROM OLD LONDON

To the Editor of
The Telescope:
Dear Sir:

I thought, as you invite persons to send news items to you for publication, I would like to send, for the benefit of the many friends of the soldier boys of Walkerton, a small account of a visit paid to one of your lads who left with the first contingent, Pte. Henry Jerome, who was wounded in Ypres. We have been in communication with several of the lads since they left Walkerton and were very anxious when heavy fighting was in progress. We get news from the front quickly in London, England, and as we did not hear from him for several days, we wondered if he was moved. It happened at the time we had another of your brave lads staying here on a well earned five days leave, Pte. Chas. Sutton, "Dad" as the boys know him, who came from the same trenches in Ypres. We were indeed pleased to see him especially as he came all unexpected as all the boys are obliged to do. No one knows long enough beforehand to let their friends know what time they will come. I was sitting at needlework, talking to my sister who had just called on me, when I saw a soldier come in at my gate. Imagine my surprise when I saw it was Charles Sutton. It seemed like Walkerton and he thought so too. He looks wonderfully well and surely was delighted to meet someone from Walkerton after two years absence from the town. We certainly had a good time and there isn't much of London Charles hasn't seen. Mr. Thick and our boys took him over to visit Mr. and Mrs. Francis and brought them over here to take tea with us, some Canadian gathering alright, as that was the first time I saw Francis' family since I left them at the station. Your Canadian boys are looked up to over here, and if there are any of them our people can do anything for, they are glad to do it.

It greatly struck me, how the soldier boys stick to one another, and praise one another. Of course we kept Charles going asking all manner of questions. He told us he left Walter Pitt well, and was telling us how dangerous was the work Johnnie Jerome was doing at night. He said it was a miracle he hasn't been hit before now. "I tell you Johnnie is a brick." Isn't that a good spirit from one chum to another, but it was only a day or two after that we received no letters, then a parcel we sent was returned, marked "Cannot trace," and the friends can guess we felt pretty bad about it, as we should not be advised if the boys are wounded but their parents, of course. After a week came a letter just scribbled with one hand as best he could do it from Johnnie himself saying he was wounded, (on the same Saturday night Charles was here) at eleven o'clock putting up barb wire in No Man's Land. The Germans had broken down one lot and he amongst others was putting up some more when the Germans threw over some star-lights and discerned them, then he said he got shot, but told us it wasn't much. We asked if he was moved from the Base Hospital to have him brought to a London one but by mistake he was taken to Birmingham, nearly 200 miles from here. Lily and Sam went down to visit him last Sunday and he sure was delighted to see them, they arrived rather late having to go eight mile by road after a four hours train journey. Our rail service is all out of order owing to so many wounded being brought over and troops being taken to France and Belgium. When they reached the hospital they were shown up to his ward and just heard him tell his nurse, "I don't expect they will come today." When in they walked they said he nearly jumped for joy.

He was hurt much more than he told us, for Lily and Sam read the chart over his bed and he had a five inch wound in the foot, another in the left shoulder at the back, broke two ribs and fractured others. They said he was very cheerful and glad he got off so well. When he first came to the hospital he tried to get up and walk around but walking around a temperature of 103 is not allowed by hospital authorities so back to bed poor Johnnie had to go and that was where they found him. I am glad to be able to tell you he is getting along fine now, expects to be sent to a convalescent home shortly, then he will be spending sick leave here. He is well cared for and has the best of food, he told them, they kept him on milk, eggs and chicken. There are twenty fellows in his ward which of course is a very large one, they do as far as possible, those who are fit wait on the less able ones. I guess Johnnie would get lots of waiting on for a time, for we sent him lots of oranges, candies and lots of cookies that most boys are fond of, not forgetting some cigarettes. They have a piano and organ at one end of the ward and Lily thought it quite funny when two of the boys sat down and played a duet, "Home, Sweet Home," both alike, first on the piano then on the organ, so you see the poor boys get all the pleasure they can even in a sick ward.

A letter received from him to-day states he is doing fine and had been out of doors in the ground which are like a palace. A lady had taken them in her car and taken them out at two and given them a lovely tea and brought them in at eight, so the many friends will be glad to hear he is doing fine and thankful he is no worse. I had a nephew on the Hampshire and he happened to be one of the twelve survivors but was terribly burned all about the head and face. Frederick Sims is his name and now he is in a hospital at Grosport but so thankful to be alive at all. A letter from C. Sutton today states that they had terrible fighting and a very severe time but are now safe back for a good rest. I am sure all the friends in Walkerton will be glad to know a little of the welfare of Walkerton boys as they are not getting time to write much themselves now. I expect Pte. Jerome will soon be brought up nearer London and we should all be able to visit him then. My sisters all take a great interest in our Canadian soldiers and show their appreciation by sending parcels to help cheer them up while fighting for freedom and which are very much appreciated by the boys.

Now, Mr Editor, I must ask you to forgive me for taking so much space in your valuable paper and thank you for kindly consenting to publish this.

With my kind remembrance to all Walkerton friends, I remain

Yours truly,
E. Thick.

OLD SUBSCRIPTION ACCOUNTS

A good many subscribers in arrears have responded promptly to the notices which we have been sending out, others have been paid no attention. We take this means of informing subscribers in arrears who have thus far ignored our notice that we will very shortly turn their accounts over to our solicitors for collection WHEN COSTS WILL BE ADDED.

OUR LETTER FROM THE WEST

When we came to this country some nine years ago we were surprised at the number of grouchers we met. From what we had read of the West we thought every one would be a booster. We soon found the reason. So many people had read the most exaggerated accounts of the West, what was being and could be done there. Then they let their imagination add to these glowing tales. Finally they came to believe all they had to do was to go West and their fortunes were made. When they got here and found they had to work just as hard as elsewhere, perhaps harder, that prices of all they had to sell were less and of what they had to buy were higher than back East they put up a holler and thought they had been swindled. We have seen lots of people sell out and go off to somewhere they thought better. Nearly every one has come back, many within the twelve months. Another thing that helped to bring grouchers was, that so many who had failed elsewhere thought they could not help but succeed in the West and so came here. Personally we think the West alright. We had a hard struggle the first few years and had to figure constantly on what we could do without, now we are pretty comfortable. We have lots of neighbours who have done far better. On the other hand we have seen people come in here with a pretty good stake and "go bust."

+ + +

It isn't to be supposed that the war will prevent farmers from the East coming out here to look for new homes. Taxes here are much lower than in Ontario and consist of road tax and school tax. The road tax is $10.00 on every 160 acres, the school tax with the different school districts, round here it runs from $4 to $12 on 160 acres. There is no assessment on values. The speculator who holds his land unimproved pays the same as the farmer who is developing his farm. The farmer has also the privilege of working out his road tax. To the farmer who has lived in the once timbered country and helped clear up stump fields the open prairie looks good, but it has its drawbacks. The sod is exceedingly tough and six to eight horses are needed for breaking. Here in the broken partly wooded country three or four are all that are needed. On the prairie the crops are more uncertain and it is only on summer fallow that you can be sure of a crop in a dry year, hence the government gives the settler the option of taking a pre-emption. Lumber, fence posts etc. are also very much more expensive as they all have to be shipped in. Tamarack and cedar posts are worth 18 — 21 cts. each, poplar 16 — 16 cts., willow 8 — 12 cts., here you can buy tamarack posts for 2 cts. poplar and willows you can get for the cutting.

+ + +

The first of July was an ideal day here and was celebrated with full honors. Our villages divide the celebration. Two at different points will make a speciality of Victoria Day. Then others will specialize Dominion Day etc. If they all celebrated each holiday as it came there wouldn't be enough crowd to go round. In our second letter you had it the Peace River country was "50 miles north of Edmonton" It is 500 miles. It is strange what a change a little money will make in the nature of some people or rather how a little money will show up the true nature. When located here we were about as wealthy as Job's turkey. Our nearest neighbour was a little better off although nothing to brag about. They surely treated us white. He was road boss, and got us work on the road also work with neighbours and helped us in every shape and form. That lasted for about three years. Then he sold out and went into business in a new town some 150 miles away. When he revisited this neighbourhood his head had swelled to such an extent he could hardly be civil to old neighbours and more street and side than Brown's calf. When the war came and the money stringency he had more business than capital and so went under. His farm is gone and everything else. He is now working as a hired man again. There have been a number of people here who thought farming too slow a way to wealth and have mortgaged their homesteads to go into business. Some have made good, but more have made good, but more have failed and had to start over again. The trouble is they try to do business on insufficient capital.

+ + +

The new comer will find things done here as he would think back side foremost. For instance barley is sown later than oats instead of earlier. Late barley does better here than early and oats have to be got in to give them time to ripen before the early frost. About the second week in September it is quite common to get two or three nights' pretty smart frost, then for some weeks and there will be no sign of it. It will come just enough to play havoc with the garden then quit.

FARM FOR SALE

North half of lot 5, Con. 11, Sullivan containing 200 acres, 25 acres of bush, balance under cultivation, will sell en bloc or in part. Easy terms of payment, quarter mile from school, rural phone and mail. Apply to Robt Jackson, Marmion, or Joseph Jackson, Chesley. 24—29

The Hackneyed Old Phrase

Now Is the Time to Advertise

HAS special pertinence just now. It is in time of prosperity that money is made. As a result of big crops, demand for war munitions, etc., the country has reached a high stage of prosperity. There is plenty of money in circulation and the people are in a mood to buy liberally.

In such times as these advertising pays more generously than ever. The people are hopeful and confident, disposed to anticipate their wants, to buy the best qualities, and to purchase things they would not have felt they could afford a year ago:

Merchants ought to be able to double their trade under these conditions. But they can't get it by waiting for it. They must attract more attention, take a little more newspaper space, describe their goods a little more fully. A great deal of money will be spent in the next six months, the bulk of it with those dealers who court the most publicity.

HEALTHIEST ONE IN THE FAMILY

No Sign Of Dropsy And Kidney Trouble Since Taking "FRUIT-A-TIVES"

HATTIE WARREN

Port Robinson, Ont., July 8th, 1915.

"We have used "Fruit-a-tives" in our house for over three years and have always found them a good medicine. *Our little girl, Hattie, was troubled with Kidney Disease.* The Doctor said she was threatened with Dropsy. Her limbs and body were all swollen and we began to think she could not live. Finally, we decided to try "Fruit-a-tives". *She began to show improvement after we had given her a few tablets.* In a short time, the swelling had all gone down and her flesh began to look more natural. Now she is the *healthiest one in the family* and has no signs of the old ailment. We can not say too much for "Fruit-a-tives" and would never be without them".

WILLIAM WARREN.

HIGH SCHOOL ENTRANCE

The Names of the Successful Pupils of East Bruce Announced By Inspector John McCool

The High School Entrance Results of East Bruce was announced on Friday afternoon and thanks to the promptness of Inspector McCool, the certificates were mailed at once and were in the hands of the successful candidates day. Those who wrote at Walkerton made about the best showing of all this year, passing no less than 33, candidates out of 38, also furnishing the prize pupil, Norman Shaw. Norman, who is the bright young son of Mr. W. M. Shaw, secured no less than 547 marks out of a possible 650, and will have a good chance of winning the gold medal offered every year by M. A. Halliday of Chesley for the pupil coming first in Bruce County. While the Department does not favor the publishing of the marks, marks of three candidates who did especially well are mentioned: Norman Shaw, 547; Sadie Bremner 512; Charles McNab 525.

Seventy-five per cent was necessary to obtain honors.

AN EVIL HERITAGE

Whether [illegible] was building any castles in [illegible] on the strength of these walls [illegible], there is no doubt that [illegible] was doing so. The Captain [illegible] saw nothing, being too gravely [illegible]pled by his correspondence with Lot 13, and by the reports which [illegible] came by every mail. About th[illegible] too, there was an offer from a would-be purchaser of the estate for six hundred pounds, a sum which made Miss Valeria turn pale with indignation, and which the Captain, despite all he had to say about the bother of West Indian plantations, rejected with withering scorn.

During all this time the party at Thornton lived in absolute seclusion. Not only were they in deep mourning, but most of Bernard's neighbors were still in London. Once, in taking a short-cut through a neighboring park, Marian caught sight of a big, barrack-like house and asked who lived there.

"Some people called Durrant," said Bernard, rather shortly, "but they are not back yet."

It was not until Marian's visit had drawn almost to a close, and the boxes were being packed for departure, that an incident took place which remained ever after fixed in her mind as a landmark in her life.

Amongst other ways of amusing himself, Bernard had hit upon the plan of teaching Marian to ride. She had never been on a horse before, was not used to horses and felt distinctly nervous at the idea of every[illegible] approaching one. Seeing, however, that Bernard had set his heart upon it, and trembling a little at the idea of being despised by him, she determined to conquer her weakness, and succeeded so well that before six lessons were over she had the satisfaction of hearing Bernard commend not only other progress, but also her pluck. When he came to the pluck she could almost have burst out laughing. Was it really possible that no one had ever guessed at her secret agonies? At the chills of fear which would run over her as she stood on the doorsteps, waiting for her steed? At the sigh of relief that would escape her lips when at the end of the ride her feet once more touched solid ground? Had she really played her part so well as to deceive them all? "What an actress I must be!" said poor Marian to herself. It never occurred to her to look for the secret of this curious success in the strength of that self-control which the whole surroundings of her childhood had served to train in so unusual a manner.

It was drawing near to sunset one evening when Bernard and Marian were slowly crossing a field, their horses' heads towards Thornton, after what was to be one of their very last rides that summer. The field was enclosed by low hedges, and it was towards the gate at the further end that they were wending their way. Suddenly the wide-spread evening stillness was broken by the rattle of hoofs and the approaching rumble of wheels, and along the glaring white road beyond the hedge a victoria with two ladies in it came bowling along.

"[illegible] is the Durrant's carriage," said Bernard, standing up in his stirrups. "I didn't know they were back. By cutting over that corner I may intercept them. Here goes!"

He was all but off when a reproachful murmur of "Oh, Bernard!" reached his ear, and he remembered his cousin. What, in the name of all the botherations, was he to do with her at this most critical juncture? To leave her to her fate was certainly not the thing; how would it do to take her with him? She had never before taken the smallest jump on horseback, but she would have to begin some time or other, and this hedge was the very thing for a first attempt.

"[illegible] must absolutely speak to Mrs. Durrant," he hastily explained to Marian, "and I can only do so by clearing the hedge there in the corner. It's a very easy jump; I believe you could do it. Will you come with me, or do you prefer to wait for me here?"

"Of course I will come with you," said Marian, setting her teeth. "Tell me what to do and I will take the jump."

A few hurried directions from Bernard, a hasty settling of reins and skirts, some breathless moments during which the air seemed to be rushing madly past her ears, and then Marian experienced the roughest jolt she had ever undergone in her short existence, realised to her surprise that she was still in the saddle, that the hedge was cleared, and that Bernard was saying, "Well done, little cousin!" in a tone of approval.

They had [illegible] only some dozen yards in front of the approaching carriage. By the time Marian had begun to collect her scattered senses she perceived that the carriage was standing still and that Bernard was deep in conversation with the occupants. An introduction followed, during which Marian still struggled for breath, and then only did she become aware of a pair of black eyes fixed very earnestly upon her face. They were Miss Durrant's eyes, and they appeared to be watching her with so close an attention that she began to wonder whether her hat was sitting crooked or her collar had moved out of its legitimate position. As she drew close to the side of the carriage these questions van[illegible]. Miss Durrant's face struck her as by far the most beautiful thing she had ever seen in her life. Sybil, in a creamy gown and hat, with no color about her except what glowed on her cheeks and lips, was indeed irresistibly beautiful, and the sight of anything beautiful was always a keen enjoyment to Marian. But to-day the enjoyment [illegible] with a sense of restlessness which she was at a loss how to explain. For some reason, impossible for her to analyse, it disturbed her to see her cousin Bernard leaning from the saddle in this fashion. Moreover the imperturbable calmness of Miss Durrant's face only served all the more to accentuate the uneasiness of her own state of mind.

It was not until just before parting that the two girls exchanged a few words. Bernard was rattling off some civilities to Mrs. Durrant, who, as usual, had appeared to be snoozing, when Sybil, turning towards Marian, rather more suddenly than she was in the habit of moving, said in a lowered voice:

"How delightfully pleased you must feel with yourself, Miss Berrincott!"

"What about?" asked Marian, a little surprised.

"Why, about the jump, of course. Mr. Berrincott says it is the first you have ever taken. And you were afraid, were you not? Please tell me whether you felt at all afraid?"

"I believe I was a little nervous when the idea was first suggested—"

"And yet you took it; oh, how I admire you—and envy you!"

"Me? Oh, please don't! That quite bewilders me. But what made you guess that I had been nervous? It isn't written large on my forehead, is it?"

"Not for other people's eyes; but I myself am a coward, so I have an instinct in these things. Even if I never see you again I shall always think of you as a sort of heroine."

"And I of her as a beauty," was Marian's parting reflection. Miss Durrant's face pursued her for the rest of that evening. "How beautiful, oh, how beautiful she is!" was the thought which left her no peace.

On the following afternoon, Bernard, saying no word to anyone, walked over to the Monastery. Being in especial luck, he came across Sybil wandering by herself among the tree-stumps, which was distinctly better even than the meeting in the gallery. She was a shade more pensive than usual to-day, or so it struck Bernard. Was it possible that anything in the shape of an anxiety was weighing on her generally so serene mind?

Five different subjects of conversation had fallen flat to the ground, when Bernard, for want of a better role, began to talk of his guests' impending departure. Somewhat to his astonishment this had the effect of completely rousing Sybil from her abstraction.

"So Miss Berrincott is also going away?" she inquired, walking along by Bernard's side. Then before he could answer, "Do you know," she said, turning to him on what seemed to be an impulse, "do you know that she is worth ten of me?"

"That she certainly is not," said Bernard hotly. "What in the name of wonder are you talking about? Marian is a very good little girl, very good-natured and all that sort of thing—"

Sybil laughed—a rich, low laugh. "How blind men are! The idea of talking of her as a good little girl! She may be that, too; but I tell you that that little girl is capable of doing big things. I am not quite sure whether she isn't a heroine."

Now it was Bernard's turn to laugh. "Oh, come this is getting just a shade too rich for me. Perhaps you would kindly point out to me some of her heroic deeds?"

"I can only point out one as yet—that jump she took yesterday."

"That whipper snapper hedge? Surely you are not serious?"

"Yes, that whippersnapper hedge. To you it was a whipper-snapper hedge, but don't imagine it was anything of the sort to her. She was quite prepared for death when she turned her horse's head towards that corner. In fact, I incline to the belief that she never goes out riding with you without being quite prepared for death."

"But, why, then, in the name of all that is incomprehensible, does she ride?"

Sybil shrugged her shoulders. "Perhaps she does it to oblige you; and very likely it is in order not to spoil your enjoyment that she doesn't let you see how frightened she is. That is why I admire her so much, and that is why I say that I never could do the same as she does."

Bernard walked on for some moments in silence.

"You must be mistaken," he said at last. "I'm sure Marian has got plenty of pluck; the ordinary sort of pluck, I mean."

"That depends on what you call pluck; whether you mean not feeling afraid, or overcoming one's fear. In the second sense she's got heaps of pluck—in the first sense none. I know I'm not mistaken. One requires to be a coward oneself in order to have the proper fellow-feeling in these matters."

"Which is equivalent to saying that you cannot possess an atom of any such fellow-feeling," cried Bernard, measuring the queen-like figure beside him with a glance of glowing approval. "No, no, Miss Durrant, something has been throwing dust in your eyes; I stick to my first proposition; Marian is a good little girl, but quite the ordinary, every-day sort, whereas you—"

"I am a fraud," said Sybil, quickly, and with almost a touch of impatience. "Never expect anything in the heroic line from me, and never tax my courage, either physical or moral. I know I don't look like a coward, but I am a fraud and I can't alter it."

They had reached the house by this time, so that these words were the last of private talk which passed between Bernard and Sybil that day. They pursued him on his homeward way, and might very likely have continued to occupy him in the course of the evening, had he not, on his return home, found a fresh subject of interest waiting to be discussed.

The afternoon post had come, bringing with it the West Indian mail.

"And there is such bad news again," said Marian, who met him in the hall with a scared face. "A hurricane has blown down the chimney of the sugar works, and there is a disease among the mules. Poor father is beginning to be at his wits' end. And, oh, Bernard, only fancy, he says that it will probably end with his having to go out to Lot 13 himself to look into matters, and if he goes, of course, I cannot let him go alone."

"You would enjoy the trip, would you not?" said Bernard, a little absently, while he hung up his hat.

"I?" repeated Marian, almost indignantly. Then she appeared to collect herself and added very deliberately: "Oh, yes, of course, I would enjoy it; but I hope we will not go before the winter."

CHAPTER VIII.

Along the uneven pavement of the Southampton landing-place a four-wheeled cab rattled and jingled dismally one dark winter's day. It was Marian who peered through the blurred glass, asking herself the while whether the fog really was so thick, or whether there was anything in her eyes which yet further augmented the indistinctness of outline in general. If there was it certainly was most foolish and unjustifiable, seeing that a three months' trip to St. Clara seemed distinctly to belong to the class of pleasure excursions. Captain Berrincott himself preferred to view the matter from a strictly business point of view. Earthquakes, floods, free fights among the negroes, a plague of cockroaches, a general rise of the beetroot sugar, such were only a few of the causes underlying the thread of complaint which ran through each and all of Mr. Ellsworth's letters, and which had ended by deciding the captain to go out and look at things for himself.

Marian had spent the last fortnight in a strange, incongruous sort of whirl; buying whatever summer gowns she could find left over from last season, and hunting up parasols and shady hats, which she got at half-price, by reason of their being past their first freshness. Her mind was divided between eager curiosity and some other feeling which made it very hard to go so far away. She did not really know how hard until the last day came, and to her astonishment a hansom drew up at the door with Bernard in it. He happened to be in London, he explained, and so, of course, could not think of letting them go off by themselves. The captain protested, but not very vigorously; for, despite the indifference which he ostentatiously displayed, the old gentleman was not inconsiderably flurried by the preparations for his voyage, and Bernard, as usual, had his way, and so it happened that he was the third occupant of the cab which jingled and rattled along Southampton pier.

By the time that among all the forest of masts and funnels the right funnel had been hit upon, it had grown to be late in the afternoon. On the broad, white deck, breathing an atmosphere that was a mixture of fresh paint and salt-laden haze, the three stood together, looking about them in the gathering dusk. They were but one of many groups. Parting messages and final injunctions were being more or less feverishly repeated on all sides. Everybody seemed to be talking at once, and a large assortment of pocket handkerchiefs was visible. The only person who seemed to have no good-byes to say was a tall, clean shaved, light-haired man, standing alone by the head of the cabin stairs, his arms folded and his hat pulled over his forehead. Three or four times, in looking that way, Marian had met the gaze of a pair of somewhat chilly blue eyes, and had at last turned her face another way, with a faint feeling of unrest.

There was not much conversation in this group. Even Bernard was rather conspicuously taciturn and principally occupied with boring the point of his stick into the coil of rope which came handiest. It was not until the last moment, when bells were being rung, fog-horns blown, and the sound of choky good-byes was buzzing through the air, that he seemed to have come to some decision from which he had hitherto hung back.

"Look here, Uncle James," he said hurriedly, turning once more after the last handshake of all. "I think you're quite right to go out; but when you've seen the thing, take my advice and sell it for whatever it will fetch. Good-bye, Marian, and mind you enjoy your tropical experiences."

"But, my dear boy," began the Captain in amazement; but Bernard was over the bridge already and waving his hand to them from the pier.

This was the moment at which a certain uncomfortable sensation which during the last half-hour had been busy at Marian's throat became acute.

"Good-bye, good-bye," she muttered, just above her breath. "Oh, how long those three months look!"

The words were on her lips as she turned away. In the same instant she passed her handkerchief impatiently across her eyes. It was almost too dark to see distinctly, and yet she had the unmistakable sensation of being watched. That tall figure at the head of the cabin stairs had not altered its position.

Over the details of the next few days it will be wisest to cast a merciful veil, while, as regards the rest of the voyage, a few extracts from Marian's first letter home will do to begin with. "Dear Aunt Val," she wrote on February 10th, "this is the first day on which an inkstand can be got to stand straight, so you see that I have lost no time. The ship is not full, but there are some pleasant people on board. Most of the men are commercial travellers, though there are some others, for instance a Mr. Hibbert, who has lived for nearly fifteen years on one of the small outlying islands off St. Clara, where he has got some government appointment. He is the tallest and scraggiest man I have ever seen, and his chin is quite out of drawing. But I don't want to say anything unkind about him, for there is something about the man that makes me feel sure that he is unhappy." On February 13th the following addition was made to the letter.

"I am writing this with my grey print frock on, and the first flying-fish have been seen. The water is so blue that one cannot help fancying that if one dipped a paint-brush in it it would paint bright blue. We are leading a very gay life on board ever since it got smooth. Mr. Hibbert is quite determined to get up a dance for to-morrow—Valentine's day. I rather wonder at him, for he seems quite elderly (at least forty, I should think) and generally very silent. I should never have thought that dancing was in his line. The band is to consist of a banjo, two tin whistles, and a fife."

"I see something coming," was the remark with which Miss Valeria folded up the letter containing the above passage, when, in course of time, it reached her hands.

"You always see something coming," replied Miss Honoria, with her comfortable laugh. "You made that identical remark when Bernard paid his first visit in Laurel Road, and that was nine months ago."

But Miss Valeria was of far too irrepressible a nature to be damped by any sarcasm which Miss Honoria was capable of wielding. In point of fact she scarcely heard her, her thoughts being well forward already on the road of this her newest discovery. She remembered now having often heard that sea-voyages presented numberless opportunities for agreeable acquaintances being formed, and were particularly favorable to people with "serious intentions."

(To be continued.)

SUNDAY SCHOOL LESSON

LESSON IV.

July 23, 1916.

Paul at Corinth.—Acts 18: 1-22.

Commentary.—I. Paul's arrival at Corinth (vs. 1-3). 1. after these things—After Paul's labors at Athens. came to Corinth—Corinth is about 40 miles west of Athens on the isthmus that separates the southern part of Greece from the northern. It could be reached by land or by sea from Athens. The city was the political capital of Greece at this time and the Roman proconsul had his residence there. Corinth was great commercially. It was upon the isthmus, and all land traffic between the north and the south of Greece passed through it. There was a harbor on the Corinthian Gulf, as also on the arm of the Aegean Sea on the east. It is said to have had a population at this time of four hundred thousand, made up of a great variety of nationalities. There were Greek adventurers and Roman settlers, and there were also representatives of eastern peoples. It was a mass of Jews, ex-soldiers, philosophers, merchants, sailors, freedmen, slaves, tradespeople, hucksters, and agents of every form of vice." It was known as an extremely wicked city, and vice was practised under the name and guise of religion. Corinth was near the seat of the famous Isthmian games, to which Paul more than once refers in his writings. It was in a city of this character that the apostle undertook the establishment of a Christian Church, and he met with marvellous success. 2. a certain Jew named Aquila—Paul was a Jew by nationality and he sought out Jews first in the different places where he labored. The name is a Roman one, and means an eagle. He may have taken that name upon his removal to Rome. born in Pontus—Pontus was a Roman province in Asia Minor, bordering on the Euxine or Black Sea. Priscilla—The wife of Aquila is frequently mentioned in connection with him in the writings of Paul, and appears to have been a capable and devoted woman. The two became close friends of the apostle. Claudius had commanded—The Emperor had banished all Jews from Rome because of some tumult that had been occasioned by them. came unto them—It is not stated that Aquila and Priscilla had as yet embraced Christianity, but they became Paul's faithful fellow workers later on. 3. of the same craft—Among the Jews it was considered proper that everyone should have a trade. Paul was a tentmaker, and as Aquila and Priscilla had the same occupation, and had facilities for carrying on their trade, Paul arranged to live with them and work. tentmakers—What they made was most probably tent cloth. This was made from the shaggy hair of a species of goat found in Paul's native province of Cilicia. Tents were greatly in demand in the east, and the employment as tentmakers was steady and remunerative. Paul was determined to earn his own living so that it would be impossible for anyone to say that he was making gain out of the gospel which he preached.

II. Ministry to the Jews (vs. 4-6.) 4. Reasoned in the synagogue every Sabbath—Paul sought out the synagogue and his own people in every place where he labored, and declared the Messiahship of Jesus. Persuaded the Jews and the Greeks—The fact that Greeks were found worshipping with the Jews indicates that they were in sympathy with them and might properly be called Jewish proselytes. To these two classes Paul presented the gospel. 5. When Silas and Timotheus were come—From Macedonia whither they had been sent by Paul. Was pressed in the spirit—"Was constrained by the word."—R. V. Both of these renderings are supported by good authority. It is probable that Paul in his early ministry at Corinth was under great pressure; but when Silas and Timothy arrived, bringing with them good reports from the churches in Macedonia, and joined him in his labors, he was greatly encouraged and strengthened to testify "to the Jews that Jesus was Christ." 6. Opposed themselves—The word implies very strong opposition, as of a force drawn up in battle-array. It was an organized opposition.—Cam. Bib. And blasphemed—The Jews spoke wickedly of the truths that Paul uttered and profanely rejected them. Shook his raiment—In token that he had spoken the truth to them that they needed, and he placed the responsibility for its acceptance upon them. Upon your own heads—The Jews must answer for the disposition they would make of the truth. I am clean—I have done my duty toward you. Unto the Gentiles—He would turn to the Gentiles in Corinth. In other places where he labored later he went to the synagogues and proclaimed the Gospel to the Jews.

III. Ministry to the Gentiles (vs. 7-11.) 7. Justus—"Titus Justus."—R. V. Justus was a worshipper of God. Paul made use of his house for the Christian services which he was conducting. This would be a convenient place for any Jews to come who might become favorable to Christianity, and Gentiles would feel free to listen to Paul's preaching. 8. Crispus .... believed—The high position which Crispus occupied made his conversion remarkable, and his course would naturally have great influence in leading others to accept the gospel; but it would be likely to make the unbelieving Jews still more hostile to the apostles. Many .... believed, and were baptised—The plain, positive preaching of the gospel had its designed effect. The results of Paul's labors were good—much better than at Athens.

9. By a vision—The Lord had spoken to Paul near Damascus, and he became changed into a new man. His nature was new and the whole course of his life was new. The Lord spoke to him by a visit at Troas and a new field of labor was opened before him. Now another vision was given to him to inspire him anew for his work. Be not afraid—There was strong opposition to him already, and efforts would soon be made to destroy his work. The Lord gave him this token of his favor to prepare him for what awaited him. 10. I am with thee—God had given this assurance to Moses when he was about to undertake a great task. Jesus told his disciples that he would be with them always. The promise was given to Paul that he might be strong and full of faith for his work. No man shall set on thee to hurt thee—The apostle would be assailed, but the attacks of his enemies would do him no harm. I have much people—The Lord encouraged Paul that his labors were being greatly blessed, and many were believing in Jesus. 11. Continued there a year and six months—In this important centre the labors of the apostle were prolonged, and a strong church was founded. This is one of the few instances in which a definite period of time is stated in connection with Paul's labors.

IV. Paul before Gallio (vs. 12-17). Achaia was a Roman province and Gallio was the pro-consul or governor. As he had been newly appointed, the Jews thought they could influence him to drive Paul away from Corinth. They charged Paul with teaching doctrines contrary to Jewish law, but Gallio would listen to no charges of a religious character, as long as the government tolerated different religions, and the case was dismissed. The crowd who sympathized with Paul and who hated the Jews, took this occasion to do violence to Sosthenes, the chief ruler of the synagogue, and Gallio paid no attention to it.

V. close of Paul's second missionary journey (vs. 18-22). After laboring some time longer in Corinth, Paul went to Cenchrea, the eastern seaport of Corinth, and sailed for Caesarea, stopping a short time at Ephesus on the way. He went up to Jerusalem and thence to Antioch in Syria, whence he had started on his first two missionary journeys. The second missionary journey occupied about three years, and extended as far west as Corinth. Paul's mission had been eminently successful.

Questions.—Where is Corinth? Describe the city. Who were Aquila and Priscilla? What discouragements came to Paul at this time? How was he encouraged? What success did Paul have in Corinth? What did the Lord tell Paul in a vision? How long did he labor in Corinth? Where was Cenchrea? What points did Paul visit on his return?

PRACTICAL SURVEY.

Topic.—A Battle for Truth.

I. Under divine guidance.

II. Under Roman protection.

I. Under divine guidance. In this lesson we may trace the divine presence as manifested for the comfort of Paul, the divine providence in caring for his personal necessities and his safety while performing his mission and the divine purpose in his stay at Corinth. Not one trial did Paul undergo which was not overruled of God for his own glory and the highest good of his faithful apostle. The lesson opens with a beautiful picture of human friendship, one which began in early relations and was perfected in the bonds of Christian fellowship, a friendship which was brought about by the remarkable guidance of Providence. Paul was assisted and prepared for his work by the fellowship of Aquila and Priscilla. The result of their coming together was of priceless value to each. Paul recognized the importance of establishing, as early as possible, a church in Corinth from which Christianity might radiate all along the lines of commerce. Because a place seemed unpromising for gospel work did not deter Paul from entering it. Paul was persevering. He used his opportunities wisely even when he was hardest at work. He could not keep back the main point of his theme, certain as it was to awaken opposition. He presented truths which compelled attention. When he was in Athens he saw all had been done which philosophy could accomplish, and the result was idolatry and profligacy. Paul relied on the gospel alone as the only effectual means of leading the sinner to abandon his sin and turn to God. He therefore determined to continue as he had begun, to preach Christ and him crucified to Jews and Greeks in Corinth. Paul believed that everything depended upon the acceptance or rejection of Jesus Christ. Opposition arose to the point of intense ridicule, literally, blasphemy. Paul found appeals to reason and conscience utterly powerless with the Jews. Notwithstanding their intolerance and persecution Paul had no fear, yet the opposition of the synagogue led him to a more distinct ministry among the Gentiles. He had been loyal to the Jews. He separated the disciples from the synagogue in the hope of securing quietness and peace, but the prejudiced Jews continued their persecutions. It was at this period of perplexity that God's comforting message came to Paul. It was one of the marked peculiarities of the divine dealing with Paul that at the great crisis of his life special visions were granted to him. If Paul was tempted to turn aside to a more quiet place to labor, he was thoroughly aroused by the vision and promise from God. His purpose was then deliberately formed. He looked at things from his Master's point of view. This gracious and comforting manifestation of God to his servant came at a time of much depression.

II. Under Roman protection. The opposition of the Jews grew into hatred and finally into a murderous passion to compass Paul's imprisonment or death. A large number of Jews made common cause against one unbefriended man in a religious matter, before a foreign court, with a very insincere statement of the case. The facts compare very closely with the treatment which the Jews gave to Christ. They thought they could excite a tumult. Gallio would not even entertain the case. He ruled that religious differences did not come within the authority of a civil magistrate. He refused to listen to Paul's defense as superfluous, for he had been guilty of no offense against Roman law. In a technical sense this was no concern of Gallio's, but in a very real sense his indifference was neither wise, loyal nor manly. His decision was wholly favorable to Paul, for it became manifest to the Jews that they could not expect sympathy from him in any attempt to interfere with Paul's preaching. Sosthenes was, doubtless, the ringleader of the Jews, but the Greeks did no service to the gospel by their violence. Gallio's indifference may have been increased by seeing religion identified with disorder, though the Greeks were not exceeding the custom of Corinth in their act. If this Sosthenes is the one referred to in First Corinthians, Paul's gospel triumphed in his conversion.—T. R. A.

Ceilings and Ventilation.

Rooms with low ceilings or with ceiling even with the window tops are susceptible to more perfect ventilation than those with high ceilings. In such rooms the leakage at the windows, which is constantly going on, keeps the air in motion throughout the room, whereas if the ceiling is higher only the lower part of the air is moved, and an inverted lake of foul or hot air is left floating in the space above the window tops. This lake keeps actively at work, fouling the fresh currents circulating beneath it.

Lay paper patterns away flat in a common file book and they will be neither lost nor torn.

THE POULTRY WORLD

WATER GLASS EGG-PACKING

Now that the hatching season is practically over farmers and poultrymen will find it profitable to remove the male birds from the flock so that infertile eggs will be produced. An infertile egg has greater keeping power than has a fertile one. At [illegible] degrees F. the germ of a fertilized egg will begin to develop; at a constant temperature of [illegible] to [illegible] F., incubation will proceed in a normal and natural manner. Eggs that are infertile will not germinate or produce chick development under any condition. The enormous advantages of infertile eggs for immediate use, and for preserving purposes, are therefore readily apparent.

PRESERVING EGGS.

Of late years it has been shown that water glass is a reliable egg preservative. Experiments prove that eggs can be satisfactorily preserved for from [illegible] to 12 months.

Many different methods have been tried, and with varying results. They include both liquid and dry methods, and among them have been the following: Dry salt, dry wood ashes, dry oats, powdered sulphur, ground gypsum, permanganate of potash, brimstone fumes and sulphur, salicylic acid, salt, brine, vaseline, eggs dipped in melted paraffine and packed in some dry substance, eggs dipped in collodium and packed in some dry substance, eggs dipped in a solution of gum-arabic and packed in a dry substance, water glass solutions of various strengths, and lime water and salt solutions.

If the eggs are to be kept only a short time, they may be packed in some of the dry substances, and fairly good results obtained; but these methods cannot be depended upon for longer than two or three months. Greasing the eggs with vaseline has been found to keep them from three to four months, but some claim that the eggs absorb the taste of the vaseline. Salicylic acid, cottonseed oil and alcohol, salicylic acid and cottonseed oil, gum-arabic and collodium have all failed to give satisfactory results.

WATER GLASS SOLUTION.

Strictly fresh eggs should be used, those that are infertile are preferred. Water glass is a heavy or thick-colored liquid (it also can be had in powder form) which may be purchased at a reasonable price from any druggist.

In practice one pint of water glass is usually diluted to a [illegible] per cent. solution by adding nine pints of boiling water. Very thorough experiments conducted at the Rhode Island Agricultural Experiment Station proved that the strength of the liquid could be safely reduced to three per cent. (three parts water glass to [illegible] parts water).

Fresh, clean eggs are placed in a jar or other receptable and the water glass solution is poured over them until they are completely submerged. The liquid should stand at least one or two inches above the top layer of eggs, and if necessary an inverted plate may be placed in the liquid over the eggs to hold them down in place fully beneath the surface of the liquid. Cover the jar tightly and set in a cool place where it will not be disturbed.

FACTS WORTH REMEMBERING.

For a receptable in which to pack the eggs, nothing better than an ordinary three or five-gallon stone crock can be used. However, wooden buckets or kegs may be used with entire satisfaction. The vessel should be thoroughly scalded and placed in the position in which it is to remain before the eggs are put in it. The eggs should be stored in a moderate cool, well-ventilated cellar or room.

The ideal egg for preserving, besides being infertile, should be naturally clean and not washed clean, free from checks or cracks and not over seven days old. The eggs should be carefully packed in the jar until it is filled to within an inch of an inch and a half of the top. The solution is then poured over the eggs till they are completely covered. Place a cloth cover and then the lid of the vessel over them. From time to time look at the eggs to see that the liquid has not evaporated and allowed the top eggs to become exposed to the air. Should such an occurrence happen, pour enough boiled cooled water into the jar to completely cover eggs.

In general, this completes the operation. However, there are a few points to which attention should be called. A white precipitate, which is silicic acid, forms in the jar. This is a poisonous substance, but there is absolutely no danger from it if all eggs are washed before using. To boil water glass eggs, a pinhole should be made in the large end of the egg to allow for expansion of air. Normally the shell of an egg is porous, but when preserved in water glass, which is identical with window glass and which makes it necessary to make an escape for the air when boiling the egg. The hands should be kept out of the solution, as it will make them rough and sore. One cracked or checked egg will flavor the entire lot. An egg that has started to spoil will continue to spoil if put in the preservative. It is not necessary to put all the eggs in the preservative on the same day. Some may be put in one day and covered and others added as they are obtained. Eggs that have been preserved in water glass are desirable for all purposes up to eight to ten months of preservation, after which the albumen becomes thin and they are not entirely satisfactory to fry; otherwise they may be used with complete satisfaction. Eggs have been used after remaining in preservative four years. Do not try to use the solution twice. One gallon of water glass will preserve 30 dozen eggs.

WHAT THE SOLDIERS EAT.

Principal Dishes of Various Nationalities.

The principal meal of the Russian peasant soldier consists of "stchee," a sort of cross between a gruel and a soup, the chief ingredients of which are cabbages, potatoes, oatmeal and fat meat—preferably pork. These are all boiled together with salt and other seasoning, the resultant mess being a thick, nourishing, and by no means unpalatable dish.

This constitutes his usual midday meal, and it is repeated in the evening for supper. For breakfast he takes, when he can get it, a big bowl of "kasha"—dry buckwheat and cold sour milk.

The staple diet of the "Turcos"—splendid French-Algerian colored troops who are fighting so magnificently in Alsace—is "cous-cous," which is merely boiled semolina. It is eaten either plain or with the addition of vegetables, and occasionally a little mutton or goat-flesh may be added; but the semolina is the mainstay. On this a Turco will march forty or more miles a day, carrying a weight of from eighty to one hundred pounds, more than is borne by any other soldier anywhere.

Italian soldiers are also splendid marchers, and they, too, exist largely on a farinaceous diet; macaroni, spaghetti and so on. They are also very partial to fruit, which is issued, together with wine and cigars, as part of their regular rations whenever possible.

No German considers his daily menu complete without a sausage of some kind or other, and the "higher" it is as regards flavor the better he likes it.

The mainstay of the French soldier consists of his beloved "soup," he calls it, but which is really a thick nourishing stew, made from meat, potatoes and various other vegetables.—Tit Bits.

"As we sow, so shall we reap," quoted the Wise Guy. "Yes, provided your neighbors' chickens don't interfere," replied the Simple Mug, who was experimenting as an amateur gardener.

◆

"The telephone is a great social factor." "You bet. We wouldn't have called on the people next door at all if we hadn't wanted to use their telephone."—Boston Transcript.

SUNDAY AT HOME

MY WORK.

Let me do my work from day to day,
In field or forest, at the desk or loom,
In roaring market-place or tranquil room;
Let me but find it in my heart to say,
When vagrant wishes beckon me astray:
"This is my work; my blessing, not my doom;
Of all who live, I am the one by whom
This work can be done in the right way."

Then I shall see it not too great or small
To suit my spirit or to prove my powers;
Then shall I cheerful greet the laboring hours,
And cheerful turn, when the long shadows fall
At eventide, to play and love and rest,
Because I know for me my work is best.

Henry Van Dyke.

HE IS ABLE TO SAVE.

Jesus ....because He continueth ever, hath an unchangeable priesthood. Wherefore He is able to save them to the uttermost that come unto God by Him, seeing He ever liveth to make intercession for them. Him that is able to keep you from falling, and to present you faultless before the presence of His glory.

Seeing....that we have a great high priest, that is passed into the heavens, Jesus the Son of God, let us hold fast our profession. For we have not a high priest which cannot be touched with the feeling of our infirmities; but was in all points tempted like as we are, yet without sin. Let us therefore come boldly unto the throne of grace.

The beloved of the Lord shall dwell in safety by Him; and the Lord shall cover him all the day long, and he shall dwell between His shoulders.

VOID.

"The earth was without form and void. (Gen. 1, 2.) The word void is strong and full of meaning; it will not be taken out of our dictionary for some time. It means widowed, deprived of, empty, vacant, not occupied. "I looked out of my window," says Wisdom. "I discovered among the youth a young man void of understanding." We have some of these in the city, and some who cannot be called young. Many of these go to church on Sunday. Look at these men as they enter the sanctuary in the freshness of the morning; there's a drag, a dulness; the healthy glow of a man all alive is wanting, there's a void.

"Christianity, wherever it has not penetrated the life, has made a great void around it, and the man who in the bosom of Christendom is, nevertheless, not Christian, carries about a desert within him. The perspective is luminous for some, gloomy for others, great and solemn for all, and there where reigns not an ineffective joy reigns an ineffable sadness."

We hold it essential to the very notion of religion that it should be able to furnish proofs capable of satisfying an earnest and attentive mind. Love opens the mind to thoughts so high, so new, that they must seem madness to such as do not accept them.

Have we not a numerous class who have long been hovering around Christianity as around an impenetrable sanctuary; they knock at all doors without seeing it open; at once believing and not believing. Christian in desire, Pagan in hopes, convinced, but not persuaded, enlightened and not consoled. Could we plead with this numerous class we might say, "How comes it that you believe, and that as yet you have only the expenses and not the revenue of your faith; how comes it that you wear your faith as a yoke that burdens and cramps you, not as wings that raise you above the world and its sorrows? How comes it that in the midst of this religion, accepted by you, believed in, you are strangers, aliens, and as it were out of your natural atmosphere? How comes it that you are not "at home" in your Father's house? Let us lay our finger upon the wound. It is because your heart is not yet touched."

Walk the deck of a ship with no cargo on board and the sound is hollow. There is a void! A picture of your own heart. Why pay a preacher to torment you? Why stand on the shore listening to the commander of the Gospel Ship? Approving His invitation, why not walk the gangway and get on board? The word is yet "Come," and come at once.

H. T. Miller.

IODIDE OF NITROGEN.

An Explosive So Deadly That to Make It Is Suicide.

Explosives are solids which under certain conditions suddenly change into heated gas occupying many times the original space of the solids.

Ordinary gunpowder when fired turns into gas, of which the volume is 4,000 times as great as that of the powder. No wonder the bullet in front of it leaves the muzzle of the rifle in a hurry.

To-day there are scores, even hundreds, of different sort of explosives known to science. Some, such as lyddite, require a very considerable shock to explode them. Others, such as nitroglycerin, are fearfully dangerous to handle, for a few extra degrees of warmth or a very slight jar is sufficient to turn them instantly into gas.

Of the latter type there is nothing quite so unstable as iodide of nitrogen. It has to be made in alcohol. When allowed to dry it appears as a brown powder, and so unstable in this powder that a touch with a feather will set it off. The experiment has been tried of leaving a few grains upon a table mixed with a few grains of sugar. The first bluebottle that flew on the table and began to crawl among the grains caused an explosion.

The mere jarring of the air by a loud shut or a heavy footstep is sufficient to detonate iodide of nitrogen, and it need hardly be added that no one in his senses would attempt to make this terrible stuff. To do so in any quantity would be equivalent to committing suicide.—Pearson's Weekly.

"I guess the wife is home, all right." "What makes you think so?" "I've been trying to get the house on the 'phone for three quarters of an hour, and the line has been busy all the time."—Detroit Free Press.

MILBURN'S
HEART and NERVE PILLS
CURED
Salvation Army Captain.

Capt. Wm. E. Sanford (Salvation Army), 38 Harlecourt Ave., Toronto, Ont., writes: "A short time ago I suffered from heart trouble, which seemed to come on me very suddenly. I was so bad, that at times it seemed as if it was all I could do to breathe. I noticed an announcement of Milburn's Heart and Nerve Pills, and decided to give them a trial. After taking two or three days' treatment I felt fine, and my heart has not bothered me since. If this testimony would be of any service to others you are at liberty to use it."

To all who suffer from any form of heart trouble Milburn's Heart and Nerve Pills will give prompt and permanent relief. They strengthen and invigorate the action of the heart, and tone up the whole system.

Milburn's Heart and Nerve Pills are 50 cents per box, or 3 boxes for $1.25. For sale at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Bradstreet's Trade Review

TORONTO.—Trade conditions are encouraging. Summer business in the sorting way has improved in drygoods houses and fall placing orders are comparatively large. Prices are high. Leather prices were advanced 2 cents to [illegible] cents per pound in a strong, tight market. Hides and wool are firmly held, both being absorbed readily by manufacturers. Better weather conditions have materially helped the demand for hardware. There is shortage.

MONTREAL.—Trade conditions are quieter than during recent weeks. The volume of business has kept up well, however, compared with a year ago. Travellers from drygoods firms have very favorable reports to make regarding booking of new business for the fall. The grocery trade is seasonable quiet. Hardware firms report a fair volume of trade in summer lines. Prices are firmly held. Boot and shoe men have plenty of fall orders to fill. Collections have improved, while remittances are good from Ontario and Eastern points. A fair demand continues for bank funds for commercial purposes.

WINNIPEG.—The movement of goods from wholesale and retail houses is fair. Demand for summer footwear continues good. The tone of the drygoods market is strong and firm. The grocery trade is in a healthy position, the movement of commodities being steady.

CALGARY.—Business conditions in towns and cities farther West than Winnipeg has improved. In Calgary a satisfactory trade both in wholesale and retail houses has been done up to date. Crop prospects are excellent. Country stores are feeling the effect of improved financial conditions among farmers.

VANCOUVER.—Conditions are assuming a distinctly better tone, with the result that a shortage of labor is felt. The mining, fishing and lumbering industries are picking up rapidly, with good prospects ahead. General trade is moving in a much heavier volume than last year.

HAMILTON.—Business conditions continue favorable. The movement of goods from wholesale hardware firms is fairly active. Manufacturers are for the most part busy, having both war and commercial orders on the books to maintain operations for months to come. Retailers have found a steady trade for all staple commodities. The movement of goods from wholesalers to the country is encouragingly large.

LONDON.—Travellers from wholesale firms, including drygoods, hardware and groceries, report favorably as to fall business. The buying of country stores keeps up.

QUEBEC.—Business as a rule is showing up well, both wholesale and retail and the outlook continues encouraging. Groceries and provisions are in active demand. Shoe manufacturers and other industries are well employed. Activity prevails in shipping circles. Collections are fairly good. Reports at country points are favorable.

NO DRY BATTERIES.

They All Contain Moisture or They Would be Useless.

So called dry batteries are in common use for small electric call bell systems and private telephone lines and were used extensively for ignition on earlier makes of automobiles. Applying the word "dry" to the battery is misleading, for there is no such thing as a "dry" battery. There never was, nor will there ever be.

If it were dry no current would generate, as it requires moisture to produce chemico-electric activity when the circuit is completed from the plus to the minus elements.

The so called dry battery is really an "inclosed wet battery," which retains its moisture to its limit of life, whether in service or not. The limit of life depends on the stored capacity, how frequently the circuit is applied to it, evaporation due to age and deterioration of the conducting elements.

The battery consists of a zinc cylinder case containing a carbon in the centre, the intervening space filled in which a paste compound of one part zinc oxide, one part zinc [illegible],—one part sal ammoniac, three parts plaster of paris and two parts water. The qualities are greater as the capacity of the battery is increased.

As soon as a circuit is completed a chemical combination is started, and the current flows from the internal part of the zinc to the carbon, then out from the carbon to the appliance and returns to the zinc. The external terminals of the battery are the reverse of the internal.

When the battery is exhausted it can be recharged by sending current into it from a close circuit battery, such as a nitric of sulphuric acid cell. Pouring water through a small hole at the top of the battery is an aid to the return of its life, but neither this nor the former will restore the battery to its originaly efficiency.

◆

"Isn't you all's paw afraid de neighbors' chickens will git into your garden?" "No," replied Miss Miami Brown. "Dat's what paw broke up de ground an' scattered de seeds around foh"—Washington Star.

The Soubrette—Yes, I have been married 12 years. The Comedian—And—er—how many times?

Was Troubled With
Stomach and Liver
FOR SEVEN YEARS.
MILBURN'S LAXA-LIVER PILLS
CURED HER.

Mrs. Thomas Sargent, Berkeley, Ont. writes: "I have been troubled with my stomach and liver for the past seven years; also have had constipation, causing headaches, backaches and dizzy spells, and at times I would almost fall down. I tried all kinds of medicine, without obtaining any relief. I commenced using Milburn's Laxa-Liver Pills, and they have cured me. I have recommended them to many of my friends, and they are all very much pleased with the results they have obtained from their use."

Milburn's Laxa-Liver Pills have been on the market for the past twenty-five years, and can be procured from all dealers.

The price is 25 cents per vial, or five vials for $1.00.

If your dealer does not keep them, they will be mailed direct on receipt of price, by The T. Milburn Co., Limited, Toronto, Ont.

FARM & GARDEN

SQUASHES FOR PROFIT.

When given the proper cultivation and fertilization, squashes can be profitably grown and yet not involve more labor than is necessary for other farm crops. The best soil is one of a rich sandy or gravelly nature, well fertilized with barnyard manure. It should be broken up early and well cultivated with disk or spring-tooth harrow, to pulverize well the top soil to a good depth, and the weed growth kept in check until planting time. Squashes do not require as good soil as do cucumbers and melons; otherwise the culture is practically the same.

Planting should be delayed until warm, settled weather, as squashes are all sensitive to cold.

An acre of winter squashes will provide much more nutritious and valuable food for stock than an acre of corn.

One ounce of seed will plant 24 to 40 hills, according to size of seed. It will require from four to six pounds of seed to plant an acre.

Summer squashes grow mostly in compact bush forms.

The hills should be at least eight feet apart in rows drawn eight feet distant. The rows are thrown out with a broad, heavy, single shovel plow drawn the long way of the plot and as deeply as possible. Where it is intended to have a hill, a good shovelful of well-composed barnyard manure should be dropped into the furrow, and, and a light harrow drawn lengthwise, which will mix the ingredients with fine soil and form a hill well fertilized, and which will stimulate rapid growth of the plant.

It is this rapid growth that combats such insects as the squash borer and beetle. Place at least a dozen seeds in each hill, so as to be sure of a good stand, and afterwards thin to at least three plants after the beetle season is passed, and more room demanded by the young plants for growth. Plant the seeds not more than an inch deep and distributed about the hill and covered with finely pulverized soil.

The weeds on the field must be kept down, which can be done by deep cultivation and by harrowing the centres between the rows. This must be kept up until the vines cover the surface. They should be cultivated deep and often, and the surface about the hills raked over well with the garden rake.

The last cultivation should be made after the vines have a good start. At that time a quantity of soil should be drawn with the hoe well up over the roots and stems of the plants. This materially prevents the destruction from borers which get in the root stem of the plants. Dust frequently with stove soot, air-slaked lime and plaster of paris, mixed, to prevent attacks of the beetle. This mixture should be lightly sprinkled on the plants in the morning when the dew is still on. The large gray squash bug must be picked off.

Additional fertilizer in the form of nitrogen is afforded by applications of nitrate of soda, worked in for several inches adjacent to each hill during the summer cultivation. About one-third of a pound at each application may be used at the time of thinning, at the time the plants are budding, and when small fruit is setting. This will give fuller matured specimens, dry and sweet, and with hard, thin shells indicating better keeping qualities.

It is difficult to capture the squash bug. He is a quick fellow, evidently on constant watch. Hand-picking is the most satisfactory method, although kerosene emulsion, soap emulsion and tobacco decoction are recommended mixtures.

Many bugs can be destroyed by laying pieces of boards on the ground among the vines with one end slightly raised. The pests will cluster under these boards for shelter and protection, and can be collected and destroyed a couple of times each day thus greatly reducing their number.

FARM NEWS AND VIEWS.

It has been determined that salt is a valuable seasoning for the feed of hogs, though only a limited amount is required. It acts as a stimulator of the appetite and appears to improve the taste of the animal, just the same as it does a human being. It aids in digestion and in general increases the energy of the vital process and is greatly relished. When charcoal cobs are fed to pigs they appreciate them much more when they are sprinkled with salt. If you feed a slop ration it should have a little seasoning of salt in it. The effects of a mild seasoning of salt in the food are beneficial as a tonic and general aid to good condition. However, be careful not to overdo it.

Some cows should go dry longer than others, but every cow will need a season of rest of at least a month or six weeks. It will be better for her and her unborn calf.

An experiment conducted at the Kansas Experiment Station shows that silage reduces the cost of producing butter fat from 30 cents to 21 cents. The herds in this case were of sufficient size to give reliable data and eliminate the difference that might occur between two cows. The lot which were fed silage gave seven pounds more milk in the summer and 96.6 more in winter per month than the herd which were fed dry feed. The butter fat was also increased by 46 in summer and 4.6 in winter. The difference in the cost of feed was even greater. The silage-fed cows saved 60 cents per month in the cost of feed.

A sore spot looks bad for the owner of a horse, as well as for his driver. With proper care there need never be a sore on a horse.

The currant patch should be well cultivated and hoed, all weeds being kept down, as they are very injurious to currants. Keep well trimmed after they have come into full bearing, as too much of the young and old wood will hinder the growth. It is not well to allow any of the wood to get very old, as the finest fruit is usually grown on the two and three-year-old growths.

The orchard will require moisture and favorable cultivation for fruit of the marketable or even the kind for home use. Unless there is already a cover crop on the orchard soil it may be advisable to plant one for summer protection a little later on. There are many advantages that will appeal to those who give the matter the proper attention.

EVERY WOMEN'S AMBITION FOR ROSY CHEEKS NOW EASILY SATISFIED

Hollow cheeks and dark lines under the eyes, how a woman hates them!

But rosy cheeks, clear skin and bright eyes, give them to a woman and she is happy.

The woman who attracts, whose fresh, dainty complexion compels admiration, is always careful of her health, particularly of her blood condition. Bad complexion always means bad blood.

Girls, don't let your blood grow thin or watery. To do so brings on haggard looks and declining strength.

Many a woman who has allowed herself to run down, to develop that tired, worried look, has built up again in this simple way. Why don't you try it?

At the close of every meal, just take two small chocolate-coated Ferrozone Tablets—any person can do this in a minute. The action of Ferrozone is apparent at once. It sets you up, makes you feel good, starts up your appetite, aids digestion, brings that old-time feeling of youth into the system again.

Ferrozone puts you on the right road—the one leading to health.

Not a man, woman or child needing blood, vigor, endurance—not a person who is weak, nervous or sickly, not a person in ill-health who won't receive immediate help from Ferrozone.

As a tonic and restorative, as a health-bringer and body-builder Ferrozone is unrivalled. It cures because it feeds and nourishes, because it contains the elements that build up and strengthen. For better looks and better health try Ferrozone yourself, sold everywhere, 50c per box, 6 boxes for $2.50, or by mail from the Catarrhozone Co., Kingston, Ont.

AIR.

Air has no color.

In summer air is lighter than it is in winter.

Older people breathe less than younger people.

Small song birds are the most vigorous breathers of all.

Most air contains water in the form of gas or vapor.

Air, when compressed, has valuable curative properties.

The atmospheres of the various planets differ greatly in quality.

An open chimney is very good for helping keep the air in a room fresh.

The weight of air, at the level of the sea, is fifteen pounds to the square inch.

If a man is in a room ten feet in each direction he has a thousand cubic feet of space.

It is a mistake to suppose that night air is dangerous to breathe; it is purer than that of the day.

If you varnish an egg, so that no air can get through the shell, it will die, and no chicken will come out of it.

Very nearly the whole of the air is composed of two gases only—nitrogen (four-fifths) and oxygen (nearly one-fifth).

Air may be turned to a liquid, or even a solid, by the application of great pressure, together with an extremely low temperature.

With each ascent of three miles and a half the density of the air is halved, and the steps shorten, through the condensing power of cold at high altitudes.

Compressed air is used as a motive power in certain forms of machinery, notably those employed in boring tunnels through rock and under mountains.

Grace Darling died of consumption, though during the day she breathed splendid air, because at night she slept in a tiny room with a closed window.

THE WHIP IN RIFLE BARRELS

It is Caused by the Pressure of Modern High Power Powder.

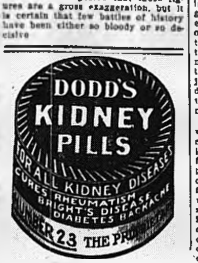
The use of high power powder in rifles has given rise to a phenomenon which did not exist in black powder days. This is known as "whip" and is due to the pressure and vibration set up by the powder. It is constant with given loads and is always in the same direction.

Sights are aligned by the manufacturer to compensate for this whip in proportion to the powder charge used. In firing auxiliary cartridges it will often be found that the rifle shoots off centre. As a matter of fact the bullet from the auxiliary is traveling in a true line with the bore, and it is the sights that are wrong. The lighter charge of the auxiliary does not produce the usual whip, with the result that the line of prolongation of the bore of the rifle along with the bullet travels is not the line given by the alignment of the sights.

Two other rifle terms that must not be confused are upsettage and keyholing. Keyholing is the tendency of the bullet to turn over in flight, while upsettage is the slight shortening of the major axis of the bullet due to the force of the charge. It was peculiar to black powder fired behind lead bullets and does not exist to any appreciable extent in metal jacketed bullets with smokeless powder. In the latter case the charge burns more slowly and the jacket stiffens the bullet against the sudden blow from behind.—Outing.

The Battle of a Week.

The battle of a week was the great conflict at Tours in which Charles Martel overthrew the Saracens, A. D. 732. The members of the Saracen army are variously estimated at from 400,000 to 700,000, and the historians say that 375,000 were killed on the field. It is suspected that these figures are a gross exaggeration, but it is certain that few battles of history have been either so bloody or so decisive.



TO PUT UP GOOD JELLY

With sugar constantly increasing in price, one cannot afford many experiments in jelly-making this season. It is better to go about the business of making jelly with some clear ideas that will make success more certain. There is nothing more attractive in appearance nor more satisfying in taste than a dish of home-made jelly which is clear, which keeps its shape while being "quivery." On the other hand, ropy, thick or tough jelly appeals to no one. Neither is it pleasant to set your teeth on edge with crystals in jelly. To get jelly of the right consistency and free from crystals is the problem not only of the young housewife, but also of the mature ones. Two questions often asked of the Domestic Science experts are, "What makes crystals form in my jelly?" and "Why doesn't my jelly harden?" It is almost impossible to answer these questions individually because one does not know just how the jelly in question was made, but there are some general solutions that are worth trying.

CAUSES OF CRYSTALLIZATION.

In reply to the first question, about the crystallization, there are two points to consider. There may be too much sugar in proportion to the juice, or the jelly may have been boiled too hard. Some fruits have more sugar than others, currants for instance have four or five times as much sugar as the peach. Yet to the taste, peaches seem much sweeter than currants. Grapes have the most sugar of any of the fruits and grape jelly is more apt to have crystals form than other fruits. Another factor that comes into jelly-making is the weather. In hot, dry seasons, with plenty of sunshine, the fruits, particularly berries, have more sugar than usual and this should be taken into account when measuring the fruit juice and sugar. The usual rule is pint for pint, or cup for cup. And that rule should be followed this year because we are having a cold, wet season, without a great deal of sunshine. If, on the other hand, we had had little rain, plenty of hot weather, it would be better to use less sugar, i. e., to each pint of juice add a good three-quarters pint of sugar. Sometimes too rapid boiling causes the particles of jelly to be thrown up on the sides of the kettle where crystals are formed and then either pushed down into the kettle or fall down and these crystals later will start others to form. To avoid crystals measure the sugar carefully and take care to have the jelly boil slowly.

AS TO HARDENING.

Why jelly does not harden requires a different explanation. The fruit may be overripe, it may have been boiled too long, the fruit may not be the right kind or too much may be boiled at a time. There is a substance in all fruits, when ripe or nearly ripe, that is called pectin, which is a carbohydrate something quite similar to starch in its properties, and it is this pectin that enables us to make jelly. Equal quantities of fruit juice and sugar heated to the boiling point for a few minutes brings about a chemical change which causes the pectin in the fruit to gelatine the mixture and jelly is the result. Pectin, pectose, pectase all come from the Greek word, meaning to coagulate or curdle. Through certain changes the pectic acid is made to form a jelly mass instead of curdling things. Pectose and pectase are always in unripe fruit.

Pectose is supposed to form the bulk of vegetable jelly the elemental qualities of which may be equal to the starches. Pectase is a substance present in the juices of plants. As fruits ripen the pectase acts on the pectose which cannot be dissolved and changes it so that it can be dissolved, changing the pectose into pectin. Now the important point for the jelly-maker to remember is that this pectin is always at its best just when the fruit is ripe or a little before. If the fruit is over ripe, if it begins to ferment a bit, if the jelly is cooked too long then the pectin undergoes a change and loses its power to gelatine and the jelly does not harden. Choose fruit that is just ripe or a little green and you will have better success than with the overripe fruit.

WHEN PECTIN IS NEEDED.

The amount of pectin changes in the different fruits just as sugar does. In the strawberry, for instance, the quantity of the jelly-making pectin is so small that it is difficult to make jelly from strawberries. Apples or currants may be added to make a jelly in which some of the flavor of the strawberries may be obtained. Indeed, I have always found that to get good results with peaches it is better to add apples or grapes. The peach is often given in jelly-making lists, but I would advise new jelly-makers to let the peach alone at first or use it with something else that is easy to make jelly from. If you chance to have some currant juice canned add a fourth proportion of that. The best fruits for making jelly are: Currant, crabapple, apple, apple, quince, grape, blackberry and raspberry. If you wish to have success with cherry jelly add currants or apples if you want real jelly. Of course, some of the cherry flavor will be lost.

Many housewives prefer to make jelly from juicy fruits such as currants, raspberries, blackberries and grapes, without adding any water when cooking the fruit to extract the juice. They mash a little of the fruit in the bottom of the kettle first, and then put in the rest of it. The kettle is placed over a low fire and heated gradually, so that the juice will be extracted enough to cook the berries or currants. Other housewives say that they add a little water to start the fruit cooking. I find from experiment that this works very well, particularly with currants, provided the jelly is cooked in a way that I will discuss later indeed my experience is that I had more jelly, and with a more delicate flavor.

The proportions were one pint of water to four quarts of currants. The currants were looked over, leaves and imperfect currants removed. The fruit was washed, drained and then placed in an agate kettle with a pint of hot water poured over them. The fruit was cooked rather slowly until it was soft and then it was thoroughly mashed with a potato masher. Then it was poured into a jelly bag made of coarse muslin and allowed to drain over night. The next morning the clear juice was taken and cup for cup of sugar added. When the sugar had dissolved, or almost so, it was put over the fire and heated gradually to the boiling point, where it was allowed to boil gently from 10 to 15 minutes. I tried it by dipping a teaspoon of the mixture on a cold plate and when I found that it rolled up from this plate, that is when it showed that it was jellying I poured it into the jelly glasses and set away to cool.

But I only cooked a little of it at a time. And it is to that fact that I ascribe my success. Indeed, cooking a little at a time is one of the things that I consider essential in making fine jelly. I never put more than three cups on to cook in one kettle. When I am making a good deal of jelly at one time I have found it necessary to keep two or three kettles going at once, which may be done without difficulty, by starting one a few minutes later than the other. Then the skimming off of the scum that rises to the top, and the testing on the plate may be done one kettle after the other. The jelly glasses should be sterilized, dried and kept hot to avoid ferment and mould later.

AS TO CLARITY.

If you have a sunny window in your kitchen, it is a good plan to set the glasses in it for a day, covering them with a pane of glass, or wax paper, and then pouring paraffine over them. The paraffine may be handled easily by putting it in a small coffee pot or teapot, which may be bought at five or ten cents, and melting it in this over a low flame, or heat, and then pouring a thin coating over each glass being careful to entirely cover the jelly.

By using the juice that drains out without squeezing the jelly bag, you will have a clear jelly. If you wish this extra transparent use a flannel bag to drain the juice. After the first juice has been used the jelly bag may be squeezed and that juice used to make jelly that will not clear, but will taste just as good. Or if this is not desirable the fruit in the jelly bag may be turned into a sieve and the pulp rubbed through to be used in making marmalade. But where there are children in the family jelly that is not clear will not receive harsh criticism.

BAKING POWDER

FIRST AID WORK OF THE C. P. R. CENTRE.

"A most successful year, notwithstanding the general depression." This is the pleasing statement contained in the sixth annual report of the Canadian Pacific Railway Centre of the St. John Ambulance Association. For the twelve months, ending September 30, 1915, no less than 1,818 passed qualifying examinations out of a total of 2,561 who presented themselves for instruction at the classes.

In all the departments of the C. P. R. Centre of the Association, which spreads over the country, a greater zeal than ever was manifested for work, and the support of the superintending officials of the C. P. R. is in no small way responsible for a good deal of the advancement made. Wives and daughters of C. P. R. employees have taken advantage of the free course of training offered, and now no less than 825 ladies have taken out the certificate of qualification from the Association.

Under the auspices of the C. P. R. Centre instruction was given to the Borden Battery and Ammunition Column before leaving Montreal for the front. Afterwards the certificates of merit were presented to the officers and men by His Royal Highness the Duke of Connaught.

An important feature of the work of the C. P. R. Centre was the bringing of a large number of the lady clerks of the C. P. R. into touch with the Red Cross Society, an organization to which they proved a valuable asset.

Three men were saved from drowning at Winnipeg by W. T. Davies, C. P. R. ambulance instructor, and William Newcombe, a C. P. R. constable. Sir Donald Cameron presented the medal of the Royal Canadian Humane Society to each in recognition of their bravery.

Particulars were obtainable of 3,780 cases where first aid had been administered by members of the C. P. R. Centre. The cases were thus divided: Atlantic Centre, 9; Eastern Division, 130; Ontario Division, 136; western lines, 3,440.

Concluding the report, the C. P. R. Centre pays a glowing tribute to the late Lieutenant-Colonel Lacy R. Johnson, who had been chairman of the Centre under review and also of the whole Association. During his time as chairman nearly 7,000 employees of the C. P. R. passed the qualifying examinations, and, in this way made themselves better citizens of the Dominion.

The Physiotype.

This is an English invention for making pictures by impression of leaves, ferns, lace, feathers and various other objects. It depends upon the chemical action of a fine powder. The object of which a representation is to be made is placed upon white paper and pressed, either by the hand or by other means. When the object is removed no impression is visible on the paper, but upon sprinkling the powder over the paper the picture at once appears, sharply defined, and remains permanent. Sections of wood and designs of coins and medals can thus be represented, and the prints can be transferred to lithographic stone, zinc, or aluminum, thus producing records from which any number of copies can be taken.—Chicago Record-Herald.

FASCINATING BAD MEN.

No Matter How Vile, They Can Find Women to Trust Them.

Of all the queer and unpleasant truths dragged into the light of day by way to the dock none is more surprising than this: That, no matter how great a blackguard a man may be, he can always, and with ease, find women to believe in him. Indeed, it would almost seem that, the greater the scoundrel, the more women can he get to trust him.

Can any blackguard get a wife? Is there something about really bad men that appeals in some subtle way to women? Judging by the evidence given in the murder trials of the past few years, there is no limit to the number either of gullible women or women who are willing to take any risks where marriage is concerned.

For instance, a few years ago Waltzoff, a Russian Jew, was convicted of bigamy. This choice specimen found, in a comparatively short space of time, no fewer than six women willing to marry him, each of whom he deserted after he had possessed himself of her money! Then, to take another outstanding example, there was George Chapman, who was executed in England. This brute had no difficulty in getting three girls to marry him, each of whom was, in her turn, foully done to death.

"How," people will say, "is a girl to know that a man such as this is a criminal in disguise?"

In that case, what becomes of the wonderful "feminine intuition" about which we have always heard so much? Is it a myth?

It is not necessary to search the calendar for proof of these statements. Day after day the police court proceedings show how pitiably easy it is for the worst kinds of men to deceive women; most of us know of cases among our own private circle. Who among us is not acquainted with at least one woman whose husband almost since their wedding day, has done nothing but slack about and get drunk, quite content that his wife should slave her life away in order to keep him in beer and tobacco?

If you look a little deeper you will discover, as a rule, that even when they are engaged he was as often as not out of work, and that he drank "more than was good for him." Yet she swallowed whole all his "hard luck" stories about the difficulty of getting a steady job. And, as to the drink, had he not "promised to reform"?

Nor is this sort of thing confined to any one class; you will find it everywhere. In regard to the men, it is just possible that in some cases the baseness of their characters is due to the fact that they have been "made a fuss of" by their womenfolk since the days when they were babies, waited on, hand and foot, by sisters, servants, girl friends, etc.; idolized and pampered by foolish mothers, until at last they have grown up with a contemptuous, but domineering, regard for all women, and a fixed determination to get what they want at any cost. And still women answer matrimonial advertisements.

FACTS FOR THE CURIOUS.

King Nicholas of Montenegro has a fortune estimated at $20,000,000.

The largest fine ever collected in Washington County under the Vermont law which makes six inches the maximum length of trout was $230, paid recently by Harry Dudley, for having 43 short ones in his possession.

Perhaps the most curious mineral found in the United States is staurolite, otherwise known as "fairy stone," according to the "United States Geological Survey." This is an iron aluminum silicate found only in Virginia and North Carolina, the reddish brown and brownish black crystal occurring in well-defined single and double single and double crosses. There is some commercial demand for the crosses as curios, which are worn as watch charms or on chains in the manner of a locket or lavalliere, a demand perhaps stimulated by the quaint legend which is told of their origin. The fairies living in the caves of the mountains on hearing of the sad tidings of the death of Christ, fashioned these crosses as mementoes of Him.

A novel method of storing natural gas has been adopted in Midway Oilfield, Cal. Two wells are yielding more gas than can be used for fuel and domestic purposes, and the excess has been led by pipe lines to an old non-producing oilwell. In this the natural pressure causes the gas to find some outlet at a depth of about 500 feet—probably into porous strata or cavities serving as underground reservoirs.

Built according to specifications for a powerful tractor to move the heaviest mobile artillery, which were received by a Springfield (Mass.) concern from the French and British Governments, a new tractor is now available for American building and contracting firms, which surpasses all previous vehicles of this type, declares an exchange. The new tractor recently picked up, without much difficulty, a huge flat truck on which was loaded an immense boiler weighing more than 66,000 pounds, the truck itself weighing more than eight tons. The total dead weight moved by the four-wheeled tractor was, therefore 41 tons. The usual requirements for moving such a load by means of horses would have been a team of 25 strong animals, with 10 extra horses and a block and tackle for starting.

At a recent meeting of the Academy of Sciences in Paris, Prof. Laveran, of the Paris Institute, described a new form of tetanus which makes its appearance from 30 to 50 days after the wound has been received, whether the patient has been given a preventive injection of serum or not. The disease can appear without apparent cause, but usually it occurs after operations or on the outbreak of fresh inflammation in wounds. It is fatal in from one-third to one-half of the cases. A treatment of anti-tetanus serum once each week is recommended.

If marriage is a lottery, perhaps a man may be pardoned for thinking of alimony as a gambling debt.

It's a good plan to pay as you go. The man who is taken at his own valuation isn't taken very far.

Note Your Increase In Weight

By making the blood rich and red Dr. Chase's Nerve Food forms new cells and tissues and nourishes the starved nerves back to health and vigor.

By noting your increase in weight while using it you can prove positively the benefit being derived from this great food cure.

50 cents a box, all dealers, or Edmanson, Bates & Co., Limited, Toronto.

Dr. Chase's Nerve Food

The Passing of the Children.

The children we love, O where do they go
  When tired of play and their tiny bare feet
Turn down the broad road where the buttercups grow,
  And beautiful skies and the meadow lands meet—
All happy and tired, O where do they go,
  The children we loved, does anyone know?

The children we love, O what do they see
  Beyond the bright fields, that calls them away,
That leads the dear children from you and from me
  And leaves them no choice but to go and obey;
What vision attracts them, what fate can it be—
  What is it, I wonder, that little folks see?

The children we love become women and men—
  A toll that Time claims—but in fancy I see
Their shadows, still happy and joyous as when
  They romped and they prattled all day at our knee—
They seek the far fields and the blossoms, and then
  They live in the bloom of the flowers again.

—John D. Wells in Woman's World for July.

INSECT MARVELS.

What the Hop Aphis Unchecked Would Do in One Year.

Few persons, writes James Buckland in a report of the Smithsonian institution, realize how enormous is the number of insect species or how amazing is their power of multiplication. The number of insect species is greater by far than that of the species of all other living creatures combined. More than 300,000 have been described, and probably twice that number remain to be examined. Virtually all living animals as well as most plants, supply food for these incomputable hordes. The fecundity of certain insect forms is astounding.

Riley once computed that the progeny of the hop aphis, which sees thirteen generations born to it in a single year, would, if unchecked to the end of the twelfth generation, multiply to the inconceivable number of ten sextillions of individuals. Supplementing that calculation, Forbush says that if this brood were marshalled in line, ten to the inch, it would extend to a point so sunk in the profundity of space that light from the head of the procession, travelling at the rate of 184,000 miles a second, would take 2,500 years to reach the earth.

Kirkland has computed that in eight years the progeny of one pair of gypsy moths could destroy all the foliage in the United States. A Canadian entomologist declares that in one season the descendants of a pair of potato bugs would, if unchecked, number 60,000,000.

The voracity of insects is almost as astounding as their power of reproduction. The daily ration in leaves of a caterpillar is equal to twice its own weight. If a horse were to eat as much he would require a ton of hay every twenty-four hours. Forbush says that a certain flesh-eating larva will consume in twenty-four hours 200 times its original weight. A human child, to do well, would have to eat in the first day of its life 1,500 pounds of beef.

Trouvelot, who made a special study of the subject, affirms that the food taken by a single silkworm in fifty-six days equals 86,000 times its original weight at hatching. What destruction this one insect would cause if even a one-hundredth part of its eggs ever the value to man of the insect-eating birds.

The Oil in Tobacco.

Although the Havana or Havana seed tobaccos are low in nicotine, they are high in oil. The settlement in a pipe stem or the brown stain obtained from blowing tobacco smoke through the meshes of a handkerchief is not nicotine, as commonly supposed, but is in reality tobacco oil, nicotine only being obtained in extract by an elaborate process of distillation and double distillation. The oil in cigar tobacco prevents the smoke being inhaled, as it would cause a strangulation and painful irritation.

It requires a certain amount of wisdom of a man to fully realize what a fool he really is.

THE POULTRY WORLD

WATER GLASS EGG-PACKING

How that the hatching season is practically over, [illegible] will [illegible] to [illegible] keeping power [illegible]. At [illegible] degrees, F. the germ of a fertilized egg will begin to develop: at a constant temperature of [illegible] F., incubation will proceed in a normal and natural manner. Eggs that are infertile will not germinate or produce chick development under any condition. The enormous advantages of infertile eggs for immediate use and for preserving purposes, are therefore readily apparent.

PRESERVING EGGS.

Of late years it has been shown that water glass is a reliable egg preservative. Experiments prove that eggs can be satisfactorily preserved for from [illegible] to 12 months.

Many different methods have been tried, and with varying results. They include both liquid and dry methods, and among them have been the following: Dry salt, dry wood ashes, dry oats, powdered sulphur, ground gypsum, [illegible] of potash, brimstone fumes and sulphur, salicylic acid, salt, brine, vaseline, eggs dipped in melted paraffine and packed in some dry substance, eggs dipped in collodium and packed in some dry substance, eggs dipped in a solution of gum-arabic and packed in a dry substance, water glass solutions of various strengths, and lime water and salt solutions.

If the eggs are to be kept only a short time, they may be placed in some of the dry substances, and fairly good results obtained, but these methods cannot be depended upon for longer than two or three months. Greasing the eggs with vaseline has been found to keep them from three to four months, but some claim that the eggs absorb the taste of the vaseline. Salicylic acid, cottonseed oil and alcohol, salicylic acid and cottonseed oil, gum-arabic and collodium have all failed to give satisfactory results.

WATER GLASS SOLUTION.

Perfectly fresh eggs should be used, those that are infertile are preferred. Water glass is a heavy or [illegible]-colored liquid (it also can be had in powder form) which may be purchased at a reasonable price from any druggist.

In practice one pint of water glass is usually diluted to a 10 per cent. solution by adding nine pints of boiling water. Very thorough experiments conducted at the Rhode Island Agricultural Experiment Station proved that the strength of the liquid could be safely reduced to three per cent. (three parts water glass to 97 parts water).

Fresh, clean eggs are placed in a jar or other receptacle and the water glass solution is poured over them until they are completely submerged. The liquid should stand at least one or two inches above the top layer of eggs, and if necessary an inverted plate may be placed in the liquid over the eggs to hold them down in place fully beneath the surface of the liquid. Cover the jar tightly and set in a cool place where it will not be disturbed.

FACTS WORTH REMEMBERING.

For a receptacle in which to pack the eggs, nothing better than an ordinary three or five-gallon stone crock can be used. However, wooden buckets or kegs may be used with entire satisfaction. The vessel should be thoroughly scalded and placed in the position in which it is to remain before the eggs are put in it. The eggs should be stored in a moderately cool, well-ventilated cellar or room.

The ideal egg for preserving, besides being infertile, should be naturally clean and not washed clean, free from checks or cracks and not over seven days old. The eggs should be carefully packed in the jar until it is filled to within an inch of an inch and a half of the top. The solution is then poured over the eggs till they are completely covered. Place a cloth cover and then the lid of the vessel over them. From time to time look at the eggs to see that the liquid has not evaporated and allowed the top eggs to become exposed to the air. Should such an occurrence happen, pour enough boiled cooled water into the jar to completely cover the eggs.

In general, this completes the operation. However, there are a few points to which attention should be called. A white precipitate, which is silicic acid, forms in the jar. This is a [illegible] substance, but there is absolutely no danger from it if all eggs are washed before using. To boil water glass eggs, a pinhole should be made in the large end of the egg, to allow for expansion of air. Normally the shell of an egg is porous, but when preserved in water glass, which is identical with window glass and which makes it necessary to make an escape for the air when boiling the egg. The hands should be kept out of the solution, as it will make them rough and sore. One cracked or checked egg will flavor the entire lot. An egg that has started to spoil will continue to spoil if put in the preservative. It is not necessary to put all the eggs in the preservative on the same day. Some may be put in one day and covered and others added as they are obtained. Eggs that have been preserved in water glass are desirable for all purposes up to eight to ten months of preservation, after which the albumen becomes thin and they are not entirely satisfactory to fry; otherwise they may be used with complete satisfaction. Eggs have been used after remaining in preservative four years. Do not try to use the solution twice. One gallon of water glass will preserve [illegible] dozen eggs.

IF YOUR THROAT IS HUSKY CATARRH MAY BE STARTING

A weak or irritated throat is the first step towards Catarrh. Everything depends on your remedy. A cough mixture slips quickly over the weak spots, drops into the stomach and does little but harm digestion. It is altogether different with Catarrhozone—it cures because it gets right at the trouble. You inhale Catarrhozone, breathe in the vapor of healing balsam that strengthen and restore the weak throat tissues. You'll never have colds or coughs. Throat trouble and catarrh will disappear with the use of Catarrhozone. Get the large dollar outfit, which includes the inhaler. It lasts two months and is guaranteed to cure. Smaller sizes 25 and 50 cents, sold everywhere.

SOME CALCULATOR

Boss Figured That His Clerk Worked One Day a Year.

An amusing story is going the rounds relative to the result of a clerk in a local real estate office asking for an increase in wages. The boss listened to the many reasons why an increase should be granted, and when the clerk had finished he was told to "sit down and we will figure this thing out. First, we will put down the number of days in a year—365. You sleep eight hours a day, one-third of the time. We will deduct that 122 days from 365, leaving 243 days. Now, you have eight hours a day to yourself, 122, which, deducted from 243, leaves 121 days. Then you are off 52 Sundays. We now have only 69 days left. Deduct two weeks' holidays, and we have 55 days. Legal holidays, New Year's, Christmas etc., we have 12 days. You get off a half-day each Saturday, which makes 26 days, leaving us with 17 days, your lunch hour amounts to 16 days; which, taken from 17, leaves only one. Get out of here, you are only working one day each year."

Mr. Subbubs—Why did the new cook leave? I thought she was perfectly satisfied with the place. Mrs. Subbubs—I fancy she made the discovery that she was too stout to wear my clothes.

CURRENT COMMENT

What are you doing to help in the big drive?

Carranza is conciliatory and does not want to fight the States.

Hurry up, boys, and get into the big drive.

Any young man of spirit would want to get into the great drive.

It was a double celebration—Dominion Day and the great British drive.

The Germans are not so offensive as they were. They are on the defensive.

That German submarine has not yet arrived at New York. Perhaps it struck a mine.

The Scottish miners are showing their determination to do their bit while the great drive is on by foregoing their usual summer holidays.

The epidemic of infantile paralysis in New York is spreading to outside towns. Keep the children out of crowds and away from dust.

We are told that we are living too high—importing too many luxuries, instead of spending our money for war purposes.

But the North Park farmers are not fighting this by-election on bilingualism. There is something else to fight about.

The Turks are now charged with the massacre of the Syrians. It is said that 80,000 victims have perished. A day of retribution must be at hand.

The United States Senate has voted to pay young John Hays Hammond $750,000 for his patented contrivance for the radio control of torpedoes and vessels. Looks like easy money.

Lloyd George has managed to draft a scheme of government for Ireland that has been approved of by the Cabinet and Irish parties as a temporary measure, while the war lasts. It will be put into effect at once. When the war is over the whole Empire will sit down and plan some permanent scheme of government that will satisfy Nationalist and Unionist alike.

There are over one thousand factories in the United States making munitions. Employment has thus been given to half a million workmen, for the most part unskilled mechanics, at wages higher than ever before; and this has brought a general advance, for firms in other lines have had to increase wages to hold their men. It is said that none of these factories is able to make a rifle for use abroad.

The arrival of the Deutschland submarine on this side of the water has brought home to us a new danger. The same or a similar vessel can approach the Canadian coast. Can enter our harbors on the Atlantic and sink all the vessels in sight. Is it possible that they could come up the St. Lawrence as far as Quebec, and play havoc among our shipping? This is something that Canada and Britain must soon provide against if they are to be free from such disasters.

Argentine is running a race with Canada. The last census just published fixes the population of the Argentine Republic at 7,892,278. The census of 1895 gave the population as 3,954,911, so that the records shows almost a doubling of the inhabitants in the past twenty years. Buenos Ayres is a large and beautiful city with a population of 1,575,814, about half as much as all of Argentina had 20 years ago. Argentina is a progressive country, with good laws, civil and religious liberty, and a fertile soil. Canada has a strong competitor in this republic in the markets of Europe.

The new publication "German Atrocities"—an official investigation by J. H. Morgan, M.A., late Home Office Commissioner with the First Expeditionary Force, deals with the British inquiry into these atrocities, backed up by documentary evidence of outrages committed upon soldiers in battle, on non-combatants and on women and girls. Some of these are fiendish in the extreme. No direct evidence could be procured of the crucifixion of Canadian soldiers, but the commissioners felt that there was truth in the statement and that such had occurred. Toronto-The Musson Book Company.

The building of the thousand homes in the west, which the C.P.R. has already commenced, will give very considerable employment. The procuring of the timber, and the fashioning of the same in the saw mills of the company in British Columbia will give employment to large numbers of hands while the putting up of the outhouses, the fencing of the land, the preliminary preparations of the same—all will afford employment to considerable numbers. The C.P.R. recognizes that to provide 1,000 ready-made homes with farms attached is only a beginning; and that many thousands of homes will be required when the war is over. The tabulation of all the idle farms in the Eastern Provinces by the company will also entail considerable clerical labor; but this the C.P.R. is doing as a patriotic work. In this matter the railways are showing the way to the Government.

Four Doz. Men's Straw Hats at a Bargain Price

In stylish Boater shape. They're English made and of good clean Sennet Straw trimmed with black silk band and have a soft comfortable sweat band. They're worth regularly 1.00 to $2.00 each. Sizes 6¾ to 7¼. Special Price **50c.**

Newly Arrived

NEIGHBORING VILLAGES & COUNTRYSIDE

News of the Week Collected by Staff of Live Correspondents

OTTER CREEK

Miss Stella Jasper from Hanover was a visitor here at her home on Sunday last.

Mrs. Litt of Stratford was visiting at Mrs. David Bell's on Sunday last.

Mr. Milton Dippel and sisters were visiting friends in Alsfeld on Sunday last.

Mrs. Samuel Hessenauer of Berlin is a visitor at Henry Dippel's at present.

Mr. and Mrs. David Gress were visiting at Mr. John Holston's Sunday last.

Mr. Wesley Stemler was visiting friends on the fourteenth on Sunday last.

Mr. Edward Fenner was visiting in Mildmay Saturday last.

Mr. Wilfrid Gress and Miss Nettie Gress were attending the Children's day of the Alsfeld Church on Sunday last.

Mr. and Mrs. F. Wickie were visiting in Mildmay on Sunday last.

MILDMAY

A happy event transpired in the Sacred Heart Church here on Tuesday morning of last week, when Mr. Isadore Seifried of the 6th concession of Carrick was united in marriage to Miss Melinda Haformehl of Howick, Rev. M. Halm conducting the ceremony. The bride was assisted by Miss Loretta Lobsinger, while Mr. Wm. Seigfried acted as best man. Mr. and Mrs. Seigfreid will take up their residence at once on the former's farm in this township.

Rain is needed here to help along the spring grain and root crops.

Miss Esther Stade is spending a few weeks at the home of her sister, Mrs. I. Knecht-l.

Quite a number from this section took in the big Orange Celebration at Palmerston on Wednesday of last week.

Pte. Geo. Helwig has completed his course at the Military School and will very shortly be given the Lieutenant's title. George is to be given a commission in the 160th.

Mr and Mrs. Samuel Liesmer and family of Detroit are spending ten days with relatives here. They made the trip by auto.

Mr. R. H. Wendt of Ford returned to that place Tuesday after spending ten days with relatives here. Mrs. Wendt and children will remain for weeks longer.

Mrs. H. Schwalm of Harriston is spending a few weeks at the home of her parents, Mr. and Mrs. Chas. Wendt.

Mrs. Joseph Voigt, who died very suddenly Friday evening, was buried in the R. C. cemetery on Monday morning.

Mr. C. Powell spent Sunday with friends in town.

LOVAT

Mr. Dune McArthur is engaged for the haying with Mr. Archie McIntyre.

We are pleased to see Mr. Howard McKeeman out again after having an attack of typhoid fever.

Mr. Jack Vance is busy over-hauling his barn at present.

Mr. John Houston, M. A., of Winnipeg was a caller on his friends and old school pupils last week. It is 10 years since he taught school here.

Mr. John Rose has purchased a new Overland car.

Pte. Tom McGregor of the 160th spent the week end at home.

Mr. Jas. McKay has purchased a new rubber tire buggy.

We are glad to learn that Mrs. Robert Colwell is able to be around again.

KINLOSS

We are pleased to see Thomas Briggs around again. About a month ago he had the misfortune of being kicked by a horse.

Miss Ella Livingstone of Berlin is visiting Mrs. Peter Mc. Donald.

While passing through our village the other day, a gentleman was thrown about twenty feet when his motor-cycle which was travelling about thirty mile an hour, struck one of our village dogs. However after Dr. Sinclair dressed his wounds he was able to repair his machine and go on peacefully onward.

Miss Marie Armstrong of Berlin is visiting her mother Mrs. J. H. Armstrong.

As far as we can make out the Orange men are only supposed to celebrate on the 12th of July. But here they have been pounding away ever since the snow went off. Yes and even before. On the early morning of July 12th, our Orangemen met at the Hall and kept the citizens awake from about two thirty till four o'clock when they proceeded to Lucknow. We understand they were going to Clinton. But instead they went to Palmerston. You know the train connections were not good enroute to Clinton. Having to change cars at Wingham and wait about five minutes. About one thirty that night they arrived home with no less noise than when they were departing.

Dont forget the Red Cross supper Saturday night. We are looking for our usual crowd.

As our Pastor was unable to be with us Sunday evening, Mr. Duncan Guest of Bervie delivered a fine address.

Misses McLeod of Glamis spent Sunday with Mr. James Elliot.

Mr. John Portice has lost his hired man. What will John do now?

Miss Bertha Harrison is visiting her parents, Mr. and Mrs. Ed. Harrison.

Mrs. Colwell and family are holidaying with her mother, Mrs. Winterstein.

A very quiet picnic was held in Mr Hodgins grove of July 12th. Everybody reports a good time, boating being the main attraction in the afternoon. In the evening we had a baseball match and dancing.

PINKERTON

Mrs. Neal and Misses Neal and Foute returned to their home in Tennessee on Monday.

Mr. and Mrs. Geo. Chick have returned home after spending a few holidays in Muskoka.

A number from here attended the Garden Party at Glamis on Monday evening and report an excellent programme.

Mr. Simpson of Harriston visited in this district last week.

Miss Jennie Cummings of Molesworth is spending her holidays with her grandmother, Mrs. J. Murray.

The Pinkerton Red Cross Society have made all these articles within the last three months—60 pairs of socks (knit); 36 pairs summer socks, (bought); 5 quilts; 23 pairs pajamas; 1 old sheets; 2 old table cloths; 4 old cloths; 1000 mouth wipes; 5 wash cloths; 409 handkerchiefs; 3 dozen surgical shirts; and 5 pillows. The Society is very grateful to the ladies of Bradley Sunday School for their kind donation of $50 and also to the workers for their generous co-operation towards this this worthy cause.

LOWER SCHOOL EXAMS

Candidates "Slaughtered" Throughout The Province by Extremely Severe Tests—One Third of Those Writing go Under on one Hard Paper Only Eight Walkerton Pupils Pass.

The results of the Lower School examinations which were published on Saturday show the examinations to have been most severe. In Walkerton only 8 candidates out of a class of 27 were successful. We believe that in other towns the percentage of successful pupils was in most cases even lower. There is surely something wrong, when pupils who have worked hard all year and have been recommended to write by their teachers are slaughtered indiscriminately. In a good many instances these pupils will become discouraged and the whole course of their lives changed through the fact that they have lost a whole year in their progress towards the goal they have in view. The blame should be laid we believe at the doors of a "freak" education department, which shows itself strangely lacking in common sense.

We understand that one subject alone caused the failure of one third of all the candidates who wrote, and that another subject was almost as severe. The marks and certificates will be forwarded promptly to the candidates. It is expected that they will be received next week.

The successful Walkerton pupils were:—Leander Bilger, Minnie Baechler, Edna Coulter, Mervyn Forsythe, Aileen McCool, Gordon Pfohl, Alice Tolton, Gertrude Lewis.

House to Rent

House to rent.—Apply to C. Patrick.

+ + +

Stenographer For Courts

Required a stenographer for courts at Walkerton. Salary $200, besides fees about $350. Duties to commence first September next. Apply to Judge Klein, Warden A. B. McNab or M. Goetz. 27-8

+ + +

Notice

Give yourself some comfort during this hot spell by placing electric fans in your house and store. Also keep your house and kitchen cool by using electric irons and grill stoves. These can be bought at the Electric Light Co's office at cost and the current they use is small so that they can run economically. Leave your orders now and they can be filled within 24 hours.

+ + +

560 Citizens Gave

Five hundred and sixty citizens of Walkerton contributed a total of $7,814.95 to the Patriotic and Red Cross Funds on the recent canvass, according to the list prepared by the campaign committee. The largest contribution was $200, and the lowest was 25 cents. The commonest contribution was $12 (a dollar a month), no less than 91 people giving this amount.

+ + +

Banks Don't Get It Now.

The Bank Act has been amended to permit the Minister of Finance to claim from all the banks of Canada the balances unclaimed for more than five full years, the moneys to be used for the Patriotic Fund or for any other purpose in the public interest. Formerly any unclaimed deposits after five years were claimed by the the banks.

A Line From Ed. Eidt

"We are in tents now and have a camp on a high hill, overlooking the beautiful Haselmere Valley," writes Ed. Eidt from England to a member of the family. "It's the finest spot we struck in England, and we've been in quite a few places. We don't expect to leave for France for a month at least and are settling down to steady training at a trench mortar battery." Ed. encloses a picture of the boys of the Battery as they were about to leave for their trenches and gun pits on a sunny morning. The Walkerton boys whose faces appear are:

10,000 Overlands for Canada

Mr. J. E. McGregor attended the Convention Of Overland agents at the Thousand Island House at Alexandria Bay last week. One hundred and fifty dealers were present, representing nearly every district from Coast to Coast. The Convention adopted the Slogan for the coming year. "Ten thousand Willys Knight and Overland automobiles for 1917, not 9,999." An interesting feature was the showing by moving pictures, the Willys Overland Company's factory, the largest in the world. No less than ten million dollars worth of cars were contracted for by the Company's representatives during the three days meeting.

MARRIED

HAMEL—RHODY—At the Evangelical parsonage, Walkerton, on July 12th, by Rev. J. H. Grenzenbach, Miss Sophia Rhody, daughter of Mr. and Mrs. M. Rhody to John Hamel, son of Mr. and Mrs. Geo. Hamel, both of Brant.

"Mack" Gibson narrowly escaped serious injury at Knechtel's factory on Thursday. He was leaning forward on one foot when his other foot got caught in the cogs of a machine. His shoe was torn off in an instant but fortunately he was able to save his foot with only slight injury.

In a letter to his parents, Mr. and Mrs. Thos. Cunningham, Pte. Chester Cunningham writes from England that his battery is experimenting with a wonderful new trench mortar which throws no less than 52 explosive shells per minute. Each shell cleans the ground for a hundred yards on all sides.

Does the soldier who falls in battle in defence of his country necessarily obtain Salvation? was a question touched upon by Rev. Thos. Wilson at Knox Church Sunday night. The speaker considered such a teaching harmful and pointed out that the Christian religion offers to man salvation only through the Atonement.

When Hartford Connecticut, had its "clean-up" campaign it called on the Boy Scouts for help. They are admirably organized and were full of enthusiasm. This is what they did: they inspected 15,000 yards, reported 3000 instances of insanitary or dangerous conditions, and delivered 51,000 letters to householders—all in three hours and a half.

Walkerton has a diminutive bugler, Master Frank Pruin, aged 12 years, who can bugle with the best of them. Frank knows all the calls and keeps the air of the neighborhood ritzed with the familiar notes played on a brand new bugle for which he has been saving his pennies. Frank has also surprising talent for drawing and can draw life-like portraits of celebrities from memory. This lad will no doubt be heard from if he is given an opportunity to develope his natural talent.

Hot At Saloniki.

Sergt. Cryderman writes his parents, Mr. and Mrs. C. W. Cryderman from Saloniki under date of the middle of June, that although the summer was not yet started, the thermometer stood at 105. There was much sickness mostly malaria, and the hospital staffs had to work at full tilt in spite of the heat.

Walkerton Man is D. D. G. M.

At Grand Lodge A. F. & A. M. held at London last week, Andrew F. Johnston of Walkerton landed a high office in Masonry. He was elected District Deputy Grand Master for the newly constituted district of Bruce. Right Worthy Bro. Johnston is a past master of Saugeen Lodge and is well qualified to perform the important duties which will devolve upon him. The new district is composed of twelve lodges, including the towns of this county on the Southampton and Wiarton lines of the G. T. R. and also Clifford. The seven remaining lodges of the old district, including Kincardine, are added to some others to form a new North Huron District.

Former Walkerton Publisher

Miss Mary Clendenning received the intelligence this week of the passing of her uncle, Mr. William Brown in Vancouver, B. C., on July 14th. "Beloved and loving he went, quietly as an infant sleeping, surrounded by his family and friends" was the word received. For a great number of years, Mr. Brown published the Bruce Herald and had a book store in town. He is well-known in Bruce. Later he became the pioneer newspaperman of Vancouver and through the press and in the city council did much to mould thought and action in right channels. He had a fine mind and a kind noble heart, and full of years and good deeds. He leaves a cherished memory to Mrs. Brown, their two married sons (Arthur and Will.) and very many friends.

Enjoying Preston

Rev. D. A. Walker writes to a member of his former Congregation here that in spite of the warm weather his family is nicely settled and are enjoying Preston. It is a good town, growing and destined to grow. The Methodist Congregation which is too large for the church is composed largely of young people, many of whom work in one or other of the factories. The Sunday School is one of the best features. Preston is a town of children, old fashioned families are to be found and the Sunday School has an attendance at present of over 200 which increases when the cooler weather prevails. Mr. Walker speaks of the regret which he has felt in leaving his friends of the Walkerton Congregation. Opportunity for a big work appears to present itself at Preston and in Mr. Walker the congregation has just the right man to carry it forward.

NEWS ABOUT TOWN

Civic Holiday, Monday August 7th.

Wheat-cutting has begun in this section.

Mr. Herb Weiler is holidaying at London.

Mr. Norman Walford spent Sunday at Hespeler.

Miss Kate Beattie is holidaying at Bala, Muskoka.

Mrs. T. E. Attwood returned from Toronto Saturday night.

Miss Norma Smith of Hanover spent Sunday at her home here.

Master Charlie O'Malley had his tonsils removed one day this week.

The Court House is being reshingled. Mr. John McKinnon has the contract.

Chesley will observe Monday, August 7th as Civic Holiday, the same day as Walkerton.

Mr. Geo. Whitehead of Guelph visited his brother, Mr. James Whitehead, this week.

Mr. and Mrs. A. J. Wesley and babe spent Sunday at Mrs. Wesley's old home at Belvie.

Mrs. E J. Glave and Erma left on Friday for London to visit Ralph at Grosvenor Camp.

Mr. and Mrs. Hugh Walford and children of Berlin have been visiting at Mr. Walford's old home here.

Lance-Corp. John Clancy of the 100th Batt. was a visitor in town Friday on his way home to Cargill.

The Methodist Sunday School will hold a picnic on the Exhibition grounds this (Thursday) afternoon.

Practically the whole 160th Bruce Battalion is out on harvest furlough. Less than 100 men are left in camp this month.

Mr. and Mrs. John H. Appel and daughter, Mildred, are spending the week with relatives at Guelph and New Hamburg.

Almond Glebe, the little fellow who underwent two operations at the County Hospital last week is getting along splendidly.

Wor. Master P. Bremner had a line from Rev. D.A. Walker this week extending greetings to the members of Saugeen Lodge, A.F.&A.M.

The Women's Institute will meet at the home of Mrs. V. C. Wahn's on August 3rd when a demonstration will be given on breadmaking.

Next Sunday will be Rev. Thos. Wilson's last Sunday before holidays. He leaves next week to supply a Philadelphia pulpit during vacation.

A two-storey brick addition to the residence occupied by Mr. K. M. Taylor is almost completed. The addition includes a kitchen and sleeping porch

Mr. and Mrs. Arthur Barbour motored up from Rockwood on a visit to Mrs. Barbour's parents, Mr. and Mrs. Arch. Tolton. Their little daughter, Eleanor, is spending her vacation with her grandparents here.

Mr. George Ernewein purposes remodelling the double residence on Colborne St. which he purchased recently from Mr. J. B. Huether. When the changes are completed, he will have an up-to-date residence for his own use.

Mrs. James Armstrong and her two daughters, Mrs. Sherman and Mrs. Wallace of Saskatchewan, also Mr. Wallace and their child, motored here last Sunday evening on a visit to Mrs. Armstrong's sister, Mrs. Andrew Swanston.

"You advertised as a chauffeurette-maid." "Yes, madam." "What were you duties at your last place?" "I drove and cleaned the cars single-handed." "And as maid?" I took down my lady at night and assembled her in the morning."—Punch.

Chepstow Belle, the fast road mare recently sold by Rev. Father Goodrow of Chepstow to Robt. Trench of Teeswater, is now being systematically trained, and it is said that she made a mile last week in 2.15 This is a wonderful record, after only three weeks training. Rev. Goodrow purchased this mare from Jos. Schutskofski of Chepstow.—Mildmay Gazette.

The engagement is announced of Phyllis Eileen, youngest daughter of the late Judge Kingsmill, formerly of Walkerton, and of Mrs. Kingsmill now of "Fairfield, "Burnham, Somerset England, to Lieut. Cedric C. Macredy R. A. M. C., youngest son of Thomas Tighe Macredy, of 91 Merrion Square, Dublin, and "Monte Vista," Dalkey. The marriage will take place early in August.

The Guelph Mercury says that Mr. J. D. Ramsay, principal of Hespeler Public School, has started work in a munitions factory for the summer. He is working on a lathe, doing his bit, making shells. "I cannot go and fight but I can help to make shells", he stated. Mr. Ramsay, who is the father of Mrs. Norman Walford of Walkerton, has been principal of Hespeler public school for over 15 years. He heard that men were scarce and offered his services for the summer months.

Wheat cutting is general.

Miss Marion O'Malley is visiting in Toronto.

The spring crops are suffering from lack of rain.

Mr. D. C. Wilson came up from Toronto Tuesday night.

Mr. O. E. Klein is erecting a summer cottage at Port Elgin.

Sergt. Harry Watts of the 160th was a visitor in town yesterday.

Mrs. Pryne and children of Toronto are visiting at Mr. Wm. Pryne's.

Master Max. Player had his tonsils and adenoids removed on Monday.

Mr. and Mrs. John Foster of Tara renewed acquaintances here over Sunday.

Mr. and Mrs. G. S. Schwindt and family motored to Berlin for the week-end.

Coun. Russel paid a visit to relatives at Ozenden, on Colpoy's Bay the past week.

Miss Jennie M. Long has accepted a position as teacher of a school near Chesley.

Judge Klein is up in Lindsay Tw'p. this week regarding a ditch and water-course.

Corp. W. F. Swanston of the 160th Batt., arrived home on furlough Monday night.

Miss Eleanor O'Malley of Buffalo is visiting her parents, Mr. and Mrs. Jno. O'Malley.

Mrs. Etherton has moved from C. Patrick's flat to Mr. S. A. Rife's house on Scott St.

Gunner Norman Hibbert of the 50th Battery, was home from Petewawa for the week-end.

Lieut. Vic. McKechnie of the 160th spent the week-end with his parents, Mr. and Mrs. D. McKechnie.

Miss Jean Haugh of Lindsay is here to spend a fortnight's holiday with her cousin, Miss Minnie Kerney.

Mr. John A. Long, Divisional Signal Corps, is home from Ottawa, on a visit to his parents, Mr. and Mrs. Robert Long.

The Hydro Electric Power has been off at Palmerston and other towns twice this week, on account of trouble at Niagara.

Messrs Kolpin and Ernel and their families motored to Berlin on Sunday returning on Monday after having had a pleasant visit with friends there.

Miss Margaret Smith, who was operated upon for appendicitis at the County Hospital recently, is getting along splendidly and will be removed to her home before the end of the week.

Mr. Joe. Chesney's little six-year-old daughter, Annie, had her foot badly cut by an old tin can on Friday. She was playing in her bare feet at the time and jumped from the fence, alighting on the can.

Five rinks of local bowlers motored over to Hanover Monday night and played a return match with the devotees of the green in that town. The visitors had an enjoyable outing and were up on the total score.

Mr. George Lawrence, who works for Mr. Norman Brockelbank, Durham Road, had his right foot badly cut by a stone while bathing in the river last Wednesday night. The gash was a deep one and he will be laid up for some time.

Probably no battalion receives more favourable mention in Sir Max. Aitken's new book "Canada in Flanders" than the 13th Battalion Royal Highlanders of Canada, in whose ranks "Reg" McCarter was fighting when killed in action.

Mr. Ezra Briggs arrived home on Tuesday from a two weeks' trip to the West. Mr. Briggs has visited the Western Provinces a number of times but on this occasion Briggs took a new route going by G.T.P. He was greatly impressed with the possibilities of the Clay belt of Northern Ontario and believes that Country has a great future ahead of it. Both in Manitoba and Dakota the crop outlook is good. In North Dakota, he attended a family reunion of five brothers and one sister at the home of his brother, who is very poorly with heart trouble and is not expected to live.

The Guelph Mercury had a half-column write-up of a great picnic given by Mr. J.A. McCrae of that city to his staff of employees and to his successors, Messrs Huether & Todd. A merry crowd of twenty-seven were taken by four-horse tally-ho to Puslinch Lake, where an enjoyable day was spent in boating, swimming, baseball, etc. Messrs Huether & Todd spoke of their appreciation of Mr. McCrea's courtesy in the course of selling out, and of how they appreciated the loyalty of the staff to the new firm. Messrs Huether & Todd have one of the largest grocery and meat businesses in Western Ontario. They have a large staff of salespeople and no fewer than eight delivery rigs are required by firm.

Ice Cream, Bulk and Bricks at Mrs. Stead's.

All Neilson's lines of chocolates at Mrs. Stead's.

Miss Cooke is spending her holidays at Guelph and Mildmay.

Mr. Ed. Pengelly is spending a few days at Port Elgin this week.

Miss Estelle Schumacher of Sublette, Ill., is holidaying at her home here.

Mr. George Spence of Regina has been visiting the old town this week.

Chocolates and Bonbons Neilson's, Moir's and Huyler's at Mrs. Stead's.

Mrs. M. L. Van Horne of Minneapolis, Minn., is visiting at Mr. Wm. Van-Horne's.

Mrs. B. N. Richardson and little son Gerald of Toronto are visitors at Mr. E. Myles.

There are twenty-four Mac Donalds in the 160th Bruce Batt. What do ye ken about that?

Pte. Finley McInnes of Lucknow was reported "prisoner of war" in yesterday's casuality list.

Mrs. Angus Smith of Owen Sound visited Mr. and Mrs. John Smith during the past week.

It is now about two weeks since the mercury became addicted to the habit of hanging around 90.

Mrs. Gibson returned home last week from Thorold, accompanied by her daughter, Mrs. Munroe.

Moir's Chocolates, Halifax, are first choice among those who pick and choose.—Sold at Mrs. Stead's.

Rev. D. McLennan was in Toronto on Saturday, taking a young boy to the industrial school at Mimico.

Miss Anna Selwood of Detroit and her friend Miss Marion Shaw of Thessalon, are visiting the former's sister, Miss Selwood.

Dr. and Mrs. Walton Dixon and little daughter Marie, of Calgary, and Mrs. Thos. Dixon spent the week-end at Southampton.

Miss Helm and a party of friends from Berlin motored to Walkerton one day last week an called on Miss Rolston and other friends in town.

Corp. Harry McDougal's father, an old resident of Kincardine, was suddenly stricken with paralysis at Kincardine last Sunday afternoon and passed away the same evening.

A report was circulated last week and published in some local papers that Bandmaster Wright of the 160th Batt. had resigned. We understand that this rumor was incorrect.

At Osgoode Hall, Toronto, last Wednesday, Mr. Geo. H. Kilmer K. C. moved to have Perry Ell of Walkerton declared a lunatic and a committee appointed to look after him and his property. An order was granted.

Two case of infantile paralysis have been discovered at Todmorden, a suburb of Toronto. There are now 17 cases in the provinces. Dr. McCollough says he does not fear an epidemic such as is occurring in New York.

Mr. Charles Stephan returned on Saturday from Algonquin Park where he has been enjoying a much needed holiday the past month. Mr. Stephan acquired a tan which rivals the redskin's complexion and comes back from his outing feeling as "hard as nails."

About two weeks ago, while attending a garden party at Pinkerton, Stanley Purdy had a new bicycle exchanged for an old and much inferior wheel. Thos. H. Purdy of Pinkerton, father of the boy, suspected crooked work and put the case into the hands of Constable Leitch of Paisley. The constable became suspicious of a Paisley boy, who sported a wheel answering all descriptions with the exception of color. Investigation showed this had been changed. The boy when accused protested his innocence, but later confessed, Mr Purdy recovering his property.

The Town Hall which has been in the hands of the brick mason, carpenters and painter, lately undergoing some necessary repairing will soon be ready for occupation again. The interior has been freshly decorated and presents a bright and clean appearance. Two new stairways are in process of erection at the rear, which will furnish additional exits from both the main floor and gallery. Altogether the building is much improved in appearance and it has been made absolutely safe, according to the architect's report, through the erection of the heavy buttresses at the sides of the building and the filling in of the walls in the lower storey.

Miss Emma E. Grainger, daughter of Mrs. John Grainger, West Ward, left on Tuesday for Montreal to join a party of 110 Canadian nurses who have offered their services for the Front and have been accepted by the Canadian Government. Miss Grainger was a graduate of Lowell Hospital, Lowell, Mass. and had taken a post graduate course at another hospital before practising as a trained nurse at Boston for several years. Although living in the United States Miss Grainger was none the less anxious to do her bit with the other brave Canadian girls who are doing invaluable service at the Front. She expects to sail from Montreal within a couple of weeks.

THAT COUNTY MEETING

Prominent Citizens Gathered From All Parts Of Bruce To Hear Recruiting Speaker Who Did Not Show Up —Delegates Appointed To Go To London Next Wednesday.

Prominent citizens gathered from all parts of the County on Thursday last, at the summons of Warden McNab, and Judge Klein, President of the Preparedness League, to hear Lieut. Col. McCrimmon, District Recruiting Officer, or Col. Williams, Dominion Recruiting Officer on the recruiting question. The meeting was called at the request of Lieut.-Col. McCrimmon, the hour mentioned being two o'clock at the Court House. When the citizens gathered for the meeting and waited for two or three hours, with no speakers putting in an appearance, they naturally got a bit hot under the collar. A number of the men who had come thirty and forty miles for the sole purpose of attending the meeting had to return home without having accomplished anything. The following resolution was passed by the gathering before they dispersed:—

"Moved by D. Phelan (Reeve of Greenock,) seconded by D. A. McDonald (Reeve of Kinloss) that this meeting of representative men of Bruce County assembled at the request of Lt.-Col. McCrimmon on July 20th at the call of the President of the Bruce Preparedness League in the Court House of the County Town of Walkerton to hear Col. McCrimmon or Col. Williams on the question of recruiting are deeply disappointed that this representative gathering were unable to be enlightened on this matter owing to the non-appearance of either of these gentlemen. This gathering desires to point out that Bruce County has contributed as requested in men and money, and while still willing to do more, where need is shown, awaits more responsible leadership in this great matter of Empire service.

The ladies of Walkerton had been called together to hear Col. Williams at three o'clock, and they were of course also disappointed.

THE NIGHT MEETING

About 6 o'clock when a large number of the men had left town for their homes, Col. Williams arrived by auto, and was totally ignorant of the fact that a meeting had been arranged for the afternoon by Lt-Col. McCrimmon. He had expected to address a night meeting. As many as possible were hurriedly got together and a meeting was held at the Town Hall at 7.30 o'clock.

Col. Williams who is an able and fluent speaker, with a thorough grasp of the situation, gave a general talk on the Empires needs, and announced that a general meeting could be held at London on August 2nd. with a view to formulating a recruiting policy for Western Ontario and he asked that Bruce County send a number of delegates to that meeting.

Judge Klein said he believed it would be hard to interest the people throughout the county just at the present moment in the formation of a second battalion. After the harvest would be a more opportune moment. If the men of Bruce were brought to see its real necessity they would be ready to make very real sacrifices.

W. D. Cargill said that in his home village they were so short of help for the harvest that they had to close the mills to get help. He did not believe there were many more available men in this section. Mayor Miller of Kincardine also spoke.

Col. Williams pointed out that the women could help wonderfully in recruiting by their attitude towards their men, as well as in the various channels in which they have helped so much. He asked that the ladies also name delegates for the London meeting on August 2nd.

The following delegates were appointed: — Warden McNab, Judge Klein, S. R. Brill, Teeswater; R. D. Cameron, Lucknow; G. H. Mooney, Ripley; D. B. McDonald, Tiverton; E. R. Sayles, Port Elgin; C. M. Bowman M. L. A. Southampton; H. McKerracher, Paisley; Sheriff Jermyn, Wiarton; S. C. Cooper, Lionhead; James Douglas, Hepworth; Jas. A. McDonald, Tara; C. J. Mickle, Chesley; W. D. Cargill, Cargill; John Rowland, Walkerton; Dr. J. A. Wilson, Mildmay; Jas. Johnston, Bruce; Mayor Miller, Kincardine; Alex McCannell, Saugeen Tp; C. E. Whicher, Colpoy's Bay.

Among the men from out of town present during the day were:—Mayor Miller, Reeve Hunter, and Ex-Mayor Patterson of Kincardine; Reeve W. H. Brown and Chas. E. Biehn of Chesley; E. Roy Sayles, Port Elgin; Reeve Dan McDonald of Kinloss; Ex-Warden L. Schumacher, Hugh McKerracher, Jas H. Steele, Reeve Ballachey, Geo. Welsford of Paisley; J. A. Carrick, Mr. Thompson of Carrick; W. D. Cargill, M.P.P., Reeve D. Phelan, Sam Hawthorne of Greenock; Reeve Nesbitt, and Deputy-Reeve Arch Weir, of Brant and others.

WIT AND HUMOR

HIGHER MATHEMATICS
(Jester)

"A kiss is nothing divided by [illegible]."
"Enh! That's old stuff. A kiss is two divided by nothing."

THE WHOLE TROUBLE.
(Record)

He—What was wrong with the Gaddskes' party?
She—Too much stick in the girls and not enough in the punch!

THE IDEA.
(Baltimore American)

"I am going to have an old beau for the hero of this story."
"That's a dandy idea."

DOUBLE BARS.
(Life)

Knicker—Is Jones on a restricted diet?
Bocker—Terribly; he is confined to what he can afford and his wife can cook.

YET SOME ARE.
(Washington Star)

"A little learning is a dangerous thing."
"Yes," replied Miss Cayenne. "But that fact doesn't justify some of us in being proud of how little we know."

PREPARED FOR IT.
(Life)

Belle—Marie married a genius.
Millie—You can't mean it?
Belle—Yes, but she has talent and can support him.

A SPLIT.
(St. Louis Post Despatch)

Knickers—What do you tip the waiter?
Bocker—Half way between what he expects and what I can afford him.

A DISTINCTION.
(Baltimore American)

"I hate jam."
"Do you mean on bread or in the trolley cars?"

NATURAL TO EXPECT.
(Baltimore American)

"I want cut rates on this job."
"What is it?"
"Trimming my trees and hedges."

THE BOSS.
(Richmond Times-Despatch)

Grubbs—Dinks says that at last he is the undisputed master of his house.
Stubbs—He is, too. His wife and family are away on a visit and the cook has quit.

LET WELL ENOUGH ALONE.
(St. Louis Post Despatch)

"My player-piano is out of order. The bellows are so leaky that it's impossible to play on it. I wonder how I could fix it?"
"Why trifle with your luck?"

CONDITIONAL.
(Life)

Head of Firm—We are thinking of increasing your salary, Mr. Lubleigh. You don't object, do you?
Bookkeeper—No, sir, not if you will first promise me you won't let my wife know it.

HIS RESPONSIBILITY.
(Life)

Judge—This man was a stranger to you! Then why did you pick a fight with him?
Kelly—All me friends is away on their vacations!

STARK REALISM.
(New York Times)

Mother (entering the nursery)—Children, why do you sit about looking so solemn and unhappy? Why not play a game of some sort?
One of 'Em—We are playing. We're grown-up ladies making a call.

GROWING UP.
(Topeka Journal)

"Your daughter is getting to be quite a big girl, isn't she?"
"Yes; she's big enough now to wear short dresses."

HIS ONLY FEAR.
(Baltimore Sun)

Damocles saw the sword suspended by a hair.
"Quite safe," he declared. "Now show me a sword suspended by balloons."

FIERCE FLUIDS.
(Washington Star)

"What made the trouble for the original inhabitants of America was firewater."
"Yes," replied Mr. Chuggins, "and what is making the trouble for the modern inhabitants is gasoline."

HAD BEEN TESTED.
(Life)

Carrie—See the diamond ring Arthur gave me. Isn't it a beauty?
Bessie—Indeed it is. Do you think it is genuine?
Carrie—Genuine? Why, it cut another fellow out of me.

GETTING THE WRONG MAN.
(Washington Star)

"There is something wrong with the penal system," remarked the thoughtful woman.
"What makes you think so?"
"That bandit who made all kinds of trouble is still roaming the world a free man, and my husband, who is as conscientious and law-abiding citizen as you would want to meet, is locked up on jury duty."

THE TEST.
(Life)

"We never know what we can do till we try," quoted the Parlor Philosopher.
"That's right," assented the Mere Man. "Many a girl who tells a fellow she couldn't live without him finds it remarkably easy after they have been married a while."

IN AGREEMENT AT LAST.
(The Christian Herald)

Elias fled before his irate wife, and seeking the first shelter that presented itself crept under the bed, from where, after a short time, he peered cautiously out.
Seeing his wife standing near by with an upraised broom, he enquired:
"Mirandy, I think it's about time somebody was boss in this house."

PRECAUTIONARY.
(Washington Star)

"Can you accommodate myself and family for summer board?"
"What's your politics?" inquired Farmer Corntossel.
"Does that make any difference?"
"Yep. I'm not going to take another chance on havin' the whole place stirred up with arguments day an' night. All the folks that board here this summer has got to have the same politics."

BILKINS' SCHEME.
(Pacific Service Magazine)

Roderick—Great Scott! Has Bilkins lost his mind?
Van Albert—I don't think so. Why?
Roderick—Just look at the illumination in his house. He has had every gas jet burning all day.
Van Albert—Oh, that's just a little scheme Bilkins has to increase the gas bill this month. His wife is coming back to-morrow, and he told her he had been remaining at home all evening every night since she went away.

A WEE BIT SANE.
(Christian Herald)

While a certain Scotch minister was conducting religious services in an asylum for the insane one of the inmates cried out wildly:
"I say, have we got to listen to this?"
The minister, surprised and confused turned to the keeper and asked.
"Shall I stop speaking?"
The keeper replied:
"No, no; gang along, gang along; that will not happen again. That man only has one lucid moment every seven years."

CROSS PURPOSES

I.

"All women are match-makers—some for themselves, and the rest for other people," said Mr. Francis Leicester. He stood at his own hearth-rug, with his back to his own chimney-piece, and surveyed the subject comprehensively from that advantageous position. And he was entitled to have an opinion of his own about it, for he was nearly three-and-twenty.

Two ladies were present. "Which am I, pray?" said the younger, instantly accepting the challenge. She looked up at the speaker with great bright brown eyes, like those of some sylvan creature. "Which am I—for myself or for other people?"

Frank laughed, and turned away a little, gazing at a golden effect of September sunshine on an old family portrait. "Oh, I am not going to be personal," he said; "you don't catch me so. I mean women in general."

"Oh, woman in general! I don't care for women in general," said Miss Vivian; "and I don't much believe that anybody else does."

"I may say what I like, then?"

She nodded gravely. "Yes; on the understanding that it doesn't apply to anybody in particular."

"I'm afraid, perhaps, that won't be very interesting," said Frank, doubtfully.

"I'm quite sure it won't be; it makes me yawn only to think of it."

"But this does apply to somebody," said young Leicester's mother, smiling from her easy chair. "Frank means me. Whenever he wants to make rude remarks about anything I do, he always calls me women in general. But this time he ought to be ashamed of himself, for—thank goodness!—whatever I may be, I am not a match-maker."

"Say that again!" Leicester exclaimed. "To-day of all days!"

"Well, I am not!" she repeated, firmly. "I don't want to make a match of it, I'm sure. Only it seemed hard that they shouldn't meet somewhere and have another chance."

"Just so," said Frank. "Let's hope they'll profit by it. I should think they might know their own minds by now; they are getting rather elderly, these lovers of yours, aren't they?"

"Elderly—well, they are not so young as Tiny here; but they are a good deal younger than I am. I don't see why they shouldn't have their feelings as well as other people."

"Oh, I've no objection," said Frank, with his hands in his pockets and his chin a little higher than usual. "If I wanted to make a match, it should be a new one while I was about it, not a rechauffe affair like this. But that's your concern, and I'm sure I wish you all success. Give them their wedding-breakfast, if you like. I'll throw old shoes after them, and go in for all the rest of the foolery with the greatest pleasure." He turned to Tiny Vivian. "Will you be bridesmaid?"

Tiny nodded. "If it's a pretty dress."

"That's settled, then. You shall support the elderly bride; I'll be best man, and my mother shall be the rest of the affectionate relatives. Why, we can do it all in the family! No, though! who's to give her away? The best man can't, can he?"

"It doesn't sound quite proper. I wouldn't have the best man give me away," said Tiny.

"Better have the best man to take you," Frank suggested. "Well, it's awkward, but for such a little amateur performance I think I might double the parts."

"Couldn't you manage a slight change of costume as you dodged from one side to the other?"

"Do not be so silly," said Mrs. Leicester. "And do remember that it is a secret—that nobody knows anything about this old love affair. It is quite a secret."

"You hear?" said Frank, turning his head a little, and looking down at Tiny.

"I don't see why you say 'You hear?' to me. I'm sure you're quite as bad, or worse," said the girl, smartly.

"Oh, but it isn't that. I wasn't doubting your discretion or my own; but I thought you might have a few spare secrets about you, and not have known where to put them for safe-keeping. I wanted you to observe that you might bring them here."

"Now, Frank, you know I always do keep secrets," said his mother. "I shall keep this one," she added, virtuously. "I'm only afraid you and Tiny won't."

"I should keep it better, I think," said Tiny, "if I knew a little more about it. One is so apt to let out half a secret while one is hunting about for the other half—don't you think so?" She laid her hand coaxingly on Mrs. Leicester's. "Do tell me. If nobody knows it, how do you know it?"

"My sister told me—my dear sister, who is dead," Mrs. Leicester replied, in a slightly altered voice. Tiny's brown eyes dilated for a moment, and the corners of her eager, smiling mouth went down a little. It was just the attention which any mention of the King of Terrors ordinarily receives in the course of conversation. "But there's hardly anything to tell," the elder lady went on; "Caroline knew something of young South when he was really little more than a lad, and he liked to talk to her about Miss Fairfax. It was quite a boy and girl attachment, you know; I don't think it was ever allowed to be a regular engagement; but Caroline used to tell me about it till I felt as if I knew him. She said it was quite touching to see how the young fellow worshipped the very ground Mildred Fairfax trod on. And then he got his commission, and was ordered off to India. Oh, it's a long while ago! I remember Caroline coming in to tell me that she had just said good-bye to him, poor boy."

"He went away," said Tiny. "Yes, but why didn't they marry afterward?"

"Well, I don't know. After Caroline died, I never heard any more about them. But when Mildred Fairfax was four or five and twenty she married young Austin, and he was a friend of my husband's; so I saw something of her then, of course. We gave them a pair of candlesticks, pink and gold, very pretty; Mr. Leicester bought them in Paris. But I suppose they would be quite wrong now."

"Never mind; most likely they are broken," Frank suggested, in a consoling voice.

"It was Miss Fairfax who didn't wait for Mr. South, then?" said Tiny, pursuing the story. "And did he get married, too?"

"Oh, no; he never married. He wasn't in the army long; he sold out, and went to live with an uncle, who died some years ago, and left him a nice little property. No, he never married."

"Why didnt she wait for him? I shan't like her! Was Mr. Austin rich?"

"Pretty well, I think. He was a barrister, but he had money of his own. She is left very well off altogether. But I had quite lost sight of her for a long time till we happened to meet at the Stauntons' place a month ago, and I asked her to come and stay a few days. That's all."

"I shan't like her," Tiny repeated, softly. "But you haven't accounted for Mr. South, now," she persisted, with pitiless interest.

"Oh, that was rather funny; it was at Mr. Lane's—Minna Wilkinson she used to be. Some one spoke of Mr. Gilbert South, and I was curious. I asked to be introduced to him, and we had quite a long talk about poor Caroline and old times. Wasn't it odd I should meet him just after I had seen Mrs. Austin again? He mentioned her, and told me he used to know her, and began to ask so many questions that I invited him to come and meet her here. And he jumped at it—quite jumped!" said Mrs. Leicester, sinking back.

"He is in love with her still," she Tiny, pensively; "but she doesn't deserve it."

Frank settled his shoulders against the carved wood-work of the chimney-piece. "But how long ago is it since these young affections were blighted?" he inquired. "That's what I want to know."

Mrs. Leicester sat pondering the question. "I don't quite know," she said. "What year was it that young South went out to India? I could find out—I must have got it down somewhere, for it was just when you had the measles."

Frank uttered a very impatient ejaculation. "I wish to Heaven there was something you couldn't calculate in that fashion!" he said. Then he began to laugh, and turned half apologetically to Tiny. "Haven't you noticed? My ailments, whooping cough and mumps, and that kind of thing——"

"Frank, you never had mumps! You are thinking of——"

"— have infected all history. In fact, nothing has happened but my ailments ever since I was born. Ask my mother."

Mrs. Leicester, who had risen to take her knitting from the table, laid her hand on his sleeve. "They haven't been very bad, luckily," she said, looking up at his handsome, healthy face.

"If they had been, the world would have come to an end, wouldn't it?"

"Yes," she said, "it would—for me."

Frank bent his head and touched her smooth forehead with his lips. "For sentimental folly," he remarked, as he disengaged himself, "there is nothing like—like—women in general! Well, good bye for the present."

"Where are you going?"

"Why, your superannuated lovers can't be here, either of them, for the next hour, and I promised Huntley I'd go and look at those cottages by the river they say ought to come down. It's a shame to spend such an afternoon indoors." He looked at Tiny. "Won't you come, too? You haven't had a walk to-day."

"Not had a walk! Well, you were playing lawn-tennis for hours—I should like to know what you call that!" Mrs. Leicester exclaimed.

"I call it lawn-tennis," said Frank.

"It wasn't a walk," Tiny chimed in. "I'll get my hat; I should like to go." She was at the door in a moment, looking back with an eager, glowing little face as Mrs. Leicester called after her, "Mind you are not late coming home."

Frank Leicester was a fine young fellow, good-looking, good-hearted, good-tempered, and the owner of Culverdale Manor. Had he described himself, he would have given that last clause the foremost place. He was intensely conscious of the fact that he was a landed proprietor, and family tradition had impressed him with the belief that Culverdale Manor, taking it altogether, was the most desirable spot on the surface of the globe. Any trifling drawbacks were honorably disposed of in the limitation "taking it altogether." Frank could not part himself in his own mind from the estate, which had belonged to the Leicesters for so many years. He was young Leicester of Culverdale, and, if he had not been Leicester of Culverdale, he would hardly have known what he was or what he could be. It may be questioned whether it would have been possible to make provision for Frank anywhere else in the universe. It would certainly have been difficult. In his own house, on his own land, or in any company where there was the requisite knowledge of the importance of Culverdale, he was fearless, outspoken, and perhaps a little conceited, with the happy and harmless conceit of a young fellow who has been petted all his life, and thinks the world at once better and easier to deal with than most of us find it. But in any society where Culverdale counted for nothing, he would have been shy and humble, with a very moderate opinion of his own abilities. Briefly, it may be said that Frank was Culverdale. It was a prosperous, well-managed, wealthy, and sheltered estate, beautiful after a certain trim and English ideal of beauty, but with nothing wild or original about it. It was just so much placid contentment lying in a ring fence. Frank was one with Culverdale when Culverdale was at its best, with the airy and hopeful freshness of spring about it, and the beauty of promise in copse and meadow. Whether he would ever be one with Culverdale when it was at its worst, an expanse of sodden and heavy acres lying drearily under a dull November sky, was a question which might suggest itself to a chance observer more readily than to those who knew and loved him as he was.

Perhaps it is unnecessary to say that Frank was essentially a country gentleman. There was a pleasant harmony between the young squire and his surroundings which would demand a pleasant word to describe it. It is true that he had traveled as much or more than his neighbors, making the most of a limited knowledge of that tongue which is neither English nor French, though it has affinities with both those languages. The fact that Culverdale was not much known on the Continent did not depress Frank. He was sorry for the natives of other lands (comprehensively described as "foreign beggars"), who, owing to misfortunes of birth and training, could not appreciate the position he held at home. As he felt himself unable to explain it with any degree of precision, he acquiesced in their ignorance with the good-humored tolerance of a young prince in disguise. He had read his Murray in a good many historic localities, could find his way, with a sense of old acquaintance, through the streets of Paris, and would have been greatly surprised if any one had told him that he was more countrified than his cousin Tiny Vivian, who had never crossed the Channel and had only enjoyed an occasional week in town. It was true, nevertheless. Tiny, with her bright, innocent brown eyes and eager youthfulness, was so evidently undeveloped that it was impossible to classify her. The budding plant might open in the old garden where it had grown, or might be transferred to a conservatory to blossom more delicately there. But Frank had carried that slight rusticity of his to two or three European capitals, and brought it back to the peaceful English home where the rooks were cawing in the elms outside his windows, and the doves cooing in the tangled copses.

Mrs. Leicester went back to her easy chair when Frank and Tiny had left her that afternoon, and gave herself up to drowsy meditation. "A match-maker, indeed!" she said to herself, as she leaned back, suffering her knitting and her plump white hands to lie idly in her lap. "As if I shouldn't make a match for Frank, if I did for anybody! And no one can say I ever tried that." It was quite true. Mrs. Leicester had perceived that important young men were fatally apt to fall in love in a wrong, or, which was much the same thing, in an eccentric fashion, and she had determined that if Frank would but choose some one fairly unobjectionable she would ask no more. Hitherto, in spite of many little flirtations, he had escaped the snares laid for him at garden parties and county balls, and had returned from all his wanderings apparently unscathed. So far as he showed any real preference it was for Tiny Vivian, who received his attentions in a very guileless and simple manner. It would be great promotion for Tiny to be mistress of the old Manor house, which was a paradise to her girlish fancy, but Frank's mother was quite ready to welcome here there, and was very good meanwhile in the matter of invitations. Mrs. Leicester was an amiable, kindly, easy-going woman, and was really fond of the girl, yet in her fierce motherly fondness she would have sacrificed her any day, body and soul, for Frank. Tiny must take care of herself. If Frank wanted her, well and good, but if the young prince should chance to discover a more suitable princess elsewhere, his little cousin must go back to her own people, heart-whole or heart-broken as she might chance to be.

Mrs. Leicester's thoughts turned from Frank and Tiny to her expected visitors, and drifted idly in the past, to which they belonged. How well she remembered the dull autumn afternoon when Caroline came in to tell her that Gilbert South was gone, and how he had done his best to preserve a manly demeanor to the last. "Poor boy! poor boy! I only hope Mildred Fairfax will be true to him," said the kindly, sentimental Caroline, while her eyes filled at the thought of his sorrow. The sisters were excited over the love story, but naturally it failed to interest the fretful little tyrant who had the measles. Poor Aunt Carrie had to wipe her eyes and relate a wonderful story about soldiers who went away in ships, but who were all coming home again very soon, Mildred Fairfax was not required in Frank's version of the romance. Aunt Carrie told no more stories; she was dead before the young lover reached India; and Mrs. Leicester, looking back across the long years which parted her from her favorite sister, a sad pleasure in taking up the unfortunate love story of whose earliest beginning she had been the confidante. She had a vague feeling that it might please Carrie if she could give Gilbert South a chance of being happy after the fashion that Carrie had planned so long ago. It was a late and unsatisfactory conclusion, perhaps, yet the best that she could see, and there was a sentimental charm about it which appealed to Mrs. Leicester's easily touched feelings; so she sat in her easy-chair, thinking it all over, till the figures of the old story—Caroline, Gilbert South, and Mildred Austin—came and went in something of a confused and softened vision before her half-closed eyes, while the window near which she sat became a great sunset picture of darkly towering trees and yellow sky. The sound of wheels passed through her pleasant dream, which was hardly so much dispersed as a little more defined when Mr. South stood on the hearth-rug where Frank had stood a couple of hours earlier. He spoke in soft, deliberate tones, and looked round the room with a covert inquiry in his glance.

Mrs. Leicester made an effort, and was glad that he had a pleasant drive. "You find me all alone," she said; "Frank is out somewhere, and so is Miss Vivian, who is staying with us. They were playing lawn-tennis all the morning, and they have been walking all the afternoon."

Mr. South expressed his admiration of such unflagging energy. "It wouldn't suit me," said Mrs. Leicester, candidly; "but I have a sort of recollection that when I was young I used to think I would run about all my life."

"Ah, when one was young!" said Gilbert South, with a smile. "And so you are all alone?" he repeated, still looking round with questioning eyes.

Mrs. Leicester awoke to a sudden comprehension of her companion's anxiety. "I shouldn't have been alone long, even if you hadn't come," she said. "I am expecting Mrs. Austin—I told you she was coming, if you remember. She was obliged to put her visit off for a few days, and she arranged to come this very afternoon—in fact, I have sent to meet her."

"How does she come, then?—by a later train? You need not have sent twice, Mrs. Leicester—I would have waited."

(To be continued.)

"One good turn deserves another," quoted the Wise Guy. "Yes, but unfortunately, perpetual motion as never fully materialized," added the Simple Mug.

My Town.

I know my town, and I love my town
 And I want to help it be
As great a town to every one
 As it seems to be to me.
I praise my town and I cheer my town,
 And I try to spread its fame;
And I know what a splendid thing
 'twould be
 If you would do the same!

I trust my town and I boost my town
 And I want to do my part
To make it a town that all may praise
 From the depths of every heart!
I like my town and I sing my town,
 And I want my town to grow;
If I knocked my town or blocked my
 town,
 That wouldn't be fair, you know.

I think my town is the very best town
 In all the world—to me;
Or if it's not, I want to act out,
 And try to make it be!
I tell my town and I preach my town,
 As I think a fellow should—
Who has more at stake than to win or
 make
 For the love of the common good!

I bet on my town, and I bank on my
 town,
 And I think it fine to feel—
When you know your town and you love
 your town—
 That it's part of your honest zeal!
I'm proud of my town, I love my town,
 And I want to help it start—
And that's the way to help a town—
 Not curse it and despair!
 —The Baltimore Sun.

A WOMAN'S MESSAGE TO WOMEN

If you are troubled with weak, tired feelings, headache, backache, bearing down sensations, bladder weakness, constipation, catarrhal conditions, pain in the sides regularly or irregularly, bloating or unnatural enlargements, sense of falling or misplacement of internal organs, nervousness, desire to cry, palpitation, hot flashes, dark rings under the eyes, or a loss of interest in life, I invite you to write and ask for my simple method of home treatment, with ten days' trial entirely free and postpaid, also references to Canadian ladies who gladly tell how they have regained health, strength, and happiness by this method. Write to-day. Address: Mrs. M. Summers, Box 8, Windsor, Ont.

Some Recent British Jokes.

MANY SHOTS NEEDED.

A girl who had just become engaged to a young "sub," was telling her best friend that he'd threatened to shoot anyone who dared to kiss her. "He'll need a machine gun, won't he, dear?" was the rather pointed comment.

NATURE'S SWEET RESTORER.

The Dublin foreman found a navvy asleep on the dock when he should have been at work. "Slape on," muttered the foreman. "While ye slape ye're on the payroll. When ye wake up ye're out av work."

AWKWARD.

A hurried glance at the latest number of the Sphinx, the bright official organ of the 2nd 6th Batt. Manchester Regiment, yielded this:

"What's the matter, Colonel?"

"I told my man to take my horse and have it shod, and the fool's misunderstood me, and has gone and had it shot!"

THE OLD AND THE NEW.

The Old Version—Men must work and women must weep.

The New Version—Men must fight and women must work.

Sillicus—Oh, all women are the same. Cynicus—Don't you believe it. In fact, even one woman isn't the same for any considerable length of time.

Daugerous Throat Troubles Prevented by Nerviline

IT ENDS MISERY OF COLDS QUICKLY.

Don't wait till night.

Get after your cold now—this very minute, before it grows dangerous you should apply old-time "Nerviline."

Rub your chest and throat, rub them thoroughly with Nerviline. Relief will be immediate.

Nerviline will save you from lying awake to-night, coughing, choking and suffering from congestion in the chest and acute pain in the throat.

Nerviline will break up that dull neuralgic headache—will kill the cold and chill at its very beginning—will save you from perhaps a serious illness.

To take away hoarseness, to break up a grippy cold, to cure a sore throat or bad cold in the chest, you can use nothing so speedy and effective as Nerviline. For forty years it has been the most largely used family remedy in the Dominion. Time has proved its merit, so can you by keeping handy on the shelf the large 50 cent family size bottle; small trial size 25 cents, sold by any dealer anywhere.

ANTIQUES

As a well-preserved antique the Wedgwood table-service, made in 1773-4 for the Empress Catherine of Russia is without a parallel in ceramic history. This service consisted of over one thousand pieces, each article painted with a crest and embellished with a view picture, no two scenes being alike.

The cost of the service was about fifteen thousand dollars, and its destination, when completed was the palace of Tzarsko-selo, near St. Petersburg. It was much-talked-of at the time, but gradually went out of sight, and little was heard of it during the last century.

About ten years ago the writer of these notes compiled memoranda upon the subject, and photographed what was then supposed to be the only remains of the service—five plates owned by members of the Wedgwood family. Subsequent inquiries at the Russian court led to a search among the Imperial Palaces, and some eight hundred well preserved specimens were unearthed, a portion of which were later exhibited in London, Eng.

The order was for a vast "creamware service for every purpose of the table," and the writer is of opinion there never has been a table service produced, in any kind of ware, in which so many new forms were first introduced as in the "Great Russian Service." Each piece was to bear a different scene, and as the service was for use at the "Grenouilliere" (a part of the Palace of Tzarsko-selo), a child and a frog were to be painted on the underside as a distinctive mark.

The "child" part of the crest was later on countermanded and the "frog" (grenouille) appeared, painted green, within a shield, inserted into the border which ran around the rim of each piece of ware, instead of underneath, thus forming part of the decoration.

The production of a service of such high character and liberal proportions opened out paths leading to the betterment of the pottery industry of the end of the eighteenth century, and its effect upon art industries generally was beneficial and lasting. For the modeller it largely extended the range of shapes and articles required for table purposes; to the decorator it meant the infusion of new blood and the adoption of new methods of treatment, as the decoration being mainly of the picture order and requiring the services of a greater number of artists than were available, with pottery-painting experiences, other branches of art had to be requisitioned.

The situation is summed up in the words of Josiah Wedgwood, addressed to his partner, Thomas Bentley:

"Dare you undertake to paint the most embellished views, the most beautifull Landscapes, with Gothique Ruins, Grecian Temples, and the most Elegant Buildings, with hands who never attempted beyond Huts and Windmills upon Dutch Tile at three-halfpence a doz.? And this, too, for the first Empress in the World! Well, if you dare attempt and can succeed in this, tell me no more of your Alexanders, no nor of your Prometheuses neither, for surely it is more to make Artists than mere men."

Minard's Liniment Cures Dandruff.

Varieties of Wrens.

There are many varieties of wrens, more than 150 species in both hemispheres, and they are grouped under the general term "troglodytes," which is Greek meaning "one that creeps into holes."

The common wren of Europe, which is very like our best known wren, has many pet names. The French have given it more than a hundred endearing names, and Germany, Italy and other countries have done nearly as well. In the folklore of those countries the wren is credited with being a transformed fairy and with an amount of wisdom far greater than its size would indicate.

Avoid Harsh Pills! Doctors Condemn Them

Most Pills unfortunately are harsh and drastic; they cause inflammation and great discomfort. Rather like nature is the way a pill should act, mildly, but effectively. Science has established nothing more satisfactory as a family pill than the old reliable pills of Dr. Hamilton's, which for forty years have had a premier place in America. Dr. Hamilton's Pills are very mild and can be effectively used by the aged, by children, and indeed by men and women of all ages. No stomach or bowel medicine is more reliable. No remedy for indigestion, headache or biliousness is so effective, so mild, so certain to quickly cure as a 25c. box of Dr. Hamilton's Pills.

THE DEUTSCHLAND.

Some Interesting Points Her Arrival Creates.

The claim is distinctly made for the Deutschland that she is a merchant vessel, "armed only for defence."

This raises interesting questions of law. For the most part they are simple enough. Assuming that the craft carries no torpedoes and no war equipment save perhaps a single gun, coming under the English and American rule of defensive armament, she is a merchant ship. Therefore, if her papers are found to be in due form, she may enjoy the use of our ports at her pleasure, may take on cargo and set out on her return trip. Peaceful use removes her war character. So she will not be obliged to leave in twenty-four hours or remain interned during the war.

Recrossing the ocean she will be subject to capture by British or French cruisers. But here arise questions of interest entailing possible communications. She may not be sunk without warning or without providing for the safety of her passengers and crew. She must be stopped and if there is doubt about her character she must be visited and searched. Then, after her company is made safe she may be sent to the bottom.

All that is plain. But must British cruisers hereafter observe these formalities with all German submarines, lest perchance they commit a Lusitania crime on a much reduced scale? And is it possible that the Germans have sent this U-boat over with deliberate attempt to veil their entire submarine operations in a protecting cloud of ambiguity, putting their enemies under obligations to visit and search every U-boat before opening fire? That would bring an unwonted element of comedy into the grave domain of international law. We should have to credit the Germans with a delightful sense of humor. The rule of solvitur ambulando would apply in most cases, we imagine, for the way of escape for a submarine is easy and promising. If the attempt were made the attacking ship would be blameless whether the U-boat went clear to the bottom under fire or only so far down as it pleased her to go under her own control.

But provocative of amusement and worthy of applause as the plan may be for its ingenuity it could serve no practical purpose. Encountered in mid-ocean a German U-boat might hereafter have comfortable ground for presuming that an enemy ship would give her some benefit of doubt. In the North Sea the presumption would lie all the other way and she would be sunk on sight. Nor could Germany complain overmuch if mistakes were made. The pretense that submarines sent out with cargoes and passengers for a 4,000-mile voyage are primarily and exclusively engaged in commercial ventures would not deeply impress a court of law. It would be only too evident that the real purpose was to create a saving presumption of merchant character for every U-boat, a mere ruse of war enjoying no title to respect after detection, in like case with a flag of truce repeatedly used to mask military strategy. The disguise would take fatal taint from what it sought to conceal. If that be the German purpose, no practical or legal end will be gained. At best the achievement of this bold craft will serve only to stir the wonder and promote the gayety of nations.—New York Times.

Minard's Liniment Co., Limited.

Gentlemen,—I was badly kicked by my horse last May, and after using several preparations on my leg nothing would do. My leg was black as jet. I was laid up to bed for a fortnight and could not walk. After using three bottles of your Minard's Liniment I was perfectly cured, so that I could start on the road.

JOS. DUBES,
Commercial Traveller.

Curious Manx Custom.

On July 5 every year all the officials of the Isle of Man, including the clergy in their surplices, walk to the top of Tynwald hill, and from the top of it the laws made during the year are promulgated in Manx and English. This promulgation of the laws on Tynwald hill is as necessary as the royal assent to the validity of all laws passed by the Manx legislature. This is one of the many relics which the old Norsemen left behind, and it dates so far back that its origin is lost in the mists of antiquity.—Liverpool Mercury.

Minard's Liniment for sale everywhere

Shopping in Europe.

Visitors from abroad are always surprised at the lateness of the hour at which London shops are opening. In all large towns on the continent shops are open and in working order at 8 o'clock or earlier. But in London one frequently sees a sleepy-eyed porter taking down the shutters at 9, while a walk down Oxford street or Regent street at this hour necessitates constant vigilance to avoid the debris and litter of the day before which is being turned out of the half-opened establishment.—London Spectator.

No More Corns

Cure Guaranteed

Never known to fail; acts without pain in 24 hours. Is soothing, healing; takes the sting right out. No remedy so quick, safe and sure as Putnam's Painless Corn Extractor. Sold everywhere—25c per bottle.

Scolds Gagged With Iron.

In the seventeenth century erring inhabitants of Newcastle used to undergo far more trying ordeals than that of the drunkard's cloak.

Ralph Gardner, in a work entitled "England's Grievance in Relation to the Coal Trade," published in 1655, records having seen "in Newcastle six months ago one Ann Bridlestone drove through the streets by an officer of the same corporation holding a rope in his hand, the other end fastened to an engine called the branks, which is like a crown, it being of iron, which was muzzled over the head and face, with a great gag of iron forced into her mouth, which forced the blood out, and that is the punishment which the magistrates do inflict upon chiding and scolding women."—London Express.

Times Office, Hamilton.

Eggs a La Quebec.

Cut an onion into fine dice, fry lightly in a tablespoonful of butter, then dash in a teaspoonful of vinegar. Butter a shallow dish and strew the onion in it. Break five eggs into it, being careful not to break the yolks. Bake in a hot oven until the whites are set. Dust on salt and white pepper and sprinkle with coarse bread-crumbs fried brown in butter. Garnish with parsley and serve in sauce dish.

PERSONAL.

PERSONS SUFFERING OR THREATened with tuberculosis, appendicitis, indigestion, constipation, dyspepsia, anorexia, hemorrhoids, weak stomach, liver, kidneys? Write for particulars. John Galbraith, Cronyn Ave., Toronto, Canada.

Substitutes for Cotton.

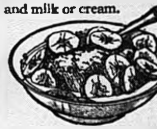
In the search for substitutes for cotton the Germans are making use of sphagnum moss which to some extent has been in use both in Germany and England prior to the present war. The moss is so filled with minute tubes that in its ordinary state it holds eight times its own weight in water and is therefore a powerful absorbent when dry. It is soft and light. Gathered from the swamps it is dried on rocks and bushes until blanched white, then cleaned and sterilised.

Minard's Liniment Relieves Neuralgia.

A Royal Snake Slaughterer.

The "secretary bird" is one of the most precious birds in South Africa. It is royal game, and any person destroying one is liable to a fine of £50. Majestic looking birds, they stand about three feet high, and generally go in pairs. They are of drab color, with black, feathery legs, and are valued for their propensity for killing snakes. Where the secretary bird is seen there are sure to be many reptiles about. The bird beats down its adversary first with one wind and then with the other, at the same time trampling on it with its feet until the snake is sufficiently stunned to catch it by the head with its claws. Then the bird rises far up in the air and drops its victim to the ground to be killed. By this means thousands of venomous reptiles are destroyed.—London Scraps.

A Man's Meal for Five Cents. Living on mush makes a mushy man. A man who works with hand or brain must have a man's food. Two **Shredded Wheat Biscuits** with milk or cream will supply all the strength-giving nutriment needed for a half-day's work or play at a cost of not over five cents. Simply crisp a few Shredded Wheat Biscuits in the oven and serve with fresh fruits and milk or cream.



Made in Canada

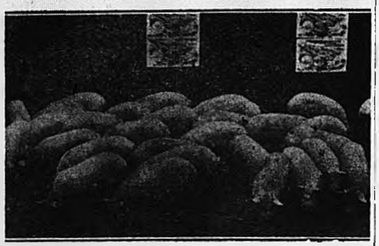
SECURING THE LARGE AND THRIFTY LITTER

It Depends Very Largely Upon the Selection, Feeding and Management of the Brood Sow.

The brood sow need not be pure-bred if market hogs are desired, but she should at least be a good grade—never a nondescript mongrel—and she should be of the proper size and conformation. When bred to a pure-bred boar of good quality her offspring, if properly handled, will finish a high quality of bacon, but none of the boar pigs of such a litter, of course, should be kept for breeding purposes.

In selecting the sow it is always wise to secure one from a prolific mother who has demonstrated her ability to give birth to large litters of thrifty, quickly maturing pigs. One old farmer whom we knew and who was a very successful hog raiser and feeder, always chose his young sows from the best breeders and judged the individual largely by the number of teats. The latter is a point that should be observed. Choose a sow for breeding purposes with at least twelve well developed teats, set well apart and the front ones set well forward on the body, and the results are apt to be very highly satisfactory.

The sow should be of correct type and conformation for the breed and of good size and quality. After that about the only way to determine just how good a mother she will make will be by actual experience. If she proves to be of the best—and the "best" are not easily obtained—it is wise to keep her as long as she produces satisfactory litters and takes care of them properly.



This remarkably uniform bunch of Danish hogs was produced from common sows and large Yorkshire boars—Look to the sow for size and fertility and select the boar for quality.

Although the hog is a quickly maturing animal it is not good practice to have the young sow bred before eight months of age, and many good farmers prefer to wait until ten or twelve months. Much depends upon the growth and development of the sow. If bred before proper development has taken place, the young sow will usually raise small litters, her mammary glands do not develop properly, and consequently her future usefulness is greatly impaired. If, on the other hand, she does raise a full litter, her vitality is greatly weakened in nursing them and she will not develop into as strong and large a matured animal as normal, nor will she give birth to as large and thrifty litters or retain her usefulness for as long a period. So the owner loses in either case—sort of gets caught coming and going. It is a matter that every careful hog-raiser and feeder can afford to study carefully.

While often a sow will breed a few days after service, it is much the wiser plan to have her breed after the litter is weaned. It is tax enough on her system to care for one litter at a time—when the demands of two are upon her, her vitality is lowered and the owner is sure to lose in the long run. And if she is in poor condition when the pigs are weaned she should be given a rest and liberal feeding before being bred. It is necessary in fact, in every case, that the sow be in a strong, healthy thriving condition at time of breeding, without being unduly fat, if best results are to be obtained. Because this method is not followed a sow which has raised a fine, large litter, very often gives birth to a small one next time.

SOW MUST HAVE EXERCISE.

A most important point in the care of the brood sow is to make provision for ample exercise. She requires it more even than the boar—especially during the period of gestation. In summer she should have a run well shaded, with abundant green feed and natural or artificial shade. During the winter it is a little more difficult to ensure exercise. Usually the barnyard can be utilized satisfactorily when she can root in the manure or in scattered straw. If in addition she has a dry well-bedded sleeping place, free from draughts, the conditions are close to the ideal. Failing this, a large shed with an earth floor, littered with straw in which grain is thrown each day, with a sleeping place arranged in a corner, serves the purpose very well. Some have used portable pens placed some yards from the feeding place, with satisfactory results.

The methods of feeding and management during gestation and after farrowing are very important. Whether the young pigs will be profitable feeders or not depends very much upon the care given at these critical times. Concerning these questions perhaps no one can advise with more authority than *Professor George E. Day*, of the Ontario Agricultural College. In his bulletin, entitled "Swine," he writes as follows:

"During the period of gestation the sow should be kept in good, strong condition, but not overloaded with fat. Extremes in conditions are to be avoided. The very fat sow is apt to be clumsy with her pigs, and sometimes her pigs are few in number or lacking in vitality. On the other hand, the very thin sow will either not do justice to her pigs, or will become a mere wreck of herself during the time she is nursing her litter, and the chances are that both these things will happen. A sow may be kept in fairly high condition and will produce satisfactory litters, provided she takes plenty of exercise.

"In districts where corn is plentiful, there is a temptation to feed almost exclusively upon corn. Such a method of feeding cannot give the best results, because corn does not furnish enough bone and muscle-forming constituents to properly develop the unborn pigs. It is also rather too fattening and heating to feed in large quantities to a sow at this stage. The ration of equal parts ground oats and wheat middlings will answer very well for the sow. The proportion of corn, if fed should not be over one-third of the meal ration and wheat middling or bran may be used to dilute the caorn meal without oats. In lute the corn meal without oats. In cold weather, if sows have good deal more corn with safety than when they are kept pretty closely confined.

"A meal ration which is preferred by the writer to all others is equal parts ground oats and middlings, leaving out corn altogether.

"It is possible, however, to use a wide variety of feeds, as long as the feeder realizes the importance of furnishing considerable bulk and of restricting the proportion of heating or highly fattening feeds.

"The sow also requires something besides meal, and the furnishing of some such feeds as roots, or alfalfa, or red clover hay, is very important. Skim-milk is also excellent but is not always available for sows.

"In summer, a pasture field will furnish the bulky part of the ration, and if sows are in good condition to start with and are given a good pasture, they will get along very well without other feed for two or three months. They should be given a little meal for several weeks before farrowing, to accustom them to its use, and render the change less violent when they are taken into the pens. With regard to quantity of meal, the feeder must be guided entirely by the condition of the sows.

"A record should be kept of the date of service of each sow, so that the date of farrowing will be known in advance, and due precautions taken. A week or two before farrowing, the sow should be placed in the farrowing pen, so as to become accustomed to the surroundings and changed conditions before the pigs are born.

"Constipation is the bane of the swine breeder and if the sow becomes constipated before she farrows, the chances are that she will lose her pigs, and possibly her own life. Constipation, therefore, is one of the main things to be guarded against at this time. When it once occurs, very little can be done to overcome it and save the pigs, so that it is altogether a matter of prevention. If a sow is taken directly from a pasture field, shut up in a pen and fed upon an exclusive meal ration, the trouble is almost sure to occur. Radical changes in feeding are to be avoided, and the ration should be kept practically the same after taking the sow into the pen as it was before. If anything, the feed should be made rather more sloppy, and the green feed or roots should be supplied the same as they were before the sow was taken in. A small amount of linseed meal (oil meal) or ground flax added to the ration is also helpful in preventing constipation. The wisdom of feeding meal to sows while on pasture for awhile before they farrow can be readily appreciated, as it prevents a violent change in their ration. The sow should also be given a chance and encouraged to take exercise.

TREATMENT AFTER FARROWING.

"After farrowing, the sow should not be disturbed, and if she lies quietly for ten or twelve hours or even more, so much the better. When she wants anything she will go to the trough for it. At first she should have little more than a drink. A very thin slop of middlings and water will answer very well. If the weather is cold, tepid water should be used. During the first three days great care must be exercised not to overfeed, and the ration should be kept very light. After this, the feed may be gradually increased, taking a week or ten days to reach full feed. A good mother with a large litter requires very liberal feeding, but if the litter is small, it may be necessary to reduce the feed.

Many different rations are used for nursing sows. Equal parts of finely ground oats and wheat middlings, allowed to soak between feeds makes a most excellent ration. If sweet skimmed milk can be added to the mixture, it makes an almost ideal ration. Corn may be used as recommended for sows before farrowing, and in larger quantities if skim-milk is available. A certain amount of roots and green feed are always in order, but the sow should not be expected to subsist upon such feeds at this time. A limited amount of bulky, succulent feed helps to keep the sow healthy.

The sow's udder may become hard and inflamed. If so, it is a good plan to bathe thoroughly with hot water and apply equal parts of lard and turpentine.

When the pigs are weaned, the feed should be cut down to check the secretion of milk. Dry oats make a safe feed for the sow for a few days after the pigs are weaned.

Famous Chief's Way Of Cooking Fruit

Fruit forms an important part of the diet all the year around, but in summer one turns especially to it, not only because it is readily had, but also because, if properly selected, prepared and served, it is appetizing and refreshing. It is a part of the menu over which no one can afford to be careless, for nothing is much more trying than ill chosen fruit not fitly served or cooked. For instance, the strawberry, so often referred to as the queen of berries, may be washed until it is water soaked and so be utterly unpalatable, while to conserve the flavor some people go to the other extreme and refuse to wash it at all, and the "peck of dirt" one eats with a shortcake cooked on this latter rule takes courage often to devour.

"To get the real flavor of fruits," said Mr. Panchard, "it is necessary to use them in season.

"Cooked fruits are especially for delicate appetites and digestions. Raw fruits are for those who are stronger and can get all the benefit from fruits; the benefit is diminished by cooking it. The best way of cooking fruit is not by boiling, but by simmering. In cooking very tender fruit bring the syrup to the boiling point, then throw the fruit in the hot syrup, cover tight, remove from the range or fire, and let it stand for half an hour. This applies particularly to berries.

"To prepare larger fruit, throw it in boiling syrup, cover tight and leave it five minutes on the range; remove and let it stand half an hour. One pound of sugar to one quart of water, or a pound to a pound, is the usual allowance for the syrup.

"Do not use the same kind of fruit more than once a day. Have one kind for breakfast, another for luncheon and another for dinner. And do not have the same sort day after day, as strawberries for breakfast every day, for the system cannot stand the sameness and the appetite rebels.

"An attractive dish is a compote of cooked fruit composed of different fruits in season. Compotes are always served cold.

"Fruit compote may be used with meats, for instance, cherries with a roast like duckling or roast venison, but not with roast beef or lamb, just with game or guinea hen. Orange compote can also be used with duckling, also apple compote. Plum compote can be used with roast duckling.

"Fruits do not go with roast beef. With roast mutton serve currant jelly, or with roast squab or roast guinea hen. Mint sauce goes with lamb; nothing else is correct except mint jelly. Compote of gooseberries goes nicely with duckling.

"Wild cherries are excellent for pies.

"Serve only one fruit with each meal. For instance, when fruit salad is served no other fruit is in order. An exception is in serving melons as a first course and an acid fruit, as strawberries, for the last course.

"Cantaloupe can be used excellently as dessert. Take half a cantaloupe and fill it with cherry compote; place on top a little sherbet or lemon ice. The cutting of melons is a matter of individual fancy, that is, whether long or round.

"Grapefruit is not much served in summer, nor are pears, grapes, apples, oranges or bananas, as they are not fruits in season. Southern fruits are properly for winter, and these are mostly Southern fruits.

"Currants are a delightful fruit cooked into a syrup as a drink. Put a few drops of Kirsch in when the drink is mixed. Prepare the syrup by boiling the currants in sugar and water and straining afterward. Two pounds of fruit to one quart of water is the allowance.

"When white Malaga grapes are obtainable they may be served with chicken in the following manner: Throw the grapes in hot water and then skin and seed them. Prepare the chicken en casserole and sprinkle the grapes over the top together with croutons fried in butter."

The following are Mr. Panchard's special recipes. The brandied cherries after his recipe are especially noted, and every housewife will value it:

Pancake With Fresh Strawberries—Take one pound of flour, twelve eggs, a little salt. Separate the eggs, stir the flour with milk or cream until it is smooth, add the yolks and salt; add the whites of the eggs beaten to a froth. Have the frying pan hot, put in some butter and fry in rather thick cakes to a nice brown color on both sides; dust with cinnamon and fill in compote of strawberries and serve.

Cold Compote of Strawberries — Sprinkle ripe, large berries with powdered sugar, and squeeze over the juice of sweet oranges.

Strawberry Charlotte—Line plain or fancy paper cases, or sherbet glasses, with lady fingers. Soak two ounces of gelatine in a little cold water. Take one quart of ripe berries, rub through a sieve and mix with one pound of powdered sugar. Beat one and one-half pints of double cream to a firm froth. Dissolve the gelatine on the fire, add to the crushed fruit; stir this mixture on the fire till it begins to set and mix lightly with the whipped cream. Fill into the lined cases or glasses and set on ice until firm. Serve decorated with whipped cream and some nice ripe berries.

Strawberry Sweet Omelette—Take six whites of eggs, four yolks, vanilla extract and four ounces of sugar. Beat the whites to a meringue, adding a part of the sugar. Stir the yolks with the other part of the sugar and add the vanilla. Keep out a little of the meringue for decoration. Mix the yolks and the sugar lightly in the other part. Rub a little butter on an oval omelette dish, and pile on the mixture, high and long, in omelette shape, make a deep dent along the top, to facilitate quick baking and to fill with compote of strawberries when baked. Dust with sugar. Set on another platter and bake in a good heat for from twelve to fourteen minutes and serve at once, filling the centre with the strawberry compote.

Steamed Cherry Pudding—Two pounds crumbs, ½ pound flour, 1 pound sugar, 1 pound cherries cut in half, 1½ pounds chopped suet, ½ teaspoonful baking powder, flavor of mace, about 1 pint of milk, a pinch of salt, 3 eggs. Mix the dry ingredients and the baking powder in the flour. Add more or less milk (which depends on the dryness of the crumbs.) Steam or boil for two hours, serve with wine cream sauce or orange cream sauce.

Brandied Cherries.—Take medium ripe fruit, wash and put in stone jars. Pour over them a hot syrup, made with two quarts of water and two pounds of sugar. The next day drain off the syrup, reboil and add 3 ounces more of sugar, and leave it on the fruit for three days. Drain the syrup from the cherries, put the cherries in bottles and cover with a syrup of 32 degrees. Add to each pint of syrup 1 quart of proof spirits and put on the covers. A syrup of 32 degrees may be made with 1 quart of water and 2 pounds and 12 ounces of sugar brought to a boiling point.

Compote of Blueberries.—Wash and pick over the berries. Stew in a light syrup till tender. Let cool and serve. Use 1 pound of sugar to 1 quart of water.

Peach Souffle—Take very ripe peaches, peel them or plunge in boiling water to make the skin come off easily. Cut in small pieces. For each pint of pulp take 12 ounces of sugar, let it boil and stir constantly till it jellies. Make a fine meringue of ¼ pint of white of eggs and 10 ounces of sugar; flavor lemon and mix lightly in the jelly. Fill paper cases with the jelly, dust with sugar and bake in a medium heat for 25 to 30 minutes. Serve at once.—Edouard Panchard in N. Y. Sun.

Cherry Ice—Three and a half pounds sugar, 3 quarts water, 2 quarts cherry pulp and juice. To sweet cherries some lemon may be added. Let it stand to draw the flavor for one hour, strain the syrup and freeze. The flavor of the cherry ice may be improved with extract of wild cherries or maraschino liquor.

KEEP THE BOWELS REGULAR AND AVOID

CONSTIPATION.

When the bowels are not kept regular they become clogged up with waste and poisonous matter, causing constipation, biliousness, sick headaches, piles, and all kinds of liver troubles.

Milburn's Laxa-Liver Pills will regulate the bowels so that you may have a free and easy motion every day. One pill every night for thirty days will cure the worst cases of constipation.

Mr. John J. Smith, Elginburg, Ont., writes: "I had been troubled for a great while with constipation, and tried many different remedies which did me no good. I happened to try Milburn's Laxa-Liver Pills, and I have found them most beneficial."

Milburn's Laxa-Liver Pills are 25 cents per vial, or five vials for $1.00; for sale at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

THE POULTRY WORLD

LATE HATCHED CHICKS.

The experienced commercial poultry keeper will inform the beginner that it is the early chick that in the majority of cases will prove the most profitable, both from an egg-producing standpoint as well as breeding. There are many causes for this. First, the early chick is batched when the weather conditions are not ideal, as during March stormy weather can yet be looked for, often extending well into April. Yet, when proper brooding accommodations are provided, the chicks obtain a good start, and when the fine weather of May and June arrives they grow by leaps and bounds when properly cared for, and obtain a good start before the hot days and nights of July and August arrive. Fowls, especially the young chicks, feel the depressing heat of summer, and when compelled to go through these two trying months at a tender age they receive a check, from which they never fully recover.

It is true that the expert poultry keeper has success with the later-hatched chicks, and the breeder with an eye to prize-winners at the mid-winter shows has often produced the best specimens, especially in color. Yet, these facts do not make the late-hatched chick the one to bank on for largest profits, commercially.

To obtain the best results with chicks hatched in June and July special care not needed, or given to the early-hatched chicks, must be given. Shade is one of the important essentials, for it will allow the chicks protection from the hot rays of the summer sun and supply a natural circulation of air; will keep them from seeking it in the poultry house, which is always hot during the day, no matter how well constructed for good ventilation. Natural shade is best, but if this cannot be had, artificial shade in some form must be supplied and high enough—that a good circulation of air will result.

Green food is next of importance. When the chicks can have the run of grass runs, clover, alfalfa, etc, they will make good growth, and this green food in its natural state will supply food and aid indigestion. Chicks will be stronger and consume less grain and mash than if compelled to be on bare ground.

Fresh water is far more important than perhaps feed, for if the chicks are compelled to go without water, as is so often during the heated term is to invite poor results.

It should be remembered that each time the chick receives a check in growth, due to any neglect on the part of the poultry keeper, it means that much longer to maturity, and this is often found the case when one sees flocks looking to be up to weight in good condition and old enough to lay—yet not producing hen fruit, with the owner wondering why—forgetful of the fact of the several checks that the chicks received in their earlier days. Early maturity lies largely with the poultry keeper in seeing that the chicks are properly grown from shell to maturity, and to attain this one must not only have good stock, incubate well and properly brood and feed, but must look well into the important factor of doing in every way to obtain the right environment, which is so essential. Green feed, natural, if possible, shade and fresh water, with clean quarters, freedom from lice and vermin, will do much to overcome the handicap that is bound to be present during the hot summer months.

NOTES.

Ideal chick weather. May and June are good months to start chicks, although after June has passed unless properly cared for chicks do not make the rapid growth that the early hatches do, owing to the hot days and nights. Given extra care in housing and good runs, the chicks will do well, but with other than good care they will suffer a setback.

The brooder problem has been solved in the best of the up-to-date coal-burning hovers that give the required heat and better still, ample ventilation, something the old-time breeders failed to do. The beginner now has greater chances for success in rearing chicks than ever before.

Overcrowding the growing chicks will, in spite of the oft-repeated advice given in the press be again indulged in. This evil, practiced largely by beginners and even poultry-keepers of more experience, results in under-sized specimens, slow maturity, which means no egg production at the time eggs are the highest. Poultry to do their best should have plenty of room, not only in the poultry quarters, but yard room as well. Rather a smaller flock of well-grown fowls that will prove profit-payers than a large flock not so well grown.

MERE LUST FOR CONQUEST.

(Buffalo Express)

The heavy blow which the Allies have dealt Germany has not been in the form of territorial conquest, but in the destruction of her maritime trade. The assumption that this could be ignored; that the still more important questions of human rights could be equally passed over and that the war could be settled on the basis of land areas conquered, reveals the bent of the German mind, and tends further to establish the fact that the purpose of the war in the first place was merely a mediaeval lust for conquest.

COULD NOT SLEEP

Nerves Were So Bad.

To the thousands of people who are tossing on sleepless beds night after night, and to whose eyes sleep will not come, Milburn's Heart and Nerve Pills offer the blessing of sound, refreshing slumber, because they restore the equilibrium of the deranged nerve centres, thus restoring strength and vitality to the whole system.

Mr. Arthur McCutcheon, Mt. Pisgah, N.B., writes: "I have been much troubled with my nerves, and could not sleep for hours after I would go to bed. I would toss and turn from one side to the other before I could go to sleep. I would then wake up in the night, and lie awake a long time before I would get to sleep again. I thought I would try Milburn's Heart and Nerve Pills, as they were recommended so highly. I now get to sleep without any trouble; my nerves seem quieted, and when I lie down I go to sleep quickly. Anyone who is bothered with their nerves should keep a box on hand."

Milburn's Heart and Nerve Pills are 50 cents per box, 3 boxes for $1.25; at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Chats With the Doctor

BY A PHYSICIAN

FAITH AS A HEALER.

That faith plays an imporant part in the curing of disease has long been not only one of the bed-rock facts of rational and successful medical practice, but the very basis of the art of the quack. And the very success which quackery has undoubtedly had even in the hands of ignorant persons testifies to the fact that it is the faith of the patient rather than the special merit of the recipient of that faith which matters. Some sects go so far as to say that all physical troubles are remediable by faith. But even the most broad-minded of ordinary humanity are unwilling to admit the fulness of this claim. We find it hard to believe that a broken leg is healable by any amount of belief that it is not broken. Any ordinary observation certainly supports our doubt. But in diseased conditions of a more complicated nature than simple injuries we do see every day how big a part is played by faith and hope and confidence in bringing about a cure. Some people are sufficiently self-contained and, if you like, self-reliant, to be able to get the benefit of this faith by their confidence in themselves and in their own power of combating illness. Others have faith in the ordering of the universe, and in the benevolence at the back of nature. But the commonest form of faith in this connection takes the shape of faith in an individual or in a special class. An enormous number of people accept the words "a doctor" on matters of health as final and absolute—something about which there can be no doubt and no question. Many specialize in this matter, and have a corresponding faith in their particular doctor.

Anyway, the fact remains, and thousands of observations go to confirm it that faith and confidence as curative agents are as real as any drug, and much more real than most. In the great majority of all illnesses there is, over and above the obvious disease, a great nervous element which varies with the individual temperament. And even physical signs that may be seen with the eyes are often nervous in their cause and origin, just as the flush on the cheek when we blush through self-consciousness, or the dryness of the tongue when we are struck with fear. All this goes to show the enormous importance to the health of a nation or of a race that it shall be impregnated with what we may call a comfortable philosophy or a comfortable religion. By comfortable I do not, of course, mean smug and complacent, but rather fatalism as regards the things clearly outside human power, tempered with confidence in individual ability to modify or to attain to things within the human range.

HAEMOPHILIA.

The disease known as haemophilia is one of the most curious in the whole story of medicine. People who suffer from it are known as "bleeders," from the fact that they have a tendency to excessive bleeding. On the smallest provocation, sometimes without any apparent provocation at all. The scratch of a thorn or the extraction of a tooth in these persons often leads to bleeding so uncontrollable as sometimes to be fatal. To such persons the slightest operation—the visit of the dentist, vaccination, or the cutting of a wart—even cutting a corn—assumes the proportions of a real danger to life.

The causes of haemophilia are still obscure. They must be looked for, apparently, either in some condition of the blood-vessels, or in some abnormality of the blood itself, but so far no unusual features have been detected in either of these. The blood shows a disinclination to coagulate, but nothing can be found either by microscopic or chemical analysis to account for this. The disease has certain other peculiarities which suggest that its causes lie deep. Thus, it is congenital—that is to say, the subject is born with it, and it is never acquired, whilst it is inherited in a certain never varied order. It is most frequent and most severe in males, but it is never inherited through them, but always through the mother, though this later may not herself be a "bleeder," but have come of "bleeder" stock.

In the way of treatment no great success has yet been obtained. Of course, much may be done in the way of prevention the obvious indication being that women who come of families having this tendency should not marry. People who actually have inherited this condition should so far as possible lead quiet, regular lives, should live on simple, light diet, and should remedy the slightest tendency to constipation. Unnecessary operations should, of course, be avoided, and the danger of hemorrhage should be remembered in even the most trivial operation. Bleeders would be wise always to carry in their pockets a few crystals of perchloride of iron in a bottle to apply to any injury—even the slightest—that may occur, and also a small supply of cotton wool and a bandage. Should any accident occur and a doctor be called in he should be at once informed of the patient's peculiarity.

ECZEMA.

Eczema like influenza, is a name which has to do duty for a great number of diseases. Strictly speaking, it is a superficial inflammation of the skin not due to an obvious external irritating cause. In its more typical form an attack of eczema begins with a redness and swelling of the skin, accompanied with much itching and irritation and often a good deal of burning, smarting or pain. Little watery bladders then show themselves, these burst and the serum which they contain oozes out, dries up, and forms under the crusts, which thus may acquire considerable thickness. Besides the skin condition which seems to arise without external cause, a number of other morbid conditions caused by various external irritants are also included under the general term "eczema."

HEMORRHOIDS OR PILES.

This very prevalent trouble consists of dilated veins at the lower extremity of the intestinal canal. The hemorrhoidal veins carry up the blood to the liver. Hence derangement of that organ, or any undue pressure on them—as by tight stays—will cause. But the most universal source of the trouble is constipation—neglect of that daily evacuation which nature exacts from us all, and which she insists upon as the sine qua non of health.

If you, early in life, learn to attend to this imperative duty, you will never be troubled with hemorrhoids—unless, of course, you flagrantly break natural law in some other similar respect. And here, most conspicuously of all bodily ailments, prevention is best. When the trouble has once begun you seldom get rid of it entirely. Even a surgical operation often fails to eradicate it in toto.

Always the affliction is a very unpleasant disability. But it may be far worse when two conditions are grafted upon it—inflammation or too severe hemorrhage. With inflammation there is great pain. The first thing to be done is, if possible, to push the inflamed pile completely within the sphincter muscle, which firmly grips it, and whose pressure may have caused the symptoms.

Bleeding is not a thing to worry about, unless it be excessive. A moderate amount of hemorrhage acts as a safety valve, preventing too great distention of the vascular system, and so averting apoplexy. It should not be checked without consideration. In the old days people had themselves bled regularly three or four times a year, and often with considerable advantage. This incident is a parallel.

All alcoholic drinks tend to produce congestion of the liver, and so to cause hemorrhoids. Here the bleeding is distinctly salutary. All sufferers should be total abstainers. Also the less meat they take the better, as a rule.

Of local applications hazeline is the best. It is very important to observe local cleanliness; there should be a thorough wash with hot water once a week at least, followed by careful drying with a towel. If inflammation be present, hot fomentations are beneficial.

Under all conditions a very useful measure of internal treatment is a large teaspoonful of pure glycerine taken twice daily in tea, milk or water. Occasionally a course of Epsom salts taken for three weeks in doses of a dessertspoonful or more in a tumbler of water before breakfast will work wonders. Take also plenty of vegetables (especially onions) and fruit, and as much active exercise out of doors as possible.

THE DAY OF DELIVERANCE

(New York Tribune.)

The present week, which sees the anniversary of the murder of the Archduke, sees also the beginning of what we may justly and reasonably believe to be our deliverance from the German nightmare which for two years by violence in action and for a generation by violence in threat has laid a strangling hand on the throat of civilization.

Looking out upon the battle fronts from where must come our deliverance, our release from the blackest peril that has menaced us since the Spanish Inquisition marched with equal step with the Spanish infantry, it is patent that Europe is at last beginning to shake off the German domination. In the east Russia has struck the first and great blow. In the south Italian armies are advancing. In France Verdun still holds, and the great armies of Britain are preparing to deliver the heavy blow, so long and eagerly awaited.

It is doubtful is any moment in the last century, perhaps in many centuries, has been so critical in human history. It is soon to be settled, let us pray, forever, that violence, brutality, material efficiency, accompanied by spiritual obliquity canot prevail in our twentieth century. It is soon to be demonstrated that no preparation in destruction, no ruthlessness in action, no application of the gospel of terribleness joined to the religion of mechanical perfection can chain the minds of men, can reduce the world to a slavery in which men's bodies grow fat, but their souls languish.

We know now to the very bottom what the German idea and ideal mean. We have seen them applied in Belgium and France. We Americans have stood beside the graves of our own murdered women and children, who escaped Prussian lust but not German terribleness. All mankind beyond the confines of the German Empire and those of the Austrian ally have taken full measure of what German purpose means, and in many tongues and many languages Germany will be an adjective of ignominy for years to come.

The armies of revolutionary France, of Napoleonic France, when they overflowed into Europe carried with them the gospel of liberty, of fraternity, of equality. Wherever they passed, they left behind them a heritage of progress, and when they had vanished, a new and better Europe emerged and has endured. After the French revolution, human slavery in the political sense was doomed in Europe.

But after the German armies have passed what has been left? Only ruins. Was there a thing beautiful, sacred, dear to France or Belgium, dear to the world for its artistic value, dear to the village that owned it, for parochial reasons? It has been ruined, defiled. Wherever German armies have passed there has been a harvest of dishonor for women, shameful death of children and old men, and utter destruction of the inanimate things of beauty.

For forty years Germany dreamed to dominate Europe, and for two years she has striven to realize her dream. Millions of men have died, millions of women and children wander in exile over the face of the world. Human suffering and misery such as the world has not known in centuries have replaced peace, happiness, the orderly life of civilized countries.

To realize her dream Germany has murdered Belgium, laid waste Northern France, crushed Serbia, and sent her army corps from the Dwina to the Marne. All that violence, treachery, deceit, corruption could accomplish have been accomplished. All that the gospel of terribleness could avail has been realized over half the European continent.

And yet it has not worked after all, this German thing. Men have not been terrified, nations have not been broken. Out of all their terrible sufferings the spirits of men emerge calm, determined, unsubdued. The conquest of the spirit has not been had and the body, responding to the spirit, has remained indomitable, in Belgium, in Serbia, in France, in Russia, in Britain.

Already those who boasted that the next war would be for "world power or downfall" are whimpering for "victorious peace" in the market places of the world and interrupting their bulletins of victory to utter denunciations of the enemy who, conquered, will not yield, and destroyed, still prepares to advance.

Those who come hereafter will have a better measure of the grandeur and the horror of these two years through which we have lived. They will see clearly what has been hidden in part from us and they will realize as we cannot how much for, mankind has been won by the defeat of the German assault upon all our civilization and all our humanity.

It has not paid, this German doctrine, this Teutonic dream. It has not paid, as the ever increasing casualty lists of German dead reveal. It has not paid, as the clamor of German women and children for food discloses. A day is not far off, perhaps, when what was visited upon Louvain may be visited upon a score of German cities, not the agony of physical violence, but the agony of want and misery, and hunger and weakness.

We have known ever since the Marne that a free Europe would endure. We have known that France gave us and gave civilization on that field a new guarantee of safety. Now we are beginning to see that there is another gain to come. German barbarism was only halted in 1914 on the fields where Attila in his time suffered defeat. It was not enough that the German army should be defeated; it was necessary, of primo importance, that the German idea should be crushed, that there should be a final proof that not by hate, violence, murder shall one race overbear all others on this planet.

It is to prove this fact that this struggle has endured these terrible months, that it now endures. There can be no peace, no permanent peace, on this planet while there exists in the heart and head of any race the belief that it has a right to rule all other races, that it is elected to dominate all other peoples and that to achieve its appointed place in the sun it is warranted to commit any crime however terrible, to do any deed however atrocious—that it is authorized to repeal all the precedents of international law and all the concepts of humanity.

But now, as in 1813, Europe is marching against a tyrant, against a tyranny indescribably baser and more intolerable than that of Napoleon. Those nations which were struck all unprepared two years ago have kept their lines and preserved their existence and are now prepared in their turn to strike, to end the danger of them and of us of German domination.

For most of us only the military operations will have meaning in the coming months. We shall see only armies advancing and retreating, the conquests of captains and generals. But these are idle things that other generations will not even note. What is to come is the day of our deliverance from a spiritual peril. What is to come is a victory of Galilee over Corsica, to reverse the German boast of other days. What we are to behold is the destruction, not of a race, not even of a dynasty, not the conquest or occupation of German lands—these things are unimportant, they may be well undesirable — but the ultimate defeat of a German menace to all we love and care for in this world, we who hold to liberty and believe those articles of faith on which democracy has been founded and all free countries built.

Bradstreet's Trade Review

TORONTO.—Business conditions, while quieting down a little on account of summer weather, are decidedly favorable compared with previous years, since 1913. Jobbers and outside representatives of textile concerns report that orders have been satisfactory and collections good from most parts of the country. The Western situation is steadily looking up. Labor in demand. Local leather firms are working on good orders for harness and saddlery recently secured from the government. Boot and shoe firms are busy including both manufacturers and wholesalers. The grocery trade is steady. Hardware houses find trade from shelves fairly active. The tendency of finished metals is lower as the base metals have most of them declined.

MONTREAL.—Trade conditions continue to respond to prosperous conditions in Eastern communities. Employment is plentiful, wages are good, buying power increases proportionately and the retail and wholesale trade at once feels the effect. Wholesale drygoods firms have had a fairly liberal trade in summer goods, hardware merchants report a larger movement from shelves, while the grocery trade is normal and boot and shoe firms are doing better than last year.

HAMILTON.—Manufacturers continue busy on substantial orders. Large plants are operating at capacity. The commercial trade, therefore keeps apace. The movement of merchandise to the country has been fair.

LONDON.—Generally speaking trade is fairly active in the city. Country orders continue to come in. Manufacturers are most of them busy. Prospects are bright commercially.

WINNIPEG—Business conditions remain brisk. Not only has there been commercial activity in the month just past; but indications are for continued activity. More money is in circulation, payments are fairly prompt. Generally, there is a health tone to trade. The grocery trade remains steady. In drygoods, houses summer sorting business has become brisk. The grocery trade remains steady. In drygoods houses summer sorting business has become brisk. The same is true of boots and shoe trade.

CALGARY.—Trade conditions are satisfactory west of Winnipeg. In Moose Jaw and Regina demand for summer merchandise keeps up. Business is reported good at Edmonton and Calgary itself. The splendid crop conditions give promise for increased trade during the coming year.

VANCOUVER.—The movement of merchandise from wholesale and retail houses in the city has been fair. Fundamental conditions in the province are gradually improving. With old stocks of canned goods at low ebb, and with an export trade the canning season this year promises well.

QUEBEC.—Business in all branches continues active. Wholesale drygoods report English goods coming to hand fairly well and stocks as a rule are well assorted, orders for fall business is satisfactory, retail trade for the season is good. Industrial conditions continue bright. City and country remittances are fairly good.

The Generosity of Dolan.

Two Irishmen were discussing the death of a friend.

Said Malachi: "Sure, Dolan was a good fellow."

"He was that," assented Mike. "A good fellow, Dolan."

"And a cheerful man was Dolan," continued Malachi.

"A cheerful man was Dolan, the cheerfulest I ever knew," echoed Mike.

"Dolan was a glucrous man, too," said Michael.

"Glucrous, did ye say? Well, I don't know so much about that. Did Dolan ever buy you anything?"

"Well, nearly," said Malachi, scratching his head in thought. "One day he came into Casey's barroom, where me and me friends was drinkin', and he said to us: 'Well, men, what are we going to have—rain or snow?'"

"Turn about is fair play," quoted the Wise Guy. "Yes," agreed the Simple Mug, "when a fellow wins a girl's heart it is quite natural that she should win a diamond."

WALKERTON, JULY 27th, 1916.

CONSTRUCTIVE LEADERSHIP VS. IMPOTENCE

The Ontario Government for some time past, notably during the last session of the Legislature, has been manifesting signs of increasing impotence; and the result of the bye-election in North Perth shews that the people of the Province are turning to Mr. Rowell's wise and constructive leadership and foresight in public affairs as a sheet-anchor in the difficult times which are brewing. The Liberal Party, both in Dominion and Provincial politics, is taking the lead in preparing to meet the after-damp of the explosion in Europe; whilst the Tory Governments at Ottawa and Toronto seem content to let the future take care of itself. The meeting of the National Liberal Advisory Committee during the past week in Ottawa has demonstrated the progressiveness of the Dominion Liberal Party in the far-reaching resolutions which were adopted covering social and other problems which will have to be dealt with after the war. Mr. Rowell in England studying conditions there and gathering data as to how the much greater problems of the mother country are being grappled with, is putting the members of the Ontario Government to shame, as he has already done other and more responsible public men in the matter of recruiting. In the House last session Mr. Rowell's resolution regarding the organization of the resources of the Province for the successful prosecution of the war, coming as it did immediately upon his conscientious support of The Ontario Temperance Act, clearly demonstrated the potentiality of his leadership; whilst his recently announced constructive policy for future Canadian Liberalism is backed by a most practical declaration of the means to attain the end. Not a little satisfaction has been gleaned by the Liberal members in the Ontario House from the fact that although the Government has, from time to time, voted down every constructive effort on their part it has in many instances been compelled by the force of public opinion to ultimately adopt Opposition's proposals. Amongst other things, the Government has repeatedly rejected Liberal proposals for the elimination of the patronage system in the Civil Service and the promotion of the Agricultural interests of the Province. During the Ontario House, Mr. Carter (Liberal member for S. Wellington) strenuously championed the cause of a Civil Service Commission, and the Government was attacked so strongly by a combination of Liberal members in close touch with agricultural Ontario, on its failure to even attempt to introduce a measure of value to Agriculture, without obtaining any response on the part of the Government, that rural voters throughout the Province, without regard to political affiliations are turning away in disgust from the listless, inert, don't-know-what-to-do attitude of the present Administration. North Perth is a case in point.

EDITORIAL COMMENT

As one soldier from London told us: "This spinal McGinnis scare was pulled off so we wouldn't have to leave London.—Guelph Mercury."

✦ ✦ ✦

A soldier got the Victoria Cross for playing the bagpipes and rallying the troops to a charge. The Germans were done for long before the chargers reached them.

✦ ✦ ✦

Ed. Davis, Alfred Brown, and David Poore put up barns on their farms and the Township assessor must tax them higher next spring. If each had bought a thousand dollar motor car instead the township would have gained nothing and the road would have suffered a little. Is there not food for thought here?—Lionhead News.

✦ ✦ ✦

The London Free Press wants Premier Hearst to ascertain whether North Perth spoke only for itself or the whole Province. It would have half a dozen ridings opened and bye-elections brought on. Couldn't the thing be accomplished more easily? What's the matter with ordering elections to fill the Commons' vacancies?—Simcoe Reformer.

✦ ✦ ✦

According to the Glasgow News, a copy of which has been received by Mr. N. Crawford, the "bonnie, bonnie banks of Loch Lomond," famous in the Scottish song is to be acquired by the city of Glasgow as a recreation park, where the public may feast their eyes on one of Scotland's rarest beauty spots. The property acquired amounts to about 800 acres.

✦ ✦ ✦

The recent High School Entrance reports give an indication of the quality of the work that is being done at the Walkerton Public and Separate Schools. Toronto passed 38 per cent. Walkerton passed 100 percent of entrance candidates. Congratulations are due to Principal Willoughby, Mother Superior and staffs. It goes without saying that good schools are an invaluable asset to any community.

"SOMEWHERE IN FRANCE"

Two Interesting Letters From Our Boys on the Firing Line

FROM A "PRINCESS PAT"

A young member of the Princess Patricia's Light Infantry writes to a member of the Telescope publisher's family:—

I suppose you are aware of what has been going on over here by this time. War is certainly hell. I am without a scratch.

The bombardment we got was the most intense that has been on the Western front. There were more shells put over in the short distance, 1000 yards, than any place on Verdun front. So great was the noise of the bombardment that three mines with ten ton of explosive were not heard or reported till two days after. We not only had shells to contend with ranging from 5.9 to 12.2 but 150 lb. aerial torpedoes, 60 lb. trench mortars, rifle grenades, bombs and liquid fire. It was with the latter they drove us from our front line. But we got it back again. The Huns broke through on our right and to save our battalion from being surrounded, the Col. led one No. 3 Coy. down a trench perpendicular to the the front line. The Huns were already in this. But with the Col. to lead, we got them out. It was here while calling for bombs and standing on the parapet, rifle in hand he was shot through the heart. He was certainly a man to be proud of. We buried him with the former Col. who was killed near the same place. There were only 6 officers left unwounded

Wilmont Stone was fine. He was with the Col. and his rifle got so hot it burnt his hands. But he came out cool as a cucumber.

I think Sandy will be recommended for a medal. He was runner for one of the officers, then the acting Brigadier got hold of him. Every man he had with him was killed, so the Gen. told him he would have to go alone. He was pretty slippery, the Huns would never get him. He guided a whole Machine Gun Coy. into the trenches while the shells were bursting around and only had one man hit in the ankle. There were four different reports came he was killed, I was nearly wild. Then just imagine my joy at seeing his smiling face come around the corner. After we got out he had to take a party of stretcher-bearers up. His machine gun was the last to be put out of action. He said the only time he got nervous was when he was left alone in charge of the gun and he was out of ammunition and was afraid of losing the gun.

I was brigade runner. I was over 48 hours without a wink of sleep and had no time to eat, I was all in. I do not know what Sandy was like. He was 4 days and 3 nights without sleep and just a biscuit now and then. I detonated bombs till my fingers got so sore I couldn't touch anything with them, I did 300 one afternoon. I took an officer through the city that was being shelled, to the dressing station, I guess I had the closest shave then and to wind up I went back and stood on guard from 10 p. m. to 4 a. m. counting our fellows as they came out.

I have a German bayonet souvenir (tres bien). One of our fellows has a saw edged bayonet, every other German had one (10th pioneer batt). They are wicked looking things.

You remember that nice woods I told you about and where I found those violets. That place is levelled to the ground and hardly a blade of grass showing. The air was black with smoke of bursting shrapnel. The curtain of fire was used by the Germans several times. You may have heard we tried to take back the trenches three times one night. We didn't succeed. One of the fellows would open up rapid fire. This would put Fritz's wind up and he would open with the biggest variety of shells you ever saw.

We are back for a rest and to get repaired after being in the trenches for three months just about the place where we got it. That was just about 800 yds. from where the regt. got the jolt last year. I have seen enough of Belgium to last me a life-time. I could tell the minute I crossed the border into France. Everything looked cleaner. The girls were better looking and wore shoes. The little kids had their faces washed and the language is more reasonable.

I am going to try to get my commission transferred to this regiment. I will not get one anyway till the 00th gets to England. The Adj. is going to bring me before the Col. about it Monday morning. I hate to leave the Batt now after fighting side by side with the fellows in the trenches so long.

OLD SUSCRIPTION ACCOUNTS

A good many subscribers in arrears have responded promptly to the notices which we have been sending out, others have been paid no attention. We take this means of informing subscribers in arrears who have thus far ignored our notice that we will very shortly turn their accounts over to our solicitors for collection WHEN COSTS WILL BE ADDED.

BEGINNING OF END IN SIGHT

Ald. Jos. Lawson of Guelph, formerly of Brant, received a letter from his son, Capt. Dr. Smirle Lawson, who is on the staff of the Ontario Military Hospital at Orpington. The letter reads in part, as follows:

Dear Father,—I wrote you two letters a week ago and am waiting to hear from you by cable as to your opinion about my going to Greece.

We are very busy here just now as the "Big Push" is on. We get a convoy at 7 a. m. to-morrow morning right from the big advance, and we get them from the trenches in two days, so we get all the news first hand and it does not always tally with the papers.

However, they are going now and whilst it will take a long time yet, I think with this terrific drive started two days ago, the first glimpse of the beginning of the end is in sight.

The horrors of the war are very vividly seen here, an arm gone from this one, a leg gone there, battered, mangled, by bullets and shells in every part of the body but these brave fellows still smile and hope to get another crack at "Fritz," as they call the Germans.

We have those whose homes and dear ones are in old Ontario, and east from the Maritime Provinces, and west right to the Rockies, Australians, New Zealanders, English, Irish, and the quiet but determined Scot. The spirit and courage of the soldiers is wonderful. The British race can well be proud of them, for they fear no foe.

I am Orderly Officer to-day and cannot leave the grounds for 24 hours and have attended all parades since 5.30 a. m. this morning.

Write soon, with love.

SMIRLE.

INFANTILE PARALYSIS: WHAT IS IT?

The following instructions regarding Infantile Paralysis are issued by the Provincial Board of health.

Infantile Paralysis, also called Anterior Poliomyelitis, is a communicable disease chiefly between the age of two and fourteen years. Older children and adults may also be affected by the disease.

The cause is unknown. It is known, however, that the agent causing the disease is present in the secretion of the nose and mouth and in the intestinal tract from being swallowed.

The disease is epidemic in some United States cities and in at least one town in Ontario.

It is believed that Infantile Paralysis is spread from one child to another by means of the secretions of the nose and mouth by direct transfer. It is possible also that it is spread by flies which have been in contact with intestinal discharges. It may become widespread in country as well as in the crowded city districts, and persons who have been in contact with cases of the disease may harbour the contagion and give it to others without contracting the disease themselves: that is they are "carriers."

WHAT TO DO ABOUT IT?

1. Every CASE must be quarantined for a period of SIX weeks.

2. All children who have been in contact with a case must be quarantined and kept under observance for a period of TWO weeks.

3. Adult members of the family who are wage earners may be allowed to go about their work subject to the regulations of the Provincial Board and on the discretion of the Medical Officer of health.

4. Where there is an outbreak, gatherings of children, such as picnics, picture shows, and playgrounds, should be prohibited.

5. The source of origin of each case should be carefully inquired into in order that proper quarantine may be maintained.

6. In houses where cases appear all doors and windows should be screened the premises kept clean, and no accumulation of garbage or waste permitted.

7. All cases should be at once notified to the Medical Officer of Health, and by him to the Chief Officer of the Provincial Board.

8. Mild cases, showing slight headache, rise of temperature and vomiting persisting for a few days, with slight muscular weakness and absence of paralysis, should be quarantined. These are probably one of the chief sources of contagion.

9. As Infantile Paralysis is a most serious disease and in the present epidemic giving a high death rate, the public is urged to second the efforts of the authorities in every way to prevent a severe outbreak in the Province.

10. All materials, such as cloths, etc. carrying secretions and discharges from patients should be burned, boiled or disinfected.

If the disease shows any tendency to spread, special quarantine measures may be necessary.

J. McCULLOUGH,
Chief Officer of Health

Guelph Mercury—When a man gets the notion that any business can't get along without him, the best thing he can do is to give it a chance to try for a few days. The surprise and shock may do him a lot of good.

COMPETITION - - PRIZES
THE CANADIAN LIBERAL MONTHLY

BOYS AND GIRLS (UNDER 18 YEARS OF AGE)
For the Months of
JULY AND AUGUST, 1916

For the summer months it is proposed to interest the young people, the boys and girls, by giving a generous commission on subscriptions collected for the Canadian Liberal Monthly, thus affording an opportunity to make pocket money during the summer holidays.

We offer a straight commission of 20 per cent, which amounts to 5c for every yearly subscription received at 25c a year. Subscriptions for more than one year from any one subscriber will count by the year, thus $1.00 from one subscriber for four years' subscription will count as four subscribers, and, of course, will carry the commission of 20 per cent.

PRIZES
Capital Prizes for Each Province

First Prize: $15.00 in Cash
Payable on September 1st to the boy or girl in each Province securing the largest number of yearly subscriptions to the Liberal Monthly.

Second Prize: $10.00 in Cash.
To the boy or girl in each Province securing the second largest number of subscriptions.

General Prize
In addition to the Commission of 20 per cent and the Cash Prizes, every contestant sending in 25 subscriptions will receive at once a large portrait, in colors, of The Right Honourable Sir Wilfrid Laurier, P. C., G. C. M. G., M. P.

The subscription price of the Liberal Monthly is 25c a Year

The subscription list has multiplied several times since the 1st of January, 1916. The people subscribe readily and willingly if only given a chance. Anyone who devotes a little time to the work gets dozens and scores of subscriptions from Conservatives and Independents, as well as Liberals.

Results so far have been good, but they could be much better—several times better. Our success so far is the best proof of that.

Everybody Help
For sample copies and additional subscription blanks, apply, Secretary, Central Liberal Information Office, 63 Sparks Street, Ottawa, Ont.

When sending in lists, sign full name, Post Office address and age, and write on the list that it is for "THE COMPETITION."

The Hackneyed Old Phrase
Now Is the Time to Advertise

HAS special pertinence just now. It is in time of prosperity that money is made. As a result of big crops, demand for war munitions, etc., the country has reached a high stage of prosperity. There is plenty of money in circulation and the people are in a mood to buy liberally.

In such times as these advertising pays more generously than ever. The people are hopeful and confident, disposed to anticipate their wants, to buy the best qualities, and to purchase things they would not have felt they could afford a year ago.

Merchants ought to be able to double their trade under these conditions. But they can't get it by waiting for it. They must attract more attention, take a little more newspaper space, describe their goods a little more fully. A great deal of money will be spent in the next six months, the bulk of it with those dealers who court the most publicity.

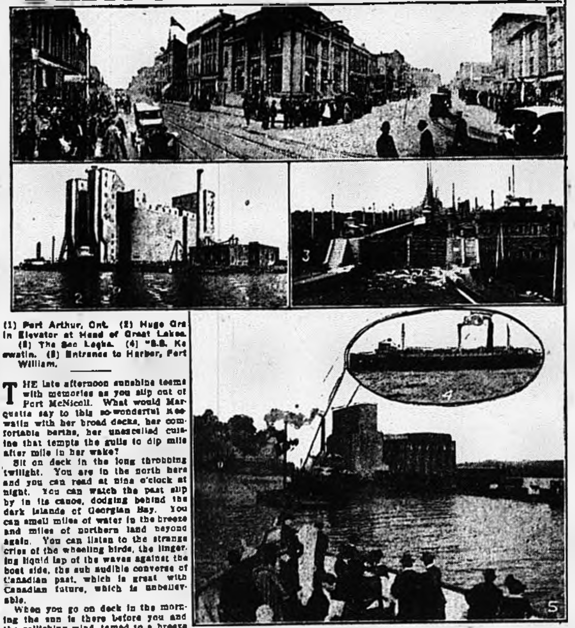
Canada's Great Lakes



(1) Port Arthur, Ont. (2) Huge Grain Elevator at Head of Great Lakes. (3) The Soo Locks. (4) "S.S. Keewatin. (5) Entrance to Harbor, Port William.

THE late afternoon sunshine teems with memories as you slip out of Port McNicoll. What would Marquette say to this so-wonderful Keewatin with her broad decks, her comfortable berths, her unexcelled cuisine that tempts the gulls to dip mile after mile in her wake?

Sit on deck in the long throbbing twilight. You are in the north here and you can read at nine o'clock at night. You can watch the past slip by in its canoe, dodging behind the dark islands of Georgian Bay. You can smell miles of water in the breeze and miles of northern land beyond again. You can listen to the strange cries of the wheeling birds, the lingering liquid lap of the waves against the boat side, the sub audible converse of Canadian past, which is great with Canadian future, which is unbelievable.

When you go on deck in the morning the sun is there before you and the rollicking wind, tamed to a breeze by the still-green banks of the St Mary's River, gay with cottages. Soon you'll reach the Soo and the far-famed canal that Canada and the States have made.

What's that against the skyline, like black-barred skeleton hands playing "Simon says Thumbs Up"? That's the Canadian Pacific Railway's Bascule Bridge, which splits accommodating in the middle, using its wonderful thousand-ton side-weights, and opens itself like scissor blades, a hundred and sixty-eight feet in the air! Truly a strange town, this Soo, where boats walk upstairs in canal-locks and bridges go jack-knifing against the horizon!

See that weird boat yonder, like a whale with its head and tail out of the water? It's an Alice in Wonderland boat so don't laugh at its pulled-out proportions. It carries a little machinery in one end and a little crew in the other. In between—which is anything from four to six hundred feet—it's just a series of grain bins, tied together with steel. It can stow away from seven to nine trainloads of wheat. But now we're through the locks and by afternoon we might be in the middle of the Atlantic for all the land we see.

At four o'clock we find ourselves under the awnings where the little blue teapots circulate cheerily and the talk turns on how cool it is.

Dinner to-night—strange how mundane and appetiteful we become in the air!—dinner is a joyful procession straight through the menu, even with the sneaking remembrance that somebody said there'd be more bovril at ten.

Looking through the porthole as we rise next morning, we see Thunder Cape and in an hour or so call at Port Arthur, next door neighbor to our terminal at Fort William—elevator towns, both of them.

Between Fort William and Port Arthur there are twenty-five of these huge wheat-banks, each looking like a collection of spent shells from some giant mortar, triumphantly up-ended in the service of mankind and grain trade. Their combined capacity runs to forty-three and a quarter million bushels, this making the twin towns the world's greatest grain port. —

OUR OTTAWA LETTER

By H. F. G.

The appointment of F. B. McCurdy, M. P., as Under-Secretary of Militia, is taken here to mean that Sir Sam is to be "eased out". The time has come for disappearing. All Sam's war babies have been left on his doorstep at once. It is expected that Sam's visit to England will give the public time to forget and that Under-Secretary McCurdy, who is as mild a mannered man as Sam is brusque, and as silent as Sam is loquacious, will not aggravate remembrance.

Mr. McCurdy has evidently been chosen because he openeth not his mouth. Sam opened his mouth too much and every time he opened his mouth he put his foot in it. And Sam has no small foot at that.

Under Secretary McCurdy has a gentle and equable disposition. Sam is a high explosive, and even more dangerous to his friends than to his enemies.

The three war babies that are causing Sam the most trouble are the Bertram Shell Committee, Camp Borden and the Ross Rifle. The two latter are already crying at his door and the latter will probably set up a howl by way of the Duff-Meredith report before this article sees print. Camp Borden is the first of the war babies to make a holler.

As centralization camps go, Camp Borden is equal in size to the rest of Sam's pet schemes. It is high ground, sandy dusty and a lot of other things which the soldiers have found out. The chief objection to it is the dust—but the dust is part of Sam's vainglory. The soldiers had to eat the dust because Sam wanted to boast over in England, that he took a wilderness and made it into a camp in two months. If Sam had left the soldiers where they were another month, the concrete road for heavy traffic, which will relieve the camp area of dust, would have been finished, the ashes and dust, where the brush was burned on the manoeuvering ground would have settled down, the headquarters staff would have completed their organization, the camp ovens would have been provided with bakers, the commissariat would have had things in shape and Camp Borden would have been livable.

But that did not suit Sam's book. He was due in England and he wanted to tell them all about it at the Savoy and the Ritz, swell his reputation as a hustler, which he couldn't do if there were no soldiers in Camp Borden. So all raw as it was, Camp Borden was filled with soldiers to sweat in the sun and eat dirt to make Sam's holiday. The soldiers signified their disapproval, some by rioting, others by taking French leave. At this writing there are more than one thousand illegally absent and workers on the moving picture theatres say that not a day passes that they don't get offers of thirty dollars and more for their working clothes from soldiers who want to get rid of the khaki and Camp Borden at the same time.

Not only was there rioting, but the Minister of Militia himself suffered the indignity of being booed by certain of the mutinous battalions and when he was leaving at the station he was surrounded by a crowd of kickers who frightened him with their baleful eyes. Brave though he is, Sir Sam retired to a prepared position on the observation platform of his private car from which he addressed a jollying speech to his "boys." This speech was received with mingled sentiments—cheers (ironical) and hisses unmistakable. After Sam got away the kickers took it out on the ice cream, and other dainties awaiting cartage on the station platform. That little speech of Sam's, guaged by its weight in ice cream, cost $1,800, that being the damage assessed on the battalions which took part in the demonstration. All the incidents related here were witnessed by this writer.

A fortnight from now Camp Borden will be the same camp, but will be with a new lot of soldiers. Sam's hurry to give himself and his friends a rare show has given the camp a black eye in the meantime and has done a lot to stop recruiting. The government is solving the problem Sam's impetuosity got them into by sending the present occupants of Camp Borden overseas in large drafts, ten units at a time. Under-Secretary McCurdy's policy is in full swing. He is getting rid of the kick by removing the kickers. He is in hopes that those who take their places will find a camp ready to live in and will be more amenable to discipline.

H. F. GADSBY.

BILLION DOLLAR CROP EXPECTED

After a thorough canvas of various points throughout Western Canada, Dr. McGill of the Dominion Grain Commission, is quoted in Calgary as saying that Alberta would have a crop as good as last year, that the Dominion would have a billion dollar grain crop and that the grain crop of the three prairie Provinces would be little if any behind that of last year.

Those who contemplate going West will do well to remember that the most fertile districts in Western Canada are served by the Lines of the C. N. R. and that this season they can travel from their home districts to destination Canadian Northern all the way.

Arrangements have been made whereby Passengers may travel in comfort. Colonist and Lunch Counter Cars being a feature.

The first of these excursions will be run in August, the date will be announced later.

For further information apply to nearest Canadian Northern Agent, or write to R. L. Fairbairn, General Passenger Agent, 68 King St. E., Toronto.

OUR WESTERN LETTER

Written for the Telescope
By an Old Brant Boy

The weather the past two weeks has been glorious, very warm with an occasional shower. The grain and wild hay are stretching fast. Heavy hail storms were reported last Sunday from points north and south, east of Lacombe. The other day driving along a road, we saw a notice by a gate, through which a well worn trail led. It read "This loanin is stoorkit gang tae the next yett ye'll win through there." Apparently there must be some Scotch in that locality. The decision of the Militia Department not to provide kilts for our Highland Regiments may solve the mystery, "what do the Highlanders have under their kilts? We have a neighbour who has had a particularly fine run of hard luck. It started when he began to board a bunch of weaners. It is estimated that each and every one landed him at least one kick, that left him more or less black and blue. When his color had returned to about normal he got in connection with a steer. The steer was at one end of a lariat and the other end of the lariat was tangled round our friend's foot. Luckily the coral was full of deep mud so Mr. Steer could not get up express speed and was compelled to travel at some eight miles an hour. This was however fast enough to have Mr. Man's foot badly strained by the time he got it disentangled. After limping round for a few weeks with a stick he got limber enough to climb to the hay loft one night to put down hay for the horses. It is to be presumed that during his enforced absence from the loft he had forgotten the location of all the feed shoots. Any way he light-heartedly stepped down one. As his nose rasped the side of the shoot all the way down it helped to delay his decent so that on hitting the manger below he didn't quite break his shins. We would imagine such a run of luck suffcent to satisfy most men but our man is a glutton that way. When he had recovered from this last accident sufficiently to taste horse-back exercise he proceeded to ride over to visit a neighbour at mazeppa-like speed. His untrusty horse however desired more time in which to view the landscape. So, having deposited his rider on the turf and danced a polka on his recumbent form he proceeded to study nature. Even this was not the end of his troubles for with the cost of living soaring skyward but unable to catch up with the rise in leather goods and baby boots, he has now been presented with another son, bringing his family to the nice total of fifteen souls. That's what you call a strenuous life.

TWO LONG YEARS HE SUFFERED

"Fruit-a-tives" Made Him Feel As If Walking On Air

ORILLIA, ONT., Nov. 28th. 1914.
"For over two years, I was troubled with *Constipation, Drowsiness, Lack of Appetite and Headaches*. One day I saw your sign which read "Fruit-a-tives make you feel like walking on air." This appealed to me, so I decided to try a box. In a very short time, I began to feel better, and *now I feel fine*. I have a good appetite, relish everything I eat, and the Headaches are gone entirely. I recommend this *pleasant fruit medicine* to all my friends".
DAN McLEAN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

R. L. GIBSON, - - Jeweler

AN EVIL HERITAGE

"Forty is a little much, certainly; but then Marian is such a serious girl for her age. And of course he would need to get some home appointment."

"But, my dearest Val, she talks of him as 'scraggy,' and says that his face is out of drawing. Surely that doesn't look like being very desperately smitten."

"It is precisely from those remarks that I have drawn my deductions," replied Miss Valeria, with a ring of triumph in her tone. "What she says is quite sufficient to show that an impression has been created, though I admit that this impression will require to be modified by time. That which she now calls 'scragginess' will in all probability have turned into an 'elegant slimness' by next letter, and instead of his profile being out of drawing, she will have discovered that his features belong to the marked and interesting order."

By the time these remarks were made the St. Valentine's Day dance was a thing of the past. Marian had enjoyed it in spite of herself, and, as was her invariable habit in moments of enjoyment, had fallen into an almost complete silence.

"What are you thinking of?" her partner had asked her abruptly, while during one of the pauses in the entertainment they leaned over the side of the ship, gazing at the dark water below. It was the same Mr. Hibbert with regard to whom Miss Valeria was subsequently to observe that she saw something coming. Standing now bareheaded in the starlight, his sharply protruding chin assumed an outline that was all but grotesque. Upon his thin, clean-shaven face the skin lay in wrinkles that were obviously premature, and what with this, as well as the sunken look about a nervous haggard mouth, added to his unusual height, the man was undeniably conspicuous wherever he went. His narrow shoulders and the slight stoop with which he carried himself gave him a somewhat consumptive appearance. In point of fact he was not consumptive, and the stoop was the result of an instinctive desire to appear a little less tall than he was. Most people who spoke to him for the first time were agreeably surprised to find that he had no difficulty in looking them in the face. His pale blue eyes might have something chilly in their gaze, but nothing underhand.

At sound of his abrupt question Marian roused herself.

"I was thinking how strange it was that I should have danced my first proper quadrille in the middle of the Atlantic."

"Then you have never been at a ball before?"

"Never. I am to go out next season, I believe. Bernard has persuaded papa."

"Who is Bernard?"

"Bernard? Oh, Bernard is my cousin."

And again Marian leant over the side of the steamer, and there was silence for some minutes.

It was very quiet here at the back of the ship where they were standing, and had it not been for the mingled smell of engines at work and of hot niggers which pervaded the atmosphere, the peacefulness would have very nearly deserved to be described as idyllic. This was the first perfect tropic night that they had yet enjoyed. Now and then some flying-fish skimmed over the surface, their wet wings catching the white light, to sink again silently into the motionless water.

"Tell me," said Mr. Hibbert, after a long pause, during which the subdued sound of voices and laughter rang toward them over the deck, "was that your cousin Bernard who came to see you off?"

"Yes, that was he. How do you know?"

Mr. Hibbert laughed faintly.

"I don't know, I only guessed." He was silent for a moment, and then added, "It must be pleasant to have somebody to see one off."

"Had you nobody? Oh, no. I remember now; you were standing at the head of the cabin stairs."

"You observed me, then?"—this a little more quickly.

"I—well, yes, I couldn't help observing you." How was she to explain to him that he was the sort of person whom it was quite impossible to overlook?

"Of course you couldn't help observing me," said Mr. Hibbert, with a touch of bitterness. "I was forgetting."

"Why did you not have a brother or a cousin to see you off?" went on Marian, by way of turning the conversation.

"I have not got either a brother or a cousin."

"Or a friend?"

"I don't deal very largely in friends."

"Oh!" said Marian, and then held her tongue, afraid of having stumbled upon an awkward subject.

"You were sorry to say good bye to him, were you not?" said the smooth, flat voice beside her.

There was nothing to indicate who was meant by the "him," and yet Marian turned with a guilty flush on her cheek.

"What do you mean? I never said I was sorry; and of course one is always sorry to say good-bye to any of one's relations. I have known Bernard since I was seven years old."

"Have you, indeed?" said Mr. Hibbert, unperturbed. "That is a long time, certainly. I suppose it must be at least ten years since you were seven years old. There is the music tuning up again. Shall we return to mingle with the festive crowd? You know that you have promised me the next round dance."

It was two days later at four in the morning that Marian's eyes first saw land. Mr. Hibbert had procured for her the necessary permission for taking up her station on the bridge while the ship wended its way towards the harbor between the many little islands that lie scattered around St. Angela's. The moon was still shining brightly when she emerged on the bridge. Up here the noise of the engines was no more than a subdued throb, and by far the most pronounced sound was a rising and falling swish of water as the steamer's head rocked towards the entrance of the strait. With every roll of the ship the outlines of the black jagged rocks on each side altered with the rapidity of grimacing faces. From one point ahead a flare burns up out of the darkness, a little further on another—small fishing boats afraid of being run down, as Mr. Hibbert explained to Marian. As slowly they issued from between the islets, a feeble line of dawn had started up along the horizon, though the white moon still hung in the sky. They passed the fishing boats a little to the left. By the immobility of the black silhouettes, whose invisible faces were turned towards them, it was easy to see that the men had paused in order to watch the passing ship. In ten minutes more the line of dawn had widened to a band and warmed to a fiery yellow; and now, as they rounded the last shoulder of rock that fiery band had crossed and recrossed by hundreds and hundreds of black lines, slender lines and thick lines—the masts and funnels of the shipping in the harbor of Johnstown. Soon the lines began to detach themselves from each other, like the tangled meshes of some vast piece of network.

The sun was blazing up now from behind the long low houses. A few passes only were exchanged between its golden javelins and the silver arrows of the moon, and then the king of day was victor of the field. The silver ripples which had so faithfully been accompanying the ship turned to gold, fawnish courtiers who hastened to doff the badge of the departed monarch in order to don that of the ascending one. On the golden ripples there danced a single cocoanut shell which had floated outwards from land. Seeing it, Marian realized that they were close to port, and that it was time to go below to take a final look round her cabin.

When she returned to deck they were steaming slowly into harbor, and the solitary cocoa-nut shell proved itself to have been the vanguard of an army, for a miniature fleet of the shells was now surrounding the ship, bent, to all appearance, either on repelling the invaders or on welcoming the strangers. Which was it? Marian asked herself dreamily, while she stared with dazed and incredulous eyes at the palm trees by the water's edge.

"I am beginning to believe now that we are in the tropics," she wrote in her letter next day. "As long as there was only the sky and the water and even flying-fish as evidences, my reason declined to be convinced. We took a walk on shore with some of our travelling acquaintances, and on the market-place we bought pineapples and cocoa-nuts (two for twopence-halfpenny), bananas and limes. It was very touching to see a young couple on their honeymoon eating their first fresh cocoa-nut together with one spoon between them.

"Now we have parted from all our new acquaintances except Mr. Hibbert, who goes as far as St. Clara with us."

Now that they were fairly in the tropics, Captain Berrincott began unceasingly to enlarge upon his expectations with regard to Lot 13. With every island that they passed his curiosity grew more acute. The sight of the brilliantly white houses standing in the midst of the brilliantly green cane-fields and detaching themselves from a background of sharply pointed hills left him no peace.

"I am going to look after a sugar plantation," he would explain to whoever happened to enter into conversation with him. "The canes seem to be standing well," he sometimes added tentatively.

If the person addressed was a novice like himself, he would unhesitatingly agree; if an old West Indian hand, the answer would in some cases assume the form of a question.

"This is your first visit to these parts, is it not?"

"Well, h'm, yes. An out-of-the-way place of this sort is always something of a nuisance, you know."

The captain, as he spoke, gave a slightly upward jerk to his collar, without being in the least aware of it. It was a habit he had acquired since he had become a West Indian proprietor. Whatever misgivings might be lurking in the background of his thoughts, they were, for the moment at least, lying still. It was with his mind full of expectations that belonged distinctly to the sanguine order of those sensations that, on the morning of the 19th, the captain caught his first glimpse of the stately mountain peaks of St. Clara, with their eternal canopy of cloud hanging sullenly around them.

CHAPTER IX.

"Cocoa-nuts, saar! Buy me cocoanuts!"

"Oranges, ma'am! Bananas! Finest bananas ever grow on true!"

"Neber you listen to him, ma'am! And you rest still, Charlie Boso: you ever hear of lady buy banana when de apples 'longside?"

"Me dive for sixpence!" shrieked another voice. "Any gentleman want to see Gladstone Glasgow dive? Him throw sixpence down there, me bring it up in teeth."

"Massa in hurry to go shore? This way, massa, Quashie's boat only sound boat in Williamstown harbor."

The last words were drowned in a chorus of yelled-out protestations by which the owners of other boats were attempting to give vent to their indignation at this base calumny; for, though it might be true enough that there was only one sound boat in the harbor, that boat was not Quashie's, but belonged, according to one voice, to somebody called Daniel Alnes, according to another to Samuel Samuel, and so on through a small catalogue of names.

Captain Berrincott, despite all his desire to appear calm, was aware of a touch of flurry, now that the moment of final disembarkment had come, and the clamoring voices around him by no means helped to settle his nerves. He did not want to buy either pineapples or cocoa-nuts, and he certainly did not want to see any of those black monkeys dive either for sixpence or even for fourpence; all he wanted was to get on shore without further bother, and, if possible, start for Lot 13 within that same hour. And meanwhile here he was with his handbag in his hand, Marian close behind him, people pressing round, black faces gaping upwards, while the air continued to buzz with the prices of oranges and bananas, and Gladstone Glasgow, stripped to the waist, stood on the edge of his boat, all ready for the dive, grinning and nodding in the most insinuating manner known to him, and trying at this moment to catch the Captain's eye.

Turning away in order to elude the gaze of Mr. Glasgow, the Captain caught sight of an elderly gentleman who had just stepped on board, and who, with a bundle of newspapers in his hand, was moving rapidly about on deck, exchanging handshakes and hurried words with several among the passengers, generally also pressing a paper into their hands, but all the time anxiously peering about him, as though in search of something. Mr. Hibbert was among those who received both a handshake and a newspaper, and with whom a few words were exchanged. The next moment the elderly gentleman had darted away from Mr. Hibbert and literally pounced upon the Captain.

"You're Captain Berrincott, I hear! That's right; I thought you were, from your look," he began, at the same time warmly grasping the Captain's unoccupied hand. "You're going to Lot 13, I know; but of course you'll stop at least a night in town, everybody does; and of course you'll come to my house, everybody does to. We haven't got hotels, you know, or perhaps you don't know, just coming from home. What's the latest news there, by the bye? You are Captain Berrincott, are you not?"

"Yes, my name is certainly Berrincott."

"And my name is Rudd. This is your daughter, I presume—a most charming young lady; a star that cannot fail to shed a radiance over our isle. By the bye, what did you say that the latest news was?"

"I did not say anything; but when I left home people were talking more of the Russian war preparations than of anything else."

Mr. Rudd stared for a moment almost open mouthed.

"Oh, I see, I suppose I didn't quite explain myself. Of course I meant in the sugar prices. Anything new in that beastly—beg your pardon, I forgot that such language is not suitable for your daughter's maidenly ears. Anything new in beetroot?"

There was nothing new in beetroot, however, and Mr. Rudd returned to his original point, with the result that before three more minutes had elapsed the Captain and Marian were being hurried across the deck and towards the ladder under this gentleman's guidance.

"How do you do, Brown? Canes standing decently? You'll find it on the second page, first column. Here, Hibbert, you're coming too, aren't you. Clear a passage, you chattering rascals!"

Before she had exactly realized what was happening, Marian found herself sitting on a cross-plank with Mr. Hibbert beside her and her father straight opposite, while the boat's head was turned towards the shore. It was a small harbor and all but empty. Some half-dozen small sailing-vessels, one man-of-war at anchor, and a scanty sprinkling of fishing-boats, that was all. All life that there was seemed to have concentrated itself around the newly arrived steamer, and every stroke of the oars that took them further from its side seemed also to be taking them into a deeper quiet. No bustle on the shore, and neither cargo being shipped nor steam got up.

"Doesn't look like a busy place," was Captain Berrincott's inward observation.

"If they had kept up the duties on foreign sugar," Mr. Rudd was meanwhile saying, "we would have been in quite a different place from where we are now. There is—ahem—an article of mine on the subject in this week's Williamstown Trumpet" (the mystery of the distribution of the papers was now cleared up) "Perhaps you would not object to running your eye over it presently and letting me have your opinion."

They were nearing the shore by the time this request was modestly proffered and Marian, who had been staring about her with greedy eyes, was roused out of her abstraction by Mr. Hibbert's voice, speaking for the first time.

"So it is over now," he remarked, abruptly.

"Is it? I think, on the contrary, it is only beginning. The journey is only a preliminary."

"For you, no doubt; but it sometimes happens that a preliminary contains more than the sequel. Do you see that dark blue line over to the right there, against the sky? That is my residence. I am supreme being upon that strip of sand. It's an excellent place for a hermitage."

"But surely you don't live there quite alone?"

"Alone? Oh, dear, no. There are plenty of lizards and more cockroaches. Cassacou possesses a judge and a doctor, and even a species of half clergyman."

"Why, then you are not a hermit at all."

"Of course not," and Mr. Hibbert's lips twitched in a manner that was unaccountable to Marian. "Here we are, Miss Berrincott. Our ways part here. Good-bye, and thank you very much," he added, speaking a little lower and more quickly.

"For what?" asked Marian in amazement; but the boat had already grated against the shore, and all remarks of a private nature had become impossible.

"You are coming too, of course, Hibbert," said Mr. Rudd: "plenty of room in the buggy."

"Thanks, but the wind is in the right quarter just now: I am going to look out for an opportunity for crossing to Cassacou. Thank you, but I think I had better not come."

Had the other three been a little more interested in Mr. Hibbert they might have observed that there was a certain emphasis on the last words; as it was passed unobserved, and with a hurried handshake all round he was gone.

(To be continued.)

Playing Safe.

"I'm surprised to see you riding in the suburban smoker every day. You never use tobacco in any form, do you?"

"No, but if I ride in one of the other cars my wife expects me to be able to tell her what every lady on the train was wearing and whether it was becoming or not, and if I tell her she accuses me of taking too much interest in other women. If I can't tell her she says I'm too stupid for any kind of use."

SUNDAY SCHOOL LESSON

July 30, 1916. Lesson V.

The Word of the Cross.—I. Corinthians 1: 1-2: 5.

Commentary.—I. Paul's salutation (vs. 1-9). Paul declares at the outset in unmistakable terms that he is an apostle of Jesus Christ by divine appointment. Sosthenes is associated with him in the writing of this epistle. This is possibly the Sosthenes mentioned in Acts 18: 17, having become a Christian, as did Crispus, his successor as chief ruler of the synagogue. Paul addresses his message to the church at Corinth and speaks of them as being sanctified in Christ Jesus and called saints, but he would have it understood that his message was intended for all Christians everywhere. His desire is that grace and peace from God the Father and from the Son may be upon them. The apostle takes occasion to express his thanks to God for the spiritual gifts and graces they enjoy. He lovingly commends them for their faith and patience, and is confident that the Lord Jesus will keep them to the end and present them blameless before God. He declares that he who called them into fellowship with the Son Jesus Christ, is faithful. This address and salutation express Paul's unshaken faith in God and the salvation which he preached. He was about to reprove the Christians at Corinth for their shortcomings, but he does not enter upon that reproof until he has commended them for their virtues and graces.

II. Divisions rebuked (vs. 10-17). Paul is intensely interested in the stability and growth of the church in Corinth and exhorts them to be united in heart in the work of the Lord. He had learned from reliable sources that there had come to exist factions in the Church, and he knew that divisions in a body of Christians was productive of weakness. They seem to have divided up and followed certain leaders. Some called themselves after the name of Paul, others after Apollos, and still others claimed to be followers of Peter, or Cephas. One faction declared that they were followers of Christ, without claiming special allegiance to any earthly leader. Paul plainly and impressively shows how unbecoming it is for Christians to be thus divided. Their salvation came wholly and only through Jesus Christ, and the apostles were simply the human instrumentality by whom they had been instructed and encouraged.

III. The excellence of the cross (vs. 18-31.) 18. The preaching of the cross. The preaching that presents the suffering and death of Christ for the sins of the world. To them that perish foolishness—The doctrine of the cross is folly to those who are perishing, because they conceive of some inherent excellence in humanity, whereas the cross proclaims and justifies God's sentence of death against the human race.—Lias. Unto us which are saved it is the power of God—Those who take advantage of the atonement of Jesus Christ fully realize that there is power divine in the cross. 19. It is written—The quotation is of Isa. 29: 14. Destroy the wisdom of the wise—Human wisdom is of small account in spiritual matters. When God speaks, let worldly maxims perish. 20. Where is the wise—The apostle boldly declares that there is no worldly wisdom that it is at all comparable with the word of God. "The wise" mentioned here stands for the philosopher. The scribe—The Jewish scribe, or teacher of the law. The disputer—The Greek disputer.—Alford. Made foolish the wisdom of this world—True wisdom belongs to God alone and emanates from him. 21. The world by wisdom knew not God—Natural religion falls far short of arriving at the state which God's word requires. God has revealed himself but partially through nature, while by his word and by his Son he has made himself known so fully that man comes to know what is required of him and what his privileges are.

22. Jews require a sign—There never was a people in the universe more difficult to be persuaded of the truth than the Jews; and had not their religion been incontestably proved by the most striking and indubitable miracles, they never would have received it.—Clarke. Greeks seek after wisdom—The Greeks pursued philosophy and tried to arrive at just conclusions through the process of reasoning. 23. But we preach Christ crucified—Passing over the "sign" sought by the Jews, and the "wisdom" which the Greeks boasted, the apostles declared that Christ died for sinners. Unto the Jews a stumbling-block—Because they had misinterpreted the scriptures and could not think of the Messiah as being put to death. Unto the Greeks foolishness—The crucifixion of Christ as the ground of individual salvation was so different from their philosophy, that it appealed to them as foolishness. 24. Are called—Those who have heard the gospel invitation and have accepted it by faith in Jesus. The power of God—Power to deliver from the guilt and love of sin. Wisdom of God—They who accept salvation through blood of the cross are able to understand spiritual things. 25. The foolishness of God—The doctrine of the cross was considered by the Greeks as foolishness, but it was the wiser than any of man's wisdom. The weakness of God—Worldly wisdom would count it weakness in Christ to die, but his death brought to men the possibility of becoming the sons of God. 26. Ye see your calling—That is, God's calling of you into the kingdom of Christ, implying your acceptance of all its blessed results.—Whedon. Not many wise, etc.—The worldly wise and noble refused God's gracious invitation. 27. To confound the wise—Those who are humble and trustful receive salvation through the crucified Christ, while the wiser after the flesh stagger in blindness. 22. blindness. 28. Things which are not—Things which by the side of other things of higher importance in our human eyes appear to us as nothing. Yet these, in the counsels of God, are to change places, and more than change places, with things that are highly regarded in the sight of men.—Cam. Bib. 29. That no flesh should glory in his presence—God works through humble means, yet effectually, and makes it clear that it is He, and not the instrument, that accomplishes the result. 30. Wisdom—Christ came to show us the Father and to enlighten our minds regarding spiritual things. Righteousness—Through Christ man is justified or made righteous. Sanctification—Christ in the atonement provided for the cleansing of the heart from all sin in the present life by an act of faith. Redemption—Redemption embraces Christ's whole work of rescue from sin, even to glorification." 31. Let him glory in the Lord—The Lord alone is to be praised for the plan of salvation.

IV. Preaching Christ crucified (2: 1, 2). 1. When I came to you—Paul refers to his labors during his first missionary journey. Not with excellency of speech or of wisdom—The apostle had no thought of appearing as an orator or of presenting the findings of the philosophy of the day. The testimony of God—His aim was to declare the message of salvation plainly and impressively. 2. I determined—Paul knew the tendencies of the people and their tastes, both of the Jews and the Greeks, but he had only one purpose, and that was to show them the way of salvation. Save Jesus Christ, and him crucified—His one theme was Jesus the Saviour of men.

Questions. Who wrote this epistle? From what place? What was the object in writing it? How does the epistle begin? Why was the cross of Christ a stumbling block to the Jews? What did Paul determine should be the character of his preaching?

PRACTICAL SURVEY.

Topic.—Church Unity.

I. Promoted under gospel fellowship.

II. Destroyed by human philosophy.

III. Encouraged by apostolic example.

I. Promoted under gospel fellowship. This lesson presents a splendid example of the way to prepare an offender for well-deserved rebuke. First of all Paul asserted the divine authority of his office. The strength and nobleness of his character rested on the confidence that he was called of God to be and to do the work of an apostle. He stood before the Corinthian church as the appointed representative of their Lord. It was manifestly within his province to point out blemishes in the Corinthian church and to reprove evil-doers. Reserving needed rebuke, Paul first saluted his Corinthian brethren in a manner altogether courteous, affectionate, candid and wise. His salutation generously acknowledged spiritual attainments and endowments. Love kept in check apostolic authority and righteous displeasure. With heavenly wisdom the apostle filled the minds of the Corinthians with thoughts of Christ and of their high calling in him, as separated from their former selves to do his will. He recognized in their gifts of utterance promise of a rapid and effective propagation of the gospel. As inhabitants of one of the most debased cities of the ancient world, the Corinthian church had been saved by the gospel of God's grace. They had been called out of a society where the Greeks sought for wisdom and the Jews for signs, but they had found salvation.

II. Destroyed by human philosophy. The converted Greeks carried their old mental habits into church life. For ages they had identified each shade of opinion in philosophy with the name of an individual teacher. It was natural for them to look at Christianity as an addition to the world's thought which admitted of being treated as other systems. The divisions in the church at Corinth were deprecated by Paul as an offense against the fundamental principles and laws of Christian fellowship. Such divisions exalted the subordinate at the expense of the vital and supreme. They involved the very heart and soul of the community. They arrested their unity which was designed to grow into perfection. Paul set before them the positive duty of unity as opposed to all partisanship. Through a carnal disposition to exalt his servants they were losing sight of Christ. They were opposing one another which was sadly inconsistent with fellowship with Jesus Christ.

III. Encouraged by apostolic example. Paul had a personal experience of the excellence and power of the doctrine of the cross. The knowledge which he prized he communicated to others. The blessings which he enjoyed he sought for others. He had the comfort of a good conscience as he called to mind the purpose and method of his ministry. Well might he pass by the wisdom of men since he was entrusted with the wisdom of God. Paul magnified his office and humbled himself. He relied wholly on the grandeur of his theme and the spiritual power with which its announcement was accompanied. He exalted the cross of Christ as the central element of the gospel. The spirit and manner of fulfilling his office were thoroughly unworldly, so much so as to appear to the Greek as foolishness and prove to the Jew a stumbling block. At Corinth Paul felt the necessity of adhering to the simplicity of the gospel, disclaiming the wisdom of words, upon which others laid stress. The central point of his preaching was that he delighted to sum up in the expression, "The cross of Christ." He gloried in it as the distinguishing feature of the good news he proclaimed. This evangelical doctrine filled the foremost place in Paul's thought and supplied the chief inspiration of his heroic life. He knew that it would meet the deep, universal needs of humanity. He was convinced that the gospel could do for mankind what no other power could effect, bringing pardon, the principle and power of a new life and hope for the future, blessings which God only could bestow. The miracle of grace by which the soul is translated from death in sin to the life of holiness, was exalted by Paul as the mightiest of all wonders. With Paul the cross and salvation were indissolubly joined.—T. R. A.

The Rat and the Bulbs.

According to the French naturalist De Parville, a gardener planted one afternoon 250 tulip bulbs in a terrace, and next morning he noticed that the ground had been disturbed and that the bulbs had all been taken away. He was confident that rats had done the work, and, taking a spade, he began to dig in the hope of discovering their nest. Soon he unearthed a large female rat, which he killed, and after digging a few more minutes he discovered an underground chamber lined with hay and leaves and connected by a corridor with two holes, which were evidently used as storehouses, for in them he found the 250 tulip bulbs. This was remarkable, but more remarkable was the fact that they were neatly arranged in two rows, and that not one of them had been gnawed or otherwise injured.

"Misery loves company," quoted the Wise Guy. "I suppose that's why people flock to funerals and weddings," suggested the Simple Mug.

AUSTRALIA IN FRANCE

Antipodean Troops Are Different to Home Growns.

Are Very Anxious as to Canadians' Showing.

"Here they are!"

We were sheltering from the rain in the waiting-room of a station a dozen miles from Paris, and at the exclamation we ran out and saw a long train coming round the bend of the platform. As it slowed down I noticed a large Australian flag nailed on the outside of one of the wagons, at the open door of which stood half a dozen men in shirt sleeves and slouch hats. The train was full of Australian soldiers, from Gallipoli and Egypt, on their way through France to the front.

A fine lot they looked; mostly tall, straight young fellows, tanned and tough looking, with keen but kindly eyes, frank, open faces, and a ready smile. They had their horses with them, and their guns and equipment were in the rear wagons.

They were pleased to have a word with anyone who spoke English, and when I sympathized with them because of the rain they said they did not mind it.

"We've had enough sand," they added, "and it does our eyes good to see the verdure. We've never seen land like this for fertility and greenness. Have we, Dick?"

"It's new on me," answered Dick. "First time I've ever seen anything like it. By gum! I'd like to get hold of 5,000 acres of this land. Wouldn't I grow some stuff!"

And his sunburnt face lit up at the vision of the magnificent harvests he could get from the verdant soil, apparently forgetting that land in France costs a great deal more than in Australia.

The train stopped long enough for me to have a chat with several of the officers and soldiers.

My companion on the lookout for the train was a young Englishman from Nottingham, who had a brother, Lieut. ——, with the Australians. They had not seen one another for six years, and when they met, and came walking down the platform I remarked how different they were in appearance. The brother who had spent all his life in Great Britain looked just like you and me. The other, who had been in Australia most of the time and had come over with the war volunteers, had overseas written all over him. Spare, with the build of an athlete, and as brown as a cowboy, he looked strangely grave for a young man. But when one gets to know the responsibility that rests on the shoulders of overseas officers on active service perhaps it is not surprising that some of them seem preternaturally solemn for their years.

The men were anything but downhearted, and they all bore the stamp of absolute fitness.

"They're the best fellows in the world," said one of their officers, "but as stubborn as mules. You can't drive them, but if you know how to handle them you can do anything with them."

While we were talking a private joined us, and without waiting for an introduction joined in the conversation.

"Maybe you'd like to see our rifles," he said, and he began to explain to me the mechanism of his weapon.

"I say, Bob," remarked his superior, "your rifle's dirty. Why don't you clean it?"

"All right, boss," answered Bob, and went on with his explanation.

It was patent to me that relations between overseas officers and men are not quite the same as those in the British army.

The Australians were all very anxious for news of the Canadians.

"Where are the Canadians?" "What are they doing?" were questions put to me by several men.

"Covering themselves with glory," I replied.

"Ah!" they exclaimed, in a tone which seemed to imply:

"Very likely. But just you wait till our fellows get to war."

It occurred to me that perhaps the friendly rivalry which obtains between English and Scottish regiments, Belgians and Frenchmen, is not unknown among our brothers from beyond the seas.

The Australians are delighted with the manner in which they have been received since they landed in France. All the way up from Marseilles, whenever the train stopped, they were met by Red Cross ladies and the girls in the towns and villages with hot tea and coffee, biscuits, bonbons and tobacco. At Lyons an old French officer stood at the salute as the train came into the station. When it stopped he delivered a speech of welcome. One of the overseas officers—his French is rather skimpy—made the request:

"Voulez-vous parler lentement, s'il vous plait?" (Will you speak slowly, please?")

Then he discovered that the Frenchman was inviting the occupants of the train to take tea with him.

In five minutes the Australians were crowding into the buffet, where strawberries and cream, cakes and tea awaited them.

Their cheers as they left Lyons were heard far beyond the station.

The manner in which the transports were convoyed by the British fleet from Egypt to France aroused the admiration of the soldiers.

"It was wonderful," they said. "When we left port we were accompanied by a little petrol-boat. At one part of the voyage along the Mediterranean enemy submarines were reported in the vicinity, and immediately three British cruisers appeared out of nowhere and made rings round us. It was wonderful!"

One of the things that puzzled the men from Melbourne and Sydney was that at Marseilles they got a higher rate of exchange for English bank notes than for British sovereigns. They were somewhat annoyed to find en route that no one would cash the Chamber of Commerce one franc war notes they had brought away with them from Marseilles, these being current only in the place of issue.

The fact that it is still possible for Germans in England to go about uninterned filled Mr. Hughes' compatriots with amazement.

"They could not do it in Australia," they remarked. "We have made a clean sweep of them, and if a German was discovered in any of our towns he'd stand a fair chance of being lynched."—W. L. McAlpin, in the London Daily Mail.

SUNDAY AT HOME

LOSS AND GAIN.

When I compare
What I have lost with what I have gained,
What I have missed with what attained,
Little room do I find for pride.

I am aware
How many days have been idly spent;
How like an arrow the good intent
Has fallen short or been turned aside.

But who shall dare
To measure loss and gain in this wise?
Defeat may be victory in disguise;
The lowest ebb is the turn of the tide.

BE STRONG IN THE LORD.

My grace is sufficient for thee; for my strength is made perfect in weakness. Most gladly therefore will I rather glory in my infirmities, that the power of Christ may rest upon me. Therefore, I take pleasure in infirmities, in persecutions, in distresses for Christ's sake; for when I am weak, then am I strong. I will go in the strength of the Lord God; I will make mention of thy righteousness, even of thine only. The gospel of Christ .... is the power of God unto salvation.

I can do all things through Christ which strengtheneth me. I also labor, striving according to his working, which worketh in me mightily. We have this treasure in earthen vessels, that the excellency of the power may be of God, and not of us.

The joy of the Lord is your strength. Strengthened with all might, according to his glorious power, unto all patience and long suffering with joyousness.

HABIT.

Fifty years ago we travelled extensively in Scotland, and we enjoyed the hospitality of not a few. We tarried in the home of a devout man, who took care to say grace at every meal. One sentence was always in evidence. "Take away all our sins." To the family this came as a matter of course, but to a stranger it suggested that this good and devout man took care to accumulate fresh sins, in order that he might have them taken away at the next meal.

Nothing of the kind! This was a pure living man, of high repute. He simply copied words from his father, and doubtless continued to the end of his days.

Habits are ties and chains. We contract them imperceptibly; we cannot break them without pain. It is certain that we act because we have acted, we continue because we have begun, we attach ourselves to our work because it is our own. We must love truth supremely, and in order to judge of it correctly we must separate it from habit. Nay, a truth may become an error, when, being consecrated by habit, it opposeth other truths: or when, being only relative, it claims to be absolute. Absolute truth itself should never become a pure habit; it would grow old and die within us, if it were not every day and every hour born there anew. Nothing can last in this world except on the condition of its renewing itself.

Christianity is radical in the highest degree. It uproots one life and plants another; it breaks the shell of habit and says: "Be ye enlarged." It does not add virtue to virtue till the frame be full; but it throws into man's heart a new principle of life and action the love of God; a nature at once mysterious and profoundly in agreement with our moral wants. Here is the only lever which enters deeply enough into the soul, to shake, move, and displace old life and habits, and bring in a larger life.

What is given is Life! And this life is renewed "day by day." This life is moving. It is not stationary; it is not like a tree. This life is ever coming, and becoming. It bursts the bark. It breaks the shell, it is here not to reach certain limits, but to surpass all limits.

The world is old enough to have some old religions, and what are they, and where? They are tottering structures, dying and dead, and waiting to be buried; nay, some are out of sight.

"Bel boweth down, Nebo stoopeth."

Let us beware of habits; the mode, the manner, the way, the style, are not Life. We repeat again: "I am come that ye might have life; and that ye might have it more abundantly."

H. T. Miller.

The Children's Hour.

Between the dark and the daylight,
When the night is beginning to lower,
Comes a pause in the day's occupations,
That is known as the Children's Hour.

I hear in the chamber above me
The patter of little feet,
The sound of a door that is opened,
And voices soft and sweet.

From my study I see in the lamplight,
Descending the broad hall stair,
Grave Alice, and laughing Allegra,
And Edith with golden hair.

A whisper, and then a silence:
Yet I know by their merry eyes
They are plotting and planning together
To take me by surprise.

A sudden rush from the stairway,
A sudden raid from the hall;
By three doors left unguarded,
They enter my castle wall.

They climb up into my turret
O'er the arms and back of my chair;
If I try to escape, they surround me;
They seem to be everywhere.

They almost devour me with kisses,
Their arms about me entwine
Till I think of the Bishop of Bingen
In his Mouse-Tower on the Rhine.

Do you think, O blue-eyed banditti,
Because you have scaled the wall,
Such an old moustache as I am
Is not a match for you all.

I have you fast in my fortress,
And will not let you depart,
But put you down into the dungeon
In the round-tower of my heart.

And there will I keep you forever,
Yes, forever and a day,
Till the walls shall crumble to ruin,
And moulder in dust away.

—Longfellow.

DIARRHOEA

Was Caused By Change of Diet, Etc.

Diarrhoea arises from many causes such as, change of diet, change of water, change of climate, catching cold, the eating of unripe fruits, or anything that will cause or induce an excess of bile.

On the first sign of any looseness of the bowels it should not be neglected, but should be looked after immediately, for if not diarrhoea, dysentery or some other serious bowel complaint may ensue.

Mr. Geo. Smith, Victoria, B.C., writes: "It is five years ago since I first tried Dr. Fowler's Extract of Wild Strawberry. I was then on a timber survey, and suffered greatly from diarrhoea, caused by change of diet, etc. A friend in the party gave me a few doses which gave me great relief. Since then I have been in survey work, and would as soon think of starting out on a trip without my compass and blankets as without my supply of Dr. Fowler's Extract of Wild Strawberry, which I consider the woodsman's best friend."

Dr. Fowler's Extract of Wild Strawberry has been on the market for the past seventy years, and is universally known as a positive cure for all complaints arising from any looseness of the bowels.

When you ask for "Dr. Fowler's" be sure you receive what you ask for as there are many rank imitations of this sterling remedy placed on the market to try and fool the unsuspecting public.

The genuine is manufactured by The T. Milburn, Co., Limited, Toronto, Ont.

Price, 25 cents.

POTATO DISEASE

Late Blight and Rot Treated of by an Expert.

A timely bulletin issued by the Division of Botany, Central Experimental Farm, Ottawa, deals with late blight and rot of potatoes. Paul A. Murphy, assistant plant pathologist at Charlottetown, P. E. I., is the author, and the Bulletin, which is entitled Circular No. 10, can be had free on application to the Publications Branch, Department of Agriculture, Ottawa. Both the director of the Dominion Experimental Farms and the Dominion Botanist agree that the subject is most important, as late blight has caused incalculable losses, but that these losses can be reduced to a minimum by thorough and timely spraying with Bordeaux mixture. Mr. Murphy describes the symptoms very fully. Early blight is prevalent in July, and the spots which it causes are characteristically dry, brown and marked, with a series of concentric rings. Late blight makes its appearance in August and September, as a rule, although it is always present before it is generally noticed. The first spots, which are usually on the lower leaves or stems, are dark brown to purplish black in color, sometimes surrounded by a ring of light green, and they have a water-soaked appearance. In fine weather they dry up and become brown. In moist weather they increase in size and number, and may involve the whole plant. An infected tuber is characterized by lurid-colored, slightly shrunken areas on the surface that are abnormally hard. Mr. Murphy says that the losses from the disease are incalculable, and that in the United States some time ago they were placed in value at $25,000,000 a year. In 1915, it is estimated that the loss to Prince Edward Island alone was not less than $1,000,000, representing 2,000,000 bushels. The damage all over Eastern Canada was about on the same scale. Methods of control by spraying are detailed, and the prescription for making the Bordeaux mixture given. The stocking of solution of copper sulphate and milk of lime is advised. Poison for the Colorado beetle can be applied with the Bordeaux as often as necessary. For this, either Paris green or arsenate of lead or a combination of both may be used. Half a pound of the former and a pound and a half of the latter to 40 gallons of spray being sufficient. In very severe cases, the quantities of the poison may be increased by half.

HE SHOULD NOT MOURN.

(Guelph Mercury)

The editor of the Soo Express has been ordered to suspend publication for three months for some matter that he wrote in regard to recruiting. That punishment may prove a blessing.

If he has any kind of luck in that time he may look around and discover another line of business where he can sell it and make an honest living; where he will not have to hide behind the lamp post when he meets the bailiff, nor hold up two fingers to the barber every time he gets his chin scraped or his locks trimmed.

"LIBERTY AND PEACE."

(Simcoe Reformer)

The Buffalo News asserts that the American flag is not the banner of a belligerent nation, but the emblem of liberty and peace. Liberty to stand aside while others fight that freedom may not be banished from the earth; and peace with profits.

Everything ends with songs.—Beaumarchais.

Had Weak Back and Kidneys.

COULD HARDLY MOVE IN BED.

When the back becomes weak and starts to ache and pain it is a sure sign that the kidneys are not performing their functions properly.

On the first sign of backache Doan's Kidney Pills should be taken and serious kidney troubles prevented.

Mr. Francis McInnes, Woodbine, N.S., writes: "I deem it my duty to let you know the wonderful results I have received from the use of Doan's Kidney Pills. For a long time I had been suffering from weak back and kidneys. I used to suffer the most at night, and sometimes could hardly move in bed with the pain. I could do no hard labor on account of my back. A friend advised me to give Doan's Kidney Pills a trial, and I am glad I did for the pain in my kidneys is gone; my back is strong, and I can perform any hard labor and get my good night's sleep. I only used three boxes of the pills."

Doan's Kidney Pills are 50 cents per box, or 3 boxes for $1.25; at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

When ordering direct specify "Doan's".

FARM AND GARDEN

HOT WEATHER PLANTING.

The home acre can be made all the more profitable by planting some late vegetables. It is doubtful if there is a month that offers better returns for labor spent in the small vegetable garden than does the month of July. The experiment is worth trying. The conditions in July are far different than those in April, and it is therefore important that the gardener fully understand them, so as to be able to take advantage of the opportunities offered.

The seed sown in July must be placed deep in the soil—as during this month the weather is dry and hot—or the seed will not properly develop. But this does not imply that deep planting means deep covering. Deep planting and deep covering must not be confounded. A good rule to follow in this is "four times the diameter is the depth a seed should be covered."

In deep planting the rows should be opened at least four inches, the seed sown on the bottom and covered lightly. As the plants grow earth should be filled in until the ground is level.

This method, which might be called "trench planting," answers several purposes in hot weather that cannot be obtained in any other way. Being below the level evaporation is retarded in such rows to a considerable degree, and the dews of the night settle more readily in them, supplying the seed with enough moisture to germinate them.

The greatest advantage secured from trench-planting is the fact the young, tender roots are placed far enough away from the surface to prevent danger of a prolonged dry spell.

If the soil on the surface is kept soft and free from weeds, the vegetables planted in July will make such headway that they will be fit for the table in from six to eight weeks.

VEGETABLES THAT STAND HEAT.

Bush beans will mature and give a good crop, if planted any time during July.

The extra early varieties of sweet corn will at this season usually be fit for the table in about 50 days from the time the seed was planted.

There is somewhat of a risk in planting peas. They do not generally thrive in hot weather, and the crop would hardly be worth the use of the land in which is grown.

Beets and carrots sown in July will give a crop of roots that will be tender the entire winter. But on the approach of frost they must be stored in sand in a cool part of the cellar.

Cutabaga turnip seed can be grown even as late as the first of August, but the earlier in July the seed is put in the soil the better. The seed should be sown thinly in rows about five or six inches apart, putting in the plants at intervals of about seven or eight inches. The dibble should be employed when transparent, and the earth should be well firmed around the roots.

Never plant turnips where cabbages, cauliflower, Brussels sprouts or kale has been and vice versa. As a writer once stated: "The family of Brassica is a very secluded one in regard to its relations."

July is the proper time for sowing spinach for a winter or early spring crop. The plant must be thinly covered with fine litter or straw as soon as winter weather sets in.

Radishes may be sown up to the middle of August, but this is the time for sowing winter radishes. To have them tender all winter they must be lifted fairly early and planted in dry soil in a cellar where they will not freeze.

Planting top onions or multipliers in early August will insure tender, delicious scullions in early spring.

NOTES.

Many who do not keep accounts do not realize the cost of keeping farm animals. It may be stated as a conservative estimate that a cow will eat $30 worth of feed a year, perhaps more if it is available; the cost of feed for a horse is variously estimated at from $60 to $75 a year. This is in addition to the labor, shelter and attention required for the animal's comfort. It has been estimated that it requires an average of one acre in five to feed the horses used in farming. Whether much of the feed is raised or considerable bought, the cost is to be considered, as feeds have value. This would suggest that we reduce the cost of raising and feeding animals and increase the value of the animal and animal products.

Many cows highly recommended have been a disappointment to the purchaser and the cause of much hard feeling. In many cases good feeding would have brought satisfaction all around.

Make any needed repairs as soon as they are found. It will cost you more to neglect such repairs than to make them at once. A thoughtful, alert farm manager is always looking for needed repairs, and such men save expense in farm operation.

Take care of the small things on the farm and the larger ones will take care of themselves. Let nothing that is produced go to waste if it is possible to use it at all. Be fair with the farm and conserve its natural resources and the crops it produces. This will be necessary for those who are to occupy the farm after you.

Do not neglect the shade trees. If the weather should become extremely dry it would probably save some of them to water them occasionally. Insects and diseases should be watched and care taken to prevent trouble if possible.

Every farmer that has a few acres of pasture might produce his own pork and bacon. One sow on a few acres of pasture and with grain enough for a maintenance ration, will produce enough pork in one year for an average family of five individuals. With skimmed milk, slops and a little grain the pigs can be very cheaply raised and they will save the bacon bill. Get a bred gilt now and begin to raise your own meat.

That the silo is almost indispensable to live stock and dairy farms is the conclusion of the Ohio College of Agriculture. As to some of the benefits of the silo the college authorities say: Practical dairymen who are silo users say that the silo on the farm means a saving of from eight to ten cents a pound in the cost of producing butterfat. Beef feeders say that ensilage saves from $1 to $1.50 per 100 pounds in producing beef. Feeding experiments bear out these statements. On this basis ensilage under normal conditions is worth $4 per ton. With an increase of 50 per cent. in feed prices it is worth $6 per ton. Reports from farmers over the State show an average cost of $2.75 a ton for corn ensilage, including all factors incident to its production. The inadvisability of doing without a silo seems to be more important than the question of whether to build one.

MAKING WATCHES.

Wonderful Feats That Are Performed by Modern Machinery.

The rapidity with which watches are nowadays manufactured has been made possible by the ingenious machinery designed within recent years for the making of all parts of a watch. The speed with which these various parts are turned out is little short of marvelous. Great sheets of brass and steel are cut and rolled into ribbons and punched out into wheels at the rate of 10,000 a day from each punching machine. Workers drill the thirty-one holes in the root of the watch as fast as they can count.

Brass wire glides into a machine that measures off the length of a part, turns it, puts a screw thread on each end and actually screws it in at the rate of 2,000 a day.

The screws are of such tiny size that fifty gross of them may be put in a woman's thimble, while of others there are a thousand gross to the pound.

Balances are cut from the solid steel, ground down, worked up and drilled with their twenty-five screw holes apiece, at the rate of 100 wheels a day from each machine.

Wheels have their teeth cut, a couple of dozen at a time, some with from sixty to eighty teeth, at the rate of 1,200 wheels a day from each machine.—Harper's Weekly.

GOOD RICH BLOOD
MEANS GOOD HEALTH

Just a Little More Rich, Red Blood Cures Most Ailments.

The lack of sufficient rich, red blood does not end merely in a pale complexion. It is much more serious. Bloodless people are tired, languid, run down folk who do not enjoy life. Food does not nourish; there's indigestion, heart palpitation, headache, backache, and nearly always nervousness. If this bloodlessness is neglected too long, a decline is sure to follow. Just a little more rich, red blood cures all these troubles. Then you have new health, new vitality and pleasure in life. To get more rich, red blood the remedy is Dr. Williams' Pink Pills. No other medicine increases and enriches the blood so quickly or so surely. This is not a mere claim. Dr. Williams' Pink Pills have done this over and over again throughout why thousands of people always have a good word to say for this medicine. Miss Gertrude Haffner, Kingston, Ont., says: "About two years ago I was suffering greatly with anaemia, so much so that I had to give up my situation. I became so weak that I could scarcely walk without help. I had no ambition, no color, no appetite and was constantly troubled with head aches and dizzy spells. I was taking medicine from the doctor, but it did not do me a particle of good. One day a friend asked me if I had tried Dr. Williams' Pink Pills. Though as the result of my condition I was greatly discouraged, I began the use of the Pills, and thanks to that good friend's advice after using a few boxes I began to feel much better. Under the continued use of the pills I gained in weight, my color came back and I grew gradually stronger. I looked so much better that people would ask me what I was taking and I had no hesitation in giving the credit to Dr. Williams' Pink Pills. I am so grateful for what this medicine has done for me that I will do all I can to extend its use."

You can get these pills from any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

No Law's Delay Here.

In Perak, in the Malay peninsula, lawyers find no business, for a modified form of trial by ordeal decides all disputes. In place of the legal practitioner the pleader is a native boy who is assigned to one or other of the sides and is given a bamboo tube, in which is sealed the pleading of the person or persons whom he represents. When all is ready two stakes are driven into the bed of a stream, and by the aid of a bamboo pole the heads of the two boys are submerged at the same time. By grasping the stakes they are enabled to remain under water for quite awhile after their natural inclination would bring them to the surface, but at last one of them gives in and, releasing his hold of the stake, comes to the air. He is immediately seized, and the tube he holds is cast aside. The other lad is led ashore, his tube opened, and the document contained therein stands as the decision in the case.

By first scalding the milk and setting it aside to cool, a baked or boiled custard will be perfectly smooth.

BEES' SENSES.

Smell Serves for Taste as Well, With Them.

I na pamphlet recently issued by the Smithsonian Institution, Dr. N. E. Mcindoo, of the bureau of entomology, states that the sense of smell in honey bees is highly developed and that it also serves as a sense of taste, says the Pittsburg Post. In some instances the bee seemed to distinguish a marked difference in the taste between certain mixtures which the scientist himself could scarcely perceive.

Until recently but little experimental work has been performed to determine whether insects have a true sense of taste, or gustatory sense, as it is termed in science, but the present author has endeavored to show that bees have likes and dislikes in regard to foods and has made a careful study of the structure of the sense organs on the mouth parts of the honey bee. In his experiments he used something like 6,500 bees, mostly adults, all of which were kept in their normal state.

Even in the higher forms of life it is difficult to distinguish the sense of taste from that of smell, and in his experiments Dr. Mcindoo has discovered that in the bee these two senses cannot be separated at all. In fact the sense of taste proves to be merely one phase of the olfactory sense, or sense of smell. In testing the senses of these insects the following substances were the most important ones used: Vinegar, lime sulphur, kerosene, carbolic acid, formic acid, oil of peppermint, quinine and strychnine, and various other salts mixed with cane sugar and honey, besides other candies made of various sugars and honey. Dr. Mcindoo began by feeding the bees several substances from which five classes were chosen to study the effects: repellent, sweet, bitter, sour and salty substances, the four latter being representative of the attributes of human taste.

The experiments show that bees like honey best of all foods and that they are able to distinguish the differences between various kinds of honey, that they have likes and dislikes, and that they can distinguish in foods differences not perceptible to the writer. Oil of peppermint, which is agreeable to man, is distasteful to bees, while, on the contrary, another substance which the experimenter did not like seemed to please the bees.

It was also discovered that the bees must first eat more or less of certain foods before they can distinguish them, indicating that they have a true gustatory sense unless this discrimination is made possible by means of the olfactory sense. Since it was not possible to determine this point by experiment, the author made a thorough study of the sense organs on or near the mouth of the bee. After studying the anatomy of the two general types of sense organs, innervated hairs and pores, the author decided that the bees possess only a sense of smell, although, judging from the experiment to find the likes and dislikes of bees as regards foods, the indications were that bees also had a sense more or less similar to our sense of taste.

During his experiments he also investigated the tactile sense, or the sense of touch, of the honey bee, and believes that with the organs for that purpose the bee is enabled to mould in uniform thickness the walls of all its cells. He also investigated the manner in which bees eat liquid foods by capillary attraction and by a pumping force which they possess. Some substances, which they cannot eat at once, are dissolved by the application of saliva. He discovered that many solid substances, which are not previously smelled by the bees, release odors through the physical or chemical changes brought about when they are dissolved by saliva. These odors are first received by the olfactory organs of the mouth-parts which are the nearest, and for this reason the so-called taste sense seems to be only a phase of the sense of smell of bees.

Dr. Mcindoo and the few other scientists who have fed insects foods containing undesirable substances have observed that they refuse such foods after eating more or less of them. From this observation the other authors have concluded that insects can taste, although they have not ascertained whether they possess sense organs anatomically adapted for tasting, nor have they considered the role played by the sense of smell in these responses. Dr. Mcindoo says that it is impossible to determine whether we taste or smell certain substances when we eat them. Before being eaten by us a food sometimes emits only a faint odor or none at all; but when we eat it a pronounced odor is perceived, showing that in such cases the odorous particles are not given off until the food is taken into the mouth and mixed with saliva. The same principle seems applicable when bees eat candy which contains undesirable substances emitting extremely weak odors. The author's experiments during four years convince him that the olfactory sense of the bee is much keener than that of man. Finally, he believes that their olfactory sense is highly developed and that it serves them as a sense of smell and taste combined.

Despite the popular interest in Dr. Mcindoo's report on his investigation, the publication itself is quite technical and is distributed primarily to libraries and to entomologists.

NOT READY FOR PEACE.

(Buffalo News)

The time is not ripe for peace proposals. Official pronouncements on the subject make that point as clear as day.

At the present time neither side would even consider any proposition for peace that would be mutually acceptable.

Only a decisive victory or succession of decisive victories will provide an opportunity for peace proposals.

A FRIGHTFUL DEATH
SUFFOCATED IN ASTHMA ATTACK

Every sufferer from asthma knows the terror, the abject fear that overcomes them when struggling for breath. The old-fashioned remedy may relieve, but never cure. Best results come from Catarrhozone, which cures Asthma after hope is abandoned. It's because Catarrhozone kills the asthma germ that it cures. Choking spells and labored breathing are relieved, suffocating sensations and loss of breath are cured. Every trace of asthma is driven from the system, and even old chronics experience immediate relief from lasting cure. Equally good for bronchitis, throat trouble or catarrh. The large $1.00 outfit includes the inhaler and lasts two months. Sold by all dealers or from the Catarrhozone Co., Kingston, Canada.

HOW TO KEEP YOURSELF
LOOKING YOUNG

It has been proven that the woman who protects her skin will keep herself free from wrinkles and marks of age far longer than the woman who says "Oh, no, I never do anything for my complexion."

If your skin is not naturally clear and fresh, or if it has suffered from inattention—worry—sickness—age or the ravages of wind, sun and weather, the regular and persistent use of USIT will soon restore to your complexion its natural color and freshness.

USIT is a valuable formula of an old and famous beauty secret.

It feeds and nourishes the skin, wards off wrinkles and makes the complexion clear, smooth and faultless. It is not necessary to use any other treatment during the day. Apply USIT at night before retiring, and it will tone the skin and give that silky softness and glowing freshness that alone indicates perfect skin health.

USIT is put up in handsome desk bottles. It may be secured through T. Eaton Co., Limited, Robt. Simpson Co., Limited, Toronto, and other high-class Drug Stores, or direct from us.

Send 50c. [as war tax] to-day for trial bottle sufficient for six weeks' use. See our exhibit at National Exhibition, Toronto.

USIT MFG. CO., LTD., Toronto, Ont.

SCIENCE JOTTINGS

In Wieliczka, near Cracow, there are houses built of the salt which is abundant in that vicinity.

The first steel pens were sold for about 40 cents each.

Iron in its red-hot state vibrates at the rate of 477 billion times in a second.

One-fourth of the world's lead supply is from Great Britain.

An ounce of gold leaf will cover a space 14 feet square.

Jerome D. Travers, the national open golf champion, estimates there are 1,800 golf clubs in the United States, with a combined membership of 350,000. He says that the average player spends $20 a year for balls—a total of $7,000,000.

The largest meteorite known to have fallen to earth weighed 437 pounds.

Hair-cutting was once a crime in France.

The wool on the back of the sheep is the shepherd's barometer. It curls as wet weather approaches.

The total product of the farms of the United States has amounted to more than that of all the gold mines in the world during the last six centuries.

The geographical origin of wheat is a mystery, lost in the dim past.

The Chinese have cared for their fish resources for centuries, but the United States leads in scientific fish propagation.

It has been estimated that the telephone and telegraph systems of the world have used about 600,000 tons of copper, 60 per cent. of which is charged against the United States.

The color magenta was named after the battle which was fought during the years of its discovery.

The Baltic Sea's wreck record is one a day—greater than that of any other part of the world.

Of all the cities of the United Kingdom, Belfast has fewer unemployed than any other.

The meat-eating tendency of the Americans shows an inclination to decline.

The meat packing of the United States leads all others in extent.

The annual increase for telegraph and telephone business is over 40,000 tons of copper.

Twelve thousand persons die of measles in the United States annually, and 10,000 of whooping cough.

Irritable Nerves Restored
And Health Regained
In a Simple Way

The man or woman who is run-down, not feeling up to the mark, perhaps irritable, nervous, or sleepless can well afford to learn about the wonderful results the newly discovered blood-food is giving to folks that use it.

There is wonderful power in this new blood-food, and every weak, pallid person can be quickly nourished back to health that uses it as directed.

After each meal, with a sip or two of water, you simply take two little chocolate-coated tablets, sold in all drug stores under the name of "Ferrozone."

The effect is noticeable at once. You feel happier, brighter, more contented. That old-time feeling of weariness departs—you forget your "nerves" and no longer get irritable or cross over trifling annoyances.

There is a reason for this change and that reason consists of the fact that Ferrozone contains blood-making materials you can get in no other way.

Ferrozone makes the blood tingle and sing with new vitality. This ensures lots of nourishment and strength being supplied to every part of the body.

No wonder the eyes brighten and the cheeks radiate color and happiness. With abundance of strength, a keen appetite, good digestion and plenty of sound sleep—all the result of Ferrozone—you quickly feel as if life held new charms and pleasures.

How to Prune Your Trees.

Always use a pole saw and pole shears on the tips of long branches, and use the pole hook in removing dead branches of the ailanthus and other brittle trees where it would be too dangerous to reach them otherwise.

Do not "head back" or cut off the top of a tree except where the tree is old and failing, and then under special instructions.

Be as sparing and as judicious in pruning as possible, and do not raise the branches so high as to make the tree look like a telegraph pole.

Commence pruning the tree from the top and finish at the bottom.

Make every cut as close and parallel to the trunk as possible.

To make the cut perfectly smooth the saw must be well set and sharp.

Leave no stubs, dead and dying wood, or fungus-covered branches behind you.

Do not fail to cover every wound with coal tar, not allowing it needlessly to run down the trunk.

Do not remove several large branches on one tree at a time. They must be removed gradually, the work extending over several seasons.

Silicus—What is the maximum punishment in a breach of promise suit? Cynicus—Well, I suppose the defendant might be made to marry the girl.

TENDER FRUITS

Bulletins On Pre-Cooling, Shipment and Cold Storage.

Two most seasonable bulletins have been issued by the Dairy and Cold Storage Branch of the Federal Department of Agricultural bearing upon the pre-cooling, shipment and cold storage of tender fruit. Both bulletins can be had free on application to the Publications Branch of the Department at Ottawa.

In the first of these publications Edwin Smith, B. Sc., in charge of the pre-cooling station at Grimsby, Ont., gives details and advice regarding the pre-cooling of fruit, along with results obtained from experiments. It was only in 1914 that the pre-cooling and fruit storage plant was established at Grimsby. Since that time extensive tests have been carried on regarding conditions for shipment and temperature at various stages in transit. Results and observations are given relative to all kinds of fruit, including tomatoes, and not only in reference to transportation, but also as to the effect on marketing. During 1913, this bulletin states, while tender fruit laid on the ground rotting in Ontario, the Dominion of Canada imported huge quantities of peaches, plums, grapes, pears, apricots, etc., from the United States, owing to the better and more provident care that had been taken. By following the counsel contained in this bulletin this state of things will be avoided. Rates, rules and regulations for pre-cooling and storage are supplied.

The second bulletin, for which J. M. Creelman, B. S. A., shares with Mr. Smith the responsibility, not only deals further with pre-cooling investigations, but also goes fully into methods of packing, shipping and storing tender fruit, tomatoes, corn and cucumbers. Both bulletins are suitably illustrated and should command the earnest attention of fruit growers and shippers.

A CIVIC ALPHABET.

A—Abandon the care of your back yard and you pave the way for typhoid fever.

B—Better observe a general "clean-up day" this year than have cause for regret hereafter.

C—Civic improvement calls for the best efforts of humanity.

D—Do your work well and disregard the critic.

E—Educate persons not to throw paper or trash on the street, but to place it in receptacles.

F—Fire prevention saves life and property.

G—Good roads will add materially to the prosperity of your town.

H—Hearty co-operation of citizens and club members in work undertaken will effect wonderful results.

I—Improve school rooms and grounds so they will be attractive to both children and citizens.

J—Join civic improvement clubs. You are needed.

K—Knock on the unsightly billboard and continue to knock.

L—Lead a crusade for the city beautiful.

M—Make your club a factor in your town life.

N—Never say quit when it is a question of health and beauty for your home town.

O—On with beauty, cleanliness and health.

P—Push, pull and perseverance will make your town a model.

Q—Quit criticising and begin working.

R—Request the city authorities to enforce the sanitary laws.

S—See that your premises are above criticism.

T—The tin can districts become germ breeders; banish them from your town.

U—Use every effort to have all eatables that are exposed for sale screened.

V—Vines and roses will beautify your premises.

W—Wage war on flies, mosquitoes and weeds, for they carry and cause disease.

X—Xpect help from every person in the efforts to make your town sanitary.

Y—You are responsible for the appearance of one part of your town. Don't forget that.

Z—Zeal exhibited at the annual clean-up day will put your town in a sanitary condition.—From American Club Woman.

To Find the Water Level in Soil.

In the Farm and Fireside is the following advice to the farmer who is about to plant his crops:

"The water level is a term used in speaking about soils. It means the depth in the ground where the soil is saturated with moisture.

"To find it simply take a post hole digger and dig down until water stands at the bottom of the hole. Do this in an ordinary season when the ground has about the average amount of moisture. For most crops the water level should be about three feet below the surface, for alfalfa at least five feet. A water level two to three feet deep is excellent for the majority of farm crops."

A woman's mind is generally on her dress, which may explain why she changes her mind so often.

Piles

That Dr. Chase's Ointment actually cures even the worst cases of itching, bleeding and protruding piles we know for a certainty, because of experience with thousands of cases.

To prove this to you we shall send you a sample box free, if you enclose a two-cent stamp to pay postage, and mention this paper.

Edmanson, Bates & Co., Limited, Toronto.

THAT LAWN-MOWER.

How You Can Keep It in the Best of Trim.

You have heard of palmists, pedists, physiognomists and phrenologists, but have you heard of the "lawn-mowerist? The latter tells all sorts of things about one's character by the condition of one's lawn mower, and the first count on the wrong side of the fence is based on the noise it may make that indicates neglect.

Now every one knows that when a lawn-mower rattles it means that it is being abused, but every one doesn't know what caused it to rattle. The first thing to do is to tighten up all the screws that control the bearings, and a few minutes with a good screw-driver will enable you to do this. Then examine the position of the blades—sharp blades badly placed are a far worse fault than dull blades well adjusted. If necessary, take out the screw and adjust the lower blade. This is done by gently tapping the blade, either backward or forward, so that it finally comes in proper contact with the revolving blade. When you have it in this satisfactory position tighten the screws.

Not many persons understand what is to be done when it is desired to lengthen or shorten the cut of grass. All that is necessary is quickly and very easily done by adjusting the bolts that hold the roller in place, and either lowering (for shorter grass), or raising the roller.

Use good oil on the mower, and at least once or twice a season remove the wheels and free them and the cogs of the accumulated grime. Always oil the mower well—even grease it—after thoroughly cleaning it and preparing it for winter storage. It should be kept in a dry place.

Never drag a mower after you, making its blades whirr uselessly, and always either lift it over rough places or turn it over and push it, so that it bears along with blades noiseless and inactive. These hints will not only enable you to keep your mower in perfect condition and to lengthen its life, but when the lawn-mowerist sits on a neighboring porch and hears your operation of cutting the grass, he will be justified in commenting to listeners: "By all the authority of lawn-mowerist science, that man is most efficient and of a high order of intelligence."

The Fellow Who Worries.

Here's to the fellow who worries,
The brother who longs for the strife,
The eager, hard-working who hurries
Each day to the duties of life,
With his mind on the post where he's needed,
His thoughts on the work to be done,
He chafes when his patch is impeded
And halted, he longs to get on.

The fellow who worries is never
Contented to idle and rest,
His duties are calling him ever,
His soul is alive in his breast;
A quick sense of honor is spurring
Him on to the work he must do;
His pulses his action are stirring
And he has a goal to pursue.

Stop the fellow who worries with illness,
Restrain him for days on his bed;
And he'll think through the dreary night's stillness
Of those who by him must be fed.
About him his duties will hover
And add to his torment of pain,
They will shriek: "There is ground to recover,
Get back to your labors again."

Then here's to the fellow who worries,
The fellow of spirit and grit,
Who faces life's feverish flurries
And boldly refuses to quit.
Despite all the ills that assail him
Unwilling, you find him, to shirk,
The fellow who worries! I hail him
The man who has pride in his work.
—Edgar E. Guest.

PEANUTS.

Their Digestibility and Value as Food Tested.

The peanut is remarkable among the legumes for its large proportion of fat and its resemblance in taste and use to the true nut, and indeed it is popularly with the nuts.

At present there is a good deal of interest in nuts as a food ad perhaps on this account peanuts in the form of peanut butter and in other forms are used to a greater or lesser extent as articles of diet by many families.

That it is perfectly possible to provide a diet in which the bulk of the protein is furnished by peanut or other nuts is shown by recent experiments carried on by Professor Jaffa at the University of California.

The men studied lived in health on rations composed largely of fruits and nuts, peanuts being used in several cases. It should be remembered, however, that experience does not indicate that a diet restricted to such food possesses the marked advantages have claimed.

It is worth noting that in the Southern United States and other regions where the peanuts have long been cultivated they have not become a staple article of diet, but have remained food accessories for occasional use.

There are many persons who find that roasted peanuts eaten in large quantities are indigestible, in a sense of producing pain or distress in the abdomen.

This is probably on account of their rich, concentrated character, though the distress seems to be due to eating peanuts which are roasted till they are very brown. It seems to be a fact that when peanuts are eaten in connection with other food, as bread, the ill-effects are less noted.

Furthermore, peanuts should be thoroughly masticated.—Exchange.

The one time when the world takes a man at his own valuation is when he admits he is a failure.

THE POULTRY WORLD

LATE HATCHED CHICKS.

The experienced commercial poultry keeper will inform the beginner that it is the early chick that in the majority of cases will prove the most profitable, both from an egg-producing standpoint as well as breeding. There are many causes for this. First, the early chick is hatched when the weather conditions are not ideal, as during March stormy weather can yet be looked for, often extending well into April. Yet, when proper brooding accommodations are provided, the chicks obtain a good start, and when the fine weather of May and June arrives they grow by leaps and bounds when properly cared for, and obtain a good start before the hot days and nights of July and August arrive. Fowls, especially the young chicks, feel the depressing heat of summer, and when compelled to go through these two trying months at a tender age they receive a check, from which they never fully recover.

It is true that the expert poultry keeper has success with the later-hatched chicks and the breeder with an eye to prize-winners at the mid-winter shows has often produced the best specimens, especially in color. Yet, these facts do not make the late-hatched chick the one to bank on for largest profits, commercially.

To obtain the best results with chicks hatched in June and July special care not needed, or given to the early-hatched chicks, must be given. Shade is one of the important essentials, for it will allow the chicks protection from the hot rays of the summer sun and supply a natural circulation of air; will keep them from [illegible] it in the poultry house, which is always hot during the day, no matter how well constructed for good ventilation. Natural shade is best, but if this cannot be had, artificial shade in some form must be supplied and high enough—that a good circulation of air will result.

Green food is next of importance. When the chicks can have the run of grass runs, clover, alfalfa, etc., they will make good growth, and this green food in its natural state will supply feed and aid indigestion. Chicks will be stronger and consume less grain and mash than if compelled to be on bare ground.

Fresh water is far more important than perhaps feed, for if the chicks are compelled to go without water, as is so often done during the heated term is to invite poor results.

It should be remembered that each time the chick receives a check in growth, due to any neglect on the part of the poultry keeper, it means that much longer to maturity, and this is often found the [illegible] flocks lacking to be up to weight in good condition and old [illegible], not [illegible] wondering why—forgetful of the fact of the several checks [illegible] received in their earlier days. Early maturity lies largely with the poultry keeper in seeing that the chicks are properly grown from shell to maturity, and to attain this one must not only have good stock, incubate well and properly brood and feed, but must look well into the important factor of aiding in every way to obtain the right environment, which is so essential. Green food, natural, if possible, shade and fresh water, with clean quarters, freedom from lice and vermin, will do much to overcome the handicap that is bound to be present during the hot summer months.

NOTES.

Ideal chick weather. May and June are good months to start chicks, although after June has passed unless properly cared for chicks do not make the rapid growth that the early hatches do, owing to the hot days and nights. Given extra care in housing and good feed, the chicks will do well, but with other than good care they will suffer a setback.

The brooder problem has been solved in the best of the up-to-date coal-burning hovers that give the required heat and, better still, ample ventilation, something the old-time brooders failed to do. The beginner now has greater chances for success in rearing chicks than ever before.

Overcrowding the growing chicks will, in spite of the oft-repeated advice given in the press be again indulged in. This evil, practiced largely by beginners and even poultry-keepers of more experience, results in under-sized specimens, slow maturity, which means no egg production at the time eggs are the highest. Poultry to do their best should have plenty of room, not only in the poultry quarters, but yard room as well. Rather a smaller flock of well-grown fowls that will prove profit-payers than a large flock not so well grown.

SUMMER SOUPS.

A Trio of Good Recipes for Hot Weather Use.

While the small household which dines very near the kitchen and who does a good part of the cooking may weary of soups just now they hold their own otherwise.

She may well paste it in her recipe book.

And many an illness would have been prevented if dinner begun with soup rather than ice water.

CREAM OF CORN SOUP.

For cream of corn soup add to each quart of corn, cut from the cob, or canned, three pints of water. Boil until tender, and then add two ounces of butter that has been well mixed with one tablespoonful of flour. Boil for 15 minutes more; season to taste, and just before serving add a heaping cupful of whipped cream.

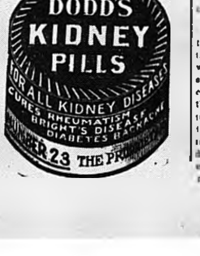
FRENCH SOUP RECIPE.

To make French soup take two dozen frogs' legs and pour over them lukewarm water, let them remain in it about five minutes, but not to cook, pour on the water and add equal quantities of milk and water sufficient to cover, cook moderately about half an hour, simmer a small onion chopped, in butter, add it to the soup with one quart of rich milk, two tablespoonfuls of butter, a little salt and pepper, and a dessertspoonful of chopped parsley; skim the legs from the soup and remove the meat from the bones, put the meat into the tureen with a tablespoonful of thick cream and a little celery chopped very fine; pour in the hot soup and serve at once.

CREAM OF ONION.

For cream of onion soup peel and cut into thin slices a dozen small white onions, and fry them to a light brown in a tablespoonful of butter. Add to the onions a pint of sweet milk, a quart of boiling water, a saltspoonful of salt, the same quantity of white pepper, a half teaspoonful of sugar, and a pinch of mace. Cook half an hour very slowly and strain through a fine sieve. Add the yolks of three eggs, well beaten, and a cupful of cream. Serve immediately.

Fortunate is the man who is too busy to think about being overworked.



CURRENT COMMENT

The Germans are now fighting shy of the British advances.

But the British Admiralty will define the status of the Deutschland.

Too many drowning accidents already.

The great drive against daylight-saving has been repulsed.

Will the Home Rule battle have to be fought all over again?

There are now no meats on the Vienna bill-of-fare. Vegetarianism is the rule.

No one has advanced the theory that it is the sea serpent that is dining off New Jersey bathers.

Over a thousand men are absent without leave from Camp Borden. What's the trouble?

The Boston Transcript says that machine guns are more needed than machine politicians.

Sir Douglas Haig and his men are fighting under the daylight-saving banner.

The Teutons have sunk a Russian hospital ship. What has President Wilson to say?

The New Jersey sharks are not only killing bathers, but they are killing the business of the hotel men and pleasure resorts along the coast.

An Orange banner at Windsor bore the motto, "One flag, one school and one language." This is a pretty big order for the British Empire, made up of all races, creeds and languages.

Mayor Beall, of Alton, Mo., has ordered the police to arrest all women who appear on the streets in silhouette gowns. What about white boots?

It should not be necessary for us to say that we have no sympathy with any attacks of a personal nature that may be made against Mr. Archie Kappele, the new business manager of the Works Department.

It is said that numerous motor boats of submarine catchers are hurrying from Britain to try to trap the Deutschland when it attempts to make the return voyage. There is also a cordon of British warships outside the three mile limit watching to get a glimpse of her.

The apprenticeship system is being revived in Great Britain, so the boys they learn their trades properly and thereby complete their industrial educations so that when the war is over the country will be in a position to supply the demands of Britain, her colonies and her allies.

Poliomyelitis has made its appearance in Montreal. It will possibly spread throughout the country. Our health authorities should take all proper precautions for dealing with it here. Children should be carefully watched and not be allowed to expose themselves too much in crowds. Keep away from dust.

The Overseas Club has made a success of its Imperial Aircraft Flotilla," it having up to date presented the British Government with seventy-one aeroplanes, along with a large number of other gifts. These aeroplanes have come from all over the British Empire. It is the desire to make the number one hundred.

The fifteenth annual meeting of the Canadian Association for the Prevention of Tuberculosis will be held in the Parliament Buildings in the City of Quebec, on Tuesday and Wednesday, 12th and 13th of September. On the first day Dr. J. H. Holbrook, of the Hamilton Sanatorium, will give a paper on "Reasons Why Open Cases Should be Isolated."

Fishermen who venture beyond the mouth of the Kennebec River there declare that there is a school of whales on the Atlantic coast. One attacked Moses Chandler, of Popham Beach, struck the boat twice, lifted it clean out of the water, unshipped the rudder, split the skeg, and loosened some of the planking. What between whales and sharks the Atlantic coast people are having quite a time.

Even the Mail and Empire expresses itself as dissatisfied with the Canadian nickel situation, saying that "If any nickel is exported from the United States to Germany then there is remissness on the part of this country." It also takes a jab at the Ontario Government by saying in relation to the squabble over the name of Berlin, "Had the Private Bills Committee of the Ontario Assembly done its duty, the controversy would have ended long ago."

The Chicago Tribune, discussing the voyage of the Deutschland, avers that by loading for the return voyage with war munitions Germany will destroy its own argument that the United States has been unneutral because the Allies were able and the central powers unable to obtain and safely transport American products. In arming the Deutschland with two small defensive guns Germany abandons the contention that any armament makes a vessel a ship of war.

Four Doz. Men's Straw Hats at a Bargain Price

NEIGHBORING VILLAGES & COUNTRYSIDE

News of the Week Collected by Staff of Live Correspondents

HANOVER

The marriage took place Wednesday of last week at Kincardine of Mr. Russel MacPherson, accountant of the Merchants Bank of Hanover, and Miss Norma Reed of Kincardine. Mr. and Mrs. MacPherson are spending their honeymoon in Muskoka.

The present conditions of crops in this vicinity indicate a large yield. Hay is now being harvested, and, except on the lowlands, is an exceptionally large crop. Fall wheat is good, being now in full head. Oats are above the average, while barley is a little below. The wet spring affected the barley more than any other crop. Corn is late, but where the catch is good will yield heavily. In many places, however, the cold and wet caused rotting of the seed. Apples, while a fair crop, will not be so large as the bloom indicated, the June drop being heavy. Roots promise well.

A gang of Gypsies—four waggons of 'em in all—were in town last week, and for a brief spell some of their women folk endeavored to secure some easy money by reading the hands of " the boys " around town. Unfortunately for the outfit one damsel tried to work the town cop for a shilling. William did not have on his blue coat with the brass buttons, and so did not look like " the strong arm of the law. "Consequently when asked to put a quarter in his hand to enable the copper-hued lady to read his palm aright, Mr. Beamish arrested her on the spot. Constable Beamish gave the Gypsy outfit half an hour to get out of town, and they faded away over the hills in the direction of Elmwood.

SOLWAY

Mr. and Mrs. Jno. Streeder and Mr. and Mrs. John Lambertus spent Sunday with Pinkerton friends.

Mr. and Mrs. Hopper from the West spent a couple of days last week with the former's cousin, Mrs. J. Helm.

Mr. and Mr. Jno. Stemler spent Sunday in Desmerton.

Mr. P. Aultman and his mother and his brother Joseph, and Mr. and Mrs. Grubb from Formosa visited at Mr. John Streeder's last week.

Miss M. Tolleck from Toronto is spending her vacation at her home here.

Mr. and Mrs. Jas. Clancy from Chesley, spent Sunday at Mr. Wm. Lambertus's.

Miss M. Weir has returned to her home after spending a few weeks with friends in Mount Forest.

FORMOSA

A. Oppermann and Jos. Borho motored to Berlin on Saturday.

Mr. and Mrs. F. H. Beingessner of Champion, Alta, are visiting his brother, Mr. B. Beingessner. Mr. Beingessner is an old Carrick boy, and has been farming in the West the past eight years. The crop outlook in his section of the West he describes as good.

On Wednesday afternoon of last week there was a severe electric storm in this section, accompanied by heavy rain. The house of Peter Milne, Culross, was struck and somewhat seriously damaged although it did not catch fire. The chimney and part of the gable were knocked to bits by the lightning.

Word was received last week that William Schnurr, son of Joseph Schnurr, who is employed by Heis and Tisle, had been wounded in France and is now in a hospital, "Somewhere in France." His two brothers, George and Andrew, are with the 160th Bruce Battalion.

CARGILL

Editor Eedy of Walkerton was a caller in our village on Thursday and was very much impressed with it.

Mr. W. D. Cargill spent the week-end in Port Huron with his friend Mr. G. A. Stokes, a former Cargill boy, but now G. T. R. Supt. at the Tunnel.

Mr. and Mrs. Schumm and two daughters left on Saturday for a visit with friends in Petrolia, Chatham and other points.

Two rinks of Paisley bowlers visited here on Thursday and had three friendly games with the locals and were defeated by one shot. The boys here intend visiting Paisley and Walkerton in the near future.

Nearly all the Cargill boys in the 160th Batt. are home on the harvest furlough for a month.

Mrs. Oatley left on Monday for a month's visit with friends in Stratford, Brantford and other points.

The Right Rev. David Williams, Bishop of Huron conducted confirmation services Sunday afternoon when five candidates were confirmed, after which he preached a very powerful sermon.

Mr. R. Lamler of Toronto spent the week-end at Hylhurst.

On Monday the bowling green looked like a tournament. Teeswater and Paisley were both represented by 3 rinks and Cargill by four and after all scores were tallied, Cargill lead by five shots. Come again boys, you are always welcome.

The garden party held by the Ladies Aid on the Parsonage Lawn on Monday evening was a grand success. Supper was served from 6 to 8, after which a good program of recitations and speeches by the clergy were given.

Mr. E. A. Ruttle of Kincardine, our efficient teacher, spent a few days in the village last week.

Misses Nora and Fannie Clark of Pickering are on a two weeks' visit to Mrs. Baldon.

Mr. J. J. Dick of Teeswater spent a few days in our village last week.

GLAMIS

Miss Eva Dezell of Hepeville has been visiting at the home of Ferris Bros', Boundary West.

Miss Bessie Mallough of Teeswater has been the guest of her cousin, Miss Olive Greer.

Corp. J. Kitchen is engaged with Archie Bell, 10th con., Kincardine.

Miss Mary Begg, of Underwood, spent the past week with her grandmother, Mrs. Gilchrist.

Miss Helen M. Oliver is home from New York on a visit to her grand parents, Mr. and Mrs. J. C. McIntyre. Her little cousin, Miss Jean McIntyre of Toronto, accompanied her here.

Miss Margaret Stanley is visiting her sister, Mrs. Pollock at Grand Bend.

Miss Retta McKinnon has returned home from Toronto.

Mrs. McPhail of Kincardine renewed acquaintance here last week.

Mr. and Mrs. Jevans returned to Toronto this week after spending a few weeks' holidays at the Manse.

Mr. W. J. McKeeman and family went to Inverhuron Beach on Thursday to occupy their cottage "Cosy Nook" for a few weeks.

Pte. Angus McIver is engaged with Wm. McKenzie, 2nd con. Bruce.

Miss Fowler of Ripley was guest of Mrs. Woodstock the latter end of the week.

Wedding bells are ringing on the 10th con. of Kincardine.

Miss Lizzie Ferris and Mr. McClelman returned to Toronto on Monday.

The entertainment last Monday night on St. Paul's church grounds was a grand success. A very large crowd attended. Proceeds amounted to $115.00.

The Camp Meetings are being well attended in Mr. Gilchrist's bush. They will continue until August 20th.

Misses Ida and Bertha McAfee, nurses of Rochester N. Y., and Washington, D. C., are home on their holidays.

Mrs. Jack Fisher and Miss Dorothy, and Master Leslie Black of Paisley, and Mr. Albert Pickard of Wiarton, were Sunday visitors here.

Miss Ottolee Roulston, who spent a few weeks at Mr. R. J. Nesbitt's returned to Owen Sound this week.

Miss Ida Stanley has returned home from Paisley.

Mrs. Janet Gilchrist returned from visiting Port Elgin friends the first of the week.

Mr. George Ferris of Ripley visited his grandmother, Mrs. Woodstock, during the past week.

Master Rob. Pollock of Grand Bend is visiting his grand parents, Mr. and Mrs. Jos. Stanley.

We are sorry to report the illness of Mrs. Thos. Gamble. All hope for her speedy recovery.

EDEN GROVE

The farmers are busy making hay while the sun shines, and the town people are just as busy trying to keep cool.

Mr. and Mrs. Sullivan, Mr. and Mrs. Connors and Miss M. Sullivan of Denver, Col, were the guests of Mr. and Mrs. P. O'Reilly King St. East, last week.

Quite a number from here took in the Barn Raising on Mrs Elder's farm Cargill. When it comes to Raising there is nothing can beat the boys from the Grove. I'm quite an expert on Raisin Pie myself.

Mr. and Mrs. John Volsing and son and Mr. Nelson Dahms, Teacher, Floradale, were guests at home of Mr. and Mrs. John Seiler, King Street on Sunday.

Our young ladies are getting a little dearer ice-cream, now Saturday afternoon and evening.

Messrs. D. Forrester and D. J. McKinnon of Paisley called on friends in the Grove last week.

Pte. Ed. Bailey of the 160th is home for the harvest.

Mr. and Mrs. A. McKeeman called on Walkerton friends, Friday.

Mr. Leo. O'Reilly is visiting friends in Toronto.

Rev. W. C. Almack, Cargill, was in town Tuesday making a few pastoral calls.

I'm glad my girl's name is Fanny this hot weather.

We are pleased to note that Oliver Seiler passed the entrance examinations succesfully.

The Messrs. Reid, of Arcola, Sask., are the guests of Mrs. Allan, King St.

Mr. and Mrs Rosseau motored to Hanover, Saturday.

Mr. O'Reilly shipped a car of lambs to Toronto, on Tuesday.

Pat Desmond has accepted a position with the G. N. W. Tel. Co. Palmerston.

Mr. Eedy and family, of the "Telescope", Walkerton, motored up and called on Grove friends last week.

Miss Subject spent Sunday at her home in Elmwood.

A few from here attended the garden party held in Cargill, Monday evening and report having a good time.

The Red Cross Society forwarded a large case of supplies for the soldier boys to the head office, Toronto, last week.

Mr. and Mrs. Campbell left for their home at Leamington, after spending a few weeks at the home of Mr. Emery.

"Sunny Jim" called on Paisley friends on Friday.

Most people thought it was too hot to go to church Sunday. It certainly was a scorcher, alright.

News reached here Tuesday of the death of Mrs. J. D. Skelley (nee Miss Rose Doyle) Although deceased had been ailing for the last year, her death came as a great shock to her many friends here. She was the eldest daughter of the late Lawrence Doyle of Eden Grove. Previous to her marriage she held the position of matron at North Battleford Hospital. She was married eight years and leaves to mourn her loss, a sorrowing husband, two sons, six years and four years old her mother three sisters and one brother. Miss Tessie Doyle, graduate nurse of St. Michaels, Toronto along with her mother and brother, Hugh were with her when she died. Misses Ethel and Veronica of Goderich are the two other sisters. The remains were interred in the R.C. Cemetery, Calgary. Deceased visited here two years ago and made many friends by her kind and cheerful disposition

KINLOSS

Miss Sarah Harrison is at present on the sick list. We hope she will soon recover.

Mr. William Armstrong made a trip to town last week with a load of porkers and acted deliveryman coming home.

Mr. Alex Caskanette turned farmer one day last week and helped Sydney Pollock with his hay.

Ptes. Sam Sturgeon and Alfred Hayes are home for a month. Pte. Bill Purtlee couldn't come. Billie has the mumps.

Mr. Orrie Herd delivered a load of hogs in town last week and brought out a load of coal for our village blacksmith.

Mr. W. Hewitt spent Sunday at home.

Quite a crowd journeyed toward Hervie Sunday evening.

PINKERTON

Mr. and Mrs. A. Gregg are spending the holidays at Inverhuron.

Mr. Jas. Gale returned to Bethany last week.

Ptes. Gordon Garland, Gordon Pinkerton and Edgar Campbell are home on furlough to help with the work on the farms.

Miss Sadie Colwell spent Sunday at her home in Kincardine.

Mr. Adam Knox and daughters Mrs. Kennedy, and Misses Nellie and Margaret motored to Lucknow on Sunday and spent the day with relatives in that vicinity.

The results of the entrance examinations are out and five out of eight of the candidates from this school were successful.

Swimming is the order of the day—and night.

Two is company, three's a crowd, five in the buggy not allowed by the laws of the humane society, so look out Harry.

Miss Alma Reid visited at Lovat for a few days.

A report of the papers, rags etc, which were sent to Toronto by the Red Cross Society has been received and the amount which they realized in this way was $22.81.

OTTER CREEK

Pte. Gordon Hogg is at present home helping his father, Mr. John Hogg, with the harvest.

Mr. and Mrs. Wm. Klein were visited at Mr. Philip Gress' on Sunday.

Miss Vergie Gress was a visitor at her home here on Sunday.

Wheat harvest has commenced,

A very severe electric storm passed over these parts on Wednesday last, but very little rain. We think there are two things we ought to pray for, one, for this terrible war to stop and that we get rain so that the crops would grow so that the farmers can pay their war tax.

Mrs. John Bell and Miss Mary Bell were visitors in Mildmay on Saturday.

Mr. and Mrs. Adam Quanz entertained quite a number of friends to a fine strawberry social last week.

Messrs Henry Russworm and George Pfohl are shingling Mr. John Bell's barn.

Pte. Russel Hutton is home helping with the harvest.

Haying is pretty well over. It certainly was a bumper crop. Mr. Ed. Fenner possesses a stock of timothy 6 feet 4 inches high.

Mr. John Hickling had such a heavy crop of alfalfa hay that when he went to turn it, he didn't know where to put the first fork full.

Mr. Edward Fenner of the 15th con. of Carrick, lot 17, erected a very modern up-to-date stave silo which is now complete, all but the stave part of the chute, which when done will rank among the finest in the neighborhood. The foundation is made of concrete for about ten feet, the stave part being 20 feet high, which makes a complete height of 30 feet and its diameter is 12 feet. The contractor is Mr. Chas. Flemming of Hanover. In addition to the silo, he built a very fine up-to-date milk and cream separator house (using the DeLaval cream separator). The milk house has a window, composed of four panes which takes up nearly the whole width of the building making it very light and the building being right north of the barn and east of the silo and mostly in the ground makes it very cool in summer and warm in winter: one enters the milk house from the rear end of the cow stable, and can also leave the building by a door which leads into a chute and then straight into the cattle passage. The building of the milk house was done by Mr. E. Fenner and Mr. Thomas Hutton. Mr. Fenner has also changed the root cellar being in between the cow stable and the milk house. Altogether Mr. Fenner has in connection with silo, a milk house, one of the most complete and handiest in the vicinity and it would be worth the while to go and see it.

Mr. and Mrs. Theodore Loos were away visiting relatives on Sunday last

Mr. Harold and Mr. Walter Jasper are at present helping Mr. Charles Beachmier with the hay.

Cherry and berry picking is the order of the day.

Miss Edna Gress returned home from visiting her sister for a week.

Misses Susan and Jennie Bell were visitors at Mr. James Gowanlock's on Sunday last.

Pte. Albert Fenner is home for a month.

Born—To Mr. and Mrs. Emerson Schumacher (nee Miss Violet Gress) on July 25th, a daughter.

Mr. and Mrs. Peter Liesemer were on a business trip to Mr. John Fenner's on Monday last.

Mr. and Mrs. Wm. Polfuss were visitors at Mr. Philip Russworm on Monday last.

Miss Katie Gress was a visitor at Mrs. Singer's at Walkerton Saturday last.

When "Someone" Comes

You can entertain him with the Edison Diamond Amberola, hearing the greatest singers of the day or dancing to the liveliest and latest popular hits.

And, all the while you can take pride in the fact that it is an Edison, the peer of all phonographs—and not a common, everyday "talking machine" that you would feel like apologizing for.

The "humanness" of the Amberola is startling—hear it.

DIED

HARDY—At Bruce County Hospital, on Friday, July 28th, Solomon Hardy of Culross, aged 78 years.

MORE RECRUITS WANTED?

It is Reported that New Campaign for 160th Batt. is to be Started Here—Battalion to Go as Unit?

It was reported here yesterday that Major Moffat and a party of officers of the 160th Batt. were coming up from London to institute a recruiting campaign in Bruce for 150 more men for the Bruce Battalion. The Battalion is still over strength in spite of rejections and the fact that a number of men have been turned over to the Artillery and A. M. C. owing to slight physical defects, but more men are needed for a base company. It is stated that if the 150 new recruits are forthcoming that the Battalion will go to the Front as a unit.

With the 160th

(By Telescope's Own Correspondent)

Most of the men of the Battalion have gone out on harvest furlough. The camp is almost deserted, scarcely enough men being left to form the guards picquets.

+ + +

The quarantine has been lifted at last.

+ + +

Tuesday caused our boys some discomfort for a short time. Several tents were blown to the ground and a great many others were flooded with water.

+ + +

Our Battalion band is to take part in the big celebration in Paisley on Friday.

+ + +

There have been several promotions within the last two weeks. Lieutenants. Little, Foster and McKay have been appointed to the rank of Captain. Q. M. Sergeant McNally has reverted to the rank of Sergeant and is posted with A. Company. Sergeant Lamb has been posted with C. Company and Corp. James has been appointed Orderly Room Sergeant. Corporal Wanless has also been appointed to the rank of Sergeant.

+ + +

Several officers and N. C. O's. took a course in Bayonet Fighting and Physical Training last week.

Lost.

A pair of gold rimmed eye-glasses on Sunday night between Methodist Church and Mr. Sheffield's home. If found, please return to, or notify Mrs. Gould.

+ + +

Faculty Exam Results

The list of successful candidates in Part I of Faculty of Education were published on Friday. The Walkerton pupils who passed were;—Wm Borho, Wilfred Tanner, Christopher Thornburn, Myrtle Green. The names of those who have been doing farm work in accordance with the Department regulations have not yet been published.

+ + +

Bowlers at Southampton.

Walkerton is represented by a rink of bowlers at the Southampton tournament this week composed of:—Messrs H. G. Hunter, James Whitehead. Albert Benninger and W. B. McBurney, skip. Mr. Whitehead drove the party up in his car. Word has been received that the Walkerton rink, up to Wednesday noon, had won three and lost one game.

+ + +

Thrown From Rig

Mrs. Dulmage of Harriston, who is visiting her parents, Mr. and Mrs. Jno. May, had a mishap on Tuesday evening which might easily have proven serious. She was driving around the English Church corner, when the horse as it was turning, suddenly slipped, throwing Mrs. Dulmage out. She landed against the animal's flank and fell to the ground. Fortunately she was not injured, although suffering slightly from nervous shock.

+ + +

Patriotic Field Day.

Paisley is making great preparation for the big Patriotic Field Day to be held there on Friday. Besides speeches by prominent men, there will be a big program of sports and a concert in the evening by Toronto talent. The 160th Brass Band will be in attendance. The list of patriotic speakers for the occasion includes:—Col. Williams, Chief Recruiting Officer for Canada; Lt.-Col. Weir; Judge Klein; R. E. Truax M.P.; Senator Donnelly; Wm. McDonald, M. P.P.; W.D. Cargill, M.P.P. and others.

+ + +

Building Observation Tower

The Dominion Government is erecting a huge observation tower on a high hill on James Kemp's farm on the first concession of Carrick. The structure is to be about 75 feet high, and can be seen for miles around. Enormous quantities of lumber are being used in its construction. The tower is being built for the purpose of taking observations to correct former maps and surveys. Mr. Kemp's hill is said to be the highest point of land in the southern part of Bruce.—Mildmay Gazette.

Miss Brown of Chesley is visiting at Mr. Patterson's.

Mrs. Wisser is leaving this week on a trip up the lakes.

Miss. Verna Skelton is away on a sketching tour down East.

Irwin Bros. shipped a carload of horses to the West on Tuesday.

Miss Aileen Pinkerton, of Pinkerton was a visitor in town this week.

Suits at a $5.00 cut, Rourke's Sale this week. Read ad on front page.

Mr. and Mrs. J. Steinmiller of Gorrie paid a visit to friends here yesterday.

The Northern Fair will be held on Tuesday and Wednesday, Sept. 12th and 13th.

Mr. and Mrs. W. H. Adams and Mrs. Geo. Martyn are leaving this week on a trip up the lakes.

Mr. George Carbert is enjoying a visit from his daughter and her family of three from the West.

Miss Madeline Patterson is home after spending four weeks at Grand Bend on Lake Huron.

$2.00 to $3.00 Straw Hats in senate sailor style going at 50 cents. Panamas at $1.20.—Rourke's store.

Mrs. Thos Cunningham entertained the nurses of the Bruce County Hospital at her home on Tuesday evening.

Mrs. W. R. Patterson has returned home after a very pleasant month's holiday spent at Aylmer and London.

Mr. and Mrs. Art McCartney and family arrived home on Monday from an enjoyable trip down the St. Lawrence.

Yesterday's casualty list reports Pte. Francis Tuckfield of Southampton killed in action, and Pte. Ralph Geddes of Port Elgin, wounded.

Alterations are being made at the Canada Bobbin Plant, including the building of a new drying kiln, and changes in the office building.

Miss Margaret Smith was brought home from the County Hospital on Saturday. She is recovering quickly from the operation for appendicitis.

Miss Case, the talented daughter of Reeve James Case, of Elderslie, who leaves shortly for the mission field in Corea, is spending Wednesday in town, and in the evening will address a public meeting of the Women's Missionary Society at Knox Church. It is recalled that Miss Case received the inspiration to go as a missionary through hearing an address by Rev. Thos. Wilson pastor of Knox Church.

Mr. Chas. Stephan's new residence for which excavation is being made this week, will be one of the finest homes in the County when completed. It will be a two-storey affair of buff brick and will be quite in keeping with his brother's fine residence on the adjoining lot. The work has been divided amongst local contractors in the various trades and is being rapidly pushed forward. The brick-laying will be started next week.

At a delightful spot near the 6th con. down the river, a party of Walkerton young ladies are camping. The girls are having a perfectly grand time and expect to spend a month at "Camp E. E. E. E." In spite of the fact that there are no mere men present they do say that the provisions have a perfectly magic way of disappearing. The party which is chaperoned by Mrs. Skelton, is composed of;—Misses Ruth Rogers, Ruth Kenny. Norma Rowland, Iretta Schwindt, Helene Whitehead, Nettie Goetz.

Narva P. O. Closed.

Another of the old Country post offices, Narva, kept by Mr. W. H. Moffat, was closed on Monday. The people of that neighborhood are now served by R. R. No 1, Pinkerton.

+ + +

Had Fine Time.

The Methodist Sunday School picnicked at the Exhibition grounds on Thursday. The children had a capital time as usual. Supper was served picnic style on the lawn after which a good program of sports was introduced by Supt. John McCool. A refreshment booth, run by two of the classes, netted over five dollars, after paying expenses, for the mission funds of the school.

Whiskey Seized at Mildmay

License Inspector Jos. M. White and Chief Ferguson seized two five-gallon kegs of whiskey at the Mildmay station on Monday night addressed to parties at Formosa. Mr. White has had the Can-Express agents at Mildmay and Berlin summoned to appear before Magistrate Tolton here next Tuesday to tell what they know in regard to a shipment of whiskey, which was expressed to Mildmay last Monday. In case it can be shown that the whiskey was bound for local option territory, interesting developments will follow.

NEWS ABOUT TOWN

There are 17 Smiths in the 160th Batt.

Pinkerton Fair will be held on Friday Sept. 22.

Mr. George D. McKay went to London on Tuesday.

The weather man is keeping up a vigorous offensive.

Mr. Walter Grainger of the Soo is visiting at his home here.

Miss Nellie Beattie has taken a position in Truax's office.

You will save money by reading the advertisements in the TELESCOPE.

Reg. Porter, of Toronto is visiting his parents, Dr. and Mrs. Porter.

Mrs. G. N. Langford and children of Toronto are visiting at Mr. C. Patrick's

Miss Gretta McKay is visiting her friend Mrs. Frank Henderson in Hamilton.

Mr. and Mrs. Frank Bainton of Blythe visited at Mr. R. H. McKay's this week.

Judge Klein is attending the big recruiting convention at London on Wednesday.

Clayton Freeman of the Divisional Signalling Corps is home from Ottawa for a few days.

Miss Verna Cunningham of Greenock left Tuesday to spend some holidays at Oliphant.

Mr. Clifton McKay is spending his holidays with his uncle, Mr. Donald McKay in Toronto.

Mrs. Frank Schnurr attended the funeral of her aunt, Mrs. Jos. Vogt at Mildmay last week.

Mrs. Donald Ross, who lives near the G. T. R. station, is very ill at the home of J. E. McGregor.

Mr. and Mrs. Charles Gibson of Montreal are visiting the former's parents, Mr. and Mrs. Ed. Gibson.

Miss Phyllis Prichard of Weston was the guest of Miss Winnifred Patterson, for a few days this week.

Mrs. Keusel of Camden, N. J. (nee Olive Weppler of Hanover) was a guest at Mr. G. S. Schwindt's on Monday.

Miss Geraldine Schmidt, who has been visiting Miss Christella Schnurr, returned to her home in Mildmay on Monday.

Mr. and Mrs. John H. Appel and Mildred returned Tuesday from a week's visit to relatives at Guelph and New Hamburg.

Miss Edna Stead and her friend, Miss Helen Vernon, of Erie, Pa., arrived on Tuesday on a visit to the former's aunt, Mrs. Stead.

The Wiarton cement plant has been sold to a new company which will install a plant for the manufacture of potash and hydrated lime.

Not one pupil out of thirteen from Tara High School passed the Lower School Examinations. Many other schools fared just about as badly.

Miss M. Baird had a card this week from her nephew, Bob Turner, now with the Engineers in France, stating that everything is O. K. with him.

Mrs. Rev. S. A. Willoughby and three children, of Minneapolis, and Miss Gussie Woecker of Drayton are visiting with their sister, Mrs. M. G. Dippel.

Miss Eloise Noecker, nurse in training in Bruce County Hospital, is spending her holidays at the home of her parents, Mr. and Mrs. C. W. Noecker.—Drayton Advocate.

It is reported that Mr. Geo. Reynolds of the 13th concession holds the record for a big hay crop this year. He had 19 acres of meadow, and he took off over sixty tons of hay.

Master Almund Glebe who underwent a serious operation at the County Hospital recently, was taken home to Hanover last Wednesday. The little lad is recuperating rapidly.

Walkerton had its share of the stifling heat during the past week. Sunday was the hottest. The government thermometer at Schmidt's fruit farm showed 98 on Sunday in a very shaded position. Some of the thermometers in town showed over 102 in the shade.

Rural mail carriers complain that a great many names have worn off the rural mail boxes. Farmers should see that their names are painted plainly on their boxes. It not only helps the mail carriers, but is a great convenience and source of interest to farmers and others driving through a strange neighborhood.

OUR ANNUAL HOLIDAY

Next week we take our annual holiday and there will be no TELESCOPE (August 10th). The office will be open as usual for business and to handle job printing.

August.

Next Monday is Civic Holiday.

Miss M. Fairservice is visiting friends at Southampton.

Mr. J. J. Schumacher was in Owen on business Monday.

Mr. and Mrs. E Welford are holidaying at Windsor.

Mr. and Mrs. F. G. Eidt spent the week-end at Southampton.

Miss Cecelia Schnurr of Buffalo is visiting at her home here.

Patriotic Field Day at Paisley tomorrow, Friday, August 4th.

Miss Gladys McCarter left on Monday on a holiday visit to Wiarton.

Mrs. F. Todd and Miss Jean are spending this week at Southampton.

Miss Muriel Pickard of Wiarton is visiting at Mr. J. W. Moffat's, Narva.

Pte. Levi Fitzell of Belvie was reported severely wounded in the arm and knee.

The list of contributors to the Walkerton Patriotic Campaign appear on page 5.

John Rowland jr. of the Divisional Signalling Corps, Ottawa, is home for a few days.

Mr. and Mrs. R. J. Hepburn are leaving on Saturday for a two weeks' trip on the Lakes.

Only 11 out of 65 students of Owen Sound Collegiate passed the Lower School Examinations.

Mrs. W. Norrish and family left on Tuesday to spend a month in a summer cottage at Southampton.

The Misses Lillian and Etta Schnurr visited with their brother, Ed. in Orangeville during the past week.

Mr. Armond Whitehead of Osgoode Law School, spent Sunday with his parents, Mr. and Mrs. Jas. Whitehead.

Miss Flora Brisian and Miss Rose Ellinghausen are on a holiday trip to friends in Woodstock and other points.

The Toronto Plaster Co. is seriously considering installing a plant at Teeswater, according to the Teeswater News.

Mr. and Mrs. Harry Truax and family are leaving shortly for a holiday at their new summer cottage, Sauble Beach.

Mr. Eddie Morack left for Detroit on Monday after spending two weeks with his parents, Mr. and Mrs. Adolph Morack.

Mrs. (Dr.) Gould, who was visiting at the home of Mrs. Gould left Tuesday for a brief visit in Toronto before returning to New York.

Mr. and Mrs. J. J. Schumacher, Rev. Magnus, Bert and Dora, motored last week to Wiarton and Cape Croker, and later in the week to Berlin and Guelph.

Mr. and Mrs. J. Russel and daughter of Harriston, Mr. and Mrs. W. Reuber and son from Carrick motored up on Sunday and called on M. A Seibohn and other friends. They took Miss Keister back with them to Deemerton.

Every soldier who is away on harvest leave has a certificate which must be signed by a farmer with whom he worked and by a clergyman. The military authorities must be satisfied that the men who accepted harvest leave worked at the harvest.

Rev. Mr. Marshall of Collingwood will preach at the B. and C. church next Sunday; Rev. Mr. Campbell of York Mills on August 12th, and Rev. Mr. Tovell of Guelph on August 19th. The supply for August 26th, the last week of the pastors' holidays has not been announced yet.

William Thompson, a brother of Mr. Geo. Thompson, ex-reeve of Elderslie, met with a fatal accident on Wednesday of last week. The deceased lived in Chesley, but had gone out to lot 35, con. 8, Elderslie, to help his half brother, Caleb Steinhoff, with haying. He was thrown off a load by the horses giving a sudden start, and his neck was broken by the fall, causing instant death.

"There is only one other battalion which equals the 147th Battalion in today's review. Grey County ought to be proud of the battalion." This was the assertion made by General Sir Sam Hughes when in conversation with Mr. W. S. Middlebro following the review of troops by Sir Sam at Camp Borden. There are thirty-six battalions in the camp and the Grey boys and the citizens of the county should feel highly gratified at the showing made.

Rev. Thos. Wilson left on Tuesday for Philadelphia where he will supply the pulpit in a city church during August. The invitation came to Mr. Wilson, some time ago through an American gentleman who heard him preach at Hamilton one time. Mr. Wilson hopes that the change of surroundings will prove quite as restful as a quiet holiday. Mrs. Wilson will join him about the 18th inst. The work here will be taken during the pastor's vacation by Rev. D. Robertson of the Londen Presbytery.

Rev. and Mrs. G. C. Rock are holidaying at Toronto.

Mrs. Henderson of Port Elgin is visiting friends in town.

Don't forget the Annual Rummage Sale in aid of the Hospital.

Walkerton bakers raised the price of bread to 7 cents on Monday.

The Teeswater telephone line was burned out by lightning last week.

Mr. and Mrs. E. H. Leeson and family are holidaying at Sauble Falls.

Mr. and Mrs. John Rowland and family visited in Southampton on Sunday.

The side streets received their much needed dose of street oil last Wednesday.

Miss Eleda Norrish returned on Saturday from visiting friends at Whitechurch.

Miss Ruth Warren of the Bank of Commerce staff spent last week in Toronto.

Coun. Alex McCarter left Wednesday afternoon to spend a few days at Wiarton.

Coun. and Mrs. George Lattner and family spent Sunday with relatives at Elmwood.

Mr. William Fennel is erecting a new bank barn on his farm South of the town.

Miss Rowand and Miss McIntosh spent the week-end with friends near Port Elgin.

Sergt. James and Sergt. Wanless of the 160th were up from London Camp over Sunday.

Mrs. H. G. Hunter, Bruce and Ruth, are leaving today for a holiday at Sauble Beach.

Capt. A. Todd of the 160th visited his home here on Saturday and spent Sunday at the lake.

Miss Isabel Wisser is spending a week with the girls of E. E. E. E. Camp down the river.

Wesley Kain returned last week from Guelph, after spending two weeks at his uncle's home.

Mr. Philip Schmidt's fine new two storey brick house at the head of Gibson St. is nearing completion.

Mr. Norman Rata of Millbank has taken a position with Stephan Bros. Mr. Rata has rented Mrs. Pallow's house.

Mr. J. J. Schumacher is erecting a two-story brick veneer residence on Scott St, back of Mrs. John Wolfe's property.

Mr. M. G. Dippel, had word from his son, Signaller Louis Dippel, that he is still up to his ears in work but is feeling fine.

Mrs. George Ernewein had the misfortune to fall off a stepladder while picking cherries at Enniskillen on Friday and fractured her leg.

Mrs. Mortimer and two daughters, Florence and Lillian, returned home last week after spending a month with her parents in West Toronto.

Sergt.-Major A. L. Huether of the University of Toronto Training Company is at present taking a course in bayonet instruction at Camp Borden.

R. G. Chapman, a former proprietor of the Hanover grist mill died at Teeswater on 22nd inst at a farmer's place where he was assisting with the harvesting.

Mr. Ezra Briggs lost his little mare which he has been using as a driver the past dozen years. The animal broke its leg in the pasture field and had to be shot.

Val. Hahn of the Hahn House, Durham, pleaded guilty to selling liquor without a license, on Saturday, without a trial being held, and paid a fine of $300 and costs.

Mr. John Klein went to Oshawa yesterday morning to bring up another new McLaughlin car which he recently sold to Dr. Sinclair of Walkerton.—Hanover Post.

Rev. Magnus Schumacher, who has been spending his vacation with his parents, Mr. and Mrs. J. J. Schumacher will return on Friday to his parish at Sublette, Ill.

Mrs. Gould's daughter, Mrs. J. J. Cook of Toronto, accompanied by her daughter, Miss Nan, sailed on the 22nd of July for England to see her son, J. Verner Cook, who is training at Shorncliffe.

Mr. and Mrs. W. Ritchie and Mr. and Mrs. Atcheson of Wingham motored to Newmarket on Friday, returning on Monday. Mr. Ritchie says that the crops nowhere looks as well as in Bruce.

Miss Aggie Hay, of Greenock, had her arm broken recently, as she jumped out of a wagon to avoid danger when one of the horses, a young animal, became unruly and threatened to run away.

Mr. and Mrs. Jno. C. King of Toronto who have spent the past month with their daughter, Mrs. H. M. Lay, left on Friday for Ottawa where they will visit their son, Hon. W. L. McKenzie King.

The Hospital Entertainment Committee have planned to hold a Bazaar early in October and would ask the visitors and ladies of the town to prepare and leave contributions with Mrs. L. H. McNamara.

ESCAPED FROM FLAMES

But Their Farms were Burned Over—Kirstines and Flemings are Safe at Haileybury After an Exciting Run For Their Lives.

Much anxiety was relieved by a wire received here on Tuesday from Mr. George Fleming stating that he and his wife, and Mr. and Mrs. Walter Kirstine had arrived safely at Haileybury from Matheson. The Flemings and Kirstines occupied farms in the neighborhood adjoining Matheson. Their farms were in the very heart of the burnt area, and the greatest anxiety was felt for their safety by the many relatives and friends here. A despatch to the Globe from the T. & N. O. officials at North Bay published in Tuesday's paper gave Mr. and Mrs. Kirstine among the list of those who had likely perished, so that the assurance that they were safe caused great relief. A despatch to one of the city dailies states that Mr. and Mrs. Kirstine lost the buildings on their farm and barely escaped with their lives. The fire was burning fiercely around them as they ran down the road to safety. As they left a wild rabbit joined them, as well as four young wild geese. Both the rabbit and the geese followed them two miles.

The Kirstines have been in the north country about eight or nine years, having settled first near Haileybury, where they still have a farm. Three years ago they took a new farm around Matheson, which Mr. Kirstine has cleared and improved. The Flemings who are neighbors, also came from this vicinity, Mrs. Fleming being a daughter of the late Sebastian Kirstine of Brant. Mrs. Walter Kirstine is a sister of Mr. John Lamb of Brant.

Salesladies Wanted.

Salesladies wanted to fill positions open on our sales staff made vacant by men enlisted. Either temporary or permanent. Income three dollars per day upward. Address the Scarborough Co. of Canada Lt'd., Map Publishers, Hamilton, Ontario.

Can You Beat It?

We have had heard of the man who did not know the other day that England was at war, but that individual has nothing on some of the municipal clerks of Bruce County. The other day, Mr. Thos. Dixon, Clerk of the Peace, received a voters list from the clerk of a nearby municipality addressed to "Judge Barrett." Since then another voters list has come for "Judge Scott." Why have these men overlooked "Joe Walker", the man who put the Walker in Walkerton.

+ + +

Death of Solomon Hardy

Mr. Solomon Hardy of Cu[illegible] passed away at Bruce Coun[illegible] al on Friday, showed [illegible] physical stamina for a [illegible] years. Mr. Hardy, who [illegible] year, had a leg amputated [illegible] so ago on account of the diseased condition of the limb. Recently it became necessary to amputate his other leg also. Mr. Hardy partially recovered from the effects of the operation and was able to return to his home. He took a turn for the worse last week and was brought back to the Hospital Friday morning. On Friday night he passed away. Mr. Hardy was a well-known and well-to-do farmer of the Teeswater neighborhood.

+ + +

Women In The Field.

Some seven hundred men of the Bruce battalion were given a month's leave last week to help in harvesting. If the men are so disposed, they can be of great service. The other day, while journeying between Paisley and Walkerton after attending the Bruce Preparedness League meeting, the editor saw at least one farmer who is in great need of help. In a hayfield which had a coil of hay about every ten feet, was the man busy while at the other end of the field was his wife, with a baby in her arms operating the hayrake. We do not know, of course, whether this man was able to obtain help or not, but the fact remains, nevertheless that there are many women who, anxious to save the crop after it has grown, are working in the fields in Bruce county.—Port Elgin Times

Doing Their Bit

The hearts of Canadians wherever found have been stirred by the call for patriotic service. A noted instance is the Canadian Club of New York, which besides large cash contributions to the Patriotic Fund, has contributed no less than seven motor ambulances to the Canadian Red Cross Society which are now doing service at the Front. Prominent among the New York men who are taking an active interest in the work is an old Walkerton boy, Mr. William Hogg, who is treasurer of the Canadian Club of New York. Mr. Hogg, who is a brother of Mr. John A. Hogg of Carrick, and a graduate of the Walkerton High School, has been engaged in the lumber business in New York City the past eight or nine years. In his younger days he taught school near Chesley.

WIT AND HUMOR

THE REASON.

(Browning's Magazine)

"I see that women's shoes [illegible] up."

"Have to, to meet the women's [illegible]."

VERY FITTING.

(Baltimore American)

"I said in my write-up that the ex-baseball pitcher's life had been well rounded out."

"How so?"

"Hasn't it been full of curves?"

PACKING FOR VACATION.

(Life)

"Jack?"

"Yes?"

"Can't you bring some fat friend home to dinner? I positively must have some heavyweight to sit on my trunk."

GARDENING COMPLICATIONS.

(Detroit Free Press)

"Pa, what is common clay?"

"Common clay, my boy, is what you get when you pay a man to haul you in a few loads of good black dirt."

STRICT RESTITUTION.

(Baltimore American)

He—Do you really believe that all stolen goods must be restored?

She—Of course, I do.

He—Then, since my conscience is troubling me, will you let me return you the kiss I stole last night?

HANG 'EM ON A HICKORY LIMB!

(The Sun)

Mother—If you fell in the water, why are your clothes dry?

Tommy—I took 'em off in case of accident.

QUALIFIED.

(Life)

"The girl who washes out dishes tells me she is going to work in a munition factory."

"Think she will do well at it?"

"Oh, yes. Her duty is to break iron things to fill shells for shrapnel."

LOOKING BACKWARD.

(Life)

Fogg—How is your wife coming on, in her hunt for more bars for her D.A.R. pin?

Hogg—Oh, she ran across a couple of ancestors behind 'em.

SAME OLD STORY.

(Boston Transcript)

Wife—Mercy! What's the matter with your face? You look as though you'd been in a battle.

Hub—I was getting shaved by a [illegible] barber when a mouse ran across the floor.

CORRECTING A MISTAKE.

(Life)

"Father, is a financier a man who can make a lot of money?"

"No, my child, a financier is a man who can live on the income from a lot of money that he never had and has no reason to expect."

THE NAME FITTED.

(Boston Transcript)

"Ma husban's very po'ly, ma'am. He's got dat exclamatory rheumatism."

"You mean inflammatory, Marthe."

"Exclamatory is [illegible] means to cry out."

"Yes, ma'am, dat's what it is. He hollers if anybody goes near him."

GOLF LIFE.

(Detroit Free Press)

"Golf is much like life."

"In what way?"

"The worse you play the harder you try."

"True, but it's different, too, in one respect."

"What's that?"

"In golf the harder you try the worse you get."

COMPENSATION.

(Life)

"Just think! So many of the old nautical terms on sailing vessels have all gone out."

"Yes. But think of all the new names of cocktails!"

EPICUREAN APPROVAL.

(Washington Star)

"How are you getting on with your garden?"

"First rate," replied Mr. Crosslots.

"Raised anything good to eat?"

"I should say so. Why, the neighbors' chickens simply can't wait for the [illegible]ipe!"

[illegible] ON THE GOSSIP.

([illegible]oit Free Press)

"[illegible] your wife like the new [illegible]"

"[illegible] as yet. You know she's [illegible] acquainted with the oth[illegible] in the block to talk [illegible]"

AMBULATORY SAVING.

(Richmond Times-Despatch)

Grubbs—I don't see how anyone can call the possession of an automobile an extravagance. To my mind, it is the finest sort of lesson in economy.

Stubbs—How do you make that out?

Grubbs—Why, when you run a motor car you have to cultivate thrift in order to keep it out of the hands of the sheriff.

LOGICAL.

(Buffalo Express)

"California air is light, isn't it?"

"I've heard so."

"Here's a man on a motor trip who has arrived in the East with California air in the tires."

"What about it?"

"His car would be lighter."

"Yes?"

"So his gasoline bills wouldn't be so much."

SILENCE IS GOLDEN.

(Detroit Free Press)

"Have you anything to say why sentence should not be passed on you!" asked the judge.

"Not a word. I made speeches the last three times I was convicted and they didn't seem to do me any good," replied the prisoner.

HER SADDEST HOUR.

(Life)

"A woman's saddest hour," said the amateur poet, "is that in which she finds her first gray hair."

"Not necessarily," his wife rejoined. "It may be the hour in which she learns that the man she jilted when she [illegible] failure whom she married has become a millionaire."

BRIER IS REALLY HEATH.

Brier pipes are not made from the wild rose brier. The name is a corruption of the French word bruyere (heath). The earliest brier pipes were introduced into England in 18[illegible] and were made from the roots of the French heath (Erica arborea).

GOING TO IT GENTLY.

(Pathfinder)

"Can you bear it if I tell you something serious?" ventured the young husband.

"Yes; don't keep anything from me," gasped the bride.

"Remember, this does not mean that my love for you is growing less."

"Don't break my heart. What is it?"

"Well, my dear, I'm getting tired of angel food every day for dinner. Would it be too much to ask you to have liver and onions?"

IN THE PLACE OF DANGER.

(The Christian Herald)

A young mother hearing her 2-year-old crying loudly, rushed to him and inquired anxiously, "What is the matter?"

"The dog bit me," was the tearful response.

"Where were you when the dog bit you?"

"Boo hoo! I was—I was by—I was by the dog!"

Life is a hurdle race to the people who are always jumping at conclusions.

CROSS PURPOSES

"Oh, no, it's the other line. I am expecting her every minute. You have been running a race without knowing it, and you have won, you see. I thought she would have been here first. She has been with friends in Cornwall."

"In Cornwall!" Gilbert South repeated the words with a touch of startled interest in his voice. "She used to live in Cornwall—I was there one summer a long while ago. I wonder where she has been staying now?" And, after a moment, he added, "Not in the old house, I know."

"It's a beautiful country," said Mrs. Leicester. "Not pretty, like Devonshire, of course."

"No, not like Devonshire; but I like it better, perhaps because I knew it first. The Land's End, on a still midsummer day——" He stopped short in the middle of his speech, and looked down, but his silence was full of remembrance.

"Oh, delightful!" said Mrs. Leicester, fanning herself slowly with a Japanese fan. "Do I hear the carriage? No. Of all places I think the Land's End——" and she glided through two or three soft commonplace sentences.

"Yes," Gilbert interrupted her. "I beg your pardon, I mean I think you do hear——"

"Why, of course I do." There was the sound of an arrival in the hall. Mrs. Leicester put down her fan, but the door at the far end of the room was thrown open before she could reach it, and "Mrs. Austin" was announced. "Here you are at last!" she exclaimed, hurrying to meet the new arrival.

Mrs. Austin bent her head twice to receive her friend's kiss of welcome, and the two came up the room with a soft rustle of drapery. The western sun lit up Mrs. Austin's pale face. "You know Mr. South?" said Mrs. Leicester, and with a smile she answered, "Oh, yes," and put out a gloved hand. He was cool enough usually, but his heart beat fast, and he hardly knew what he said, as he stepped out of a long vista of shadowy years and a confusion of memories to greet Mrs. Austin, newly arrived from a Cornwall whose sunsets, blue seas, and fringe of chafing white waves were those of a summer long gone by. It was only when she said, "Yes, it is a long while ago," that he remembered what his own remark had been.

At that same moment Tiny Vivian, a dainty little rustic figure, swinging a bunch of pale honeysuckle and green-coated nuts, was crossing the corner of a distant field. She had gone some way in silence, with thoughts intent upon the romance awaiting her at the Manor-house. It is true that to Tiny it was a dim and by-gone affair, which had been laid by so long that it could have no better sweetness than that of dried rose leaves and lavender, yet, being a real romance, it was interesting; and it was with an absorbed and earnest glance that she looked up at Frank, and said, "I wonder how those two will meet! Don't you think she will feel rather strange?"

"Why she more than he?" demanded Frank. "I should think they would both feel rather queer after eighteen years." He aimed a blow at a thistle as he went by. "I've been thinking," he said, with a laugh, "it must be eighteen years ago, if it isn't nineteen, since I had the measles. I was a horrid little spoiled wretch, I know—I remember crying because I could not go to a children's party—I used to wear a hideous tartan frock with frills, and had my hair curled. It is certainly eighteen years ago this autumn."

Tiny laughed too. "I suppose I was a baby—my birthday is in August, you know. Isn't it a long while ago? But if he had been waiting all these years, and been true all the while, he has nothing to be ashamed of."

"Might be ashamed of wasting his time, I should think," said Frank. "Don't bestow too much sympathy on Mr. South. And you expect Mrs. Austin to blush for her inconstancy? Not she! I'll bet you anything you like that the faithless widow is much the cooler of the two, and, if there is any blushing when they meet, he will have to do it."

"The sunset is doing it," said Tiny. "Look what a glow there is dying away behind those willows."

"We must look sharp," said Frank. He glanced at his watch and quickened his pace. "You can walk a little faster?"

"Oh, yes—are we far from home!" and, without waiting for an answer, Tiny went on. "I've made up my mind I shan't like Mrs. Austin." There was a determined expression in her brown eyes as she spoke.

"Sorry for her," said young Leicester. "But, to tell the truth, if it wasn't for pleasing my mother, I could very well dispense with the pair of them. I suppose he'll like some shooting; but I can't go out with him tomorrow—I've promised to ride over to Bridge End in the afternoon. I don't know what you'll all do, I'm sure—go for a drive, if you like."

Tiny pushed out a scornful little lower lip. "All packed in the carriage together!" Then, after a moment's consideration, "Well, we might go to the castle."

"Isn't it rather reckless, using up our one show-place the first day?" said Frank. "Though, to be sure, it isn't worth keeping—there's so very little of it."

"And don't you think it might harmonize nicely with their feelings?" Tiny continued, taking a higher range. "Won't they like to poke about little old remains of something that used to be very beautiful and splendid? I should think it would give them a chance of saying all sort of things."

"Oh, go to the Castle—go to the Castle, by all means!" said Frank laughing. "I only hope they'll have your fine sense of harmony, and make the most of the opportunity. Mind you don't interfere—that's all."

"I shall take care of your mother," Tiny answered, loftily. "I shall carry her shawl. And I shall pick ivy leaves off the wall. I hope I know my duty."

"Most people do," said Frank, dryly. "For instance, my duty is to be home in proper time to receive these good folks."

"Shan't we do it?" said the girl, a little apprehensively.

He shook his head. "No, like most people, we shan't! Can you dress in two minutes? You must try to-night, I'm afraid. It's all my fault; the time slipped away, and I didn't notice." Tiny, in spite of her uneasiness, was very happy. They hurried on, the glow in the west grew fainter, and the rooks went by in great clouds, cawing their good-nights overhead.

"I can't think what possessed my mother to want those people!" said Frank, with a sudden burst of irritation, as he helped Tiny over a stile. "I hate having to hurry you like this—you'll be tired out, thanks to them!"

"Oh, never mind me!" said Tiny, breathless, but loyal.

"But I do mind you," Frank answered, hotly. "I wish they were a thousand miles away! Anyhow, their touching meeting must be over by now."

He was right, the meeting was over, and, as he had divined, Mrs. Austin had been the more unmoved of the two. While she shook hands with Gilbert South she did not cease to answer Mrs. Leicester's hospitably anxious questions. She was not tired—her train was rather late, yes, but she really was not tired—she would not have any tea—no, she would not have anything. Gilbert looked at her over the top of Mrs. Leicester's head. There was something of doubt, appeal, almost of entreaty in his glance, and Mrs. Austin did not seem to evade it, yet he hardly knew whether it had reached her or not. At that moment he felt it harder to realise how he had parted from Mildred Fairfax than it had been when he stood on the rug and listened through Mrs. Leicester's talk for the sound of approaching wheels. Mrs. Austin's softly-modulated and unhurried speech was like, and yet unlike, Mildred's voice as he remembered it. It seemed like an echo of old days awakened in a strange place. She looked at him with gently inquiring eyes, as if to discover how much he had changed since their parting, and she met the same mute questioning from him. Meanwhile Mrs. Leicester wondered aloud, with much discomposure, what Frank and Tiny could possibly have done with themselves. It was getting late; would Mrs. Austin like to go to her room? So the party broke up, to meet again at seven.

The question which troubled Frank's mother was solved when, at three minutes to dinner-time, she met him on the stairs, looking very hot and dusty. She expressed some views on the subject of punctuality which seemed to make him hotter. "We went farther than I intended—we went along the river after I saw Huntley, and had to hurry back. What's the use of making a row about it?" he said, rather crossly.

"You promised me you wouldn't be late!"

"Well, don't I tell you we hurried home? I believe Tiny nearly ran all the way. I wish I'd made her take it easy, if this is all the thanks we are to get." Frank had the disgusted look of a man who faces an ungrateful world.

"Where is Tiny?"

"Gone up-stairs like a flash of lightning. Look here, mother, it wasn't her fault, you know."

"Well, all I can say is, that it is very tiresome," said poor Mrs. Leicester. "Do make haste, Frank."

"I'm only waiting till you've done talking to me," Frank replied, with boyish doggedness, and stood stock-still with his hands in his pockets. Mrs. Leicester uttered an impatient exclamation, and flounced down to the drawing-room, whereupon Frank went up the stairs two at a time, narrowly escaping a meeting with a very cool and carefully-dressed gentleman who was just coming from his room. He made the most of his time; but it was a heavy-browed and rather sullen young host who made his appearance some minutes after dinner was announced, and offered his arm to Mrs. Austin, with a muttered apology. Frank was profoundly dissatisfied with both his guests and himself. People who were busy with their love affairs while he was a very tiresome little boy getting over the measles, belonged altogether to a peculiarly uninteresting past, and the consciousness that he had been wanting in politeness made him angrily uneasy. He made up his mind about Mrs. Austin and Mr. South between his spoonfuls of soup. There was a slight likeness between them at the first glance. It was hardly enough to suggest the idea of brother and sister, but they might have ben cousins. They were both tall, fair and pale; they were very quiet, and when they spoke, it was with a subdued clearness of tone, and with a little more finish than Frank himself. The resemblance made them still more uninteresting, and the soft voices struck him as slightly affected. So far as they were concerned, he saw precisely the pair of faded lovers he was prepared to see; but he noticed that Tiny, whose cheeks were a little flushed, and whose pulses were a little quickened by their haste and her fear of his mother's displeasure, looked peculiarly vivid and young by the side of the new-comers. There was something happy and eager in her utterance of the most commonplace remarks which Frank had not observed before. Cross though he was, he flashed an occasional glance of sympathy and encouragement to his fellow-culprit when he chanced to encounter her bright, timid eyes. He would not have Tiny scolded for that afternoon's misconduct, and he watched his mother's manner so jealously that when Mrs. Austin said something about Culverdale, and the road by which she had come, he was preoccupied and answered rather at random. She turned away with a hardly perceptible smile, and spoke to Gilbert South.

It was a little better when the ladies left the dining-room, for Frank contrived to exchange a smile of reconciliation with his mother as he held the door, and so went back to his duty with a somewhat brighter face. But it was not much better. These people were not to his taste. They had the air of having seen and known things beyond the range of Culverdale society and Frank felt shy, young, and half-defiant as he sat over his wine with Gilbert South. He suspected his guest of possibly laughing at his youth and awkwardness. It is true that there was nothing in Mr. South's manner to justify the suspicion. He did not look like a man who was in the habit of laughing at his neighbors; but Frank was in an unreasonable mood that evening. He held himself aloof when they went into the drawing-room still with that heavy consciousness of inhospitable manners upon him, and suffered Mr. South to ask Tiny to sing, and to go to the piano, talk over the songs, and turn the pages for her, while he sat by the table, holding a paper which he did not read.

And then in a moment all was changed—Frank himself—the whole world. Mrs. Austin rose from her seat by Mrs. Leicester, came out of the shadows into the mellow lamplight, and walked to the piano. She simply crossed the room, with the light shining on her pale, beautiful face, as if she were drawn softly by the music. She was utterly unconscious of Frank, who lifted his head from his hand and sat gazing at her astonished and spell-bound, seeing her for the first time. He had been too sulky and absorbed to pay any attention before, he had had her hand on his arm—fool that he was—and had taken no heed. Now as she went by it was like a wonderful revelation, and with a perception which to his own consciousness was singularly quickened, he noted every detail of the picture—the delicate features, the soft, fine hair the shadowy eyelids, the lips parted a little in a lingering smile, the hand that drooped and held a fan, the dusky softness of her trailing velvet gown, and the web of yellowish lace at her throat, with a white spark of diamond light in it. It was not such beauty as Frank had ever taken pleasure in, or even recognized, before, and for that very reason he was unable to set any limit to his admiration. The charm was that of a pale gleam in an unknown sky, revealing a new world. He was startled at the sudden rush of feeling which carried him out of the narrow boundaries within which he had been eating, drinking, and sleeping till that moment. It seemed to him as if none of the thoughts and words to which he had been accustomed in that earlier life would serve him now. He had scorned poetry as something foolish and unreal; but it struck him that if he took up a volume of poetry he might chance to find it all coming true. Something wonderful, unexplicable, unforseen, had befallen him in that brief minute; but the important events of life may very well happen in a minute which often goes unrecognized. Frank, however, recognized his as it went by.

He moved a little as he sat, to command a better view of the room, and saw how South, who was stooping to untie a portfolio of Tiny's, rose with a swift glance of welcome as Mrs. Austin approached, and silently gave her a chair. She laid her hand on the back, but paused, listening. Looking eagerly at the two as they stood side by side, Frank forgot that he had ever seen a resemblance between them, and would have taken it as an insult had any one suggested that such a resemblance existed. The secret love story, over which he had laughed that afternoon, rose up terribly before his eyes. He remembered every word. He had said how he had proposed to give them their wedding-breakfast, and how he had joked with Tiny about the elderly bride. He hated himself as he recalled the word. Of course, it had been nothing but a joke: Frank knew well enough that a woman who was a girl eighteen years earlier was not elderly; but still he had used it, and the blood rushed to his forehead at the recollection. It was such a detestable word, hard, prosaic, and commonplace: it seemed to vulgarize and spoil whatever it touched. Frank would readily have sacrificed a year of his life (which at his age means that he would have consented to be a year younger) could he have unsaid that baleful word "elderly." His meditations speedily became so unendurable that, in sheer despair, he got up and went toward the piano. Anything was better than sitting there alone, with an idiotic paper in his hand, which would not distract his attention for a moment, and his thoughts full of the remembrance that he had made fun of Mrs. Austin.

It was with a singular sensation of being at once very dull and clumsy, and curiously keen-sighted, that he approached his guests. For the first time in his life he understood that real life could be dramatic, since hitherto he had supposed that novels and plays were interesting simply because of their unreality. To say that such a thing was like a play, meant that it was unlike anything which would really happen to a sensible Englishman. He had not sufficient imagination to enter into the feelings of the people who came and went about him. Long habit might teach him something of their likes and dislikes, hopes and fears, but he had little or no instinct in such matters, and consequently saw nothing beneath the every-day aspect of life. That night, however, his mother's reminiscences had given him a clew to the deeper meaning of what was passing under his roof, and with that secret knowledge of Mrs. Austin and Mr. South he grasped the situation as if it were on the stage. He saw it as if it were on the stage, but he knew that he was more than a spectator.

There was singing, and Frank halted little way off as if to listen. He had never felt so shy and ill at ease in all his life; never felt so little at home as he did standing there in the Manor-house drawing-room— in the very heart of his kingdom. Of course, he knew well enough that he was the master of Culverdale, but he did not see that Culverdale had anything to do with the matter. In fact, for the first time in his life, he was profoundly dissatisfied with Cloverdale: it was a hole of a place to live in—it had no capabilities. How should they amuse Mrs. Austin? She had been everywhere; she would be bored—she would laugh at it. It was all very well for Tiny, but Mrs. Austin was very different. They might have company, might "call the neighbors in," as the old nursery rhyme has it; but all the neighbors were bores. Frank had not discovered the fact before; but he perceived it now in the light of Mrs. Austin's presence, and reflected that a dinner-party of twenty-bore power would not mend matters much.

Tiny's song came to an end, and Frank awoke to the consciousness that he was looking at Mrs. Austin, in his perplexity.

(To be continued.)

Blessed be he who first invented sleep.—Cervantes.

Sleepless Nights

You can't sleep because the nerves are irritable and exhausted. Narcotics cannot give you any lasting help, but Dr. Chase's Nerve Food can.

It cures sleeplessness, irritability, nervous headaches, etc., by restoring vigor and vitality to the run-down and exhausted nervous system. The benefits obtained are both thorough and lasting. 50 cents a box, 6 for $2.50. All dealers, or Edmanson, Bates & Co., Ltd., Toronto.

Dr. Chase's Nerve Food

SCIENCE NOTES.

About 95 per cent. of the platinum comes from Russia.

A card system has been inaugurated for the protection of the electric light users in Chicopee, Mass. Each consumer is to be provided with a card and each time the meter is read the amount will be recorded. In this way the consumer can keep a separate account.

The City Council of Argenta, Ark., is considering an ordinance requiring the meter records of the public utility companies to have certified copies of their readings with consumers when the reading is made.

To prevent skidding and slipping in damp weather the streets of San Francisco are sanded by a machine mounted on a motor truck.

The coal operators early this year stated that the present labor cost of production is $1.80 per ton.

The efforts being made to educate the public to the necessity of care in the matter of fire prevention are bearing fruit, as shown by recently compiled figures. Fire losses in 1915 decreased $52,755,000 as compared with the 1914 record for the United States and Canada. The total losses by fire last year were only $182,836,000, as compared with $235,591,000 the previous year.

In Asia tusks are possessed only by the male elephants.

Half a million is a conservative estimate of the number of maimed in American industries every year.

The value of the annual orchard products of the United States reaches a total of $140,000,000.

The American hen produced during the last census nearly twenty billion eggs, and the product has been increasing since that time.

The world's present potato crop is approximately large enough to fill two-thirds of the Panama Canal.

KEEP CHILDREN WELL DURING HOT WEATHER

Every mother knows how fatal the hot summer months are to small children. Cholera infantum, diarrhoea, dysentry and stomach troubles are rife at this time and often a precious little life is lost after only a few hours' illness. The mother who keeps Baby's Own Tablets in the house feels safe. The occasional use of the Tablets prevents stomach and bowel troubles, or if trouble comes suddenly—as it generally does—the Tablets will bring the baby safely through. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

ANTIQUES

Centuries before the potter's art had developed into a recognized industry in articles intended for use or ornament in the home, carved and shaped stone objects were in request, and they served admirably for the then limited range of requirements. One of the earliest recorded uses in this direction was the primitive "mortar and pestle," the original machine in which cereals and other foodstuffs were pounded. The earliest form of "mortar" was a block of stone with a cavity scraped on its top surface, and the first "pestle" was a round pebble which would lay comfortably in this cavity. The grain or other foodstuff was pounded into its required state with these instruments.

Some ten years ago, while workers in the potters clay fields of Cornwall were mining, they discovered deeply embedded in the clay a block of granite about thirty inches square upon each face of which were two or more of these cavities, probably a culinary utensil of prehistoric man.

Among stone vessels of ancient origin still preserved to us, one of the most interesting is the immense wine-cup known to this generation as the Warwick vase. There is a doubt as to the origin of the Warwick vase, some authorities attributing it to Lysippus of Sikyon, a Greek sculptor, who flourished in the fourth century, B.C., and was one of the most famous of the early Greek artists. He rose to eminence from a very humble position through his efforts to faithfully depict the human form, especially the male figure, Hercules, being his favorite study. Alexander the Great paid a glorious tribute to his skill, when he said: "None shall paint me but Apelles, and no one make my statue but Lysippus."

Other authorities suggest a Roman origin for the vase, and the early part of the second century, A.D., as the period. This is possibly from the fact that the vase was discovered in 1770, while draining the lake of Pantanello in the grounds of the Emperor Hadrian's villa, near Tivoli. As Hadrian Augustus, A.D., 177, 138, was a great patron of the arts of his time, there may be good grounds for this argument.

The vase is modelled as a Bacchanalian Trophy, in the form of a wine-cup of most generous proportions. It is of white marble, and stands five feet seven high, and five feet eight in diameter. It holding capacity is one hundred and sixty-three gallons. The handles are formed of twisted vine branches, which are continued round the lip and from which, at intervals, clusters of grapes are suspended. The lower part is draped with panther skins, upon which are ranged bacchanalian sceptres and heads of Silenus—male attendants of Bacchus—and a bacchante. Acanthus leaves connect the bowl with the stand, which has a plain, square base.

Sir William Hamilton, when British Ambassador at Naples, secured this treasure, and passed it to his son-in-law, the first Earl of Warwick, hence its present name.

Most of the antiques in stone were so beautiful in form, outline and tone that they have served as models for artistic handicrafts of later times, and just now very extensive use is being made of them in adaptations of art stoneware or articles for use and ornament for the home.

Ways of the Mole.

No animal is more wonderfully adapted to its kind of life than is the mole. Moleskin is famous for its exquisite softness. The finest velvet cannot bear comparison with it. This is evidently a provision of nature for enabling the little animal to pass rapidly through its narrow underground galleries without impediment or friction going backward or forward with equal ease. It fits its burrow like a piston and pushes itself swiftly with hind feet. The burrows and nests, too, are lined with fine, soft vegetable fibers.

$1,000.00 Reward Forfeited If Remedy Fails

We hope this notice will reach the eyes of people who are troubled with constipation and bowel trouble. Dr. Hamilton's Pills have been guaranteed to cure any case within three days, and the above reward will be paid for any case resisting this greatest of all remedies.

No prescription ever written could surpass Dr. Hamilton's Pills of Mandrake and Butternut. For years they have been curing the most obstinate cases of constipation, biliousness, headaches and sour stomach. Here is your chance to test Dr. Hamilton's Pills. If they fail—your money back for the asking. Be sure you get the yellow box, and insist on being supplied with only Dr. Hamilton's Pills of Mandrake and Butternut, 25c at all dealers.

CHIMNEYS ON LAMPS.

Why They Prevent the Lighted Wicks From Smoking.

When a lamp is burning without a chimney it generally smokes. This is because the oil which is coming up through the wick is being only partially burned. The carbon, which is about one-half of what the oil contains, is not being burned at all and goes off into the air in little black specks with the gases which are thrown off. The reason the carbon is not burned when the chimney is off is that there is not sufficient oxygen from the air combining with it as it is separated from the oil in the partial combustion that is going on.

To make the carbon in the oil burn you must mix it with plenty of oxygen at a certain temperature, and this can only be done by forcing sufficient oxygen through the flame to bring the heat of the flame to the point where the carbon will combine with it and burn.

When you put the chimney on the lamp you create a draft which forces more oxygen through the flame, brings the heat up to the proper temperature and enables the carbon to combine with it and burn. When you take the chimney off again the heat goes down, when the draft is shut off and the lamp smokes again.

The chimney also protects the flame of the lamp from drafts from the sides and above and helps to make a brighter light, because a steady light is brighter than a flickering one.

The draft created by the chimney also forces the gases produced by the burning oil up and away from the flame. Some of these gases have a tendency to put out a light or a fire.

The Double Balls.

Shuangh chi'u'er, although the name may sound like a disease, is not a form of writer's cramp. On the contrary, "their" purpose is to prevent it. The words mean "the double balls," and shuangh chi'u-er are two iron balls an inch or so in diameter, which nestle in the right hand of every Chinese man of letters for hours each day, one being revolved about the other until they are worn bright. They are just large enough to make a handful, and the action of shifting one about the other brings the fingers into play and lends them that supplences and digital dexterity which are necessary in the manipulation of the Chinese lettering pen or fine-pointed brush. Of what a simplicity!

A Superstitious Musician.

Schumann was always inclined to superstition. When he visited Beethoven's grave at Vienna he found a rusty steel pen lying on it. This he carefully and reverently preserved and afterward used in writing his B flat symphony, believing that it would bring him inspiration. But this superstition, harmless enough in its early years, became accentuated later in an alarming manner. He began to take an unhealthy interest in table turning and spirit rapping. He was, moreover, intensely influenced by dreams and omens. One night he dreamed that the spirits of Mendelssohn and Schubert appeared to him and gave him a theme which he afterward wrote down and developed.

Minard's Liniment Cures Burns, Etc.

Sons of Butchers.

Three of the stained glass windows in the hall of the Butcher Guild, London, contains the portraits of Cardinal Wolsey, William Shakespeare and Daniel Defoe in recognition of their connection with the meat trade.

The cardinal was the son of a "respectable" butcher at Ipswich, in Suffolk, and "the immortal bard" assisted while a youngster a butcher in his native town of Stratford-on-Avon.

Defoe, nowadays known as the author of "Robinson Crusoe," but in his day an adventurer and secret agent of his government, was the son of a butcher in Fore street and a member of the guild.—London Mail.

Corns Cured Quick

Applied in 5 Seconds

Sore, blistering feet from corn-pinched toes can be cured by Putnam's Extractor in 24 hours. "Putnam's" soothes away that drawing pain, eases instantly, makes the feet feel good at once. Get a 25c bottle of "Putnam's" to-day.

Fishlines Sixty Miles Long.

The most of the halibut are caught with the hook and line. The fishing, however, has nothing gamy or sporting about it. The lines are dropped down into the sea in such a way that the baited hooks rest on the bed of the ocean. The lines are of great length. Some of them are sixty miles long. When loaded with fish it takes the steam engine on the vessel the better part of a day to wind them up. They are divided into sections, each section having a float or buoy that rests on the surface and is marked by a flag in the daytime and at night by a light. The line lies right on the bed of the sea. Attached to it are hundreds of hooks, and each hook is baited. The halibut swallows the bait and is caught on the hook and held there until the line is drawn up. These fish always feed on or close to the bed of the ocean.

Minard's Liniment Relieves Neuralgia.

Out of the Mouths of Babes.

One Monday morning little Jennie observed the kitchen assistant putting the clothes on to boil preparatory to washing them. Running upstairs, she exclaimed: "Oh, mamma, we are going to have boiled clothes for dinner!"

* * *

"Willie, you'll be sick," said his mother, as he handed up his plate the third time for more of the turkey.

"Can't help it, mamma," he replied. "That old turkey pecked at me once, and this is the only chance I have to get even."

* * *

One day little Mabel chanced to see a bald-headed man for the first time. "Oh, mamma," she exclaimed, "there goes a man with ingrowing hair."

* * *

"When are you going to get married, Laura?" said a visitor teasingly.

"Oh," replied the little four-year-old miss, "don't let that worry you. I'll see that you are invited to the wedding."

* * *

"Don't you think you have a good mamma to spread such nice, large slices of bread with butter and jam for you?" asked little Harry's grandma.

"Oh, I don't know," rejoined the incorrigible youngster. "She'd be a heap sight gooder if she'd let me spread it myself."

* * *

As small Joe was being tucked into bed one chilly night, he said:

"Oh, but it's cold! I wish I had a refrigerator at my back."

"Why, Joe," said his mother, "a refrigerator is an icebox."

"Oh, yes, so it is," said he. Then after a moment's pause he continued: "I guess I meant a perambulator, mamma."—Chicago News.

Cliff of Natural Glass.

A cliff of natural glass can be seen in Yellowstone Park. It is half a mile long and from 150 to 290 feet high, the material of which it consists being as good glass as that artificially manufactured. The dense glass which forms the base is from 75 to 105 feet thick, while the upper portion, having suffered and survived many ages of wind and rain, has naturally worn much thinner. Of course the color of the cliff is not that of natural glass—transparent and white—but is mostly black and in some places mottled and streaked with brownish red and shades of olive green and Brown.—Exchange.

Minard's Liniment Cures Dandruff.

The Kings of Denmark.

The dust of the Danish kings is kept in a great cathedral at Roskilde, an old town twenty miles from Copenhagen. Every year the entire royal family always pays a visit to Roskilde in obedience to an ancient custom. On one of the pillars are marks showing the height of Peter the Great, Nicholas the Iron Czar, Alexander II. of Russia, the King of England and many other kings. The cathedral was built in the eleventh century. It has two mighty towers, which can be seen at a long distance. The oldest grave is that of King Harold I., who died in 987.—Exchange.

Music is the sensual pleasure without vice.—Dr. Johnson.

The Summer "Life-Savers" are fruit, cereals and green vegetables. Meat in Summer overtaxes the liver and kidneys, potatoes cause intestinal fermentation. Get away from the heavy Winter diet; give Nature a chance. One or two Shredded Wheat Biscuits, served with milk or cream or fresh fruit, make a deliciously nourishing, satisfying meal. Such a diet means good digestion, good health and plenty of strength for the day's work. All the goodness of the wheat in a digestible form. For breakfast with milk or cream; for luncheon with fresh fruits.

Made in Canada

When the "Supreme War Lord" Fought the "Whole British Navy"

Emperor William was in high fettle publicly, and no doubt privately, over German fleet's demonstration of iting qualities in the battle of Jut- d. In his speech at Wilhelmshafen described "the gigantic fleet of Al- " as having received the hammer from the German fleet, the nimbus of British world supremacy had ppeared. "A new chapter in the tory of the world has been opened you." "God Almighty has steeled arms and kept your eyes clear." very one of you has done his duty the gun, at the boiler, in the wire- ss." "Every one thought the same ing." "I am standing here to-day as your Supreme War Lord"—but why go n? By this time the Kaiser has fully ersuaded himself not only that he fought the whole British fleet, not only that the British fleet is destroyed, but that he himself, the Supreme War Lord, was present at the action, disguised as conductor of Admiral Scheer's band! In a year or two he will, like George III., and Wellington, elieve he fought the great battle himself.

FIRST GERMAN FLEET.

It is odd to recall that the first German fleet was bought for the most part second-hand from the British navy. Among the first vessels obtained were the 26-gun frigate Thetis, the Rover, the Mosquito, the Niobe and the Renown. The last two, I believe, are still the Niobe as a training ship for Renown as a gunnery ship nshafen. Until quite recent was customary for Prussian fficers to be trained in the British navy. The Kaiser himself gained his first training in seamanship on a vessel presented by a British sovereign. This was the miniature frigate Royal Louise, which William IV. gave to the King of Prussia. Until recently it floated on the waters around Potsdam and was used as a school ship for the Prussian royal family. Doubtless, it was "strafed" out of existence—a thing English—in the campaign of hate.

SCHEER A POET.

Notwithstanding the German losses at Jutland and the consequent continuance of the blockade, the Germans do not intend to abate one whit of glory if for no other than for political purposes. Many of the German papers urged the Government to take measures to counteract the reports of the battle as circulated in neutral countries by the Admiralty: "Such misrepresentations do harm to the German cause." Admiral Scheer has, according the Rheinisch Westfalische Zeitung, graphed the following couplet to quarters of a restaurant at Essen o had congratulated him on his illiant victory" over the British —namely:

schlug ihren Feind nicht

nicht tot ist England's

translation is that it was the German fleet gave that England's mouth t dead yet! The expres Admiral Scheer means that he has not yet succeeded in depriving the English of their ability to brag and to boast!

A FAMOUS NAME.

Of the men lost in the Jutland fight no names causes greater regret to lovers of the naval story than that of Rear-Admiral Hood, on the Invincible. "Hood" instinctively recalls Nelson, and that gallant officer would have reported his death just as Sir David Beatty did :"Leading his division into action with most inspiring courage." Horace Hood, as I remember seeing him, was of middle stature, close-knit, alert, bright-eyed; disengaging an impression of vivid energy; his whole bearing animated, his conversation vigorous, frank and eloquent. The Hood family, whose splendid naval roll of honor now shows its latest line the glorious death of Horace Hood, is said to have owed its association with the navy to a carriage accident. According to the story, Captain Thomas Smith, popularly known as "Tom of Ten Thousand," one of the heroes of the Hawke school, was driving through the village of which Rev. Samuel Hood was vicar, when his carriage broke down. No inn being handy, Smith accepted the hospitality of the vicarage, and gratefully offered to take the vicar's two sons to sea. Both certainly did join Smith's ship, the Romney, as "captain's servants." The younger became Lord Bridport, the elder Lord Hood, Nelson's tutor and precursor; and from him the late rear admiral was fifth in descent.

CHANCE OF DEATH.

Perhaps the most striking fact that emerges from the great naval battle is the comparative immunity which sailors enjoy under gunfire as long as the vessel remains afloat. Of the officers and men of the Warrior, which did not sink until she had been towed some distance from the firing line, 91 men were killed and wounded out of a complement of 704. The Black Prince, a sister ship, with a similar complement, went down under fire, and not a man was saved. At this Jutland fight the destruction of warships easily totalled in value $100,000,000. How times and values change! Andrew D. White, famous president of Cornell, related some years ago that when he was American Minister in Berlin 1870 to 1881—on presenting his letter of recall to the old Emperor William: "I told him I was returning to America on the finest ship in his merchant navy, the Elbe. He then asked me something about the ship, and when I told him how beautifully it was equipped, he answered, 'Yes, what is now doing in the way of shipbuilding is wonderful. I received a letter from my son, the Crown Prince, this morning on that very subject. He is at Osborne, and has just visited a great English ironclad man-of-war. It is wonderful, but it cost a million sterling.' At this he raised his voice, and, throwing up his hands very earnestly, said: 'We can't stand it! We can't stand it!'"—Boston Transcript.

Chats With the Doctor

BY A PHYSICIAN

MASSAGE.

The value of massage in various forms of disease and injury has been recognized from the greatest antiquity. It is discussed, not only in Greek and Roman books, but in the oldest books of the Hindus and the Chinese. An intelligent person, having been properly taught, or even having carefully watched a skilled masseur at work, can soon become reasonably proficient in the practi ssage. It is very important to nd what is the object of the sage. This is the acceleration of flow of blood and lymph in the s being treated, and the consequent absorption of the inflammatory fluid and waste products from those parts.

For successful massage it is not necessary to use liniment, oil or grease; though when the skin is tender it is sometimes desirable to do so to minimize the surface friction. Pressure should be exercised by the fleshy part of the palm of the hand, or by the soft part of the thumb and fingers, and well kneaded. Then all the joints, beginning as before, at the toes or fingers, should be gently manipulated and moved by the masseur. By massage not only may stiffness in joints, pains in muscles, results of fractures and such like injuries be assisted towards cure, but neuralgia of various kinds, sciatica, and lumbago, writers' cramp and various forms of local paralysis may thus be relieved. And even such conditions as insomnia, constipation, and loss of appetite may in this way be successfully treated.

A HAND-CLEANSING PASTE.

A good paste for removing grime rom the hands when soap and water roves of little use is made by mix g together in a mortar ten ounces kaolin, seven ounces of [illegible] p, and one ounce of pumice pow , then mixing in two ounces of rcline. A little of this paste be rubbed over the hands and ed with a little hot water.

RHEUMATIC GOUT.

eumatic gout or rheumatoid arthritis is a chronic affection of the joints most commonly affecting people of middle age, or at any rate taking start at that time. It shows itself y steadily increasing pains, stiffness nd enlargement of the joints, usually nding sooner or later in considerable eformity. The degree of pain and eformity varies enormously in different cases, in some there being merely little occasional inconvenience, especially in damp weather; in others e patient being unable to move or en to stand.

As I have said, rheumatoid arthritis ually starts in middle life, but it y begin in early manhood or womanhood. Also it is much more common among the poorer classes, though all classes are liable to attack. General hygienic surroundings certainly predispose, and in many cases there is certainly a connection with carious teeth.

In the way of treatment once the disease has become established the prospects are not very satisfactory. All carious teeth should at once be extracted or stopped. The bowels should receive attention, and the utmost care should be taken to avoid indigestion. Alcohol is best avoided in nearly all cases, as also are tea, pastry, and sweet foods generally. Fruit and vegetables are generally helpful, and the drinking of large quantities of water between meals is to be recommended. According to the stage which the disease has reached a moderate amount of outdoor exercise should be taken daily, and the limbs and joints affected should be regularly massaged. If there is the slightest tendency to constipation salineaperients, such as Epsom salts or seidlitz powder should be taken regularly, if necessary. In some cases a change of climate is beneficial, a dry atmosphere and a gravel soil being in most cases desirable.

A BURST VARICOSE VEIN.

The bursting of a varicose vein is one of the very serious sudden accidents that may occur, and is of great gravity if immediate steps are not taken. The first thing to do is for the patient to lie down, with the affected leg raised well above the level of the body by means of a stool or a cushion. Very firm pressure by the thumb exactly on the burst spot must be applied at once, until a proper bandage can be substituted. This bandage should be wound both above and below the injury, as the valves in that particular part of the vein have ceased to act, allowing the blood to flow in either direction. A small hard pad of lint or bandage should be put immediately over the burst in the vein, and the bandage applied very firmly over it, so as to hold it in place whilst giving continuous pressure.

All these measures should be resorted to at once, as the patient may easily bleed to death from an accident of such a kind.

The Eclipse Monster.

The Mohammedans of Macedonia look upon any eclipse of the moon as full of portent indicating bloodshed. It is met with reports of firearms, and from the minarets the imams call the faithful to public prayers in the mosques. This recalls in striking manner the practices of many savage and barbaric nations. The great nations of Asia, such as the Hindus and the Chinese, still cling to the belief in the eclipse monster. The latter meet it with prayers, like the Turks. But even in civilized Europe, both ancient and modern, one finds numerous proofs of this superstition. The Romans came to the succor of the afflicted moon by flinging firebrands into the air, by the blare of trumpets and the clang of brazen pots. The superstition survived through the middle ages into a very late period. France, Wales and Ireland offer many instances as late as the seventeenth century.

Tommy—Pop, what do we mean by the highways and byways of life? Tommy's Pop—Well, my son, the shopping district seems to be made up of the high ways and buy ways.

Smart sports coat. Sports clothes promise to be of great importance this year. An attractive semi-sport outfit is here shown.

Human Freaks Big and Little

For some reason wholly unexplained, the region of the Caucasian mountains, where much important fighting has been going on, is productive of giants and dwarfs in such numbers, as perhaps to exceed all parts of the world put together.

In the United States native-born dwarfs, small enough to be in the freak class, are almost unknown. On this account Tom Thumb, though by no means very little as human pigmies go nowadays, proved a great drawing card when brought to this country, half a century ago. Minnie Warren and Commodore Nutt (the former became Mrs. Tom Thumb) were highly profitable attractions under the same management, both being of even slightly less stature than Tom Thumb himself.

To-day these small persons, or others of their size, would not excite much attention, for the reason that within the last few years a new standard has been set in dwarfs. On the stage of the New York Hippodrome a couple of winters ago, were assembled about thirty pigmies of both sexes, the tallest of whom would have made Tom Thumb or Minnie Warren seem quite gigantic.

The principal circumstance that brought this about was the discovery in the Caucasus region, of a wonderful source of pigmy supply. Circus agents go thither to pick them up, travelling from valley to valley, and offering to pay them compensation that seems to them fabulous. Hence the remarkable number of them gathered together for public exhibition. Recently a whole troupe of them has given Lilliputian stage plays in our principal cities.

But the Caucasus is not only pigmy land it is also giant land. If the agent does not find one or two suitable dwarfs in this or that valley he is likely to come across a huge man (less often a woman) who will serve his purpose, as a collector, just as well. Giants are never in demand where they grow; they are too big to be of much use and so are readily enlisted for the show business.

Why are some people big and some little? In families heredity seems to govern the matter. Where races are concerned it is not so easily concerned. We are accustomed, by the way, to think of the Chinese as of inferior height; and that is because our pigtailed immigrants nearly all come from the south of China. The people of North China are tall, and occasionally approach the gigantic.

Circus giants are not uncommonly sufferers from a disease called giganticism, which in the long run is inevitably fatal. It appears to be due to something wrong with a small gland at the base of the brain, which, in a mysterious way, governs growth. A strange thing about this affliction is that the victim may be attacked long after he has become adult and has ceased to grow in a normal way. A man over thirty years of age may suddenly become a giant, the first warning he gets of the fact being the discovery that he needs a larger hat and bigger boots and gloves.

There are, however, occasional giants who are simply people of extraordinary size, in other respects normal. How to account for them nobody knows, unless by calling them freaks of nature. Much more remarkable are the giant families, which are found in the Caucasus region—though most individuals of such families are not big enough to be worth while for show purposes. For circus exhibition a giant ought not to be less than seven feet six inches tall. With that stature, plus boots with thick soles and a high hat a man may be safely advertised as touching the eight foot mark.

Such giant families are not unknown in history. Josephus and other profane historians indorse the statements, found in many places in the Bible in regard to the giants of Gath—from which locality it will be remembered, Goliath hailed. The Bible puts the stature of that remarkable champion at "six cubits and a span"—in other words, about three inches short of ten feet. This would seem to be the altitude record of a human being, even allowing that the measurement was from the ground to the crest of Goliath's helmet.

The most celebrated of all the giant breed, not exceeding Goliath, was Og, King of Bashan. At the time when the wanderings of the Israelites in the wilderness was brought to a close, he was ruler over no fewer than sixty cities, "fenced with high walls, gates and bars." His, indeed, was a powerful monarchy, and the conquest of his realm by Moses is looked upon to this day as one of the greatest events in Jewish history.

Og, by the way, was accustomed to sleep in a remarkable bedstead—not of wood or of metal, but of basalt.

Whatever the circumstances under which the giant breed existed in Palestine at the first arrival of the Israelites, it is certain that in later years they were scattered about among other peoples. In a political sense, some were Hittites, and yet others Amorites.

Coming into contact with other races they become, it would seem, either extinct or subordinate. From what little is said of them in history, it is to be inferred that they were mentally inferior, though formidable fighters by reason of their great size and strength, in an age when mere bodily prowess counted for much.

If Goliath be supposed to have been 8½ feet high (allowing for helmet and crest), his stature did not exceed that of the celebrated Winckelmeyer, the tallest man of modern times, who, born in Bavaria, died not so many years ago. The height of many giants has been exaggerated, but Winckelmeyer was carefully measured by the anthropolist Doubec.

A man of less than 8½ feet could hardly have worn the enormously heavy armor and accoutrements described in the first book of Samuel as composing Goliath's outfit. The staff of his spear, we are told, was "like a weaver's beam," the iron spearhead alone weighing 600 shekels—about twenty pounds.

The giant breed in Palestine apparently died not very long before the birth of Christ.

There have been lesser giant breeds in modern times; but in some instances they have been the result of artificial selection—as, for example, in the case of the wrestlers of Nippon, who, even in a crowd, stand head and shoulders above the ordinary Japanese.

In the neighborhood of Potsdam there are to-day very many tall people owing to the fact that King Frederick William's famous regiment of giants was long stationed there. The regiment numbered 2,400 soldiers, and all Europe was searched by the monarch for big men to serve on it.

Fifteen years ago Count Alfred de Pierrecourt of Rouen bequeathed to that French city a large sum of money the interest of which was to furnish annually a marriage gift of $20,000 to the tallest man and woman (of proved good health and satisfactory physique) who could be persuaded to wed each other. This remarkable trust was accepted by the municipality and arrangements were made to maintain eventually a score or more of giant couples, giving them useful employment, in order that the resulting progeny might be studied and observed it. It was purely and simply a breeding experiment. As to the outcome of it, no data seems as yet to be obtainable.—Philadelphia Record.

Man cannot add to his stature, but wearing tight shoes may increase his sighs.

To Establish a Profitable Commercial Beef Herd

First of All Secure a Pure Bred Bull of First Class Blood Line—The Cow That Pays—Management of Herd for Greatest Profits—Care of Calves and Yearlings.

In establishing a beef herd of high economic, productive capacity, too much importance cannot be placed upon the selection of the bull. Bulls of any of the distinctly beef breeds will produce good results. It is well, though, to follow along one line of breeding in order to get as uniform a herd as possible. In selling beef or breeding stock, uniformity of type and color count. Herefords, Galloways or Aberdeen Angus are very prepotent and will impress their particular markings very strongly upon their offspring. The Hereford will reproduce on almost any cross the white face and white lines and markings on a body color of red. While the Galloway and Angus will as surely produce a mooley and nine times out of ten paint him a solid black. The Hereford and Galloway are particularly good rustlers, and the Angus are excellent finishers. It is, however, not so easy to obtain, at reasonable prices, large numbers of bulls of these breeds, that are of high uniform excellence, owing to the comparatively limited number of herds in Canada.

Shorthorn bulls are obtainable in large numbers, but discretion in selecting them is of no less importance on account of the general popularity and great numbers of the breed. The red, white and roan of the breed do not tend to a uniform color scheme in the herd, but reasonable care in the selection of bulls will result in a uniformity of type. The Shorthorn is a fairly good grazer, and is unsurpassed as a finisher either on grass alone, or under heavy grain feeding.

The blood lines of the bull whatever breed, may be decided upon, cannot be of too high quality. Select the best breeding you can afford, providing other points are satisfactory. They must be of the beef type with good backs and loins and deep ribs. Two-year-old bulls are generally preferred, and they should be raised under conditions which will have given them plenty of growth and unimpaired vitality. Young bulls kept for months tied up in stalls or even run in small, loose boxes floored in manure or warm, moist stables, are sure to go off on their feet or legs when subject to any strain. Even the strain of shipping is often sufficient to start trouble. Strong, vigorous, masculine chaps, well conditioned but not overly fleshed, with good coats of mossy hair, are the kind wanted.

The bull intended for use on the herd should be run in a roomy paddock, supplied with nourishing feed, to fit him for his season's work. During the breeding season, if the bull can be kept up so much the better. When run with the open herd, it is estimated that one bull is required with every twenty-five females.

BUY BEST GRADE FEMALES.

Where conditions make it impracticable to milk more cows than just enough to supply the household necessities, the calves run with the cows, and it is therefore not desirable to have cows of highly developed milking propensities owing to the difficulty of giving proper attention to the udders immediately after calving, and until such time as the calf can take care of a liberal supply on its own account. The danger may be more imaginary than real, and in establishing a breeding herd it is probable that the best females, grades of any of the beef breeds, will be found none too good. However, a man must be governed largely by the depth of his purse, and a good start may be made by shrewd and judicious selections of even more commonly bred females.

The cows should be bred to calve late enough in the season to ensure favorable weather conditions for the calf crop. For the balance of the summer, the cows will take care of the calves, but they should be taken up in the fall before the weather gets too cold or they will lose much of their calf flesh. Under farm conditions, where the number to be handled is not so large, special care should be given the calves during their first winter. Their quarters should be roomy, clean, always well bedded, not too warm, with a dry atmosphere and good ventilation. No better feeds than hay of good quality, or some green cut oats and sometimes even uncrushed oats, are required to retain calf flesh, and keep the youngsters growing, but of course a little linseed or crushed flax, some roots or other succulent food can be added, correspondingly greater gains will be made.

Of course an abundant supply of good water (if the chill can be taken off so much the better) must be available, and salt should always be within reach.

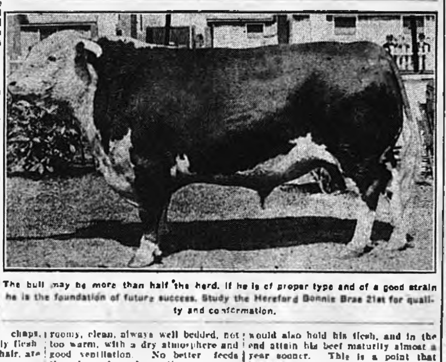
It is important that all male calves should be castrated early, at about about two weeks old is probably the best time, but where this is not practicable, on the open range for instance, the operation should be performed as early as possible, and this is generally done where the calves are branded.

CARE OF YEARLINGS.

No matter how much or how little care has been exercised in the breeding and feeding of the young bovine up to the time he attains the distinction of being a 'yearling' he is hence forth expected to rustle for himself. From the hundred-acre farmer, with his dozen calves, to the big rancher with his thousands, it is all the same; the 'yearling' is not expected to require any further attention until he can be cut out into the beef herd or turned into the feed lot, and yet it is at this stage that it would seem that both the farmer and rancher could very materially increase his profits. The yearling steer "roughed" through the winter grows bone and gains in size, but he does not hold his flesh, whereas were he given a meal ration—a small one, of say two or three pounds per day—he would not only make better flesh, but he would also hold his flesh, and in the end attain his beef maturity almost a year sooner. This is a point that has not received much attention, but one of vital importance from a profit-making standpoint.

With normal prices for cattle this is true, but with the skyward turn they have taken owing to the war it is doubly true. Young fattening is cheap fattening, and the wise feeder acts accordingly.

—CANADIAN COUNTRYMEN.



The bull may be more than half the herd. If he is of proper type and of a good strain he is the foundation of future success. Study the Hereford Bonnie Brae 21st for quality and conformation.

GREEK EMERY MINES.

Natural Abrasive Dug Up on Id. of Naxos in Great Quantities.

(From Commerce Reports.)

The dark-colored granular variety of corundum known as emery is found in beds in various islands of Greece, but the only mines are on the island of Naxos in the Cyclades group. This island's emery produce (Al_2O_3) is a monopoly of the Greek Government, the sale of all Naxos emery being under the supervision of the Ministry of National Economy.

In the world-demand for this natural abrasive, the United States takes a prominent part.

The product of the Naxos mines for 1915, delivery of which will be made in the current year, is estimated at 15,000 metric tons, of 2,204.6 pounds each. Applications have been filed for about 70,000 tons to date. In the past distribution has been made on the basis of order of application. There appears now to be a disposition to alter this arrangement, but no positive steps looking to this end have as yet been taken.

The world productions of emery stone has been estimated by a local expert at 100,000 tons per annum; of this quantity Greece produces in normal times perhaps fifteen per cent. The largest centre of production is Asiatic Turkey; a fair proportion of the Greek product is shipped into Turkey and finds its way to market with the product of Asia Minor.

The beds at Naxos are worked by the inhabitants of the island, who stoutly maintain that the mines are their property, and in practice, at least, this contention is admitted by the Government; no outsider, therefore, even though a Greek subject, is allowed to work in the mines; the inhabitants, however, reserve the right to employ outside labor should they see fit to do so. The ore extracted by this outside labor is for the account of the villagers.

After extraction the mineral is transported to the seashore at either Lyonna or Moutsouna, where delivery is made to officials of the Ministry of National Economy, who pay the villagers.

The Double Balls.

Shuangh chi'u er, although the name may sound like a disease, is not a form of writer's cramp. On the contrary, "their" purpose is to prevent it. The words mean "the double balls," and shuangh chi'u er are two iron balls an inch or so in diameter, which nestle in the right hand of every Chinese man of letters for hours each day, one being revolved about the other until they are worn bright. They are just large enough to make a handful, and the action of shifting one about the other brings the fingers into play and lends them that suppleness and digital dexterity which are necessary in the manipulation of the Chinese lettering pen or fine-pointed brush. Of what a simplicity!

Many a man has been left because his watch wasn't right.

ACTING SUB. ON DESTROYER

A Youngster's First Night Alone in Command.

(By "Taffrail" in the London Daily Mail)

He was a very junior young officer indeed when the powers that be first gladdened his heart and ruined his clothes by sending him to a destroyer. A mere sub-lieutenant with "acting" after his name, which, as any proper "sub" will tell you, is a sign of extreme juniority. Moreover, the single gold stripe on his monkey jacket was still suspiciously new and terribly untarnished.

Not so very long before he had been a midshipman in a battleship, a mere "[illegible] boys," who had to obey the orders of almost every officer in the ship except those few who happened to be junior to him. It is true that he exercised his authority and a severe discipline on those midshipmen who had the misfortune to be a year or so younger than himself, and that he expressed a lordly contempt for the assistant clerk. But he lived in the gunroom, slept in a hammock, kept all his world possessions in a sea-chest, and bathed and dressed in the company of fifteen other boisterous young gentlemen.

BUT ALWAYS BUSY.

Then he had his watches to keep at sea and his picket boat to run in harbor, while his spare time was fully employed in mastering the subtleties of gunnery, torpedo work, and electricity, and in rubbing up his rapidly dwindling knowledge of engineering and x and y. It was well that he did so, for at some distant period when the war ceased he would have to pass certain stringent examinations before he could be confirmed in the rank of lieutenant.

So on the whole he had been kept fairly busy, more particularly as watch-keeping at the guns with the ship at sea in all weathers in war time was not all jam.

But when he was sent to a destroyer he found the life was more strenuous, for the little ship spent far more time at sea. The weather was sometimes very bad indeed, and at first he was sea-sick, but it was always a consolation to have a cabin of his own, to live in the wardroom, and to be treated as a responsible officer instead of a mere "make learn."

He had to work at least six times harder than he had in a battleship. For one thing, he had all the charts to correct and to keep up to date, no small labor with pencil, dividers, parallel rulers, and much red ink in these days of war, prolific minefields, dangerous areas, extinguished lights, and removed buoys. He also assisted with the ship's gunnery, and at sea kept a regular three watches, eight hours out of every twenty-four, with the first lieutenant and gunner. But it was the sense of responsibility and the feeling that he was doing really useful work which gladdened his heart and kept him keen and energetic.

LOTS TO LEARN.

"Have you ever been in a destroyer before?" his commanding officer had asked him as soon as he joined.

"No, sir."

"Ever kept officer of the watch at sea?"

Again the answer was in the negative.

"Well, you'll have to do it here, my son. If you want to know anything come to me. There's nothing much in it so long as you keep your eyes skinned. You'll soon learn."

The skipper had said there was nothing in it, but the first night at sea he found himself alone on the bridge in charge of the ship he thought differently.

A light cruiser squadron and two flotillas of destroyers were steaming at 25 knots in close formation without lights. The night was as black as the wolf's mouth, and the rapidly rising wind cut the tops off the short seas and sent them flying over the bridge in constant showers of spray. Moreover, the perpetual pitching and rolling soon gave our friend a squeamish and altogether nasty sensation in the region of his waistcoat, and in ten minutes, by which time the water had found its way through his oilskins and was trickling merrily down the back of his neck, he felt miserable.

The ship was in the middle of a line of eight destroyers. Two hundred yards ahead of him, he could just discern the dim black blur of the next ahead and the occasional splutter of white-grey foam in her wake as her stern lifted to the seas. At times when a driving rain squall came down from windward, he seemed to lose sight of her altogether, and through inexperience and in his anxiety to catch up, increased the revolutions of the engines not wisely but rather too much. The next thing that happened was that the squall cleared, and he found himself almost on top of her, and had to put the helm over and sheer out of line to avoid a collision. At the same he reduced speed to drop back into station. Sometimes he reduced more than he should, with the consequence that the next astern nearly bumped him, while the leader shot ahead and vanished into the darkness like a ghost.

THE DEADLY SIN.

It was then that the horrible thought of being scrubbed for the deadly sin of losing touch with the flotilla and meandering about the ocean like a lost sheep looking for his next ahead. If he did not succeed in finding her somebody's blood would be required.

It was rather trying for a novice, and many times he remembered the commanding officer's standing orders. "Do not hesitate to call me if you are in doubt or difficulty," they said, with the "Do not" underlined twice. Should he rouse the skipper or should he not? He was asleep in the charthouse underneath the bridge and would be up in ten seconds if required. But the acting "sub" did hesitate to call him unnecessarily. After all, it was quite possible that the "C.O." might be rather peevish if he was hauled out for no reason. He was not himself, and he certainly did not wish to patent the fact that he could not keep the ship in station whatever the circumstances.

No; he would not call him. He solved the problem by increasing the speed of the engines ever so slightly above the normal, and five minutes later heaved a sigh of profound relief as the black shape of the next ahead hove up out of the darkness.

In an hour his helpless feeling had gone and he was jogging merrily along without difficulty.

SKIPPER KEPT SURE.

But the skipper, who was accustomed to the ways and tricks of newly joined officers generally, and sub-lieutenants in particular, had been awake the whole time. He always slept with one eye open at sea, and as the charthouse was immediately beneath the bridge and the shafting of the wheel and engine-room telegraphs passed within a few feet of his head, he knew at once from their agitated movement when anything really desperate was happening. So when the helm went over and the revolution telegraph revolved frantically five or six times in quick succession he yawned wearily, flung off his rug, and sat up.

"I won't go up and interfere unless he sends for me," he thought to himself. "He must learn." He had been a "sub" in a destroyer himself. The summons never came.

At three o'clock, by which time the dawn was breaking, the "C.O." did appear on the bridge.

"Well, Sub?" he asked. "What d'you think of station keeping at night?"

"Quite easy, sir," said that young officer blatantly, quite unaware of the acoustic properties of the charthouse. "As easy as falling off a log."

"Did you have any difficulty in seeing the next ahead?"

"Not much, sir. It was a bit dark at times, though."

The C.O. smiled to himself. He knew.

The "sub," he has passed out of the "acting" stage, is now an expert at the game, and, to use the phraseology of his latest confidential report, is "energetic and trustworthy" and a "most promising and capable officer."

SELF CONFIDENCE.

(Belleville Ontario)

Self-confidence is the steam that helps us "get there." The man with self-confidence is like a "dead" engine; the man with too much, is like an overpowered engine apt to blow up.

Blessed be he who first invented sleep.—Cervantes.

BURDOCK BLOOD BITTERS CURED DYSPEPSIA.

Unless the stomach is kept in good shape your food will not digest properly but will cause a rising and souring of food, a feeling of rawness in the stomach, pains in the stomach or a feeling as if a heavy weight were lying there.

Burdock Blood Bitters cannot be surpassed as a cure for dyspepsia and all its allied troubles.

Mr. James R. Burns, Balmoral, N.S., writes: "About two years ago I was badly troubled with dyspepsia, and could not get any relief. I tried most everything, not even the doctors seeming to do me any good. One day a friend told me to try Burdock Blood Bitters, as he had seen it advertised. I did so, and by the time the first bottle was gone I felt better, and after taking three bottles I was completely cured. I highly recommend it to all sufferers from dyspepsia."

How a Duelist Was Eliminated

(By Elinor Marsh)

During the reign of Louis XIII, France was one vast dueling ground. Dueling was especially in vogue in the army. A practice of this sort is, of course, sure to be abused. A good swordsman who desired to be rid of one who stood in his way would pick a quarrel with him and kill him. Then, too, there were men who had a passion for killing other men.

Mlle. Louise d'Alger, a girl of that period, very beautiful, much beloved, was a resident of Paris. One of her admirers, a young man of great promise, was killed in a duel, and his death rendered her very bitter against the custom. She could not understand why when a man was challenged by a person who was perfectly capable of killing him and intended to kill him the victim should be considered bound in honor to accept the challenge. Nevertheless such was the custom of the times, and the challenged party had to choose between death and social ruin.

At this time in Paris was a man who had been "out" a great many times and always killed his antagonist. Scarcely a week passed but it was announced that some man prominent socially had fallen before his sword. A terror fell upon mothers, sisters and lovers lest one whose life was precious to them would be added to his victims. For a time it was hoped that some man more skillful than he would put him out of the way. But not one of the most admirable fencers in Paris seemed disposed to tackle him, and he did not trouble any of them.

Louise d'Alger declared that any means of getting rid of the Scourge, as he was called, would be justifiable and wondered why some man did not stab him in the back. She was told that one who would do that would be regarded as a murderer.

"But," she replied, "he commits murder all the while."

"True, but there is no law to punish him. Should any one stab him in the back the person doing so would fall under the ban of the statute covering murder. Besides, he would be ostracised by his friends."

There seemed no justice, but great injustice, in this to Mlle. d'Alger, and she could not divert her mind from a feeling that such an enormity was suffered to exist merely by opinion. She brooded upon it till it seemed to her that she must do something to stop the Scourge's murders, just as Charlotte Corday at a later period rid France of Marat.

Mlle. d'Alger possessed a fortune and, though she was not noble, held a high position in Paris society. One day, the elite received invitations to a ball to be given by her. What was the Scourge's surprise to receive an invitation. He was not accustomed to receiving invitations unless he dropped a hint to some man of the family about to entertain that he would like one. Then the bid was forthcoming, for a refusal would be regarded as an insult and would cost a life. The Scourge was much flattered, at receiving Mlle. d'Alger's invitation without any action on his own part. Then, too, he inferred that possibly she had fallen in love with him.

When he appeared among Mlle. d'Alger's guests every one was astonished. The hostess had no man relative through whom he might have forced an invitation, and it was not to be expected that she would invite him of her own free will. All eyes were turned upon him when the duelist on entering the ballroom stepped up to her to make the formal greeting due the hostess, and every one marveled at her cordial reception of him.

The Scourge was beside himself with pride and arrogance at having been invited to the home of a lady of prominence in face of the prejudice, as he called it, of all Paris. The first few dances he chose for partners some lady who had a brother, well knowing that she would not dare refuse him. Later he made his bow to the hostess. She smiled upon him graciously and took position on the floor beside him.

Every eye was turned upon the couple. Mlle. d'Alger's views with regard to dueling were well known, and no one knew of any way by which he could force such cordial treatment. Could it be that she had been fascinated by this man on account of the power he possessed through his sword?

When in the dance the Scourge took his partner's hand in his he felt something prick his finger. He paid no attention to it. Indeed, he could not well do so under the circumstances. Then he was seen to stagger and raise his hand to his head. Instead of conducting his partner to another locality in the room he tottered away by himself but before he had gone a few steps sank down upon the floor. A circle formed about him, all wondering what could have happened to him.

Mlle. d'Alger called for lackeys and directed them to carry out the fallen man who was already dead. Then turning to her guests said:

"Let not this episode interfere with your amusement."

She gave a sign to the musicians, who played another dance.

No investigation was made as to the cause of the death of a man that all Paris hated and feared. On one of his fingers something like a pin prick was noticed, from which had exuded a drop of blood. It was known that his partner wore a ring on the hand he clasped, the setting of which was turned inward.

Heart Palpitated

Would Have to Sit Up in Bed.

FELT AS IF SMOTHERING.

Mrs. Francis Madore, Alma, P.E.I., writes: "My heart was in such a bad condition I could not stand any excitement, and at times when I would be talking my heart would palpitate so that I would feel like falling. At night, when I would go to bed and be lying down for a while, I would have to sit up for ten or fifteen minutes, as I would feel as though I was smothering. I read in the daily paper of a lady who had been in the same condition as I was, and was cured by using Milburn's Heart and Nerve Pills, so I bought a box, and they did me so much good, my husband got another, and before I had used half of the second box I was completely cured. I feel as though I can never say enough in favor of your Heart and Nerve Pills."

Milburn's Heart and Nerve Pills are composed of the very best heart and nerve tonics and stimulants known to medical science, and are for sale at all dealers, or will be mailed direct by The T. Milburn Co., Limited, Toronto, Ont.

Price, 50 cents per box, or 3 boxes for $1.25

AGRICULTURE AND LAND SETTLEMENT

"According to the United States immigration authorities, Canada lost 600,000 citizens during the fiscal year of 1914-15" declared Hon. J. A. Calder of Saskatchewan in Montreal recently. He arraigned the Dominion Government for its policy of "do-nothing."

This policy of "do-nothing" is even more prevalent in the Ontario Government. The Ontario Department of Agriculture is on its last legs. Expressions of dissatisfaction are arising from all sides, and the Department is recognized as a source of weakness to the Government.

In a speech made during the Agriculture Debate in the Ontario House last session, Mr. Nelson Parliament Liberal M.P.P., for Prince Edward County, urged the Government to endeavor to stop the trend cityward of our agricultural population. His plea was met with the sarcastic remark from certain members on the Government side that "this was an annual affair." Mr. Parliament quietly, but emphatically replied, as long as I have the honor to represent a constituency in this province, unless something more is done by the Departments of Education and Agriculture, this will be an annual affair." The Ontario Government seems to believe in the policy of "leave well enough alone" in agricultural affairs; but that all is not well was emphasized by Mr. Parliament, who went exhaustively into the question of the trend cityward of our rural population and stated that the boys of sixteen and seventeen were invaluable on the farm. He referred to the progress of education in Denmark, and pointed out that attention to agriculture had secured 61% of the population on the land. Mr. Parliament went on to advocate the inauguration of a system of agricultural education in rural schools. He said "I believe that the proper kind of schools in our rural communities, with a demonstration farm and an agricultural college situated thereon, with a winter term, would so broaden the minds of our rural children and fit them for their lives' work, that the outlay need not be considered." He appealed for both parties to unite in accomplishing something for agriculture. His appeal met with no response from the Government; and dissatisfaction with the present Government is growing to resentment in rural Ontario on account of their repeated failures to meet the situation.

EDITORIAL COMMENT

Some American farmers claim that because wheat is well bearded this year that it's a sure sign that Hughes is going to be president.

✦ ✦ ✦

Unconsciously shaving to the music of a trombone across the street, a guest in a New York hotel cut himself when the musician hit a bum note.

The County of Bruce, which has raised one of the largest county battalions in Ontario, and is giving largely to patriotic funds, by a resolution of its representative men, says it is willing to do more, but must have responsible leadership. Then Bruce County can sit down and fold its arms. It will get mighty little leadership from the present head of the Dominion's Government.—Simcoe Reformer.

THE TELESCOPE LETTER BOX

LETTER FROM ALFRED TOLTON

Somewhere in Belgium
9th July, 1916.

Dear Mother:

There was a Canadian mail to-day and there was no letter in it from home to me: I have here a letter I wrote on 3rd. inst. but was holding it expecting to hear from you any day but I have come to the conclusion that I should post something off to you to-day.

Part of the transport section have just been inoculated again this afternoon and I was amongst those p[illegible] Our arms are already a trifl[illegible] This will be the third time [illegible] The weather is really fine to-d[illegible] has been for several days. Yesterday afternoon the different transport sections of our brigade held a show of horses and mules at our brigade headquarters transport lines. This was quite a fine show and the horses and outfits shown would have been no disgrace at a good sized fall show in Ontario. I shall not say just how we got along in each event for if you read the Toronto papers closely they will tell you something about it no doubt. You see about the biggest share of the money was won by the battalions that trained in that city. Our front line boys are near here in a rest camp again for a breathing spell. This last time they were in, was the longest period they have spent in the front line and in reserve yet. It was near a month. The news we are getting now of the war on all fronts is very much more hopeful than formerly. The news we get in the daily press is about two days old when it reaches us but of late bulletins are being put up in the window of one of the buildings occupied by the divisional staff in the town. These are up to the minute. If the Allies offensive continues as successfully as it has during the past few weeks it surely will not be necessary to have another winters' campaign. Dominion day happened to be a fine day here. Of course there was no demonstration here beyond the hoisting of the Union Jack at most of the camps. I received a nice parcel of eatables and a birthday gift as well on that day. During the week two parcels came from E. Parkinson that were pretty good.

Now I must conclude but before I do so I might say that beyond the soreness I have mentioned I am quite well. I trust you and father are also enjoying good health.

Your affectionate son,
Alfred.

FROM LIEUT. LES. YOUNG

The following letter from Lieut Les. Young, who is in England was received by a friend here, Lieut. Young is apparently enjoying life in England and his former schoolmates and friends will recognize his old-time raillery in these lines.

46th Bn. C. E. F.
Bramshott, Camp, Hants,
July 8th. 1916.

This has been a beautiful day, and as for the evening—well I can't describe it. Camp was very quiet, none of the boys were round, and I was very much alone, and the confounded loneliness and quietness gets on your nerves. It makes me pace around, write poetry and letters, and in many other ways rehearse my old Touchstone tactics. You know that kind of evenings, and my poetical temperament, they make a confounded mixture, melancholy, and I am writing you to attempt to throw this off, I am not going to throw it at you, so do not fear.

When we are together nothing can make us downhearted, but when you are left alone, you feel like a personification of Bruce Bairnsfather's heroes. By the way have you seen his "Fragments From France." If you haven't I would love to send you the copies. Added to all my cares, one of the boys used my finger-nail file to cut some taffy and when I came to use it, it looked like the baby's face after its bread and milk had been administered. Wouldn't that anger you?

We have a fellow here, Scott, who is never without a smile, and we get on very well, I chortling, he grinning, and both of us have laughs like the frosty pump handle. For "esprit-de-corps" he says "sprinting corpse" and for "morale" he always uses morality, insisting that the lack of "sprinting corpse" is very bad for the "morality" of the troops. Between us we keep a laugh going, so that we find it very hard to be taken seriously. He says he would go to the front only, they have no mercy out there. They even kill people.

The 46th officers were going to give a dance here but when we looked over the nominal roll of the community we found that to get enough women we would have to invite scullery specialists, kitchen mechanics, pot wallopers, and gypsies so we gave it up and said that instead of that we would have a feast of our own, which broke us all.

The King was over to inspect us on July 1, but he didn't see Scott and I, at least he never spoke to us, so we felt rather downhearted that evening, and went to London to get into good humour again. Our new men have arrived and we are working night and day, to teach them right turn and left turn. We want them to learn to fight, you know we have night marches, day marches, route marches, quick marches, and Grand marches. When we're not marching we're digging trenches and when we're not digging trenches we're filling them in again, so altogether we feel sure of winning the war. The men like soldiering if they could only soldier instead of working. They are all Western fellows, and are losing some of the flare of patriotism that carried them into the army for King and country and squad drill.

Have I told you all about it. I can only say in closing that if I do not soon get to France, I will be missing Kitchener. As soon as he died they broke up our Batt. and made us all feel miserable. We sure miss him.

I am now going to retire to my chambers, and lay myself down on my downy board floor and bravely attack the fleeting demon Sleep. I hope to snatch a few hours of his territory.

[illegible]ve me as ever
Foolish and Sincere,
LES.

NOTED MUSICIAN OF MONTREAL

Advises The Use Of "FRUIT-A-TIVES", The Famous Fruit Medicine.

MR. ROSENBURG
589 Casgrain St., Montreal.
April 20th, 1915.

"In my opinion, no other medicine in the world is so curative for *Constipation and Indigestion* as "Fruit-a-tives". I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of Intestinal Paralysis—with *nasty Headaches*, belching gas, drowsiness after eating, and Pain in the Back. I tried pills and medicines of physicians, but nothing helped me. Then I was induced to try "Fruit-a-tives", and now for six months I have been entirely well.

I advise any one who suffers from that horrible trouble—Chronic Constipation with the resultant indigestion, *to try "Fruit-a-tives"*, and you will be agreeably surprised at the great benefit you will receive". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

COMPETITION - - PRIZES
THE CANADIAN LIBERAL MONTHLY

BOYS AND GIRLS (UNDER 18 YEARS OF AGE)
For the Months of
JULY AND AUGUST, 1916

For the summer months it is proposed to interest the young people, the boys and girls, by giving a generous commission on subscriptions collected for the Canadian Liberal Monthly, thus affording an opportunity to make pocket money during the summer holidays.

We offer a straight commission of 20 per cent, which amounts to 5c for every yearly subscription received at 25c a year. Subscriptions for more than one year from any one subscriber will count by the year, thus $1.00 from one subscriber for four years' subscription will count as four subscribers, and, of course, will carry the commission of 20 per cent.

PRIZES
Capital Prizes for Each Province

First Prize: $15.00 in Cash

Payable on September 1st to the boy or girl in each Province securing the largest number of yearly subscriptions to the Liberal Monthly.

Second Prize: $10.00 in Cash.

To the boy or girl in each Province securing the second largest number of subscriptions.

General Prize

In addition to the Commission of 20 per cent and the Cash Prizes, every contestant sending in 25 subscriptions will receive at once a large portrait, in colors, of The Right Honourable Sir Wilfrid Laurier, P. C., G. C. M. G., M. P.

The subscription price of the Liberal Monthly is 25c.a Year

The subscription list has multiplied several times since the 1st of January, 1916. The people subscribe readily and willingly if only given a chance. Anyone who devotes a little time to the work gets dozens and scores of subscriptions from Conservatives and Independents, as well as Liberals.

Results so far have been good, but they could be much better—several times better. Our success so far is the best proof of that.

Everybody Help

For sample copies and additional subscription blanks, apply, Secretary, Central Liberal Information Office, 63 Sparks Street, Ottawa, Ont.

When sending in lists, sign full name, Post Office address and age, and write on the list that it is for "THE COMPETITION."

The Hackneyed Old Phrase

Now Is the Time to Advertise

HAS special pertinence just now. It is in time of prosperity that money is made. As a result of big crops, demand for war munitions, etc., the country has reached a high stage of prosperity. There is plenty of money in circulation and the people are in a mood to buy liberally.

In such times as these advertising pays more generously than ever. The people are hopeful and confident, disposed to anticipate their wants, to buy the best qualities, and to purchase things they would not have felt they could afford a year ago:

Merchants ought to be able to double their trade under these conditions. But they can't get it by waiting for it. They must attract more attention, take a little more newspaper space, describe their goods a little more fully. A great deal of money will be spent in the next six months, the bulk of it with those dealers who court the most publicity.

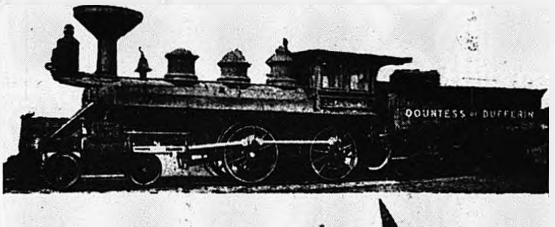
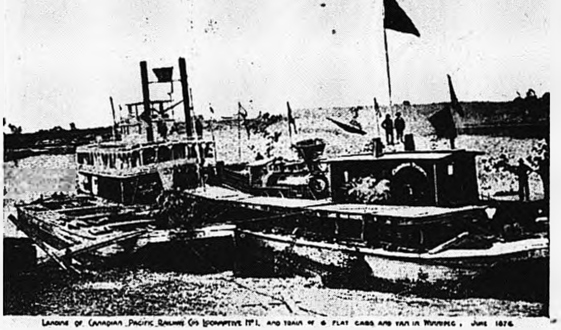
MANITOBA'S FIRST LOCOMOTIVE





LANDING OF CANADIAN PACIFIC RAILWAY Co LOCOMOTIVE Nº 1, AND TRAIN OF 6 FLAT CARS AND VAN IN WINNIPEG, JUNE 1876.

On the 9th day of October, thirty-eight years ago, the first blast of a locomotive whistle ever heard in Winnipeg foreboded the doom of Red River cart trains, flatboats and steamboats in transportation between Manitoba and Minnesota. Of the iron horse, which on that day blew its challenging blast to Indian pony and settler's steer alike, two pictures of which are here reproduced, the first being of its arrival at Winnipeg before being hitched up, and the other when, after the third of a century of good service, it was unharnessed and put to pasture, and to rest as a souvenir in the pretty little park in front of the Canadian Pacific's Winnipeg station. There it stands, embowered in flowers in summer, and housed under glass in winter, to greet the curious eyes of passengers who have been borne to the city by the modern mighty Moguls which have followed in the path of this time-honored pioneer.

On each of its fore "shoulders" are the maker's plates, bearing in a circle the lettering "Baldwin Locomotive Works, Phila." and within the circle in three horizontal lines, "1872, M. Baird & Co., No. 2664." On each side of the cab, "C. P. R. No. 1," appear in yellow and similarly on the tender "Countess of Dufferin."

The engine was so named by Joseph Whitehead in token of its having been inspected by the Countess of Dufferin in the fall of 1877, when she accompanied her famous lord, then governor-general, on a visit to the northwest. Prior to its purchase from the Northern Pacific Railway, by Mr. Whitehead, it ran between Brainerd and Jim Town, and was known as number 56, according to Joseph Fahey. And it was always known during construction by the name of the Countess, until it was turned over to the operating department, and had the distinction of becoming the number one of the long series which has followed it on the Canadian Pacific Railway.

While the Countess enjoys precedence as the first engine to arrive at Winnipeg, as it was not landed in Winnipeg, but on the St. Boniface side, to work on the construction of the Pembina Branch, the honor of being the first locomotive to steam into Winnipeg fell to the "John Haggart," which came across the Red River on rails laid on the ice in December, 1878, to be employed on the contract of John Ryan & Co., for the construction of the first 100 miles of the C. P. R. west of Red River. This latter item was also kindly given by Mr. Fahey, and affords another example of the number of Irish names so long connected with that great railway.

The steamer Selkirk arrived at Pembina with three barges, having on board a locomotive and tender, a caboose and six platform cars, in charge of Mr. Joseph Whitehead, contractor on the C. P. R. The pioneer locomotive was hailed by the settlers with the wildest excitement and greatest enthusiasm, especially as Mr. Whitehead had steam up on his engine, and notified the inhabitants that the iron horse was coming by the most frantic shrieks and snortings. On passing Fort Pembina, the flotilla was saluted by the guns of the (U. S.) artillery, and upon arrival at Pembina it was met by Captain McNaught, commanding at Fort Pembina, and his officers, Hon. J. Frankenfield, N. E. Nelson and his associates in the U. S. customs, and the population en masse. The flotilla was handsomely decorated with flags and bunting, proud of the high distinction of carrying the first locomotive destined to create a new era for travel and traffic in the great northwest.

According to the "Manitoba Free Press" of Oct. 9, 1877, "At an early hour this morning, wild, unearthly shrieks from the river announced the coming of the steamer Selkirk, with the first locomotive ever brought into Manitoba; and about 9 o'clock the boat steamed past the Assiniboine. A large crowd of people collected upon the river banks, and, as the steamer swept past the city, mill whistles blew furiously, and bells rang out to welcome the iron horse. By this time the concourse had assembled at No. 6 warehouse (at foot of Lombard Street) where the boat landed, and in the crowd were to be noticed people of many different nationalities represented in the prairie province.

"The Selkirk was handsomely decorated for the occasion with Union Jacks, Stars and Stripes, banners with the familiar 'C. P. R.,' and her own bunting; and with the barge conveying the locomotive and cars ahead of her, also gaily decorated with flags and evergreens and a barge laden with railway ties on each side, presented a novel spectacle. The whistles of the locomotive and the boat continued shrieking, the mill whistles joined in the chorus, the bells clanged—a young lady, Miss Racine, pulling manfully at the ropes—and the continuous noise and din proclaimed loudly that the iron horse had arrived at last. Shortly after landing three cheers were given for Mr. Joseph Whitehead, and in a few minutes a crowd swarmed on board and examined the engine most minutely. The caboose and flat cars, which also came in for their share of attention, each bear the name 'Canadian Pacific' in white letters. After remaining a couple of hours, during which she was visited by many hundreds, the Selkirk steamed to a point below Point Douglas ferry, where a track had been laid to the water's edge, on which it was intended to run the engine this afternoon.

"In yesterday's issue an account was given of a trip to and reception at Pembina. Leaving there the boat had to proceed slowly, the broad tow rendering the greatest caution necessary to prevent grounding. The tow, too, was difficult to handle, but Capt. Holmes and his officers brought it through without the slightest mishap. At Crooked Rapids considerable difficulty was met with and from daylight till three o'clock yesterday afternoon was occupied in passing that dangerous locality. The Selkirk could have reached here in the evening, but as Mr. Whitehead, desiring to run into Winnipeg in daylight, had the boat tied up for the night at LeMay's and steamed down this morning.

"Colonel Ruttan, who was engineer on the construction at the time, says that the 'Selkirk' with her barge 'Freighter' (on which was the engine) after putting ashore at number 6 warehouse (at the foot of Lombard Street), dropped down and crossed to the mouth of the Seine River, near the right bank of which the engine and cars were landed, to work on the Pembina Branch construction.

"After many years' active service on the main line, the Countess was relegated to serve as shunting engine in the lumber yards at Revelstoke. From this obscurity it was rescued a few years ago and placed in its present prominent position by the great company which it had served so long and well."

"HIS MASTER'S VOICE"

AN EVIL HERITAGE

The town looked about as lifeless as the harbor, Marian observed, as they jogged along the wide, empty street, where, to judge from the many broken doorsteps and fragmentary shutters, a goodly number of houses were uninhabited. At one spot the grass grew so luxuriantly that a mule standing between the shafts of a cart was enjoying a quite respectable meal. Round some of the door-steps negro children were playing with empty cocoanut shells or freshly gathered nutmegs. Here and there a black man lay basking in the blazing sun, and about a dozen men and women of various shades of color moved aimlessly along the street. And yet, though the place could not help looking lifeless, it also could not help looking gorgeous. How should it be otherwise when over the low roofs stretched the green and glossy chandeliers of the bread-fruit tree, when scarlet and yellow blossoms were blazing on either side, when through every bit of paling, however rotten, huge pink oleander heads were peeping, and when the very weeds which grew between the stones were plants which under another sun would have been treasured.

This day proved to be for the Captain full of bewildering experiences. Mr. Rudd was an old West Indian of a class which has survived on the St. Clara somewhat longer than elsewhere. While many of the neighboring isles had begun to "do" in both arrowroot and cocoa, St. Clara clung with despairing obstinacy to the old cane, which in the eye of a connoisseur would probably have accounted for the look of both the town and harbor. Mr. Rudd, though unable to deny the state of affairs, looked for the remedy everywhere except in a change of cultivation. This type of West Indian has been used for so long—ever since he reached the age of reason—to look upon those [illegible] stems as containing liquid gold, that he cannot without infinite difficulty relinquish the hope of yet turning them to wealth. He has sucked junks of "cane" when he was in the nursery, and now that he is getting near to the grave, he cannot tear his heart from the old idol, even though ruin be staring him in the face.

The Captain had only been a few minutes under Mr. Rudd's roof, and had not yet done sipping his first glass of lime juice, when an old gentleman with a crumpled red face, from which it was impossible to predict whether he would in the next minute burst out laughing or crying—it seemed unavoidable that he should do one or the other—entered the room. His linen coat was as crumpled as his face, and he seemed evidently much oppressed by the heat. This, it appeared, was Mr. Brooks, who was likewise for the moment enjoying Mr. Rudd's hospitality, but who, as his appearance betrayed, was no seasoned West Indian.

"Most detestable climate that ever was invented," he wrathfully snorted. should convey the Captain and his daughter to their destination.

"Best thing you can do is to turn tail immediately and come home with me by next mail."

"I cannot," said the Captain. "I have got an estate to look after."

"Pooh! So have I; but you won't catch me looking after anything that lies within half a hundred degrees of the equator. Why, you don't know what you're let in for! Greatest agglomeration of horrors you've ever come across. First, there are legions of insects that bother you; then there is something about an inch long which to tread on means certain death, and something else about two inches long which to come in contact means brain-fever. Then there numberless creatures with claws teeth that flop into your basin on the crown of your hat, or lie round to wait for you; there's that most interesting tailed snake which, if it gets you, you must be a person much given to delay if you are not dead in an hour."

"Two hours," corrected Mr. Rudd, soothingly.

"And it isn't the beasts alone. It's everything else as well. You're given strange and unknown food to eat. Scarcely have you got settled in your rocking-chair (which, by the way, is the only endurable institution of these parts) when you're made to get out of it in order to look at effects of through tree-branches or water. And all the time living in an atmosphere of and low fever. No, no; the glories of the tropics to you like, but not to Jack ."

"...ere comes Weedon," said Mr. had listened with perfect ... Captain's ... Weedon."

... a yellow and individual who when Captain was and bound pressed his ...th a distinct air of condol...

"... to look after Lot 13? Is so? Please be assured of sympathy."

"...ely there is nothing wrong ...?" asked the Captain, a ...usly.

"...perstitious folks say that ...ll wrong, to begin with." ... the unlucky number? ...onsense. I mean, is there ...lar screw loose about the the soil or——"

"...lon!" broke in Mr. yourself be dis... turned to the ...re plenty of ways ...e evil, as I have this very article to ...ventured to call your at... Now, if you would kindly your ear for a moment—"

...here Mr. Weedon, who seemed ...how what was coming, somewhat ...tily interposed, and the conversation now became a species of duel between the two. Both were absolutely immovable in their views. ...n Mr. Weedon said, "Our palmy ...are over," Mr. Rudd replied.

"But they will come again," or else, "We are going down hill as fast as we can," was answered by, "But we shall go up again on the other side." To which Mr. Weedon, with a broken-hearted laugh, responded: "Which other side? We are not a switch-back railway, so far as I know."

The poor Captain listened in increasing perplexity. Which, oh, which of these was he to believe!

Presently it appeared that Mr. Weedon's own plantation was situated on the windward side of the island, about half-way to Lot 13, and it was arranged that that gentleman's buggy

It was past four in the afternoon when Captain Berrincott at length found himself embarked on the last stage of his journey. The sun still blazed, but the horse and the mule which formed the team of the buggy trotted in perfect harmony and at a fine pace along an uneven road. On one side the sea, on the other steep mountains in the background, and in the foreground partly cane-fields, partly deserted tracts over which the quick growing guava bushes were creeping. The further they got from the town the more frequent did these abandoned tracts become, and the Captain, despite his determination to show surprise at nothing, felt himself compelled to put a question.

"Thrown out of cultivation," replied Mr. Weedon. "The proprietors found that it came cheaper than keeping up the works."

"There is a windmill," said Marian. "And it is turning, too!"

"For its own pleasure," completed Mr. Weedon, with a dreary smile. "There is nothing inside. Poor Mr. Thomson also was ruined by sugar."

"But if sugar is such a bad business," remarked the Captain, a trifle impatiently, "why do you not give it up and grow arrowroot?"

For a minute Mr. Weedon looked slightly foolish.

"Because it is too late," he then replied, in accents that were almost sepulchral.

The truth of the matter was that the pessimistic Mr. Weedon was just as much under the charm of sugar as was the sanguine Mr. Rudd, and that he could just as little make up his mind to abandon the tall and waving "cane" for the low and insignificant arrowroot plant. Besides, it was difficult to imagine Mr. Weedon doing anything else but singing the dirge of the island; should St. Clara ever regain its prosperity, then most assuredly his occupation would be gone. Who can say whether he did not dimly feel this?

"By the way," said Mr. Weedon, perhaps in order to change the subject, "you know the history of Lot 13, do you not?"

"I know that it is a particle of a large estate that was divided into lots. Is there anything more to know?"

Mr. Weedon smiled mournfully.

"Only a few details. The man who bought Lot 13 at the auction was of an imaginative turn of mind—so goes the story—and a speculative friend first talked him into the idea that 13 was an unlucky number and then bought the estate cheap. However, it so happened that the buyer really had a run of bad luck, and being possibly made shaky by remorse he passed the estate on to some one else in a great hurry. After that it changed hands more than once before it got into the Berrincott family, and as one of the possessors broke his nose over a cliff and another ended with delirium tremens, and as all were more or less ruined by the place, of course the tradition of bad luck stuck to the estate: nothing as tragical as a curse, you know—just ordinary and prosaic bad luck."

"Neither Simon nor his father were ruined by Lot 13," said the Captain, turning almost a little pale.

"Because they had something else to fall back upon. As far as that, they don't seem to have been particularly lucky in other ways, either."

The Captain said nothing. He had just remembered that Simon's father had been an invalid all his life, and that Simon himself had been unlucky in love. Of course he was not superstitious, but he would have preferred that these coincidences had not been.

They had been driving for more than an hour to windward when the buggy drew up in order to let Mr. Weedon alight. He was close to his house, as he explained, and the black coachman received orders to drive on to Lot 13. The Captain would almost have preferred it if Mr. Weedon had found it possible to remain in the buggy; for some unaccountable reason he was beginning to feel nervous. Neither were Mr. Weedon's farewell words calculated to reassure him.

"I shall ride over in a day or two and see how you are," he said, with a sympathetic hand-pressure. "It will be a trying time, and I don't think it would be fair to leave you to yourself."

As the buggy jogged on again the Captain became plunged in thought. Something about Mr. Weedon's talk had given him an unpleasant turn, and stirred up a train of thought which had for long lain dormant. Could it be? No; he didn't think it could be. And yet, supposing that, after all, it was?

Neither the Captain nor Marian spoke much during the latter part of the drive. It was not Marian's way to exclaim, and besides there really was not much to exclaim at, for here, on the windward side of the island, high or very luxuriant growths were the exception.

At six it began to grow dark rather suddenly, and not long after, the black coachman drew up with a jerk at the bottom of a shallow, open valley, on the sides of which, were perched some strange square objects with legs, which, seen through the failing light, might have been taken for some sort of monstrous goblins, but which in reality were tiny huts.

"Dis be Lot 13, saar," said the driver over his shoulder, with his most amiable grin.

CHAPTER X.

Lot 13, Feb. 21st.

"Dear Aunt Val.: I suppose I had better get over the worst at once. Well then, Lot 13 is a failure. But I must tell you about it from the beginning.

We got here on the evening of the 19th. Mr. Silkworth had not expected us so soon, and was not immediately forthcoming. When the buggy had turned back again, we stood on the road with our goods beside us, and a whole circle of niggers stood round us and stared, the big ones chattering and the little ones sucking bits of sugar-cane. At last Mr. Silkworth came in a great hurry. He is a big man, with curly black hair and very thick lips. He explained to father that he was quite sure he would spend some days in town, and so had made no preparations. He had not even moved over from the Big House into the Little House; he had meant only to do that when we sent for the buggy but he was afraid it would be too late for to-night. It ended by our spending the night in the Little House. There are two houses here, you must understand. The Big House is the one that Uncle Simon used to live in when he came out here; the Little House was at that time the manager's house. Now, of course, the manager has made himself comfortable in the Big House and the Little one stands empty, as a rule. It looked most desperately empty when Mr. Silkworth ushered us into it that first night by the light of an oil-lamp which he had lit in a hurry, and of course there were neither sheets nor pillows on the beds, and only two chairs and one table in the three tiny rooms.

"It was only next morning that we saw the place properly. This tiny cottage stands on a hill, and I can see the sea from my window, but on the whole the view is disappointing. The cane fields are of course slightly monotonous, and as for the village, imagine a shallow valley on the side of which about a dozen little wooden cages in stilts are roasting in the sun. Against the sky-line stand two cocoa-nut-trees—there used to be hundreds, Mr. Silkworth says, before the blight. Then there is a Portuguese shop, a smoking chimney, and a large yard, and that is about all.

"But I must return to the events of yesterday. If only my paper would lie still! We live in a thorough draught here, you know, and at this moment I am writing with my hairbrush on one corner of my paper and my glove-stretcher on the other, and with a banana to keep the envelope from flying away. Well, to resume. Of course the first thing father wanted to see was the sugar works, and of course I went with him. I think father had expected something quite different, or at any rate a little more than what there actually is, viz., some wooden sheds, a wooden wheel turned by water, and two stone rollers. Of course the whole place was swarming with negroes, and everywhere and even in the yard there was such a thick, sweetish smell hanging in the air that I was quite glad to get away. Father spent most of the day with Mr. Silkworth, but I went straight back to the cottage, having had enough with the boiling-house.

"It was getting quite late in the afternoon when at last father came back. I was sitting in what they here call the "gallery," which is simply a covered passage running along the front of the house, when he appeared quite unexpectedly—for there is no real path outside, and I had not heard his step on the grass—and without saying a word dropped into the second rocking-chair, and began to laugh so loud and so strangely that my first impression was that he was out of his mind. When I begged him to tell me what was the matter, he could only gasp out, 'Simon—it's Simon that's the matter! I see it all now! Oh, what a joke!' And he set off laughing again until I really got frightened.

"When he was a little quieted down he went on talking half to me and half to himself. I made out from what he said that, after having looked at the whole place and had a talk with Mr. Silkworth, he had come to the conclusion that Uncle Simon had left him Lot 13 simply out of spite, as he knew very well that there was no profit to be had out of the place, only worries and disappointment, and that his idea had evidently been to pass on to father the bad luck which sticks to the place. I don't know, of course, whether this is true, and it would be very terrible to think of any one being so wicked, but father believes it firmly. He says it is 'just like Simon,' and he can't help enjoying the joke, in spite of everything. Well, when he had done laughing he got out of his chair and walked up and down the gallery with his hands clenched, and declaring loudly that the last word in this matter was not spoken yet. There was also something about making Uncle Simon turn in his grave, which I did not quite understand. Presently father began to abuse Mr. Silkworth, too, though I don't know exactly what harm he has done in the matter. I am not quite sure whether father does not mean to dismiss him. At least, he talked of him as 'that fellow Silkworth,' and said a good deal also about rusty old systems that had long been exploded. Perhaps I shall be able to tell you more of this before I despatch my letter; but I must wind up for to-day."

Marian's surmises as to her father's intentions with regard to Mr. Silkworth proved to be perfectly correct. The fact was that the captain required some object on which to let out a little of the rage which was devouring him, and a natural combination of circumstances pointed to Mr. Silkworth as this object. If Lot 13 was not the wretched place it was, Simon would never have been in the position to play this detestable trick; and Lot 13 being a wretched place meant that Mr. Silkworth was a bad manager, which again meant that Mr. Silkworth must go. The conclusion was quite simple, and as the captain was no lover of delay, Mr. Silkworth heard his sentence before another twenty-four hours had passed. The announcement was followed by an altercation, brief but lively, in the course of which Mr. Silkworth let fall some remarks which at the moment appeared both pointless and trifling, but which, seen by the light of later events, gained a significance of their own.

He did not seem able to grasp the possibility of the thing announced to him.

"Leave the place? Give up the management?" was all that he was able at first to repeat, while his obstinately curly hair tried to stand on end, but did not quite succeed. "Surely I have not understood you aright? That cannot be your meaning."

The captain repeated that it was his meaning, nevertheless.

"Give up the management? But do you know what you are doing? Are you aware that I have managed the place for eleven years, that my brother managed it before me and my father before him? Why, the Silkworths have been at Lot 13 longer than the Berrincotts, seeing that my grandfather served the former possessor."

(To be continued.)

SUNDAY SCHOOL LESSON

Lesson VI. August 6, 1916.

The Greatest Thing in the World.—Temperance Lesson.—I Cor. 13: 1-13.

Commentary.—I. The excellence of love (vs. 1-3.) 1. Though I speak—Even if I should speak. Paul here supposes an impossibility. Tongues of men and of angels—The eloquence of the most perfect speakers in all human languages and the eloquence of angels, too. And have not charity—"But have not love."—R. V. The word charity does not express the apostle's thought. Charity means at present a disposition to overlook faults and put the best construction on the acts of others, and it also means benevolence. Love is the English equivalent of the Greek word, which stands for love in the higher senses. Paul is speaking of divinely imparted love in the human heart. Even if one had the powers of language just mentioned and was destitute of love, his spiritual nature would be empty and clanging. As sounding brass—Corinthian brass, a metal formed by the mixture of silver and gold, was proverbially famed for its ringing sound when struck.—Whedon. This expression and the one which follows stand for hollow and meaningless sound as contrasted to real music. Tinkling cymbal—"Clanging cymbal."—R. V. Two concave pieces of metal form the cymbal, which make a clanging noise when struck together. "The highest eloquence, even about the gospel, is but an empty sound without the love of God in the heart." Thus love is far superior to all mere eloquence.

2. The gift of prophecy—The divinely given ability to foretell future events or to declare the truths of God's word. All mysteries—These mysteries may include the prophecies of the Old Testament and its types and symbols, as well as the atonement of Jesus Christ and the full plan of human redemption. All knowledge—Including the whole realm of human learning. All faith—Love is again compared with faith and its superior excellence affirmed. Faith is excellent, but faith without love is valueless. Remove mountains—Paul evidently refers to what Jesus said as recorded in Matt. 17: 20; 21: 21. I am nothing—"All these endowments put together leave me a moral cipher." Love is superior to the gift of prophecy with an understanding of all mysteries and a mystery of all knowledge added. 3. Bestow all my goods—Charity in its present sense is here compared with love and love is found to be far superior. It is good to be liberal, but one may be liberal without the love of God in the heart. Give my body to be burned—It is right that we should have the martyr spirit, but one may endure even death itself for a principle and be destitute of divine love shed abroad in the heart by the Holy Ghost. In this verse sacrifice and love are compared, and sacrifice without love avails nothing. In these three verses, then, love is declared to be superior to four excellent gifts, namely, eloquence, prophecy, faith and sacrifice.

II. The nature of love (vs. 4-7). 4. suffereth long, and is kind—Love endures and does not lose any of its excellencies. Love is patient. Kindness is an essential quality of love. envieth not—The several things which the apostle declares love does not do are marks of selfishness. Love has no disposition to be envious or jealous or covetous. vaunteth not itself—Love is not boastful. is not puffed up—is free from pride. Some who are fully saved and filled with love have large ability, large possessions or large influence, but they do not boast of these things. They are humble. 5. doth not behave itself unseemly—Love has regard for the rights and feelings of others. It is courteous and has a purpose to do good to others. seeketh not her own—Love does not think solely or primarily of itself. It is unselfish. The greedy and grasping are strangers to love. is not easily provoked—"Is not provoked"—R.V. The word easily is not in the original. The heart that is cleansed from sin and filled with love is not stirred to anger, is not provoked. Professor Drummond, in speaking of ill temper, says: "No form of vice is more base; not worldliness, not greed of gold, not drunkenness itself, does more to unchristianize society than ill temper .... There is really no place in heaven for a disposition like this." thinketh no evil—Love does not surmise evil, or put an uncharitable construction upon the actions of others. It does not keep in memory the evil acts that have been done to us by others.

6. rejoiceth not in iniquity—Love does not approve of wrong-doing even in the objects of its warm affection. rejoiceth with the truth (R. V.)—Love is ever in sympathy with righteousness and is glad at its triumph over evil. 7. beareth all things—In patience love endures reproaches and insults unless the welfare of others is imperiled thereby. believeth all things—It is always ready to think the best; to put the most favorable construction on anything; is glad to make all the allowance for human weakness which can be done without betraying the truth of God.—Coke. hopeth all things—When there is no place left for believing good of a person, then love come in with its home where it could not work by its faith and begins immediately to make allowances and excuses, as far as a good conscience can permit; and farther, anticipates the repentance of the transgressor, and his restoration to the good opinion of society, and his place in the Church of God from which he had fallen—Clarke. endureth all things—Sustains to the end, with unshaken confidence in the goodness of God, all the persecutions and afflictions of this life.—Liss.

III. Love enduring (vs. 8-13.) 8. Charity never faileth—Love, as a principle, is unchanging. Love is an attribute of God, and, indeed, "God is love." "Love is like the laws of nature; you may break them, but they do not change; you may defy them, but they work right on; you may use them and may trust them unfailingly." The apostle is bringing love, in its very essence, into contrast with gifts which men esteem as good and for which they seek. Prophecies .... fail—When prophecies are worked out, fulfilled, their purpose is served and they are "done away." Tongues —— cease—"There will be no need of tongues when all speak one heavenly language." Knowledge .... vanish away—The knowledge we have in time is, at best, but incomplete, and when the perfect knowledge comes to exist, the partial shall fade away or merge into the fulness of knowledge. 9. We know in part .... prophesy in part—We are here bounded by human limitations. Our knowledge of God is only partial. 10. When that which is perfect is come—In the state of eternal blessedness that which is partial or incomplete in knowledge and light shall be done away in the manifestation of perfect knowledge. 1. When I was a child—Paul illustrates the thought, just presented, of partial and complete revelation of truth, by the child and his maturing into manhood. The objects that please and satisfy the child are naturally dropped when normal manhood is reached. 12. Now we see in a mirror, darkly (R. V.)—Ancient mirrors were made of polished metal and the reflection was not perfect. The apostle introduces another illustration to make his point clear. There is a striking difference between an obscure reflection in an imperfect mirror and the clear view one gets by looking directly at a given object. Know in part .... as also I am known—Imperfections of understanding will give place to perfect knowledge.

13. Now abideth—Faith, hope and love are enduring and will continue in the eternal world. The other gifts will have had their fulfillment and be done away, but the three will be the possession of the glorified saints forever. Faith will grasp God and his truth, hope will expect still further unfoldings of the divine nature, will and purpose, and love will cling ever more tenaciously to God and the pure and the good. These three—A trinity of graces. The greatest of these is charity—Faith and hope are our own; love is diffused among others.—Calvin. Love is great in its reach, great in its manifestation and great in the fact that the other graces are nothing without it.

Questions.—To whom and for what purpose did Paul write this epistle? What does the apostle mean by tongues, prophecies, mysteries, knowledge and faith? What is meant by charity? Why is love superior to other gifts? What does love not do? What does love do? What graces abide? Why is love the greatest of the abiding graces?

PRACTICAL SURVEY.

Topic.—The pre-eminence of love.

I. Relating to service.
II. Relating to character.
III. Relating to maturity.

I. Relating to service. This chapter stands alone in the writings of Paul, both in its subject and style. It is the climax of the epistle. This single chapter contains the whole of true religion in its teaching. It touches the heart of God, the fountain of all virtue and blessedness. Much disputing in the Corinthian church concerning gifts, natural and spiritual, made Paul especially sensible of the supreme necessity of charity. He possessed supernatural gifts and fervent charity, and was therefore competent to compare the two. It was as though wearied with discussion against the sins of the church, Paul had at last found the remedy by which they could be overcome. The Corinthians were partisans, pulling down one and putting up another. They were censorious and depreciative toward those with whom they were disinclined to affiliate. They were peculiarly proud of the gift of tongues. Their love was not so conspicuous. Their gifts were accompanied with glaring inconsistencies. Paul set the supreme excellence of love in contrast with the worthlessness of other gifts unaccompanied by its presence. The evil tendencies of the church met their true correction in this gift without which Christian society could not exist. That holy love derived its very essence from Christ and must possess all who turned to Him for redemption. Love was shown to be far more serviceable to the church and to the world than the gift of tongues or prophecy or knowledge or faith or benevolence or heroism. Paul could hardly have used stronger language to show the superiority of love over that of zeal or fidelity or devotion. He held that love was the special and permanent characteristic of the Christian religion.

II. Relating to character. Paul regarded faith, hope and charity as graces belonging to character and not merely to conduct. He esteemed character of greater importance than ability. He regarded faith and hope as expressions of love. In his vivid analysis of the divine principle of love Paul looked upon it as embodied in character, being in its essence the love of God in the soul. Charity cultivates that strain of nobleness in character which prefers to think well of others and to give credit, than to question and disbelieve. It comprehends all virtue, honor, goodness, purity, sincerity, magnanimity and whatever else can adorn human character. "Love is the brightest star in the Christian firmament and the fairest flower in the garden of God." Love is a grace perfectly consonant with largest mental endowments, loftiest aims, noblest endeavors and unwearied perseverance in well-doing. Paul's description of the behavior of love was drawn in contrast to the unseemly and unbrotherly conduct of the Corinthians. His words condemned the foolish display of self-importance. Every word he tells with double force because aimed at a real enemy. Paul declared that nothingness of life without the ruling power of love.

III. Relating to maturity. Paul was not the man to disparage faith which holds so high a place in his writings, nor hope which was so prominent a feature in his character. The higher he held these virtues, loftier was the position to which he raised the grace of love, when he pronounced it the greatest and most enduring of all virtues. The great teacher saw most sublime truths in a glowing light. It is pleasant to note that Paul, whose mind was eager for knowledge, and whose life was so largely devoted to communicating it, should contemplate it as it now is and such as it is to be hereafter. Amid his array of great gifts, prophetic insight, miraculous working, philanthropy and martyrdom he placed love as the greatest possession. He asserted that love as a sustaining, resisting, aggressive power will never fail. He emphasized the truth that love will never fail as an element of moral power, as a principle of social unity or a source of spiritual happiness. He assured those that prized gifts that must pass with changed conditions that love's existence, activity and manifestations would be perpetuated; that it would survive all that is most prized as intellectually precious and desirable. Paul regarded divine knowledge as the truest riches of the intellect and divine love as the dearest wealth of the heart. T. R. A.

The moment the razor touched his face the man in the chair realized that he was in the hands of an amateur. "Will you have a close shave, sir?" asked the barber. "It looks like it," returned the victim, moodily. "At present the odds against my getting out of this chair alive seem very heavy, indeed."—Boston Transcript.

INVISIBLE WARFARE

(By James Norman Hall.)

"Fritzie, w'en you comin' out?
This wot you calls a fight?
You won't never get to Calais
Always keepin' out o' sight.

"We're a goin back to Blighty—
Wot's the use o' a waitin' 'ere
Like a lot o' bloomin' mud larks
For old Fritzie to appear?
'E never puts his napper up
Above the parapet.
We been in France for seven months
An' 'aven't seen 'im yet!"

So sang Tommy, the incorrigible parodist, during the long summer days and nights of 1915, when he was impatiently waiting for something to turn up. For three months and more we were face to face with an enemy whom we rarely saw. It was a weird experience. Rifles cracked, bullets zip-zipped along the top of the parapet, great shells whistled over our heads or tore immense holes in the trenches, trench mortar projectiles and hand grenades were hurled at us, and yet there was not a living soul to be seen across the narrow strip of No Man's Land, whence all this murderous rain of steel and lead was coming.

Daily we kept careful and continuous watch, searching the long, curving line of German trenches and the ground behind them with our periscopes and field glasses, and nearly always with the same barren result. We saw only the thin wreaths of smoke rising, morning and evening, from trench fires; the shattered trees, the forlorn and silent ruins, the long grass waving in the wind.

Although we were often within 200 yards of thousands of German soldiers, rarely farther than 400 yards away, I did not see one of them until we had been in the trenches for more than six weeks, and then only for the interval of a second or two. My German was building up a piece of damaged parapet. I watched the earth being thrown over the top of the trench, when suddenly a head appeared, only to be immediately withdrawn. One of our snipers had evidently been watching, too. A rifle cracked and I saw a cloud of dust arise where the bullet clipped the top of the parapet. The German waved his spade defiantly in the air and continued digging; but he remained discreetly under cover thereafter.

This marked an epoch in my experience in a war of unseen forces. I had actually beheld a German, although Tommy insisted that it was only the old caretaker, "the bloke wat keeps the trenches tidy." This mythical personage, a creature of Tommy's own fancy, assumed a very real importance during the summer when the attractions at the western theatre of war were only mildly interesting.

"Carl the caretaker" was supposed to be a methodical old man whom the Emperor had left in charge of his trenches on the western front during the absence of the German armies in Russia. Many were the stories told about him at different parts of the line. Sometimes he was endowed with a family. His "missus" and his "three little nippers" were with him, and together they were blocking the way to Berlin of the entire British army.

Sometimes he was "Hans the Grenadier," owing to his fondness for nightly bombing parties. Sometimes he was "Minnie's husband," Minnie being that redoubtable lady known to polite military circles as a "Minenwerfer." As already explained, she was sausage-like in shape and frightfully demonstrative. When she went visiting at the behest of her husband, Tommy usually contrived to be "not at home," whereupon Minnie wrecked the house and disappeared in a cloud of dense black smoke.

One imagines all sorts of monstrous things about an unseen enemy. The strain of constantly watching and seeing nothing became unbearable at times. We were often too far apart to have our early morning interchanges of courtesies, and then the constant phit-phit of bullets annoyed and exasperated us. I, for one, welcomed any evidence that our opponents were fathers and husbands and brothers just as we were. I remember my delight one fine summer morning, at seeing three great kites soaring above the German line.

There is much to be said for men who enjoy flying kites. Once they mounted a dummy figure of a man on their parapet. Fritz and Hans were true sportsmen while the fun was on and did not once fire at us. Then the dummy was taken down and we returned to the more serious game of war with the old deadly earnestness. I recall such incidents with joy as I remember certain happy events in childhood.—James Norman Hall in "Kitchener's Mob."

What a World.

If you don't go to church you are not good.

If you go to church you are a hypocrite.

If you dress shabbily you are a failure.

If you dress well you are trying to bluff.

If you don't give to charity you are a tight-wad.

If you give to charity you do it for show.

If you don't drink you are an kind of a regular guy.

If you drink you are not a desirable person to know.

If you wear a beard it is to hide a homely face.

If you are smooth shaven it is to try to look younger.

If you let your wife waste your money you are a fool.

If you refuse to let your wife waste your money you are a brute.

If you are affectionate to your wife in public you are mean.

If you lose a lot of money you are idiotic.

If you make a lot of money you are a crook.

If you tango you are frivolous.

If you don't tango you are a back number.

If you are poor you are no good.

If you are rich you get it by robbing others.

If you die you dissipate.

If you live to a good old age you attained it through laziness.

If, when you die, you go to—— it is because you deserved it.

If, when you die, you go to heaven, you got there by mistake.

So what's the use?—Boston Globe.

SUNDAY AT HOME

TO-DAY.

Let not the heart of a future grievance borrow,
Nor o'er our path one faintest shadow lay;
Let not the clouds which may arise to-morrow
Obscure the fairer sunshine of to-day.
To-day is ours—the past has passed forever,
Its joys and griefs are ours alike no more;
The future lies beyond Time's silent river—
A dim and distant and untrodden shore.

As to the day, its burden or its sorrow,
So is our strength, by Love all-wise decreed:
Beyond the trust which looketh to the morrow;
Not ours the striving; nor ours the need.
He knoweth best—the sowing and the reaping—
Who left the power of will unfettered, free;
The great, kind God, who holds within His keeping
Each day and hour through all eternity.

GRIEVE NOT THE SPIRIT.

The love of the Spirit.—The Comforter, which is the Holy Ghost.—In all their affliction he was afflicted, and the angel of his presence saved them: in his love and in his pity he redeemed them; and he bare them, and carried them all the day of old. But they rebelled and vexed his Holy Spirit: therefore he was turned to be their enemy, and he fought against them.

Hereby know we that we dwell in him, and he in us, because he hath given us of his Spirit.—After that ye believed, ye were sealed with that holy spirit of promise, which is the earnest of our inheritance until the redemption of the purchased possession. This I say then, Walk in the Spirit, and ye shall not fulfil the lust of the flesh. For the flesh lusteth against the spirit, and the spirit against the flesh: and these are contrary the one to the other: so that ye cannot do the things that ye would.

The Spirit helpeth our infirmities.

COME AGAIN.

Do we come again? Yes! By a severe and essential principle of interpretation, we never go away. Truly, we are human, here to-day and gone to-morrow, but only in bodily form. The disciples were dull and heavy; they believed only half what they saw. "How is it that ye do not understand? How long shall I bear with you?"

Jesus came to reveal the Father, to begin a new kingdom, and the most effectual proof He had to offer was to go away in bodily form and come again without observation: here is the mystery, and dignity, and separateness of the kingdom. The passwords, signs and calls are ever locked up within the precincts of the covenant, and the revealing is not left to the weakness of the human will, but by a law which cannot be abrogated. "No one knoweth save he that receiveth."

"It is expedient that I go away, because my kingdom is not of this world." Garments, breastplates, armor, swords, music and parade, belong to earthly kings; but Jesus wore no distinguishing dress, civic or ecclesiastical. He was not a Levite; had no right to perform priestly service. He was known as a carpenter, wore the dress of a common man. He had not where to lay His head, held no deed of property, employed no lawyer to make His will.

"I go away, I come again." "How long was He away? Only three days! Many stayed round the tomb looking for a corpse, but when he said "Mary," the Lord of glory was there for sure! He came supernaturally and spiritually. Does He come now? No; He is here. Let us forget bodily limitation. "I am with you always." He went away. He came back. He remains! Nothing goes away which does not come back again in another form. Old sins come back and make you blush. "I wot it was through ignorance you did it." Old virtues come, and come in honor, sweet smelling flowers cluster round your head to crown you; the tear you wiped away is transformed into a pearl, and it shines like a star in your head.

"Tell us how this is?" The spirit of every act lives, and knows no death. Loved ones come back with the intenser life of heaven, they come to bless and to stay. Pastor, Mother, Lover. They have heaven's own leisure. There's a pathos in their voice, a tenderness in their meaning, an electric force in their ministry, which would be painful only for fresh supplies of grace which are always on hand.

And we shall come again. Christ's spirit is my spirit; there is no division, no separation. "He that is joined to the Lord is one spirit."

"We would be one in hatred of all wrong,
One in our love of all things sweet and fair,
One with the joy that breaketh into song,
One with the grief that trembles into prayer,
One in the power that makes Thy children free,
To follow truth, and thus to follow Thee."

H. T. Miller.

Colors for Middle Age.

It is safe to say that few women of middle age can wear brown successfully. When the hair is turning white or gray it is particularly unbecoming, as the gray and brown do not harmonize in the least. Brown seems to bring out all the unbecoming yellow qualities in gray hair. Dark blue, on the other hand, lends it a bluish white tinge that is soft and particularly lovely. If your face is sallow never green. If, however, your hair is turning gray, but your skin is white and clear, with a soft pink flush in the cheeks, take to green kindly, as it will be most becoming. Lavender and purple are really beautiful on most middle aged women, while black and gray are equally successful. White, however, seldom looks well unless the skin is almost flawless.

It is a pleasure appropriate to man, for him to save a fellow-man, and gratitude is acquired in no better way.—Ovid.

Nearly Lost Little Girl from DYSENTERY
She Was Cured By Using DR. FOWLER'S Extract of Wild Strawberry.

Dysentery manifests itself with varying degrees of intensity, but in well marked cases the attack is commonly preceded by loss of appetite, and some amount of diarrhoea, which gradually increases in severity, and is accompanied with griping pains in the abdomen. The discharges from the bowels succeed each other with great frequency, and the matter passed from the bowels, which at first resemble those of ordinary diarrhoea, soon change their character, becoming scanty, mucous or slimy, and subsequently mixed with, or consisting wholly of, blood.

Never neglect what at first appears to be a slight attack of diarrhoea or dysentery may set in. Cure the first symptoms by the use of Dr. Fowler's Extract of Wild Strawberry.

Mrs. John Peterson, Radville, Sask., writes: "I cannot speak too highly for Dr. Fowler's Extract of Wild Strawberry. I nearly lost my little girl, aged three years. I took her to the doctor, and he told me her temperature was 104, he forbid me taking her out to our home six miles from town, but I was forced go on account of leaving my small baby home. We managed to get her home but the fever did not go any lower and we thought we would lose her as she was so bad with dysentery even passed blood. A neighbor came in and brought Dr. Fowler's Extract of Wild Strawberry, and told me to give her a few doses. This we did, and the next day she took a change for the better, but it was quite a time before she was on her feet again. I do believe if it had not been for 'Dr. Fowler's,' my little one would have died."

The genuine "Dr. Fowler's" is manufactured only by the T. Milburn Co., Limited, Toronto, Ont. Price, 35 cents.

Bradstreet's Trade Review

TORONTO—Trade conditions are growing steadily more satisfactory. The manner in which the larger manufacturers of the country are pressed with orders from abroad indicates the expansion of the field of Canadian enterprise into foreign lands. The wholesale trade is in a strong position, with so many orders for future delivery that many houses undertake to fill only absolute requirements. Railway traffic continues at an abnormal level all over the country, as the weekly earnings have indicated.

MONTREAL.—The actual value of business in wholesale houses is good, considering the quiet season is on. [illegible] firms are experiencing summer quiet. Bookings, however, from both [illegible] and [illegible] Canada, with travellers, for future delivery, have been exceptionally large. Grocers report seasonable quietness, but a fair trade is passing in hardware at firm prices. There is an easier tone in the metal market. Manufacturers are busy, with few exceptions, new munition orders and contracts for other war materials having been placed with Eastern Canadian firms. Demand for money for commercial purposes keeps up at steady rates.

WINNIPEG.—Underlying business conditions are more secure than ever, and confidence is general as to the financial future of the Middle West. Not in a generation, says one prominent authority, did the growing crops promise more. The grocery business remains steady, while wholesale drygoods trade is brisk. Hardware is firm, and the movement satisfactory to the trade.

CALGARY.—Beyond Winnipeg the value of summer trade in merchandise continues satisfactory. In most large centres wholesale dealers announce that trade is well ahead of 1915 at this season. Settlements are up to the normal.

VANCOUVER.—In and around that city, business conditions are steadily improving. The coast can stand a lot of improvement. Wholesale trade is active.

HAMILTON.—Both manufacturing and wholesale business keeps apace. Industries are busy, large, new orders having been placed with iron and steel firms. Orders for agricultural implements are an important factor in addition to war requirements.

LONDON.—While the adverse effect on wholesale and retail trade of the removal of troops from the vicinity is felt, still general business keeps the situation normal. Country trade is good. Prospects are bright for the coming season's trade, according to men in touch with conditions in Western Ontario.

OTTAWA.—Trade conditions are satisfactory in the capital. Factories are busily engaged. Wholesale drygoods houses have done well, except in some lines of summer wear.

QUEBEC.—Trade conditions are much about the same as the preceding week. Wholesale and retail houses report favorably, drygoods especially, groceries and provisions are moving well and dairying products are plentiful. Shoe manufacturers as a rule are very busy, and building trades are active.

Science and Nations.

True revolutionists, believe me, the real men of action, who are promising truth and justice for the morrow, are scientists. Governments fall and pass away; nations grown, shine with splendor and decay. But what matter? The discoveries of science will go on, will increase, will give mankind more and more light and certainty. The close of a century is a small matter; the march of human progress will always be resumed; human nature will insist on having knowledge, whatever may be the obstacles. It is foolish to object that we can never know anything; we have got to know. It we can that we may attain the greatest happiness. And therefore I say, How foolish are all the political disputes that excite nations! While the salvation of progress is supposed to be involved in the fate of a ministry, it is really the scientist—the man of learning—who will be the master of the future when he shall be able to enlighten men with a new spark of truth. All injustice shall cease when truth shall reign.—Emile Zola.

"What's your idea of a crank?" "A crank is a fellow who insists on trying to convince me, instead of letting me convince him."—Boston Transcript.

A Sluggish Liver CAUSES LOTS OF TROUBLE.

Unless the liver is working properly you may look forward to a great many troubles arising, such as constipation, severe headaches, bilious headaches, sick headaches, jaundice, sick stomach, etc.

Mrs. J. Shellsworth, 227 Albemarle St., Halifax, N.S., writes: "I take pleasure in writing you concerning the great value I have received by using your Milburn's Laxa-Liver Pills for a sluggish liver. When my liver got bad I would have severe headaches, but after using a couple of vials of your pills I have not been bothered with the headaches any more."

Milburn's Laxa-Liver Pills are, without a doubt, the best liver regulator on the market to-day. Twenty-five years of a reputation should surely prove this.

Milburn's Laxa-Liver Pills are 25 cents per vial, 5 vials for $1.00; for sale at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

FARM GARDEN

CARE OF BERRY PLANTS.

he strawberry plants set this ing are now sending out new runrs, which will develop new plants. ese in turn will send out more runrs, and by fall the rows will be so ickly set with plants, unless restricted, that small berries will be rvested next season.

The varieties mainly cultivated in is country are propagated from the unners. The first produced are, as a ule, the strongest and best for early lanting, but those that are formed ater in the season are equally as good when they reach the same size r age.

To insure the rooting of runners, surface of the soil should be kept and open, and if the weather is ry at the time they are form- well to go over the beds and se new roots as they are pro-

only a few very large and viable are wanted, it is well t off the runners just beyond nt plant, that this may become nd vigorous.

BLACK RASPBERRIES.

ew growths which develop he ground should be pinched to about two feet. The same to do, however, is to prune out old canes which have just borne These canes, which developed year, and fruited this season, have d their usefulness, and should troyed, that room may be available for the new shoots.

Old canes are not only in the way the new ones which are developing, t frequently they are the source of fection of the new canes by both ect and disease troubles. The prunings should at once be burned.

During July a close watch should be kept for wilted tips of the raspberries. hen carefully examined, these wilted may be found to have two rows of unctures about an inch or two apart mpletely circling the shoot a few ches below the top. When these ns are discovered it is important t all such a few inches below the points of the punctures and burn, which will greatly assist in the control of the raspberry cane-borer.

The culture of both the red raspberry and the blackberry should be kept up vigorously during July and August to destroy the new shoots which come up between the rows, and to thin out the ones in the rows. The more energy put into the canes this year will by good care give increased value to next year's growth and crop.

SUMMER CURE OF THE GRAPE.

Thorough spraying is essential, especially where the grapes have rotted badly, to insure the growth of good fruits.

For spraying, Bordeaux mixture, to which arsenate of lead is added, should be employed for the first three or four applications. But the spraying made after the grapes are almost grown should be with burgundy mixture. This mixture is composed of two pounds copper sulphate, three pounds sodium carbonate and 100 gallons of water. The copper sulphate should be dissolved in one vessel, and the sodium carbonate in another, and both diluted before mixing. Then stir into a third vessel in the same way as making bordeaux mixture. Insect poisons should not be added to this mixture. It is applied to prevent further infections of the grape disease.

It is the custom of some grape growers to cut off the grape shoots which have developed and formed a dense growth above the grapes to let in the sun. Some authorities, however, claim that observations have shown that grapes will ripen as well or better, even though heavily shaded, than when exposed to the light of the sun.

Another proof, too, is in bagging of grapes. Bagging produces fancier bunches of more perfect grapes than when left unbagged. All light is excluded when bagging, and yet the color is most perfect in the bags.

Luther Sutton says the shoots which have developed several feet in length have used much energy and have stored it for future use.

Not only that, but during the last few weeks of their growing season they are storing it most rapidly. To destroy them is like burning down one section of a factory—it reduces the output. If summer pruning is to be practiced at all, it should be done before the shoots have made such growth. Pinching off the tip of a shoot is not so devitalizing as trimming back four or five feet.

FARM NEWS AND VIEWS.

The man who puts on the market inferior fruit does an injury to both himself and the fruit business. Fruit can be too large for the market, but it seldom is. Thinning is the only recipe for large, plump, high-colored, juicy fruit. Nobody wants undersized or mis-shapen fruit. A crate of little peaches never brings as much as a crate of big ones. So it pays to reduce the number of crates by thinning, if the quality is thereby much improved. Often, however, there will be just as many crates as there would have been if no thinning had been done. Sometimes there will actually be more. The large fruits are more cheaply picked, packed and handled. Thinning saves the fertility of the orchard. Not very much fertility is taken away in the pulp, but the seeds draw heavily on it. In other words, the man who thins takes off more good fruit, gets more money, and removes less fertility from the orchard. He also saves his trees from exhaustion.

By the ripening of cream is meant the changes it undergoes from time of separation until it is added to the churn. Upon these changes depends very largely the quality of butter as regards texture and flavor. The temperature at which cream is held determines the firmness or texture, while the flavor is dependent upon the by-products from the bacteria growth. The purpose of ripening cream is fundamentally that of giving the butter the desired flavor and aroma, but in addition it increases the ease and efficiency of churning. Cream is ripened in one or two ways. First, it sours or ripens as a result of the action of bacteria which are normally present in milk or cream; or, second, it ripens as a result of action of certain kinds of bacteria which are added in what is termed a "starter."

In changing the location of plants from one place to another, they will stand a greater chance for thrifty growing if the earth around the roots remains undisturbed. This can be accomplished by digging a trench around the plant and binding the earth together with a piece or ordinary wire window screen. This screening must reach down as far as the ends of the roots. Cord wrapped around the screen will hold the earth in a compact mass.

Brood sows generally suffer from overfeeding rather than from underfeeding. An abundance of fat is the worst enemy of the litter. Sows that are to raise pigs in the spring should be taken away from the rest of the hogs and fed a different ration. The following three rations are recommended: (1) One part high-grade tankage, 12 parts corn; (2) skim milk or buttermilk and corn, using three parts of the milk to one part of corn; (3) wheat and shorts. Whichever one of these rations is used, a rack containing alfalfa should be so placed that the hogs have free access to the hay at all times. In addition the sows should be supplied with minerals. It is a good plan to dump the wood and coal ashes in the lot where the sows run. A coal mixture composed of a basket of charcoal, five pounds of salt, five pounds of air-slacked lime and two pounds of sulphur will give good results if kept easily available.

Joint and Muscle Pains Banished by Nerviline

IT CURES RHEUMATISM

Thousands of people, chuck full of the joy of living—happy, glad, bright people, that Nerviline has cured of their pains, all tell the same wonderful story of its power to drive out the aches and tortures of rheumatism and kindred ills.

"My goodness, but Nerviline is a miracle-worker," writes Mrs. Charlotte Chinman, mother of a well-known family residing at Mount Pleasant. "Last month I was so crippled up with sciatica and muscular rheumatism as to be almost unable to do a bit of housework. My joints were so stiff and the muscles so frightfully sore that I even cried at times with the pain. For years we have used Nerviline in our family and I just got busy with this wonderful, good old liniment. Lots of rubbing with Nerviline soon relieved my misery and I was in a real short time about my work as usual."

No matter where the ache is, no matter how distressing the pain you can rub it away with Nerviline. For forty years it has been curing lumbago, sciatica, back-ache, colds, chest trouble and all sorts of winter ills. Keep a large 50c family size bottle handy and you'll be saved lots of trouble and have smaller doctor bills. Small trial size 25c at dealers everywhere.

TRAPPING A PYTHON.

The Monster is a Victim of His Own Greedy Appetite.

The python's weak point is its stomach: it is a glutton. Not satisfied with a full supper, it will start at once on next week's breakfast if by chance that future meal happens to be within easy reach.

A python generally lives in a hole in the ground or a hollow in a tree, but if it can find an old ruin in the jungle—and there are many old ruins in India—it likes to take up its sleeping quarters there, because even in the heaviest rains the water runs off the ruins quickly, whereas a hole in the ground is likely to be flooded. The python needs to eat only once a week, and to get that meal it lies flat along the bough of a tree near a stream and waits for its prey to come to drink.

When the natives see the long trail that the python's body makes near the bank and find a heap of ruins near by they make a hole in the ruined wall just exactly big enough for the python to get through. They then tie a pig to a stake near the hole on one side of the wall, and on the other side of the wall opposite the hole they tie another pig to a stake. They also tie a wire to the leg or the tail of the near side pig, and as evening draws on they twist it from a distance, and the pig squeals. As the python comes home to bed it hears the squeals.

So the python comes along merrily and seizes its supper at a single bite. Down goes the pig into the big snake's throat, sucked in slowly by sheer muscular action. In about half an hour the pig has passed completely down the long neck, and in another half hour it is down a couple of yards farther into the python's stomach.

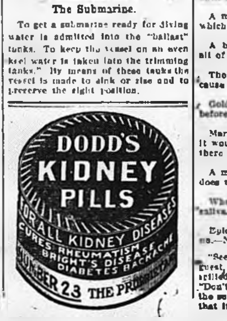
Most animals would go to sleep right away after a gorge like that. But meanwhile the second pig on the other side of the wall has realized its unhappy brother's woeful fate and has set up a most distressing noise. The python puts its head through the hole and sees it.

"Ah!" it says to itself. "Here's my next week's breakfast."

And instead of waiting for next week to come that greedy python swallows the second pig too. The wily natives wait until the second pig is well on its way down the python's body; then they have the snake caught. Pig No. 1 prevents it from advancing, and pig No. 2 prevents it from retreating. The natives lasso the python around the neck, break down the wall and pass a coil of rope between the two lumps of pig before they can amalgamate. Then they bear away the python to captivity.—"Wonders of the Jungle.

The Submarine.

To get a submarine ready for diving water is admitted into the "ballast" tanks. To keep the vessel on an even keel water is taken into the trimming tanks. By means of these tanks the vessel is made to sink or rise and to preserve the right position.



History of Paper

From time to time, almost from the very earliest days of the war, there has arisen in many European countries a shortage of paper. Many factors, often unlooked for, have contributed to bring about this result, a scarcity of labor, the increased cost of shipping freights, and deficiency in the supply of the many and various ingredients which go to the making of paper in all its many forms of to-day.

A story is told of how, something more than eleven-hundred years ago—to be precise, it was in the year 751—a Chinese force marched on Samarkand, which for some years had been occupied by the Arabs, thinking to take the city and expel the intruder. The Arab governor, however, and an able general, and marshaled his men well. He not only repelled the invasion, but took up a vigorous pursuit of the invaders. He captured prisoners. Amongst them he found men who were skilled in the art of making paper and that was the beginning of it. The craft quickly spread throughout the Arab dominions and in process of time, trade brought the products to Greece. Theophilus Presbyter, writing about that time, speaks of the paper as Greek parchment, and there is a record that the Empress Irene used it for the framing of certain rules for the nuns of Constantinople.

It was only the paper, however, that came, and not the art of making it. This was first introduced into Europe by the Moors, also about the twelfth century. They held a great part of Spain in those days and the industry quickly grew. It was good paper. "cloth parchment" it is styled in the laws of Alfonso of 1263, and well styled; for it was stout of substance and could withstand hard use. At Xativa, Valencia and Toledo the industry grew and flourished until the fall of the Moorish power. And then came a change. The Christian conquerors were less skilled, and the great industry deteriorated, both as to quantity and quality. Meanwhile, however, the Arabs had brought their knowledge of the craft with them when they invaded Sicily. The oldest known document on paper is a deed of King Roger of Sicily, bearing the date 1102. From Sicily paper making ultimately spread to Italy, and there it became a great industry. From Italy it extended to France and Germany. In 1297 Pace de Fabriano was making paper in Italy from rags and flax, and, a short time afterwards, regular mills appeared in Padua and Treviso. Ninety years or so later, the famous Stormer is setting up his paper mills in Nuremberg, and taking an oath of truly awesome solemnity, from his men that they will keep secret his processes.

And then the art reached England, and, in Wynkyn de Worde's De Proprietatibus Rerum," printed in 1495, at Caxton's Press, we find mention of a paper mill at Stevenage, in Hertfordshire, kept by one John Tate. Master Spielman, with his ten years' license from Queen Elizabeth to make paper at Dartford, in Kent, is the next great figure in the paper trade, and so on to the establishment of the famous mills at Maidstone, where John Whatman turned out his paper in and around the year 1760. In 1799 came machinery, and from the small mill at Boxmoor, in Hertfordshire, where Fourdrinier, the inventor, first set up his plant, the industry spread all over the country. With the repeal of the paper making reaches our own times.

QUEER PERSIAN VEHICLES.

Riding in Them is Like Being in a Rolling Ship at Sea.

The two kinds of vehicles in common use in Persia differ only in appearance, the palaki being open, the kejavah covered with a light roof, generally made waterproof and with curtains before the entrance to keep out the sun, rain, wind and snow. The kejavah is the more elaborate conveyance, heavier and more expensive to hire, and therefore is used chiefly by the richer classes.

But the most comfortable means of travel and one which is used only by the wealthiest and most luxurious classes is the takhtiravan. This is a sort of palanquin consisting of a box about seven feet long and five feet high, fitted with doors and windows. Inside are a soft mattress and some comfortable cushions. The whole is built on the sedan chair principle, but with mules instead of men as bearers. The poles rest on the pack saddle on the backs of the mules, which walk tandem. They can, of course, only be used in the long plains and are useless when the route goes over hilly country. The motion reminds one of a rolling ship, and some people even get giddy and seasick at first in them.

Such personages as princes, governors and high officials always travel with many followers and hangers-on. It is a most picturesque sight to meet such a caravan, from which the pipe bearer is never missing. In front of his saddle are fastened large, round cases covered with bright red cloth, containing the silver water bottle and the silver top of the kalian (water pipe.) Under the horse on one side is a perforated metal fire box hanging on a chain and containing the burning charcoal, while on the other side swings a heavy leather bottle full of water in readiness to prepare the pipe on the road. A clever bearer prepares the apparatus as he rides along, gallops up to his master and hands him his ready prepared smoking pipe to enjoy a few puffs.

The luncheon or tea-horse is another necessity for the journey. Anywhere on the highroad it can be unloaded, and within a few minutes the felt carpet, carried on the saddle behind the rider, is spread on the ground, the samovar, cups, sugar and lemons arranged on a tray on one corner, and, kneeling behind these, the servant hands out the tea to the travelers. When ready to remount they leave him behind, and he packs up and follows at a smart canter, soon rejoining the caravan.—Lieut. Colonel A. Hefnickolin Travel.

Pale-Cheeked Women Told About Restoring A Rosy Complexion

A few years ago the girl with pale, drawn cheeks scarcely knew what to do in order to restore her fading appearance. At that time there was no blood-food medium made that really would put color and strength into systems that were more or less worn out.

To-day it's different. The blood can be quickly nourished, can be made rich, red and healthy. All you have to do is to take two Ferrozone Tablets with a sip or two of water after meals. The effect is almost magical.

Mothers, look at your children. Are they ruddy and strong—do they eat and sleep well, or are they pale, weak, and anaemic?

FERROZONE will rebuild them. Take your own case—is your blood strong and rich? Have you that old-time strength and vigor, or are you somewhat under the weather?

FERROZONE will supply the strengthening elements you require. It is a blood forming, nourishing tonic that makes every ailing person well.

FERROZONE is a marvellous remedy, it contains in concentrated form certain rare qualities that especially fit it in cases of anaemia, poor color, thin blood, tiredness, and loss of weight.

Every day you put off using FERROZONE you lose ground. Get it today, sold in 50 cent boxes by all dealers, or by mail from the Catarrhozone Co., Kingston, Ont.

A Plea for Indoors.

We have run the nature fad as we have so many others, literally into the ground. We are fond of God's out of doors. We love the fields and woods and streams, too, but so much of this have we heard that we are tempted to make a strenuous plea for indoors, good old indoors—the indoors that is slowly going out of fashion. Let us pause for a moment in our consideration of nature and our enthusiasm for all her varied and wonderful exhibitions of life and make clear to ourselves just what indoors stands for. In the first place, it stands for home. A wigwam by the riverside is not a home; a tent on the lawn or in the canyon is not a home; a portable shack or hut or cave is not what represents home to us or to the world at large. Indoors is identical with the house, and a house is a man's castle, be it small or mean or large and palatial. All out of doors cannot kindle the emotions of joy, love and reverence which that magical word "home" awakens.

Indoors stands for sanctuary, for privacy. We can flee indoors when we want to shut out the world and to find peace.—Margaret Woodward in Countryside Magazine.

Many a man has been left because his watch wasn't right.

How a Duelist Was Eliminated

(By Elinor Marsh)

During the reign of Louis XIII. France was one vast dueling ground. Dueling was especially in vogue in the army. A practice of this sort is, of course, sure to be abused. A good swordsman who desired to be rid of one who stood in his way would pick a quarrel with him and kill him. Then, too, there were men who had a passion for killing other men.

Mlle. Louise d'Alger, a girl of that period, very beautiful, much beloved, was a resident of Paris. One of her relatives, a young man of great promise, was killed in a duel, and his death rendered her very bitter against the custom. She could not understand why when a man was challenged by a person who was perfectly capable of killing him and intended to kill him the victim should be considered bound in honor to accept the challenge. Nevertheless such was the custom of the times, and the challenged party had to choose between death and social ruin.

At this time in Paris was a man who had been "out" a great many times and always killed his antagonist. Scarcely a week passed but it was announced that some man prominent socially had fallen before his sword. A terror fell upon mothers, sisters and lovers lest one whose life was precious to them would be added to his victims. For a time it was hoped that some man more skillful than he would put him out of the way. But not one of the most admirable fencers in Paris seemed disposed to tackle him, and he did not trouble any of them.

Louise d'Alger declared that any means of getting rid of the Scourge, as he was called, would be excusable and wondered why some man did not stab him in the back. She was told that one who would do that would be regarded as a murderer.

But, she replied, "he commits murder all the while."

"True, but there is no law to punish him. Should any one stab him in the back the person doing so would fall under the ban of the statute covering murder. Besides, he would be ostracized by his friends."

There seemed no justice, but great injustice, in this to Mlle. d'Alger, and she could not divert her mind from a feeling that such an enormity was suffered to exist merely by opinion. She brooded upon it till it seemed to her that she must do something to stop the Scourge's murders, just as Charlotte Corday at a later period rid France of Marat.

Mlle. d'Alger possessed a fortune and, though she was not noble, held a high position in Paris society. One day the elite received invitations to a ball to be given by her. What was the Scourge's surprise to receive an invitation. He was not accustomed to receiving invitations unless he dropped a hint to some man of the family about to entertain that he would like one. Then the bid was forthcoming, for a refusal would be regarded as an insult and would cost a life. The Scourge was much flattered at receiving Mlle. d'Alger's invitation without any action on his own part. Then, too, he inferred that possibly she had fallen in love with him.

When he appeared among Mlle. d'Alger's guests every one was astonished. The hostess had no man relative through whom he might have forced an invitation, and it was not to be expected that she would invite him of her own free will. All eyes were turned upon her when the duelist on entering the ballroom stepped up to her to make the formal greeting due the hostess, and every one marveled at her cordial reception of him.

The Scourge was beside himself with pride and arrogance at having been invited to the house of a lady of prominence in face of the prejudice, as he called it, of all Paris. The first few dances he chose for partners some lady who had a brother, well knowing that she would not dare refuse him. Later he made his bow to the hostess. She smiled upon him graciously and took position on the floor beside him.

Every eye was turned upon the couple. Mlle. d'Alger's views with regard to dueling were well known, and no one knew of any way by which he could force such cordial treatment. Could it be that she had been fascinated by this man on account of the power he possessed through his sword?

When in the dance the Scourge took his partner's hand in his he felt something prick his finger. He paid no attention to it. Indeed, he could not well do so under the circumstances. Then he was seen to stagger and raise his hand to his head. Instead of conducting his partner to another locality in the room he tottered away by himself but before he had gone a few steps sank down upon the floor. A circle formed about him, all wondering what could have happened to him.

Mlle. d'Alger called for lackeys and directed them to carry out the fallen man who was already dead. Then turning to her guests said:

"Let not this episode interfere with your amusement."

She gave a sign to the musicians, who played another dance.

No investigation was made as to the cause of the death of a man that all Paris hated and feared. On one of his fingers something like a pin prick was noticed, from which had exuded a drop of blood. It was known that his partner wore a ring on the hand he clasped, the setting of which was turned inward.

INFLAMMABLE BOMBS.

Substances Used in the Making of These Deadly Explosives.

The incendiary bomb used by the Zeppelin aircraft, as a rule, is conical, of ten inch diameter at the base, wrapped round with tarred rope and having a metal handle at the apex. The base is a flat cup, into which a pierced metal funnel is fitted, having the ignition device and handle fitted at the top.

The funnel is generally filled with thermit. The latter, upon ignition, generates intense heat and by the time of the concussion has taken the form of molten metal, having the extraordinary high temperature of 5,000 degrees F. The molten metal is spread by the concussion.

Outside the funnel is a padding of a highly inflammable, or resinous material, bound on with an inflammable form of rope. The resinous material creates a pungent smoke.

There is generally some melted white phosphorus in the bottom of the cap, which develops nauseous fumes. In some cases celluloid clippings are added, and occasionally a small quantity of gasoline.

A Maligned Bird.

Long ago the phenomenal power of the stomach of the ostrich was immortalized in the idiom of all the world's great languages. To have the "stomach of an ostrich" is the synonym for incomparable digestive power, the supreme flight of gastric laudation. Those omniverous beings of the dime museum who devour hardware in public for so much per week are always down on the bills as "human ostriches."

Well, to make a long story short, the whole thing from beginning to end is nature faking, pure and simple. As a matter of fact, the ostrich, if not a confirmed dyspeptic, has a most delicate digestion. The largest single entry in ostrich mortality records is acute indigestion, and successful feeding of ostriches in captivity requires constant care.—British Press.

"Those chorus girls can dance." "Yes, you see some rather scientific dancing among chorus girls these days." "Quite so. In the chorus as well as in the prize ring, science seems to be supplanting beef."—Kansas City Journal.

CLEANS-DISINFECTS

LAUNDRY HINTS.

Proper Care of Table-linen Preserves It for Many Years.

In the home laundry certain rules should be carefully observed at every washing and ironing of the household linen. Don't use injurious washing fluids or chemicals in the water. Do not rub the fine goods on the board. Do not use unknown soaps; pick out a good harmless soap and stick to it. Be sure all the soap is rinsed out before hanging the linen up to dry, and hang it in the sunlight.

In the ironing, do not let the irons get too hot before using; try the iron carefully before putting it on the linen, so as not to scorch it. Do not fold in the same creases every time the pieces are ironed. In the ironing, iron on the wrong side, first away from the ironer, and fold the article each time in a different place.

The folding is a most important step in the preservation of good linen. If the napkins and tablecloths are always creased on the same lines the material will begin to show wear in these folds. On the other hand, if the napkins, for instance, are creased, first in four folds and then down in a square, the next time in three folds, the next time in triangular folds and then back to the first method, the wear and tear will be even on all parts of the napkin.

The creasing should be made with a warm iron, not a very hot one, as the heat adds to the wear on the folds. The tablecloths should be treated in the same way.

Much of the linen's life is lost or saved in the laundry; much depends on the washerwoman for its preservation—but once the fraying has commenced its life depends entirely upon the mistress of the house. If she is an expert needlewoman the linen may last a year or more after the frayed edge appears. If she is a poor needlewoman it will probably not last more than a month.

The mending should not be postponed until the first hole appears, for it is much more difficult to mend a hole than it is to mend a frayed spot. After every laundering each piece of linen should be held to the light and the thin places should be strengthened with thin linen thread, which has been shrunk. The ravelling of a left-over piece of linen is best if this process is carefully followed the holes will be a long, long time in coming, because they have been forestalled.

Linen treated in this way has no chance to wear out. Its fibre is bolstered up by mending wherever it becomes thin.

Minard's Liniment Co., Limited.

Dear Sirs,—I had a bleeding tumor on my face for a long time and tried a number of remedies without any good results. I was advised to try MINARD'S LINIMENT, and after using several bottles it made a complete cure, and it healed all up and disappeared altogether.

DAVID HENDERSON.

Belleisle Station, Kings Co., N. B.

In Eating.

Be happy.
Chew well.
Eat slowly.
Eat warm food.
Eat nutritious food.
But don't neglect variety.
And don't forget to have fruit.
Vegetables are also among necessities.

Don't overdo the bread side of your diet.

Bread, toasts, cereals and prepared breakfast foods are practically the same.

One of these foods is quite enough for any one meal—and bread is not the staff of life.

Furthermore, in eating one requires sound teeth, regularity, a cheerful mind, and one should not exercise violently within an hour.

A LITERARY RIDDLE.

Why Does a Woman Write Differently From a Man?

Why is it that you can always tell a story written by a man from one written by a woman? I saw the thing put to a rather severe test within the last month, with results that were startling.

Ten men and women, all of whom do considerable novel reading, had had dinner together. One of the men asked the question I put at the top of these paragraphs. He was in his own home and went to some trouble to prove that the sex of authors is an easy thing to determine.

Giving to each of the nine others a pencil and piece of paper, the host proceeded to read extracts from twenty different books and magazines, selecting parts in which proper names could not identify the story. As he read each person wrote down his guess as to whether the author was a man or a woman.

Of the 180 answers made by the nine persons to the twenty tests all but eight were correct. As he kept the books from which he read concealed it was impossible to get aid with the eye.

But, although everybody guessed right almost every time, no one could still give a good definition of the conundrum. Why does a woman write differently from a man?

The Bull of Perillus.

Perillus of Athens is said to have invented for Phalaris, tyrant of Agrigentum, 570 B. C., a brazen bull which opened on the side to admit victims who were to be roasted by a slow fire which was built underneath. The dying groans of the sufferers resembled closely the roaring of a mad bull. Phalaris greatly admired the invention and by way of test roasted the inventor first. Later the populace rose in rebellion and burned Phalaris.

THE POULTRY WORLD

HOT WEATHER CARE.

The aim of the poultry keeper should be to provide for steady growth in chickens and to put forth every effort to avoid losses. He needs to exercise special care. There are certain simple rules which should be followed whether one keeps a few fowls or large flocks.

On small poultry plants, where pens are few in number and the runs are limited in area, cleanliness is the first essential to successful chicken raising. This is especially desirable in summer. Both the pens and the runs should be cleaned regularly and limed occasionally. In the poultry runs the lime acts as a partial disinfectant. It tends to ward off poultry ailments and diseases, especially those which are liable to occur in hot weather.

In my experience growing chickens need as careful attention for about six weeks of summer as almost any other time of the year. Usually they are from three to five months old when summer sets in. At this age they should grow most rapidly. They need to develop their frame and put on flesh rather than become fat.

When chickens do not grow properly at from three to five months there is something wrong with their vitality or their feeding and management.

When well fed and otherwise properly managed chickens do not always make satisfactory growth in summer. There is a cause for this which may be wholly unsuspected. It is likely to be due to the presence of chicken mites.

This pest is a blood sucking parasite. It harbors under the perches, in cracks and in other places. Its destructive work is done at night. When the chickens are at roost the mites crawl from their hiding places onto the birds. They gorge themselves with blood much the same as a mosquito does, and then crawl back to their hiding places. If this pest is not discovered it multiplies into millions in a few weeks of hot weather. If the mites become numerous they will suck more blood from a chicken in a single night than the chicken can produce the next day from the digestion and assimilation of the most nourishing food.

During the summer every precaution should be taken to keep the pens and roosting places free from mites. This is not a difficult matter. The mite is a very small parasite, barely perceptible with the unaided eye. When not gorged with chicken blood it is light colored. It becomes red when it has gorged itself with chicken blood. For this reason it is sometimes called the "red" mite. But this pest is so delicately constituted that it can easily be destroyed by spraying with kerosene or whitewash.

In caring for my own chickens I take special pains to keep down the mites. All perches are regularly examined and then brushed with kerosene when their presence is discovered. They gather in clusters of a few mites or perhaps hundreds. They can then be readily seen. The sides of the pens are also sprayed with hot or cold whitewash. Naturally hot whitewash is more effective in destroying the mites.

It is poor policy to let older fowls and growing chickens run together and should be avoided as much as possible.

On small plants it is a good practice to use the scratching pens for accommodating the growing chickens. I always do so every summer. A temporary baseboard, with a four-foot wire netting on top, is used to divide the scratching pen into two parts. One part is utilized for a roosting place, the other part is used as a feeding place. This arrangement keeps the younger chickens from the fowls. By so doing the young birds can get all the feed they require for proper growth and development.

When the chickens are old enough to hold their own with the older fowls the scratching pens may be cleaned and made ready for winter work.

Correct feeding is very important in summer. In hot weather chickens should not be overfed. At the same time they require plenty of the right kinds of feed. It may be of some service to give my own method of handling growing chickens.

Early in the morning the chickens are given a small quantity of scratch feed. A good quality of feed, one containing a variety of grains, is always chosen. About 8 o'clock they are given a crumbling mash consisting of two parts by measure of bran and one each of middlings, ground oats and meat meal. The latter, however, is fed only three times a week in the mash. The whole is moistened with sour milk or water. The waste from the table are also mixed with the mash. Care is taken not to make the mash too wet and soggy, and only enough is fed that the chickens will clean it readily. If too much mash is given, and it is not eaten up clean, it is apt to sour in hot weather, and this would be likely to produce bowel trouble.

As accessories to the mash a handful of ground sulphur is added twice a week and once a week the liquid used to wet the mash is slightly salted. These ingredients have a tendency to keep the blood pure and the chickens in sound health. Plenty of green stuff in the form of lawn cuttings, weeds, etc., and abundance of fresh water are always supplied.

At noon, except on very hot days, the chickens are given a small quantity of scratch feed. On hot days the grain feed is omitted. In its place some lawn cuttings or clover is given with fresh, cold water. In this matter the poultry keeper must use some judgment. If the chickens on hot days seem to be enjoying the shade, which should be provided, they will be quite hungry, and this is a good indication of proper care.

For the last meal at night the chickens are given a full ration of scratch feed with which some additional wheat is mixed. Wheat is a high protein feed and produces bone and flesh. It is one of the best feeds for proper development, being in itself almost a balance ration.

During the summer months growing chickens should have as free a range as possible. If this cannot be had the pens should be well provided with shade. Fresh water should be given at least three times a day. It is advisable to add a little bicarbonate of soda to the water in summer. This has a tendency to counteract any acidity in the crop, which is likely to occur if growing chickens are overfed. It is better to feed more sparingly on hot days than at other times. The poultry keeper should watch the weather.

During the summer months, when chickens are expected to grow rapidly, the chickens should be fed corn more sparingly.

It is more important, however, to know that the corn which is fed to growing chickens is free from "green heart" and thoroughly mature. If there is any doubt as to its quality corn should be discarded altogether or should be thoroughly heated in an oven before it is fed. Corn that is immature may prove fatal to young birds.—Prof. James D. Morman, in N. Y. Sun.

TO TRIFLE WITH CATARRH IS TO RISK CONSUMPTION

Usually it comes with a cold. Being slight it is neglected—but the seed is sown for a dangerous harvest, perhaps consumption. To cure at once, inhale Catarrhozone. It destroys the germs of catarrh, clears away mucous, cleanses the passages of the nose and throat. The hacking cough and sneezing cold soon disappear, and health is yours again. Nothing known for colds, catarrh and throat trouble that is so curable as Catarrhozone. It cures by new method that never yet failed. The one dollar outfit includes the inhaler and is guaranteed to cure. Smaller sizes, 25c and 50c. Sold everywhere.

Excitement.

People who easily get excited don't usually live nearly so long as people who keep calm. Excitement, in fact, wastes the vitality and affects one's health to a very great extent. This is true, too, of all who seek excitement, whether physical or mental. Excitement makes the pulse beat above the ordinary rate, and one's reserve of energy is used up so much the quicker. Occasional excitement, however, is very good for one's health, especially where the pulse is slow, but the natural condition of the body should be one of calmness and regularity.

Strands of raffia are good for tying up vines in place.

CURREN COMMENT

Perhaps the Kaiser believes that he can deceive the devil.

The Kaiser should preach a sermon on blessed are the merciful.

The Deutschland had better look out for those New Jersey sharks.

The Bulgarians will get what is coming to them all in good time.

The Admiral of the Atlantic has to go down like McGinty to the bottom of the sea.

When the Germans are on the run the Belgian and French people won't do a thing to them.

Britain is contracting for shells to be delivered next year. Who said the war would be over by September?

Instead of the Cossacks, it was the Pathians who should have crossed the Carpathians.

There is no guarantee that the Deutschland is not carrying away Canadian nickel.

Britain is taxing the war profiteers. What about the Canadian profiteers? They are waxing fat.

Motorists who [illegible] pedestrians in Toronto will in future be kept in jail until trial, receiving no bail.

The 21st of July has come and gone and the German time schedule for the capture of Verdun has gone to the scrap heap.

The people who eat and drink moderately, dress suitably and do not overtax their strength have the best chance of surviving the heat.

The British workmen have foregone their holidays so that the soldiers ma have plenty of shells for the drive. What are we doing in ton?

The greatest enemy of the forest ha and always has been fire, says Conservation. It has been estimated that the average annual forest fire loss in this country is sufficient to pay the interest on the recent Dominion loan of $100,000,000.

Should the Deutschland carry goods for Germany from the Unit the Germans can no longer complain of the Allies getting goods from her. United States trade is open to all. Germany can get all she wants. But can she get it home? That is the trouble and that is no concern of the States.

The next Dominion war loan will be issued some time in September next. It may be for $75,000,000 or $100, 000. It is expected that the people will be wanting to invest in this loan. By doing so they will do their bit to help in the war. The loan is absolutely and no doubt will be made quite attracti

Miss Rose Lobsinger returned home this week after spending the past two weeks in Berlin.

FORMOSA

Rev. Lawrence Kuntz who recently returned from Rome celebrated mass in Formosa on Sunday.

Mr. B. Beingessner and his brother, Mr. F. Beingessner who is here from the West, paid a visit to Walkerton on Tuesday.

Mr. Joseph J. Fedy has a new Chevrolet car.

A large gathering of neighbors and friends took place on Thursday evening at the home of Mr. John P. Waechter in honor of his son, Private Francis Waechter of the 160th Bruce Battalion who is at home at present on harvest leave. Mr. John Scanlon, acting as chairman, called upon Reeve E. G. Kuntz of Culross, who on behalf of the people of the neighborhood read to Private Waechter, an address which truly expressed the appreciation of the neighborhood of his action in signing up to serve his country in the battlefields of France. At the same time, Dr. McCue presented to Private Waechter, a handsome illuminated face wrist watch and a purse of twenty five dollars. Private Waechter who was quite taken by surprise responded modestly but appropriately, thanking his friends warmly for their generous gifts. Other speakers were Reeve Kuntz, R. E. Truax, M.P., Dr. McCue, B. B. Beingessner, Ambrose Zettel, and others. Afterwards an enjoyable time was spent in dancing, card playing, etc. The address to Private Waechter is published below:—

To Private Francis Waechter
Of the 160th Bruce Battalion

We, your friends and neighbors, assembled to-night, wish to express to you our sincere appreciation for your voluntary enlisting for overseas service. When the call came from the motherland you were ready to sacrifice everything in order to fight for our liberties. To you and our allies depends the future, of our empire, which has always stood for rights and liberties, of which no other country has an equal.

It is true we cannot all go, but we are willing to help provide in order that our soldiers may fight to a successful issue, in which we have the greatest confidence. To the British Empire fell the duty to join in this war to forever destroy the militarism of the Kaiser and the German empire, which has proved so detrimental to the whole world. It is true many a young man is sacrificed in the bloody fields of Battle, but such is the Will of Divine Providence and the whole world will be benifitted when the war is over and we trust the end of the war will soon be reached. In you boys we trust the British flag will never fall.

When the 160th battalion goes to the front to give an account of themselves it will be one of the best battalions at the battle front and there win the glory that is due to heroic and courageous soldiers. Bruce County stands foremost in recruiting a battalion to the full strength and even over strength in the shortest time. Bruce county stands to-day on the foremost list in men and money. No other county battalion went to camp in full strength, and only one country donated more money for patriotic purposes, and we are willing to pay this and more if required.

To Mr. and Mrs. Waechter we owe our sincere thanks to raise such a worthy son to offer his services for our future. Although we met to-night to bid you farwell we hope and earnestly pray that the Almighty God may safely guide you through the war and when the battle is over you may again return to our midst as one of the heroes of the Formosa boys.

Accept this wrist watch and cash, although small it may be as a token of gratitude from your friends and when you wear it and glance at it always remember from whence it came.

May Divine Providence protect you wherever you may be and when the war is over you may return unscathed to the midst of your beloved parents, your dear sister and brothers and the wide circle of friends you have made for yourself in this fair county of Bruce is the earnest and sincere prayer of your friends assembled here to-night.

Formosa July 27th. 1916.

Those who had a part in the gift to Private Waechter.—E.G. Kuntz, Alex McLennan, Joe Streader, Ben Waechter, Ben Waechter, Tony Opperman, Joe Ditner, Wendel Schnurr, Frank Giesler, Alex Waechter, Engelbert Hauck, Dr. McCue, Jacob Fisher, Ambrose Fedy, Noah Bender, B. Beingessner, Frank Heisz, Tony Lang, John Korman, Ambrose Zettel, George Waechter, Harry Truax, Ralph Waechter, Lucas Zettel, Matthew Goetz, Albert Flach, Albert Waechter, John Lang, George Winter.

EDEN GROVE

This is nigger day, although there are not many dark clouds moving around.

Mrs. Seiler and Miss Frankie Seiler visited friends at Purdy's Sunday.

Mr. and Mrs. Subject and daughter, Mabel and son, Charlie of Elmwood, and Mr. W. Plomme of Chesley were visitors at the Simcoe House, Sunday.

The devil must have been making it pretty warm on Sunday, as we noticed in a certain church, the Minister and some of the members had their coats off during the service.

Mr. and Mrs. Rosseau were week-end visitors with friends in Stratford.

Sergt. Gordon Connell is spending a short time renewing old friends in the burg.

There was no place like home Sunday, unless on your best girl's home verandah—it was a corker alright.

Mrs. Tennant and daughter Martha visited at the home of Mr. and Mrs. McLean last week.

Say Jimmy, what are you doing up that telephone pole?—just listening if I can hear the wedding bells on the 10th. Come down out of that and mow the lawn, they will not be ringing for a week yet.

There is one good thing about this town—the heat cannot heave more than a couple miles of cement walk or melt our electric light wires.

Miss Lizzie Lamb left for Sedgewick, Alberta.

Misses Truax of Toronto were visitors at the home of Mr. and Mrs Alex. McKeeman, King St. Saturday.

Mr. Roy McLean, manager of the Royal Bank, Sudbury, was the guest of Wm. Tennant last week.

There were not many greaters shipped Tuesday, too hot, it takes the curl come out of their tails.

Rev. Mr. Gale was in town Monday calling on friends.

This is berry-season the time the boys and girls enjoy.

Miss Mabel Watson was the guest of McPherson, Wednesday.

Miss Mae Fordyce, Paisley, is enjoying her vacation at her home, King St. East.

Miss Pinkerton, graduate nurse Los Angeles of California visited friends in town, Thursday.

CULROSS TP. COUNCIL

Formosa, July 25th 1916.

A meeting of the Culross Council was held in the Village of Formosa on the above date as a Court of Revision. As some complaints had been made with regard to the Assessment for the Electric lights in the village of Formosa, The Reeve was appointed chairman of the Court The appeals were then laid before the Court.

Moved by Wm. Case, sec'd by Thos. McPherson: That as the appeals have been heard and duly considered by this Court. That the following changes be made in the Assessment of the Culross portion of the Formosa Street lighting:—A Schnurr to be reduced $2 and that Harry Fedy be assessed $1.00 That Jas. Kramer be raised 50c. and Joseph Fedy 50c. and that the balance of the Assessment be sustained.—carried.

Moved by Donaldson and Armstrong that the Court of Revision be now closed.—carried.

C. Hutson.
Clerk.

Aug. 4, 1914—War Declared *Aug. 4, 1916—Allies Winning*

ORGANIZE for Victory!

ONTARIO

THE THIRD YEAR OF THE WAR calls for the organized co-operation of every citizen of the Province of Ontario. ALL must help to hasten the day of final triumph. For the sake of those who have made the Great Sacrifice, and of those now overseas or in training, every citizen must give the best service possible. No one need feel "out of it" when the great day of Victory comes, but everyone must qualify now by sharing in the sacrifices which the War demands.

Suggestions for Organization

In many Municipalities there are already active patriotic organizations, such as Recruiting, Red Cross, Soldiers' Aid and Patriotic Fund Committees. In such cases, one of these, or, better still, a joint committee of these and the citizens generally, might undertake to co-operate with the Central Committee at Toronto.

Where there is no active representative organization, it is suggested that one be formed at the earliest moment. It should be nonpartisan (in the broadest sense), and represent every interest affected by war conditions.

What Organizations Should Do

1. Find more men for Overseas service.
2. Help in keeping our munitions plants working to full capacity.
3. Induce every possible worker, men and women, to serve on the farm and in other essential industries.
4. Find money for the coming WAR LOAN and war funds.
5. In short, assist in the organization of Ontario's resources to meet war conditions and after-war conditions.

THRIFT and ECONOMY, and a careful consideration and preparation for our problems are essential if we would meet the present and future needs. For further suggestions and information you are cordially requested to write at once to ALBERT H. ABBOTT, Ph.D., Secretary, Organization of Resources Committee, Parliament Buildings, Toronto.

John S. Hendrie
LIEUTENANT-GOVERNOR OF ONTARIO
Chairman of the Organization of Resources Committee

August Attractions

Summer Goods must all be cleared out this month, so we are making the prices such as to assure a quick sale. A few of the reductions below.

Sent to Egypt.

Mr. Dan Wilton had word from his son Alvin this week that he was about to be sent to Egypt with the trench mortar company to which he is attached, and that three other Walkerton boys, formerly of the 71st were also being sent:—Ed. Eidt, Chester Cunningham and Leith Russell.

+ + +

Barn Burned Near Chepstow

The big bank barn on Mr. Joe Lippert's farm west of Chepstow was burned to the ground late Tuesday night with all its contents. The season's wheat and hay, together with the implements, were a total loss. The contents were insured but there was no insurance on the building. The origin of the fire is unknown.

+ + +

Potatoes Sprouting

A strange freak has occurred this year which will do some damage to the potato crop in this vicinity. Last week's heavy rain, which followed a lengthy dry spell, caused a good many new potatoes to sprout, making them unfit for use. Mr. Gus Royce brought to the Telescope office on Tuesday, a potato, not much bigger than one's thumb with a well-developed sprout several inches high.

+ + +

Buried Cat Alive?

Two serious cases of cruelty to animals have come to the attention of Mrs. Havill, president of the Humane Society and will probably lead to prosecutions. Two boys living in the East Ward are alleged to have maimed a helpless cat by heaving stones at it, and afterwards burying the animal alive. The Society feels that this sort of thing should not be allowed to go uncorrected. The other case is that of a delivery driver of the town who is alleged to have ill-treated his horse.

HYDRO ENGINEER COMING

Next Week to Figure Power Estimate for Walkerton — Coun. Russel Wants By-laws Strictly Enforced

The Town Council held its regular monthly meeting Monday night. Considerable business was put through, and the Committee Chairmen were asked to have the estimates ready the coming week. A special meeting will be held on Tuesday night, Aug. 29th when the tax rate for 1916 will likely be struck. Those Councilmen present were:—Mayor Lippert, Warden McNab, Couns. Pletsch, McCarter, Douglas, Lettner, Russell.

Will Appoint Scavenger

A letter was received from the Provincial Sanitary Engineer returning Mr. Collins' draft by-law with one or two suggestions. One of the suggestions was that hereafter no outside closet be permitted to be erected in the town. The council threw this recommendation out at once as being impractical. Under the new by-law which will come into force shortly, all closets must be kept thoroughly disinfected, each to have a galvanised iron drawer or tub which will be emptied periodically by a town scavenger, twice a month from May to November and once a month the rest of the year.

Cess-Pools Not Allowed

Chief Ferguson was instructed that cess-pools are not permitted by statute and to order any parties who have them to discontinue and report the matter to the Board of Health. The Chief was asked to get a record of the number of closets in the town, during the coming week, so that the Council can advertise for a town Scavenger next week.

$300 For Fire Sufferers

An appeal for help for the Northern Ontario fire sufferers was received from the Provincial Committee which has the matter in hand, stating that one hundred thousand dollars was being contributed by the Ontario Government, a similar amount by the Dominion Government and fifty thousand by the City of Toronto. The Finance Committee recommended that Walkerton give $300 which was carried.

A cheque for $25.56 was received from the Provincial Treasurer's Dept. being the town's share of railway taxes for the past year.

Chief of Police Ferguson's statement for the past month showed that the sum of $4.54 had been paid in.

Suggestion Turned Down

Mrs. Wisser, regent of Walkerton Chapter, Daughters of the Empire, wrote the Council suggesting on behalf of the local Chapter that the flag on the Town Hall be placed at half mast whenever a Walkerton boy falls in battle. Mayor Lippert said he had a better suggestion. He had been planning to have the various churches of the town set aside a certain Sunday when memorial services for the boys slain in battle would be held in all the churches. The difficulty he said of floating the flag at half-mast was that so many false reports were received. The Mayor's suggestion was adopted. No action was taken regarding the flag.

The Fire and Water Committee recommended that Henry Williams who stated that he had been paying the water rate for a horse for six years without noticing it, be remitted the rate for one year.

By-law No. 1112 was passed, authorizing the Mayor and Treasurer to borrow $6,000 to meet current expenditures.

Wants By-Laws Enforced

When the routine business was concluded, Coun. Russell rose to his feet and said he would like to address a few words to the Council regarding the enforcement of the Town's By-laws. The hours for using lawn service according to the by-laws, are 6 to 8 a.m. and 6 to 8 p.m. The waterworks is the town's greatest asset, and he thought it should be protected. The by-law should be enforced. He noticed the Chief watered the Town Hall lawn at all hours. A number of citizens had spoken to him regarding this. How could the citizens be expected to obey the law under these circumstances? He blamed not so much the chief but the Council. The weeds by-law was another by-law that was not enforced at all, and the by-law against riding bicycles on the sidewalks.

Coun. Lettner took issue with Coun. Russell regarding the impropriety of the Chief watering the lawn at all hours. The town itself was not the same as a customer, did not pay rates, and was not bound the by by-law. He thought that any citizen who would kick on account of the Chief using the water at all hours was displaying narrow-mindedness.

Coun. McCarter thought any citizen had a perfect right to kick and he heard several of them do it. What kind of an example was the town showing to the citizens in not keeping within the restricted hours.

Warden McNab said that legally the Corporation was not bound to observe the restricted hours being not the same as a customer. But as a matter of advertising it might be unwise to do it.

The Waterworks Committee was instructed to take steps to have the by-laws brought prominently before the notice of the citizens and to have them enforced.

Mayor Lippert said he understood that according to the new statutes, since the war tax was introduced the town would have to purchase a ticket chopper to receive and mutilate tickets at a cost of $25 to be used at the door of the Town Hall during entertainments. Referred to Committee.

Hydro Engineer Coming

Mayor Lippert stated that when he was in Toronto on Saturday he called on Chief Engineer Gaby of the Hydro Electric Power Commission and inquired regarding the delay in furnishing Walkerton with a power estimate. Mr. Gaby told him that the Commission had received the enquiries sent by Mr. Collins and he had instructed Engineer James to go up to Walkerton. Mr. James would be back from his holidays in a few days and would visit Walkerton about next week.

DROWNED IN CISTERN

Three-year-old Daughter of John Bechberger, Cargill, Fell in Open Cistern

Mr. and Mrs. John Bechberger, who live a mile and a half south of Cargill, were sadly bereaved on Monday by the drowning of their bright little daughter, Magaret, aged three. The little girl had been missing about half an hour on Monday morning when her mother became alarmed. It was found that she had fallen into the cistern which had been left open. Life was extinct when the body was found.

WELL KNOWN HERE

Capt. Charles Kilmer Seriously Wounded at the Front.—Had Leg Amputated

Word was received last week that Capt. Charles E. Kilmer, only son of Mr. and Mrs. George H. Kilmer of Toronto, had been seriously wounded at the Front. The official report described his injuries as bomb wounds in the right leg, left ankle, left foot and a compound fracture of the right ankle. Later it was learned that his right leg had to be amputated but that he was doing fine. His parents left Toronto this week for England. Capt. Kilmer was a student of The School of Practical Science, University of Toronto, and was a lieutenant in the Queen's Own Rifles before the war. This gallant young soldier enlisted for Overseas Service in September 1914 and has seen much fighting with one of Toronto's famous battalions. 'Chap' Kilmer is well-known in Walkerton, having visited here frequently at the home of his grandfather, Mr. N. C. Crawford. As a boy he was a general favorite here.

FARMS BURNED OVER

But the Freibergers, Formerly of Greenock, Escaped with Their Lives.

Mrs. Will Goode, who with her family of six children, is at present visiting her old home in Greenock, is among the number who escaped barely with their lives from the rush of fire in the North Country. When she left home being sent south by her husband for protection, the flames were within a mile of their home at Homer Siding, and a good many of their neighbors had already perished. Of the four farms side by side, occupied by Jake, Philip, and Sigmond Freiberger, and Wm. Goode, the first two had been burned before she left. Whether or not the other farms had escaped, she had not heard up to two or three days ago. It appears that Jake and Philip who are unmarried, were over at their brother Sigmond's when their places were burned. All of the Freibergers fortunately escaped and Mrs. Sigmond Freiberger and children are at present staying with her people at Otter Creek. The Freibergers have been farming in New Ontario several years and are doing well. They are the sons of Andrew Freiberger, of Greenock and cousins of the Walkerton family of the same name. Joseph Freiberger of Greenock is a brother.

Stabbed By Pitchfork.

While hauling in oats with Frank Michael on Monday afternoon, Mr. Joseph Batt.er, had the misfortune to run a pitch fork into his right leg above the ankle to the depth of two and a half inches. Blood poisoning was feared at first but the injured limb is now doing nicely.

Wilbur Cryderman Better.

A cablegram from Salonika, Greece, received yesterday morning by O. W. Cryderman, stated that his son Sergeant Wilbur Cryderman has almost completely recovered, thereby relieving the deep anxiety which has been felt since Aug. 8th when Wilbur's appeared in the casualty list as "seriously ill with dysentry." Mr. Cryderman cabled to Col. Roberts, the head of the University Hospital at Salonika on the 9th and it was in response to his cable that the message came yesterday.

NEWS ABOUT TOWN

Page 5 for local news.

Mr. Albert Bell has purchased a new threshing outfit.

5 Room Flat to rent, very convenient. Apply—C. Patrick.

Miss Mabel Coulter left for the West on Wednesday.

Mr. and Mrs. Jas. Warren spent last week in Kincardine.

Miss Ada Fraser is home from Ashland, Pa. State Hospital.

Mrs. Dewar and Mrs. Scott of Hamilton are visiting Miss Shaw.

Reduced rates Toronto Exhibition. C. P. R., tickets at Hunters.

Irwin Bros. shipped a carload of war horses to Montreal on Saturday.

Judge Klein is spending a couple of weeks at Battle Creek, Michigan.

Mrs. John Rowland and the Misses Rowland left on Tuesday for Muskoka.

Mrs. McKinnon and her daughter, Miss Euphemia of Detroit are visiting friends here.

Send in your news items. There are others like yourself who enjoy reading the home news.

Miss. Bailey of Toronto is visiting her aunt and uncle, Mr. and Mrs. John Scanlon of Brant.

Fred Hauck, who was hurt in the collapse of the Bobbie factory office building, has quite recovered.

Miss Irene Wright left on Wednesday for Chesley to visit Mrs. Durst and different Chesley friends.

Miss Alice Coombe and Miss McKenzie of Kincardine were guests of Miss Ruth Warren last week.

Mrs. H. G. Hunter, Bruce and Ruth, arrived home Monday morning from a pleasant holiday at Sauble Falls.

Many farmers throughout this section have been threshing the past week The wheat is reported to be turning out well.

Mrs. Walton and babe of Toronto are spending a month with Mrs. Walton's parents, Rev. and Mrs. J. W Sanderson.

Mr. Richard Fraser and his friend Mr. Lee, Graham motored from Hamilton, to Mr. F. J. Fraser's to spend Civic Holiday.

Live merchants recognise advertising not as an expenditure, but as an investment. Persistent use of the TELESCOPE will verify this.

Practically all the men of the 160th Batt. who have been out on a month's harvest furlough return to Camp Grosvenor, London, to-day.

Rev. Mr. Campbell of York Mills preached powerful sermons at the B. and C. Church on Sunday. Rev. Amos Tovell of Guelph will preach next Sunday.

Misses Cooke and Selwood of the Models Millinery Parlours, are attending the millinery openings in London and Toronto, and Miss Selwood in Detroit also.

Mr. and Mrs. Neil McCannel of Durham and Mrs. McPherson of Toronto motored over from Durham last week on a visit to Mrs. McPhail, South Line, Brant.

The Walkerton Bowling Club will not hold a tournament this year on Labor Day. Four rinks of local bowlers will attend the Hanover tournament on that day.

Mr. Eli Myles took a motoring trip through the Guelph district last week. He states that in some sections where seeding conditions were poor this year the crops are scarcely worth harvesting.

Mrs. George Fleming, who with her husband had a narrow escape in the Northern Ontario fire, arrived Tuesday night at the home of her brother, Mr. Sebastin Kirstine, South Line. A letter describing their escape is published in another column of this week's Telescope.

Ten fat steers which were in pasture west of the Exhibition grounds broke out on Tuesday night and after wandering down the highway for a while started to clear up on Mr. John Cotterman's garden. Fortunately Mr. Cotterman arrived on the scene early and sent for Chief Ferguson who rounded up the herd and put them in the town pound overnight.

C. P. R. Farm Labourers Excursion from Walkerton—Saturday August 19th. Through coach Walkerton to Winnipeg leaving on regular trains at 6.30 a. m. and 3.10 p. m. connecting at West Toronto with the first special. Fare $12.00. Tickets at Hunter's Drug Store up to train time Saturday morning or afternoon. Transfer to any line west of Winnipeg.

Mr. Chas. Pelleplace was elected D. D. G. M. of the Oddfellows Encampment for this district at Grand Lodge at Chatham last week. Walkerton was represented at Grand Lodge by Mr. Richard Lee, who is a member of one of the standing Committees of Grand Lodge; Mr. Talbert Boss, representing the local Encampment; and Mr. T. Pye representing Walkerton Lodge.

Entrance to Normal.

The successful candidates at Entrance to Normal are:—Stella Bush, Ferol Cunningham, Oscar Schwindt, Irene Everett, Marie Weiler, Florence Taylor, Gertrude Rogers.

+ + +

Special Train for 160th.

The Telescope is informed that a special train to convey the soldiers of the 160th Batt. to London will leave Palmerston this (Thursday) afternoon after the arrival of the afternoon trains from the North at Palmerston.

+ + +

The Hydro Radial

Editor Johnston of the Mildmay Gazette says in his paper that he has seen the survey of the Owen Sound London hydro radial and it passes through Mildmay, Hanover, and Chesley. If this is the case our Town Council should get busy and see to it that Walkerton put on the hydro-radial map if it is not already on. It is certain that at least one survey was made through here.

Patriotic Fund Cheques

Some idea of the extent of the calls upon the Patriotic Fund may be gained from the figures for Bruce for the past month. Mr. H. M. Lay, Secretary-treasurer of the County Fund, sent out for July cheques to 243 families and $4,700 was the total amount paid.

+ + +

A Successful Tea

Quite a large number attended the Hospital tea on Mr. H. M. Lay's lawn on Tuesday evening. Small tables were set on the lawn and a dainty lunch was served by the ladies. A more ideal spot for an outdoor tea could not easily have been chosen. Mr. Lay's sweet pea garden, one of town's beauty spots, is still in blossom and was greatly admired. The ladies of the Entertainment Committee of the Hospital Aid are to be congratulated on their success. Forty dollars was realized.

+ + +

A Pitiable Case

An elderly man, named Himmelspach, who has relatives near Mildmay, sought admission to the House of Refuge here this week. As he could not be admitted, not being a resident of the County, and as he is partly paralyzed and unable to work, he was certainly in a bad way. Himmelspach told his troubles to Chief Ferguson who could do no better than have him committed to the County Gaol for the present. The Chief had a vagrancy charge registered against Himmelspach and magistrate Tolton sent him to gaol for thirty days.

+ + +

Scouts Camp by River.

The Boy Scouts of the Wolf Patrol spent last week up the river under canvas at Camp Bircey. The boys had a good outing and enjoyed every minute of it. The scouts were:—Patrol Leader, Vernon Tovell; Corporal Victor Eidt: Mervin Forsythe: Bryan McCool, Leslie Bryce; Wilfrid Inglis: Will Ramsey, Norman Shaw and Martin (Hamilton). They returned to town Thursday burnt but happy. That fat, sleek look the boys wear, must be partly credited to good fare dished up by the Camp Chef, Bill Ramsey.

+ + +

Biggest Month Yet.

The biggest month's business in the history of the Farmer's Central Mutual Fire Insurance Co., was the month of July, usually a dull month. No less than 400 applications were received by this enterprising local company during the month, totalling well onto a million dollars in policies. The 400 applications insured 274 farm dwellings and 300 barns. Of the dwellings 61 were protected by lightning rods and 158 barns. During the seven months of this year three barns and their contents were destroyed by fire caused by lightning. These were not rodded.

+ + +

Those War Bulletins

A citizen who is performing a public service which is, we believe, not properly appreciated, is Mr. L. H. McNamara. Each of those daily war bulletins which are so eagerly read by the public, mean a great deal of time and trouble for him literally "every day of the week and twice on Sunday." If it were generally known that besides giving his services, Mr. McNamara is considerably out of pocket, we believe the public would be glad to share the expense more generally and each contribute the cost of a despatch occasionally. Each bulletin costs in the neighborhood of thirty cents.

+ + +

Died At Winnipeg

The death occurred at Winnipeg on July 28th of Mrs. Richard Hanley, a well-known and highly esteemed former resident of Walkerton and Brant. Mrs. Hanley, who was in her 71st year, had been in poor health, for many years. Three deaths have occurred in the family within the last year. A married daughter, Clara, passed away last summer, and just before Christmas her husband died while visiting the Pacific Coast. It's about 12 years since the family left Walkerton to make their home at Winnipeg. The surviving members of the family are:—Charles, and Mrs. Fred Kiefer of Winnipeg; Melburn of San Francisco: and John of Mich. Mrs. Hanley was a sister of Mrs. John O'Malley of Walkerton; and a sister-in-law of Mr. Timothy Hanley of Chepstow.

+ + +

A Big Visitor.

Messrs J. J. Schultzler, Chas. Pritschau and Henry Arnold motored up from Berlin and spent Sunday and Monday at Mr. Jos. Weiler's. Mr. Pritschau is probably the biggest man ever seen in Walkerton. In fact he is as big as two or three men. Although he weighs 345 pounds, he is not what you would call stout. He is 6 feet 8 inches tall and in fact looks a good foot taller when walking down street. Mr. Pritschau was born in Germany and served in the crack Prussian Guards for several years. He is engaged in the real estate business in Berlin and is said to be a "hustler." His appearance wherever he goes naturally creates a good deal of attention but he goodnaturedly does not appear to mind it and listens tolerantly to a thousand and one witticisms about his size.

COULDN'T SEE TWO FEET

Walkerton People had Terrible Experience in Northern Ontario Fire—Neighbors Nearly All Perish.

A graphic description of the thrilling experience of the two Walkerton families, the Kirstines and Flemings, who barely escaped the big fire with their lives, is given in a private letter written by a Haileybury lady to relatives here, which we have been permitted to publish in part as below:

The fire of course wasn't near us. Walter Kirstine and George Fleming were burned out. Walter was here yesterday morning and Maggie and George last night. A shirt, a pair of pants and his old boots was all he had when he was here. His horses didn't get burned but that is all. It burned the crib in the well down to the water and it didnt burn the cover of George's across the road. George had to shoot his horse and cow. He set two trunks on the road, one was burned, the other left. Just two houses in their part left and about twelve people out of sixty. They knew there was fire as there was so much smoke but had everything they could, done to keep fire away but Maggie says it just came a wall of fire all at once. They knew they could not save anything and to get away from the buildings was best. They could not see each other two feet away and did not know where to go. They went along the road to the hay field and met five neighbor's girls and in a few minutes Walter and Ella came along so they all went together and lay down on their face flat as they could. The chunks of fire would light on them. Walter had brought a pail of water and he would wet his hat and put it out. When the grass would catch, they would crawl over a piece. They were about six hours like that.

About twelve at night there came a few drops of rain (that was Saturday night). About three o'clock they started for Matheson. They did not know it was all burned but there was a house about half way they got into but hadn't much to eat. Each got a cup of tea and half a slice of bread. Until the train got in Sunday evening about forty came to that house. They say that if there had been a doctor there he could have saved quite a few but he had gone out that morning. They got to Haileybury Monday night. Maggie is going around as if nothing had happened so far as health is concerned. She says it makes her sick when she wakes up in the morning and thinks of all she knew burned to death. Mrs. McKnight and Laura lived beside us until two years ago, both dead. Mrs. McKnight is pretty badly burned and is in the hospital.

SEND-OFF FOR SOLDIERS

Brant Neighbors Give Khaki Lads Address and Handsome Presents

A large gathering took place at the Campbell home, Durham Road West, on Tuesday night, when the whole neighborhood turned out to give a fitting send-off to the boys in khaki who were about to return to London Camp after harvest leave. About seventy-five people were present. Councillor Wm. Johnston acted as chairman, and after a few appropriate remarks, he called upon Mr. Walter Kent, who read an address to the soldier boys, while Mr. Leonard Long at the same time presented each with a handsome signet ring and a $5 gold piece. The boys responded expressing their warm appreciation. Short speeches followed followed by Messrs A. E. McLennan, Frank Rennie, Wm. Long, F. Glesler, Ben Weechter and others. Also recitations and Scottish dances by Miss Hattie Long, songs, etc. The boys receiving the presents were:—Pte Hugh Campbell of the 58th, O.A.C. Battery, Petawawa; Pte. Jas Rennie, and Herb Westwoods of the 160th and Pte. Jack Lundy of the 63rd Battery London. The address as read by Mr. Kent follows:—

Walkerton, Ont., Aug. 15th, 1916

Some of your friends and neighbors on hearing that you are about to return to your military duties, do not want to see you go, without expressing to you their hearty appreciation of your patriotic courage, in taking up arms on behalf of the Mother Country, in this world-wide struggle against an enemy, powerful, ruthless and unscrupulous. We hear of the sacrifices the men and women in Europe are making at the present time in the cause of Liberty and we are proud to see that our own Canadians are not one whit behind, in their determination to fight for the right and to defend our homes from fire and sword.

As some token of our appreciation and admiration, we beg you to accept the accompanying small remembrances. We pray that you may be protected from danger on the firing line and that you will be spared to return unharmed to Canada and those who hold you dear.

Signed on behalf of your friends and neighbours.

Ptes. Campbell and Lundy left on Wednesday morning to join their Batteries and Ptes. Rennie and Westwoods leave this morning (Thursday) to join the 160th.

AN EVIL HERITAGE

"Let us have no reminiscences, please," said the captain, with rising choler, "and for heaven's sake don't begin talking about your devotion to the family. Can't say either that I've seen any particular trace of it yet. If you had had any notion of your duties I shouldn't have had to stumble into a dark room without a chair in it when I reached this place the other night." This was a side-hit which the Captain could not resist giving. "Does such negligence show regard or respect for the family? All I can say is that if Simon was as badly served by your brother as I have have been by you it is high time there were no more Silkworths at Lot 13."

While the Captain talked, Mr. Silkworth had been desperately racking his brains as to what could possibly have caused his dismissal. Now he looked up.

"Is it because I had not got the Big House ready that I am being dismissed?"

"Nonsense, it's not on account of that."

"On account of what, then? That's the only thing I can think of."

"On account of your having mismanaged the estate."

Mr. Silkworth shrugged his shoulders, and without any word of leave-taking, turned slowly towards the door. There was a dazed look on his face. He had almost reached the end of the wooden gallery when he turned again abruptly and came back to where the Captain was standing.

"You said something just now about Mr. Simon and about respect not being shown to the family; I wasn't listening properly at the moment; surely you aren't meaning about Mrs. Simon? That wasn't my doing."

"What do you mean?"

"It wasn't my fault that Mrs. Simon was made to die in the Little House instead of in the Big House; that was my brother's doing, and no doubt it would have been more respectful to the family if she had died in the Big House, but the day was fixed, you see, and my brother in a hurry, and, at any rate, I had no hand in the matter, so it would not be fair to visit it upon me; why, I was a mere lad at the time, though I remember Mrs. Simon well enough."

"Mrs. Simon? What is the man talking of? Surely Mrs. Simon died at Thornton?" But even as he said it the Captain remembered that there had been a first Mrs. Simon.

"Oh, bother these old stories! I don't in the least care whether Mrs. Simon died in the Big or Little House. And now go! there is nothing more to say."

But Mr. Silkworth did not immediately go and it appeared that there was, on the contrary, a good deal more to say. In ordinary life the manager was a well enough mannered person, who kept his strong language almost exclusively for the abuse of black men. It was rather curious, however, to note how in moments when his self-control broke down, his eyes had a way of rolling and his teeth a way of gleaming which strongly recalled a nigger in a rage. In Mr. Silkworth's eyes the Captain had always had something of the taint of an interloper about him—seeing that the estate had come to him quite out of the regular way—and he was told now in no measured terms. According to Mr. Silkworth it was even an open question as to whether the right of giving a manager his dismissal belonged to him at all and not rather to the head of the family, therefore at this moment to "Mr. Simon's" son.

"Go and appeal to him," jeered the Captain "if you think he's the person in authority; perhaps he will redress your grievances."

"So I shall!" shouted back Mr. Silkworth. "I've never been off the island in my life, but I am going to appeal to Mr. Simon's son, even though I have to cross the Atlantic for it. You'll yet repent having treated me so unworthily. The idea of dismissing a Silkworth from Lot 13! I tell you again,—you don't know what you are doing." With that he was gone.

His last words were indeed true, and true to a degree of which he himself was unaware. For there can be no doubt that the Captain did not know what he was doing when he made up his mind to the seemingly not over-weighty step of dismissing Mr. Silkworth.

CHAPTER XI.

Had the mail not been going so soon it is just possible that Mr. Silkworth's threat might have turned out to be an empty one. Twelve or even ten days of enforced reflection have been known to alter all sorts of people's views upon all sorts of things. But in two days his anger had not had time to cool, and the consequence was that he went off, still loudly declaring that he was going to demand justice at headquarters, and still followed to say, by the Captain's jeers. Even after they were well out of the tropics he continued to rack his brains as to the possible causes of his dismissal. He could not get rid of the notion that the Little House was somehow entangled in the matter. Perhaps it had been just a trifle too easy-going to put off the move to the very last day; but then Mr. Silkworth was accustomed to take things easily. There was in his veins a touch of that happy insouciance which is to be met with so largely in that blessed clime, and which may possibly have been handed down to him from some more than dark-complexioned ancestor, the same, no doubt, to whom he owed that provoking obstinate curl of his black locks. In this imperfect world every one has a cross to bear, and the objection which his hair had to lie flat was the cross which had fallen to Mr. Silkworth's lot. Damp cloths, laid on overnight, were a help, no doubt. This, combined with a generous use of hair oil, had been known to effect such a transformation in Mr. Silkworth's appearance that not only had his best friends cut him dead, but that not even his worst enemies would have dared to insinuate that there was anything but the whitest blood in his veins. But nobody can live in an atmosphere of damp cloths; besides which these articles are apt not to be handy exactly when they are most wanted. Whenever Mr. Silkworth's thoughts returned to the moment of the Captain's appearance at Lot 13 he ground his teeth and clenched his hands, not so much because of the general scramble that had ensued, as because of his having been surprised without time for making even the hasty arrangement with regard to his hair.

During the whole of the voyage the Little House remained in the foreground of Mr. Silkworth's thoughts.

Yes, perhaps he had been just a shade too easy going in that matter. It was possible, though it was not likely, that the Captain had got on inkling of that affair of Mrs. Simon and had somehow mixed him up with Joseph.

The history of the matter was as follows: Joseph had been engaged to be married for more than two months, and Lizzie, the bride-elect, was particularly anxious to be married on her birthday, which fell on the 20th of June. On one point Joseph and Lizzie were agreed; namely, that they must positively marry "into the Big House," which, now that "Mr. Simon" had given up coming out, was not in the least wanted. Of course there was Mrs. Simon still living in it, or rather slowly dying in it, but that could only be a question of days. Mr. Silkworth vaguely remembered that Joseph had applied to Mr. Simon—it had always been Mr. Simon who had managed the Lot 13 affairs—and that he had been told he might have the Big House whenever Mrs. Simon was dead. But meanwhile the 20th of June was approaching, and Mrs. Simon had not yet done dying, and Lizzie was in tears at the idea of not being married on her birthday, so was it not the most sensible thing that Joseph could do, more particularly considering that the Atlantic lay between Mr. Simon and Lot 13, to have Mrs. Simon carefully moved over into the Little House, where, when all is said and done, she could die quite as comfortably as in the big one? Mr. Silkworth remembered the day quite well. He had been a lad of eighteen at the time, supposed to be studying sugar under his brother's charge, and he had even helped to carry the hammock in which Mrs. Simon had been placed.

Lizzie had been made happy by being married on her birthday, and Mrs. Simon had trailed on for another ten days or so before finally drawing her last breath. Whether Joseph had ever been hauled over the coals by Mr. Simon concerning this affair Mr. Silkworth did not know, for he had not been taken into his elder brother's confidence; but he did have a recollection of Joseph having been somewhat taciturn for a time, which, however, might have had some other cause. It was very unlikely that Mr. Simon should have taken to heart anything concerning Mrs. Simon, seeing in what a hurry he had to give her a successor.

Scraps of these reminiscences revived in Mr. Silkworth's mind during the course of the long sea-voyage, but once in sight of English shore he thought of nothing but of how he was to obtain justice from Mr. Simon's son.

It was after he was in London that he made an unpleasant discovery. His first step on reaching town had been to buy an overcoat, for the March air was sharper than that to which he was accustomed; but when it came to the moment of pulling out his purse, Mr. Silkworth became aware that the price of the yellow overcoat on which his choice had fallen would not leave him furnished with sufficient coin of the realm to pay for his ticket to Thornton. That was a bore. He had not thought of this before, and was now obliged regretfully to shift his choice to a cheaper garment of sandy-grey. Even as it was, though the railway ticket was secure there was no margin left for such things as a felt hat, for instance. It was with a wide-brimmed straw hat on his head that Mr. Silkworthy stepped into the train going north. Yes, undoubtedly it was a nuisance; but everything, of course, would be altered for the better when he reached Thornton.

On the following forenoon Bernard was sitting in what he called his "study," occupied with his plans for his model cottages. That is to say "occupied" is perhaps scarcely the right word to use, seeing that the pencil fell out of his hand on an average of about every five minutes, and that at intervals of scarcely half that length of time, his eyes would stray to the window, through which a single feeble ray of very pale golden sunshine had succeeded in effecting an entrance.

At last he threw down the pencil and got up. He had come to the conclusion that the model cottages could wait. It would be so much pleasanter to bury himself with them when he had not to do it alone, when there was some one else there with whom he could discuss his ideas, who would lean over his shoulder and give him good advice and busy herself along with him. Then a doubt crossed his mind: Would she busy herself with this or with anything else? Would she take an interest in his ideas!

The next instant already the doubt was chased away by a vision of her face. So vivid was the vision that Bernard drew a deep breath and turned instinctively towards the door. The atmosphere of the study had suddenly become insupportable. That feeble ray of sunshine was by no means as harmless as it looked; but had, on the contrary, proved itself to be a dangerously pointed shaft of pure though pale gold, which, hitting its scorded.

It was just at that moment when, having come to this conclusion, Bernard was moving definitely towards mark, had put an end to Bernard's repose of mind.

He actually surprised himself wishing that the anniversary of his father's death day had already arrived. Of course there was no earthly reason why he should wait for that day; but Bernard had taken it into his head that it would not be seemly for him to make Sybil Durrant an offer of marriage before the year of mourning had elapsed. It wanted still about a month to that time, but that was no reason for not walking over to The Monastery. If he made haste he might by good luck have a quiet talk with Sybil before the luncheon gong the door, that steps were heard outside, the handle was turned, and a most incongruous-looking individual in a sandy grey overcoat and with a battered straw hat on his head, was ushered in.

Poor Mr. Silkworth could not possibly have chosen a worse moment. At a more favorable time, Bernard, though he could never have fulfilled the expectations which the unfortunate manager had placed upon him, might yet very likely have taken some interest in his tale and sent him away with a liberal sum in his pocket, as a retribution for supposed damages. But just now time was a great deal too short for either taking or showing interest. The Durrants lunched at two, and it was close upon half-past twelve now. Every minute more spent here was spent at the expense of that quiet talk of which he felt so greatly in need.

The unavoidable result was that ten minutes after he had been ushered into the study, Mr. Silkworth found himself standing once more in the passage staring about him open-mouthed, and wondering whether he stood on his head or his heels. And yet he was too much astonished to feel angry.

He was still standing thus, when unconsciously he raised his head a little, half closed his eyes and widened his nostrils, after the manner of an animal that is sniffing the air.

Somebody had left an important door open, and the consequence was that the front part of the house could not possibly remain in ignorance as to this being the dinner-hour for the back part of the house. Mr. Silkworth was almost certain that he smelt potato soup. At the very moment that he told himself this he remembered that he had eaten nothing since last night. The smell of that potato soup made him feel almost sick with longing. Amazement and indignation were for the moment completely drowned in the prompt and savagely fixed resolve, somehow or other, to get at that soup. He turned and followed the scent.

Along scraps of passages, up steps and down steps, it led him in the rambling old house, until at length he stood in the doorway of what evidently was the servants' hall.

A portly, middle-aged dame, decently attired in black, a gray-haired butler, a couple of footmen, a couple of housemaids in white caps, and a couple of nondescript females were at their dinner. When Mr. Silkworth appeared in the doorway the lively conversation which had been going on was cut short and several spoons remained poised in the air. John was the only one to whom the stranger was not an utter stranger, for he had ushered this person into the study only a quarter of an hour ago. He rose instinctively from his seat.

"Shall I show you the way out, sir?"

Mr. Silkworth measured John with his eye.

"You are not to show me the way out, but you are to give me some of that potato soup. No, I am not mad—I am only starving!"

He said it in a tone that somehow put resistance out of the question, and before John, whose training was very much superior to his presence of mind, had found a reply, both his plate and his spoon had been taken possession of by the stranger.

While the man in the gray overcoat and that battered straw hat ate the soup, the servants stared in silent amazement, not even looking at each other, for fear of missing one of this enigmatical creature's movements. When he looked up at last from the empty plate, it was to find about eight pairs of eyes fixed upon him.

"So that's it, is it—you're just expiring to know who I am and how I came to be here? You want to classify me, don't you? Well, then, I feel somewhat better now, so open your ears and listen."

"And do you mean to say that it's a fact that there was a first Mr. Simon?" inquired the under-housemaid Susan, with a flippant laugh, when Mr. Silkworth had done pouring out his grievances. "I always took it to be a——"

Susan had meant to finish up with "fable," but shrank back abashed before an indignant glance of Mrs. Spankins, the housekeeper. The idea of daring to doubt the existence of any member of the family was decidedly too much for Mrs. Spankins's equanimity.

Meanwhile Mr. Silkworth was elaborating his explanations, while helping himself steadily to everything within reach, although now at a rather more reasonable pace.

"A first Mrs. Simon? Dear me! I thought everybody knew that there had been a first Mrs. Simon."

"She was a good-looking young woman, was she not?" inquired Mr. Spankins, who, in point of fact, was expiring with curiosity on the subject.

"She would have been good-looking if she had not always, latterly at least, had red eyelids and wet eyelashes."

Mrs. Spankins moved uneasily on her seat. It was quite evident that the ground was delicate to tread; and yet such an opportunity for obtaining reliable information as to the first Mrs. Simon could not be lightly parted with.

"Do you mean that he got tired of her as soon as all that?" asked Susan. "I thought they had only been married for a year."

"Nearer three years, I'll fancy," corrected Mr. Silkworth.

"Oh, come!" put in the grey-haired butler, "there's no particular object in making a mess of our dates. Everybody knows that Mr. Simon had been going about in London as a widower for more than a year before he married Miss Ingram."

"I don't see how he can have done that," said Mr. Silkworth, reflectively, "seeing that he was not a widower for more than a couple of months, at the outside; in fact, I am pretty sure that it wasn't months, but weeks."

"There's some mistake here," said Mrs. Spankins, severely. "There was no question whatever of any such indecorous haste. It is well known that Mr. Simon did not bring home Miss Ingram until the June of '59."

"Not until the June of '59! He couldn't have been much quicker than that, could he? Don't you know that it was the June of '59 that finished off the first Mrs. Simon?"

"There's some mistake here," repeated Mrs. Spankins, staggering to her feet with a gesture which seemed to imply that the discussion was closed. A short but sharp struggle between loyalty to the family and the baser feeling of curiosity had ended in the victory of the former.

Mr. Silkworth, having by this time dined pretty copiously, inquired his way to the Thornton village.

"Right through the park," he was told, "over the bridge and past the cemetery—that is your straightest way. But, dear me, Mr. Silkworth, whatever are you going to do next? Surely not to sail straight back to where you came from?"

"No, I am not going to sail straight back again, and for the excellent reason that my purse does not contain enough to pay for the ticket. Upon my word, I do believe that the only rational thing for me to do is to set about discovering a mine of diamonds, or, at the very least, of gold."

Susan and Bessie went into peals of laughter, finding that Mr. Silkworth was quite too irresistibly funny; and five minutes later the West Indian manager, with his hands in his pockets and his straw hat still on his head was strolling over the grass in the direction that had been indicated to him.

Though his quest had been a failure, his frame of mind was anything but despairing. For one thing, Mr. Silkworth did not belong to the class of people who are able to realize what despair means after an ample meal. As he moved over the grass now his thoughts were busy, not with the future, but with the past. Could it really be a fact that Mr. Simon had passed himself off for a widower while the first Mrs. Simon was still lingering on? There could be no doubt, certainly, that he had kept away from St. Clara during the last two years of his life. Could all this signify anything more than met the eye? Mr. Silkworth put the question to himself leisurely, almost indolently, as he lounged toward the village.

The direction he was following happened to be much the same as that followed by Marian on the June morning which had followed her arrival at Thornton. The consequence was that, like Marian, Mr. Silkworth presently found himself leaning over the side of a bridge, on turning from which, like Marian, he caught sight of some ruined walls overgrown with ivy.

Having drawn a little closer, he recognized that this was the cemetery he had been directed to leave to the left; and at the same time he became aware that two men were busy inside, strewing gravel on the paths, while the iron gate stood ajar.

The desire to finish opening a door that is half open is almost instinctive in human nature, and Mr. Silkworth was in no hurry. The consequence was that the two workmen looked up in some astonishment on the gravel sides nothing but Berrincotts, sleeping under flat, rounded and pointed stones.

Instinctively he began to look out for the name "Simon," being the one solitary member of the family whom he had personally known. Neither was it hard to find, being engraved upon the very newest and whitest of the tombstones.

"Simon Berrincott,
Born April 3rd, 1830."

But that was not all, for the stone bore a small dictionary of dates.

"Married June 29th, 1850,
to Sophia Elizabeth Ingram,
Died April 10th, 1884."

"So the first Mrs. Simon didn't count," reflected Mr. Silkworth, gazing thoughtfully at the stone. "Poor wretch! It certainly was the wisest thing she could do to retire from the scene at the rate she did. No, it's as clear as mud that nothing connected with that young woman could have brought Joseph into disgrace.

And, settling his straw hat more satisfactorily on his head, Mr. Silkworth sauntered out of the cemetery as leisurely as he had sauntered into it, still followed by the eyes of the two workmen.

Having reached the "Golden Cock," in the village, Mr. Silkworth, whose night had been spent in the railway, proceeded to throw himself, greatcoat and all, upon the extremely primitive bed which was put at his disposal.

By the time he opened his eyes again the room was dark, except for the stray rays of an oil-lamp which flickered in the village-street. This alone would have been enough to tell him that he had slept for several hours, but there was another symptom which proclaimed the same fact in quite as unmistakable a way. At first it touched him only as a vague and distant suspicion. It was not until he had sat up and rubbed the sleep out of his eyes that he became aware of being furiously hungry.

"Supper!" The thought burst upon him as a vision of gladness while he bounded to his feet. At the same moment, however, some stray shred of prudence guided his hand towards his purse, and immediately there came a change over his features. Settling himself down once more upon the bed, with loosely dangling legs, he stared aghast by the light of the streetlamp at the all but empty compartments.

To be sure, he had known this before in a sort of way. He was not poorer than he had been when he left Thornton House; but the world, looked at with hungry eyes, was an entirely different place for Thomas Silkworth than it had been with the glamor of dinner still lying on it. Not until this moment did a sense of genuine alarm take hold of him at the idea that his quest was perhaps going to turn out a vain one.

"Upon my word," said Mr. Silkworth, as he stuffed his purse back into his pocket, "I believe I was right when I told them that the only rational thing for me to do would be to find a gold mine! But, unluckily, I haven't a notion how to set about it."

On one point he was quite clear; he was not going to acknowledge himself beaten yet. Though Mr. Berrincott had virtually turned him out of the house, nothing could be easier than to ascertain in which direction he was accustomed to walk, and then to lie in wait for him in the park. The neighborhood of the cemetery would not be an unlikely spot, for instance; and with the recollection of the cemetery there straightway stirred again in his mind that dictionary of dates which a little while ago he had seen engraved upon the white tombstone.

"Born April 3rd, 1830,
Married June 29th, 1859."

But this time he put up his head abruptly, as though struck with a totally new idea.

"June 29th? Surely there's some mistake here. I'm almost ready to swear that Mrs. Simon wasn't dead by June 29th."

The date had conveyed no tangible impression to his pleasantly dozing mind when first he had set eyes on it; it was only now that his painfully wide-awake senses had caught the gloom of a possibility.

Scarcely a possibility yet it would seem, nothing more than a wild suggestion, which at any other moment would probably not have been thought worth investigating. But this was not a time for leaving any stone however unlikely, unturned.

Having sat for several minutes gnawing his under-lip and passing his ten fingers through his curls, Mr. Silkworth looked up again. "The last day of June, surely I am not dreaming when I remember that Mrs. Simon held out till the last day of June? And on that alone they have got June 29th carved quite plainly. And what was that about Mr. Simon calling himself a widower when he was nothing of the sort? Ye powers above!" and Mr. Silkworth rose suddenly to his feet. "I don't quite know where I've been letting my wits wander all along. Upon my word there's no saying whether that gold-mine is not going to open before my feet after all!"

CHAPTER XII.

"Henry," remarked Mrs. Durrant, on the evening after Bernard's latest visit to The Monastery, "that young man is taking too long about it; it is time he were brought to the point."

"Eliza," answered Henry, looking up from his paper with a panic-stricken countenance, "I cannot do it."

"Let's be explicit, please; you cannot do what?"

"I cannot ask him his intentions."

Mrs. Durrant shrugged her shoulders and rubbed the sleep a little further out of her eyes.

"I wonder," she remarked, in an accent of pitying contempt, "how long it would take to teach even an intelligent man the merest rudiments of social tactics! Here it's very nearly a quarter of a century since I've taken you in hand, and yet you are still capable of talking of such commonplace things and so totally antagonistic to all ideas of diplomacy as inquiring after a man's intentions! Really, Henry, I sometimes despair of you."

Mr. Durrant, thus severely apostrophized, hung his head a little, and held his tongue. To any third person who at that moment had been in a position to throw a scrutinizing glance into the room, this individual with the hang-dog look about both his expression and attitude, would hardly have been recognized as the stately Mr. Durrant, whose figure made quite a show at public meetings.

It is possible that the same scrutinizing glance would have equally failed to recognize in the person now leading the conversation the large, sleepy woman, who in general went by the name of Mrs. Durrant.

An unwieldy mass of flesh, a deep bass voice, very rarely heard, a uniform indifference to her surroundings, and an apparently unconquerable inclination to sleep—this was absolutely all that the outer world knew of Mrs. Durrant. But never was the outer world more mistaken. That uniform indifference was no indifference at all, but only a cloak which screened the mass of passive energy of which her entire person consisted. Physicaly unwieldy and apparently never doing anything more active than sitting with her hands in her lap, this woman really had been the soul and spirit of everything, the soap manufactory included, ever since she had stood before the altar with her Henry. The apparent laziness and indifference of her demeanor never failed to throw dust in inexperienced eyes, and only served the more securely to screen that sleepless ambition which had made them what they were.

Mr. Durrant had long since wisely bowed under the iron will of his wife, but so well did he play his part that no outsider ever came near to guessing that this calm, well-behaved and self-possessed gentleman was a puppet whose strings were pulled by that big, lazy woman.

The children had naturally no choice but to follow in their father's footsteps. Of the three elder daughters each had had some share of good looks, and had consequently been made use of by their mother as stepping-stones to her present position. Harriet's eyelashes had been found useful in entrapping a baronet, while Amelia's smiles had done for an earl's younger son, and Caroline's profile had put an end to the bachelor days of a landowner of ancient pedigree. Sybil was the only one remaining to her; what more natural than that Mrs. Durrant, having been so completely successful in her three first experiments, should confidently turn her thoughts towards a fourth?

It is true that Bernard had no title, but his position was all that could be desired, and the name of Berrincott was an excellent sound in the county.

There was another circumstance, too, which to some extent weighed in the balance, namely that Sybil's affections were, to all appearance, engaged. It is true that this was a mere detail and one which Mrs. Durrant did not generally include in her calculations; but that was no reason why, so long as it chose to accommodate itself to more weighty matters, it should not be taken into consideration.

"Really, Henry, I despair of you!"

"What do you propose doing?" inquired Henry, gazing at his Eliza in awe-struck admiration.

"I propose finding out his intentions without asking them."

"I have a notion that he does not intend to propose until his year of mourning is up."

"I know he does not, but that is no objection to his doing so."

Henry stared inquiringly, waiting for more.

"It is perfectly simple. That young man has got to the stage at which a tete-a-tete is synonymous with a proposal. It only requires the surroundings to be properly managed, and in this cause nothing could be easier. That county ball on the 12th comes in as handy as possible."

"But, my dearest Eliza, young Berrincott does not go to balls yet."

"That is exactly it."

"I am afraid I don't quite——"

"Of course you don't; I know you're only a man. Now attend. Sybil, of course, is going to this ball; and what more natural than that the circumstances should be casually touched upon in the young man's presence?"

"But do you think he will like that?" asked Mr. Durrant, uneasily.

"I am as certain as I am of eternal salvation that he will not; more particularly if it is mentioned that Captain Stenning is going to be present. He didn't half enjoy the captain taking her in to dinner the other night."

"And you are going to mention him?"

"No, you are. It comes more naturally from you. And then the young man can make up his mind as to whether Sybil is to go on the 12th or not."

"Do you mean that you are going to leave the decision to him?"

"That depends. A mere acquaintance would of course never venture to demand such a sacrifice. Ahem!—not beginning to see daylight yet, my love?"

"Eliza," stammered Mr. Durrant, after a long pause of speechless admiration, "you are—you are a—a genius!"

"As long as there are only men to manage, I fancy I'm pretty sure of my footing," responded Mrs. Durrant, modestly. "And now be so good as to send me Sybil. There are a few directions required to prepare the ground."

Sybil arrived presently, attired in a black evening dress, for it was subsequent to the sounding of the dressing gong that the conversation between husband and wife had taken place.

"You want to speak to me, mamma?"

"Yes, my child. Is the door properly closed? Come a little nearer. Did Mr. Berrincott say anything about walking over again this week?"

"He—he did say something about bringing over some of those fuchsia cuttings," stammered Sybil, growing rather pink.

"Have you any reason for supposing that he will bring them over to-morrow?"

"To-morrow or the next day," was whispered back.

"Good; that fits in. It was your blue serge you had on when he first saw you last year, was it not?"

Sybil looked up in some surprise.

"Yes mamma, I fancy it was."

"Tell Podskin to look it out, and until I give you further orders, mind that no other frock finds its way on to your back."

"But, mamma, I'm afraid it's rather faded, and the edge is a little frayed. My brown velveteen is much more ——"

"Really, Sybil, you are almost as bad as your father. As a dressmaker's advertizement, no doubt your brown velveteen would be infinitely superior; but has it ever occurred to you what associations that brand-new garment can carry with it, compared to those which must of necessity be lingering about the very creases of the serge? It wants but a feather to turn the scale, as you have already admitted to me. Very well, an association may be that feather. It is for this reason that you are to live in the old blue serge for the next few days; it is for this reason, too, that you are to lay in a supply of hepaticas and snowdrops, which you will mind to have handy in the gallery. That is all that is required of you. The rest you can leave to me."

Sybil still flushed up to the temples, played nervously with her fan, without making any reply. She understood perfectly clearly that her mother's aim being accomplished would mean the consummation of her happiness; and yet something within her rebelled. She was too honest perfectly to acquiesce in the plan of campaign sketched out at the same time that she was too weak to stand up for her own opinion. Never had this queen-like creature spoken a truer word than when she described herself as a fraud. Small blame to her fellowmen and women if instinctively they looked for heroic deeds from her, whereas, in reality hers was a perfect true, even tender, but ordinary and timid nature, weighed down by a touch of indolence which made her shun everything approaching to an effort.

"By the way, I was nearly forgetting, there is another point. You know, of course, that you are going to the county ball on the 12th; but what you possibly do not know is, that you have promised Captain Stenning both a round and a square."

"But it is not true!" broke from Sybil's lips, with a ring that was almost vigorous enough to be called indignation.

"Not strictly speaking, perhaps; but it is expedient, which in this case, is of greater importance. With some men the experiment might be dangerous, but I have studied this case, and I think he is far gone enough for anything. Mind you make no mistake—a round and a square."

Still that silent fingering of the fan, while the lace on the bosom of her dress rose and fell somewhat more rapidly than usual.

"Have I made myself clearly understood?" asked Mrs. Durrant, with painful distinctness, while she watched Sybil's downcast face.

The girl looked up quickly, and for one brief second the glance of mother and daughter crossed with a faint suggestion of defiance. The next moment already Sybil knew that she had been made to dream of resistance, even for the space of two heartbeats.

"Very well, mamma," she whispered, submissively.

"I suppose it is scarcely necessary to tell you that of course you know nothing of your father's intentions, so that, the point once come to mind you don't let yourself go too cheaply. Most women make the mistake of pouring themselves out in a torrent, instead of doling themselves out in spoonfuls."

There was another "Very well, mamma," as Sybil turned away.

(To be continued.)

To a Husband.

(The Echo.)

Have you put a song in her heart to-day,
Have you lifted some of her care?
Have you brought a rose from the bitter fray
And put it in her hair?
Have you made it brighter through every hour,
That she trusts and yearns for you?
Have you put a song in her heart to-day
As a brave man ought to do?

Have you made her struggle a little sweet?
Her pathway bright and clear?
Have you softened the day for her weary feet
With a memory sweet and dear?
Have you made a happier future shine
In her eyes because of you?
Have you put a song in her heart to-day,
As a brave man ought to do?

Have you given her back in the golden age
Of her sacrifice and trust
A little share of the hidden page
Of the beauty out of dust?
Have you been worth while for her dear sake
In all she's done for you?
Have you put a song in her heart to-day
As a brave man ought to do?

Edith—Would you marry a man to reform him? Alice—Not if I could get a man who didn't need reforming.—Boston Transcript.

Wigg—Bighedde boasts that he never wastes any words. Wagg—That's right. He saves them all to sing his own praises.

---

7 WEEKS OF RUSS DRIVE

Seven weeks ago to-morrow the Russians began their great offensive in the East. Although the advance still persists, as the latest German announcement of a retirement southwest of Lutsk indicates, it is none the less plain that the whole operation is slowing down, for the moment, at least. It is, then, possible to review in some detail the progress and achievements of this great campaign.

First of all, it must be measured by its cost in men rather than its conquests in territory. The Russian official figures, disrupted, to be sure, by the Austrian and German reports, claim around 200,000 prisoners. The German and Austrian reports estimate the total Russian loss at 262,000. Hitherto Russian estimates of prisoners have proved reliable, as shown by American agents charged with inspecting prison camps in Russia. If we accept the Russian figures as accurate, it is safe to estimate the total loss of the Austrians and Germans as above half a million; that is, 200,000 in addition to Russian captures.

To have put half a million troops out of action in seven weeks is, in itself, a tremendous achievement. It is the greater when it is accomplished with a loss of only about half as many by the Russians. Bear in mind also that Russia's man supply is wellnigh inexhaustible; the man supply of Germany and Austria is rigidly limited.

Together with the great "bag" of men, there has been a huge capture of guns, munitions and supplies of all kinds, and an even greater destruction of those things by the retreating Germans and Austrians. Exactly as the Russians lost terribly in this fashion last summer, the Austrians have suffered now and are continuing to suffer.

So much for the material effect in men and munitions of the Russian advance. Even more important is the moral effect. Despatches from Berlin make no concealment of the surprise and amazement the Russian operation has awakened in Germany. Look back a year, and it will be seen that all German and Austrian reports forecast the approaching elimination of the Slav. Russia was "done" for several years, Berlin proclaimed, when Vilna had fallen and the great German drive halted at the Dwina and the Pinsk marshes. German hands were now free to "finish with France."

But nine months later the fallacy of all this is demonstrated by a Russian success only less great than that won about Lemberg in September, 1914. Again and again German bulletins pay tribute to the vastness of Russian's supplies of guns and munitions and the inexhaustible supply of men. It was all a terrible miscalculation, this belief that Russia was done.

Instead of Russian collapse, German newspapers again talk openly of Austria's failure. The collapse is almost as complete as that of 1914, and it again makes extensive drafts upon German resources. For weeks German troops have been rushing to Kovel and to Galicia. When they have arrived there has been a slowing down of Russian advance, but on the south, where Austrian troops are unsupported, the failure continues. Bukovina has been cleared, Kolomea taken, the southernmost of the railroads leading across the Carpathians has been cut. Add to this the presence of Russian troops on the French front and the reports of fresh Russian victories in Asia Minor, and it is plain the lie is finally given to all reports of Russian exhaustion.

This, again, is the answer to the German campaign of last summer in the East. Russia was not "put out," but this Russian attack is coincident with a British attack in the west and follows upon the Verdun failure on the same front. A whole winter of effort has gone for nothing. Verdun and France still hold out. Instead of a conquering Germany, the world, Teutonic and otherwise, sees a Germany on the defensive East and West and a restored Russia stepping out to new victories.

Besides the material and moral victories, the Russian conquest of territory is less important. Yet it is very considerable; the fortresses of Lutsk and Dubno, the city of Czernowitz and almost all of Bukovina, some thousands of square miles of territory in Austrian Galicia and more in Russian Volhynia—between 10,000 and 15,000 square miles in all—and the advance is still continuing.

On the other hand, the Russian has not yet reached Kovel or passed the Stokhod. He is not nearer Lemberg than he was three weeks ago. His advantage in the centre from Tarnopol has been slight. Even in the south he is not yet directly threatening Lemberg, and if he is now checked there will be no very great shift in the eastern lines. Above all, the Germans will not have to retire from the Dwina and the Beresina to the Niemen and the Bug. The greatest possible territorial and moral success, the compelling of a general retirement from the Gulf of Riga to Roumania, the Russians have not yet attained. It remains possible that they will yet attain it, but it seems less likely than in the early days of their advance. They have visibly "slowed down" all along the line.

It is too early to say the Russian success marks the beginning of the end—but it is already the greatest allied success since the autumn and winter of 1914. It has proven that Russia is not "out of the war"; it has raised again the question of Austrian collapse; it has cost Germany the initiative, and it has changed the tone of Berlin quite as much as of Paris and London. In addition, it has conquered nearly 15,000 square miles of territory and, accepting Russian figures, cost the Austro-Germans half a million of men and vast resources of munitions and guns. But it is the men that count most.—New York Tribune.

The Gurgle in the Bottle.

Why does water gurgle when poured from a bottle? As water pours out air attempts to pour in. Occasionally the hand holding the bottle may move and give the air the opportunity. The quick rush of the water to fill the hole made by the air causes the gurgling sound.

Nell—Maude says she has had 17 proposals of marriage this year. Belle—I didn't think she knew that many men. Nell—Oh, 16 of them came from Chollie Saphedde.

FROM DRINKING
BAD WATER.

People moving from one place other are very subject to diarrh account of the change of water, cli climate, change of diet, etc., and w first appears to be but a slight loo of the bowels should never be neg or some serious bowel complaint be sure to follow.

The safest and quickest cure for boea, dysentery, colic, cholera, c morbus, cholera infantum, pains in stomach and all looseness of the bo is Dr. Fowler's Extract of Wild S berry.

Mr. Ernest Jeffery, Moose Jaw, S writes: "A few years ago, when I came out to Canada, I went to the vest field to work. Somehow or the water did not agree with me. the diarrhoea so bad that blood coming from me, and I thought m days had come. One of the hi hands advised me to take Dr. Fo Extract of Wild Strawberry, and I I had used the bottle I was able to work again. My advice to all is a keep a bottle of this wonderful diar cure on hand."

"Dr. Fowler's" has been on the m for the past seventy years, and b used in thousands of Canadian during that time, and we have hear of a case of bowel complaint it has not given perfect satisfaction.

The genuine "Dr. Fowler's" m factured only by the T. Milburn Limited, Toronto, Ont.

Price, 35 cents.

Bradstreet's Trade Re

Toronto.—Considering the season, the retail and wholesal are unusually active. Placing are in many cases heavier than a salers care to fill under prevailing ditions. While deliveries of some of goods from factories have improve there is still scarcity of such lin woollens, cottons and linens. The g cery trade has been fairly active. Se sonable lines of hardware are movi from wholesale shelves, but futu prices of metals are so uncertain th placing orders are in many cases b ing withheld. Manufacturers continu busily engaged on war materials, an they have as well liberal orders o hand for ordinary commercial needs.

Montreal.—Wholesale firms in flowing their business during the pa six months find in most cases satisfac tory increases in the volume of ov over the corresponding period of year ago. The grocery trade is a littl slack just now, while the hardwar business is reported quiet. Reports o remittances vary but they average m well. Money continues in good deman for commercial purposes.

Winnipeg—Business continues ac tive. Underlying conditions are grow ing sounder throughout the west. Re tailers who have been buying freely, have met payments promptly, gener ally speaking. The fact that so many cash discounts are taken advantage of, indicates the stronger monetary standing of traders. Crop conditions are better than they were a year ago. sale of agricultural implements been large. Demand for leather g continues good both for sorting fall delivery, still higher prices a talked of. Business continues act in most lines of dry goods.

Calgary—Business conditions in th and other important centres by Al berta are good. Retailers are buyir freely in most departments.

Vancouver—The movement of gen eral merchandise from the city is fair, active. There is some talk of a light run of salmon at the coast this sea son.

Hamilton—Trade conditions are healthy. The country trade to which Hamilton caters is slowly picking up, and the movement of all staple commodities from wholesalers continue fair.

London—In wholesale and retail e tablishments business has been sati factory this early summer. The move ment of merchandise, including dr goods, hardware, groceries and milli ery has been good up to date and t outlook is bright.

—General business this sum [illegible] success in their circum [illegible] retail trade has been satisfactory.

Quebec—Business as a rule is repor ed satisfactory for the season, dry goods moving well. Collections are fair. The outlook continues satisfac tory.

Poison Ivy.

The poisoning peril is at its height now that the vacation season is on. Car you tell the noxious poison ivy when you see it growing luxuriantly fro attack on the tender human skin? The ivy looks very much like Virginia creep er, but it has only three leaves, whi the creeper has five. Rubbing a littl olive oil on exposed parts of the bod before going into the woods may pre vent poisoning. It is also recommend ed that the face and hands be wash with a simple solution of cooking soda. When one has been poisoned it is well t rub the affected spots with glycerine to lay cloths on them saturated wit water and glycerine. Wet starch allow ed to dry on the poisoned skin, and lime water are some of the remedies for the alleviation of pain.

Of course automobiles have horns but that isn't what hurts when they hit you.

HAD KIDNEY TROUBLE
For SEVERAL MONTHS
DOAN'S KIDNEY PILLS
CURED HIM.

Mr. Fred. Stevens, Raymond, Alta., writes: "I am writing to bear my testi mony of your wonderful medicine. had suffered for several months wi kidney trouble. I had been under th doctor's care for two months, when read your advertisement. I at on purchased four boxes of Doan's Kidne Pills, and when I had used two boxes them I was cured. I have recommend this treatment to several of my friends.

When you ask for Doan's Kidney Pil see that you get "Doan's." The wrapp is grey and our trade mark "The M Leaf" appears on every box.

Doan's Kidney Pills are 50 cents p box, or 3 boxes for $1.25; at all dealers. mailed direct on receipt of price by T. Milburn Co., Limited, Toronto, On

When ordering direct specify "Doan's

FARM AND GARDEN

WEEDS.

o keep a place clear of weeds 'a continual warfare. But this will eless unless the neighbors agree it the same amount of labor on own places.

ere are two rules which will hold in the prevention and destruction eeds:

ne first, from the well-known fact no plant can first grow without ting from a seed, indicates the ral caution to destroy all weeds ore they can ripen their seed, and sow for crops nothing but perfectly an seed. If weeds have already o to seed, they should be carefully oved and burned. Some of the st pernicious intruders have been idely spread through hay or grass l of packing goods—no careful man allow such packing material to be tered over his land either in ure or otherwise.

e second rule is founded on the iple that no plant can live any siderable length of time without athing through its lungs, the leaves. ce, all perennial-rooted plants that ep and extend beneath the surface, the Canada thistle and milk-weed, thus form formidable patches, be destroyed completely and y, if the leaves are never allowed ppear above ground.

nnual and biennial weeds mostly ase by seeds, and include wild tard, shepherd's purse, false flax, e, chickweed, purslane, rag weed itter weed, cockle-bur marigold, light or Spanish needles, may- wild chamomile, thistle, mul- red root, tory weed or hound's ue, Jamestown weed or stink weed, bs quarter, goosefoot or pig weed, amaranth, wild teasel, chess, or broom grass, and foxtail .

ne simple perennial weeds are tall wfoot or buttercup, John's wart, tail, pokeweed, water hemlock, poison hemlock, oxeye daisy, mallow, ur dock, sorrel, garlic, nettle, sweet g or calamus and cat-tail flag.

The creeping perennial weeds are Canada thistle, toad flax or snapdragon, horse nettle, milkweed and quack grass.

The shrubs are poison sumach, poison vine, wild blackberry, elder-bush and alder.

MACHINE PLANTS 10,000 TREES DAILY.

A machine which plants from 10,000 to 15,000 forest tree seedlings a day is now being used at the Letchworth Park Forest and Arboretum, in Wyoming county, N. Y., according to officials of the Forest Service, United States Department of Agriculture, who are acting as advisers in the work. Previously the planting has been done by hand at the rate of 1,200 to 1,500 trees each day per man. The machine was designed to set out cabbage and tomato plants, but works equally well with trees. It is about the size of an ordinary mowing machine and is operated by three men and two horses. One man drives the team, while the other two handle the seedlings. The machine makes a furrow, in which the trees are set at any desired distance, and an automatic device indicates where they should be dropped. Two metal-tired wheels push and roll the soil firmly down around the roots. This is a very desirable feature, it is said, because the trees are apt to die if this is not well done. Two attachments make it possible to place water and fertilizer at the roots of each seedling. Another attachment marks the line on which the next row of trees is to be planted. No cost figures are available yet, but officials say that the cost will be much less than when the planting is done by hand. It is stated that the machine can be used on any land which has been cleared and is not too rough to plow and harrow.

NOTES.

Investigations at the Missouri Experiment Station show conclusively that cattle can be wintered economically on a ration made up largely of silage. In one experiment, a ration of corn silage and clover hay without grain, fed to yearling cattle for 100 [illegible] pounds [illegible] feeding period of 150 days, at a total cost of $11.60 or a cost of 5.5 cents a pound gain, as compared with a total cost of $15.75 and 7.5 cents a pound, when a similar lot of cattle were fed on six pounds of shelled corn per head per day and clover hay. These results have been confirmed in other experiments, which all point to the conclusion that when silage constitutes the major portion of the ration fed to wintering or stock cattle the cost of wintering is much reduced.

Giving the seed bed a thorough preparation and then sowing poor seed because it is low in price is not economy; it is foolish extravagance.

The fall bearing strawberry in the space of two or three years has developed from a home garden novelty to an extensive commercial proposition. These berries are being grown in large quantities for the U. S. market and bring prices which afford the growers a fair margin of profit.

The yield of a corn crop some years is measured by the start it gets early in the season. One year with another it will pay the corn grower to use quickly available fertilizers that will hasten the early growth of the corn plants, giving them a good root system before the dry weather or early summer.

The farm papers and progressive fruit growers can preach standardized packing and a standardized pack from now until the end of time, but there are some men who will pack culls in the middle of the barrel just as long as the law allows them to do so, even if they lose money by the transaction.

When two horses pull unevenly on a load, which horse carries the larger part of the burden, the one that is a little ahead or the one that is somewhat behind? The experts of the Minnesota Agricultural College have upset a common belief by proving that it is the horse that lags behind. The experiments showed that, if the load is a ton, the horse that keeps its end of the evener eight inches ahead of the other end pulls only 983 pounds, whereas the slower horse pulls 1,012 pounds.

The farmer who gets up earliest is not necessarily the one who succeeds.

WEAR FLEET FOOT SHOES

Cheaper than Leather—and far Better for Summer

SOLD BY ALL GOOD SHOE DEALERS

Worn by Every Member of the Family

It is the man who works on a well-defined plan who makes good these days.

Does your harness rust in the stable? If so, look to your ventilation.

For the very driest lands that are at all suitable for pasture, a mixture of 10 pounds of red top and four pounds of red clover to the acre is good. A mixture of 10 pounds of orchard grass and five pounds of red clover is cheaper, and perhaps next best.

The silo should be smooth on the inside, and perpendicular from top to bottom. Uneven walls prevent the silage from settling evenly, all air is not excluded and spoiled silage is certain.

* * *

To-morrow.

He was going to be all that a mortal
should be,
Tomorrow;
No one should be kinder or braver
than he
Tomorrow.
A friend who was troubled, and weary
he knew,
Who'd be glad of a lift and who needed it, too;
On him he would call and see what he
could do
Tomorrow.
Each morning he stacked up the letters he'd write
Tomorrow.

And thought of the folks he would fill
with delight
Tomorrow.
It was too bad, indeed, he was busy
to-day,
And hadn't a minute to stop on his
way;
More time I will have to give others,
he'd say,
Tomorrow.

The greatest of workers this man
would have been
Tomorrow.
The world would have known him had
he ever seen
Tomorrow.
But the fact is he died and he faded
from view,
And all that he left here when living
was through
Was a mountain of things he intended
to do
Tomorrow.

—Edward A. Guest in Detroit Free Press.

Irritable Nerves Restored and Health Regained In a Simple Way

The man or woman who is rundown, not feeling up to the mark, perhaps irritable, nervous or sleepless can well afford to learn about the wonderful results the newly discovered blood-food is giving the folks that use it.

There is wonderful power in this new blood-food, and every weak, pallid person can be quickly nourished back to health that uses it as directed.

After each meal, with a sip or two of water, you simply take two little chocolate-coated tablets, sold in all drug stores under the name of "FERROZONE."

The effect is noticeable at once. You feel happier, brighter, more contented. That old-time feeling of weariness departs — you forget your "nerves" and no longer get irritable or cross over trifling annoyances.

There is a reason for this change and that reason consists of the fact that Ferrozone contains blood-making materials you can get in no other way.

Ferrozone makes the blood tingle and sing with new vitality. This ensures lots of nourishment and strength being supplied to every part of the body.

No wonder the eyes brighten and the cheeks radiate color and happiness? With abundance of strength, a keen appetite, good digestion and plenty of sound sleep—all the result of Ferrozone—you quickly feel as if life held new charms and pleasures.

POWER FOR HYDRO.

Niagara Company's Offer Now Reported Satisfactory.

Toronto, July 21.—Mr. F. A. Gaby, Chief Engineer of the Provincial Hydro Commission, and Mr. Barton, General Manager of the Canadian Niagara Power Company, were in conference on Saturday regarding the details of the agreement by which the company will supply up to 50,000 horse-power if required by the end of the year to the Hydro Commission at $12 per horse-power. Mr. Gaby will report to the Commission at their meeting on Tuesday what transpired at the conference. Though no official information is available, it is understood that the details will be satisfactorily worked out, and that a temporary additional supply will be used by the Hydro almost right away.

According to a letter received by the Hydro Commission from Mr. Monro Grier, K. C., the Canadian Niagara Company is prepared to supply 50,000 horse-power at $12 per horse-power, the supply to be arranged as required and regulated agreeably to both parties. "In view of the emergency which has arisen," says the letter, "an immediate supply of 12,500 horse-power will be provided without prejudice to the agreement which will provide for a permanent supply."

Hon. G. Howard Ferguson, asked about a supply after the end of the present year, replied: "If we need more power we will ask for it and get it." The Minister said Sir Adam Beck had put up a good fight, and it had remained with the Government to take the measures necessary to bring about an agreement.

The human heart finds nowhere shelter but in humankind.—George Eliot.

THE POULTRY WORLD

THE RAISING OF TURKEYS.

Few turkeys develop to marketable size in less than six months. Provide them with ideal environment and it may be done. Certain phases of the weather, such as long droughts or repeated drawn-out east storms, directly hinder the young bird's growth. The earlier the eggs can be hatched after May 15 the longer the period of growth before the first holiday demand. A marked difference in size exists between turkeys whose ages vary but by two weeks, nor does the discrepancy ever seem to be overcome. Eggs should not be kept too long. Their vitality depreciates rapidly. The little turk issuing from the egg set as soon as laid is noticeably sturdy. If, in addition, the eggs are the product of hens two years old or more, the young have a double heritage of strength.

In recognition of this fact most growers set surplus turkey eggs under ordinary hens. As soon as the turkey hen shows a decided intention of keeping her nest she should be given her eggs. Incubators can be used, but one runs less risk of tampering with the vitality of the unhatched bird by entrusting it to a hen or turkey. Whence is uncovered one secret of the successful raiser—a sturdy hatching.

Why are turkeys generally considered difficult to raise? Chiefly because those who embark in the venture are hampered by their knowledge of the habits of chickens. The similarity of young fowls to turkeys is merely superficial. On vital points they differ radically. Turkeys are voracious, without a chicken's ability to assimilate great quantities. They require a certain amount of exercise as an aid to digestion yet too much running wearies them to the point of exhaustion. Little ones confined lack sufficient roughage (supplied by green food, such as clover, alfalfa, rape, etc.) with sad consequences, unless generous provision is made in each meal. Their rapid feather drains their vitality heavily. Witness the dragging wings of weak, eight-day turkeys. Already they are lagging in the race.

Ventilation is a vital necessity, but draughts on turkeys court trouble. Soured food which a chicken might eat with impunity works havoc with their digestion. In short, to rear them with a measure of success one must studiously avoid offending their habits with which by observation we may easily become acquainted. Failure with turkeys, aside from mishaps, springs from the attempt to force them to conform to an unnatural regimen.

There are diets a-plenty. The chief difficulty is in selecting a diet easily and cheaply procured, and best suited to their needs. The list is diverse and lengthy:

Meal and bran mash.
Meal and middlings mash.
Chickfeed.
Curd.
Boiled wheat.
Boiled rice.
Baked cornbread.
Rolled oats.
Bread crumbs soaked in milk.

Whatever is used in the way of a cereal, chopped green food, such as onions, garlic, (wild onions), lettuce or fennel, should predominate. This lessens danger of digestive disturbance. Hard boiled eggs is the factor common to all diets. Mashes are excellent, but require the exercise of good judgment in the quantity given. If the last particle is not eaten at night, it is apt to sour by morning, and trouble ensues. The best all round feed for young ones after the first week is a good chickfeed with chopped onion tops, hard-boiled egg and curd if available. Chickfeed cannot ferment unless it becomes wet. Black pepper is a good stimulant given occasionally to counteract any tendency to diarrhoea.

Every farm presents its own problem as to the proper place for the turkey coop. A well-drained spot in a wheat field or pasture is ideal. The growing wheat affords a rich pasturage for the young turkeys. They may even hide there from the wily hawk. When it is cut the scattered grain reinforces their diet. At all times it shelters a plentiful supply of insect food. Best of all, the ground is newly turned and less apt to harbor disease germs.

If the farm woman must count her footsteps she may set her coops near at hand on ground lately plowed, yet separate from chickens. A small patch of rape may be planted where the little ones may run. They are particularly fond of this, which will supply a portion of their green food.

Nothing affects turkey health more subtly or fatally than parasites. When the little ones droop or sicken without visible cause, search for vermin. Be satisfied only with closest scrutiny. After some years of experience with turkeys, I find that these are responsible for my greatest losses. Where they come from is the enigma. From bad associations, from neighboring fowls, from birds or from sparrows who steal their food—some way, despite care, they often become infested. Eternal vigilance is the watchword. For those that infest the head, anointing with one-half cupful salt grease mixed with one teaspoonful kerosene is excellent. For others a plentiful use of insect powder is sufficient. If turkeys are allowed long to be infested they rapidly deteriorate. Some die lingeringly, as if it were from some wasting disease, and are dosed, poor things, accordingly, when their dire need is insect powder.

Health disdains medicine. So with turkeys, avoid dosing till a disease appears. Always isolate the sickly. Seldom it is excusable even to disinfect their drinking water unless disease is present. Continued use of such is detrimental to thriftiness. Even the old custom of cramming a peppercorn down the throat of the newly hatched turkey, while apparently harmless, is better discarded. Dosing turkeys except with the simpler remedies is at best an unsatisfactory performance for the unscientific raised. One should aim to have their surroundings present no temptations to partake of anything but what is good for them. Especially is thus true with regard to their drinking water. Turkeys manifest a fondness for drinking out of mudholes. Such a habit once formed is cured with difficulty.

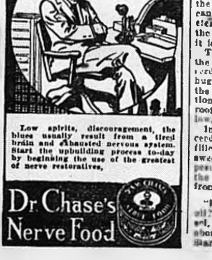
One of the contributions toward turkey health is an airy coop. Various types are in use, each with its recommendation. Those with wire fronts are admirable. Other models have ventilators at the top. The best coops have no floors and are moved frequently. In locations where drainage is not of the best or the ground is uneven earth may be shovelled against the sides. This prevents water running underneath during flooding rains. Whatever its style, the coop should have two specifications: Ample ventilation and room for the growing birds.

In reviewing these requirements for the successful rearing of a flock I note one omission, namely, patience on the part of the raiser. In all one's associations with one's flock one should be gentle and tolerant. The turkeys will repay with full confidence. Violence and roughness estrange them and sometimes account for a loss estimated in dollars and cents.

With reasonable respect for a turkey's taste in food and habits the discouraged raiser should be able to revise his opinion. If nothing, as we are told, succeeds like success, what speaks more forcibly than a flock of handsome turkeys?—M. L. Longfield, in N. Y. Sun.

ROYAL YEAST

MAKES PERFECT BREAD



Low spirits, discouragement, the blues usually result from a tired brain and exhausted nervous system. Start the upbuilding process to-day by beginning the use of the greatest of nerve restoratives,

Dr. Chase's Nerve Food

RAILWAY MEN AT THE FRONT

Of the twenty clerks in the C. P. R. offices in Calgary, 16 enlisted when the war broke out. Some of them have got promotion; some have been wounded; but the spirit they displayed has been noticed in the western press. Indeed, the railway men of the country have done nobly in responding to the call. In England over 200,000 railway men are at the front; in Canada, possibly 6,000 in all have gone forward—a splendid record considering our railways and general population. The result of such depletion is found in the greater number of female clerks employed in the Dominion. We do not see, as they see without surprise in the Mother Land, thousands of women doing the outside work on the railways—dressed in overalls, many of them, cleaning engines, cleaning stations, acting as porters and wheeling barrows, acting as ticket agents and telegraph operators. We will hardly come to that but the value of women in the clerical domain has gone up very appreciably indeed. It is urged in England that the women wear men's attire for greater convenience in many of the avocations they pursue. Many have not waited for the discussion in the press anent the matter, but have voluntarily parted with external femininity. The situation is not so acute with us, but the call, in all clerical departments is for female clerks.

Tavern Heroes.

The Marquis of Granby bears a title that swings from many a tavern sign-board all England over. London alone has some half a dozen. Yet this popular soldier who commanded England's troops in Germany during the Seven Years' War, was the target of some of "Junius'" most bitter invective. The secret of his popularity lay in the fact that Granby was always a soldiers' general who not only led them well in the fight, but also cared for their comfort in the camp. The first inn to bear the marquis' head as a sign is said to have been opened by one of his own guardsmen at Hounslow. Apart from Wellington and Nelson, the marquis comes easily first among England's tavern heroes.—London Chronicle.

THE GARDEN OF EDEN.

It is Said to Have the Most Trying Climate in the World.

The chief peculiarity about Kurna is that the natives believe the place where they live is the exact site of the garden of Eden.

The climate of Kurna is acknowledged to be the most trying in all the world. The heat is terrific in the summer time. It is claimed that the British government has a record of 169 degrees in the shade upon the bridge of a boat anchored in the river at Busreh, a little to the south.

The missionaries at Busreh tell of nights when the thermometer registers not less than 125 degrees. British sailors bound for the Persian gulf in the summer time usually desert if they can. Perhaps in Arizona the thermometer rises nearly as high, but there is the dry air, while in the Persian gulf it is exceedingly moist.

The Europeans at Busreh must pass the days in underground chambers, or serdaubs, while a native boy pulls a huge fan, or punkah, suspended from the ceiling to keep the air in circulation. The nights are spent on the roof, for it is impossible to sleep below.

In the winter time the air seems exceedingly cold, for the marshes are filled with salt, and as the wind sweeps over the plain the moist air is peculiarly penetrating. Frequently the Arab, benumbed by the cold, falls from his horse.

"Is your boy Josh burning midnight oil?" "No," replied Farmer Corntossel, "but he keeps the gasoline goin' about 18 hours a day."—Washington Star.

BASQUES OF THE PYRENEES.

Those On the Spanish Slopes Are the Pure Aborigines of Europe.

You are in the habit of thinking of the inhabitants of France as "French" and the inhabitants of Spain as "Spanish." Did you happen to read a learned disquisition on the shape of the skulls of people living on the two slopes of the Pyrenees, together with the announcement that, contrary to the belief of scientists, the Basques are not all of the same origin? And then did you ask, "Who are the Basques?" Primarily they are the people who gave to the rest of the world a curious kind of garment for women, but they are far more interesting to the student of anthropology and the historical development of language than they are to the designers of women's clothes.

There was a time before the present generation of scientists got work on the problem when the Basques, both in Spain and in France, were recognized as the last remnant of the original occupants of Europe, the people who were driven into this backwater of civilization by the onrush of the Celts. The Celts were in their turn driven westward and into such out of the way corners as they could hold, so that they are now represented by certain strains in Spain, by the Bretons in France, the Irish, Scotch, Welsh, Cornish and Manx in the British Isles and by a substratum of the Bohemians and the Galicians. Those who preceded them and who managed to cling to the mountain strongholds of the Pyrenees are remotely related to the Finns in another remote backwater. The ones on the Spanish slopes are the pure aborigines of Europe.

DRUGGISTS FLOURISH.

How the Business is Run in the South American Republics.

Latin Americans are great believers in medicines and, due to the scarcity of physicians, are obliged to "doctor" themselves. Pharmacy is consequently profitable. With the exception of modern Europe, Canada and the United States pharmacy is practiced in other lands of the world much as it was in the United States seventy-five or a hundred years ago, and this is particularly true of the republics to the south of us.

The individual druggist makes his own pills, extracts, tinctures, infusions and pulverizes his own crude drugs. Soda water fountains are few. The usual rubber goods, toilet articles, soaps, perfumes, instruments and sundries are carried.

Each druggist makes a line of his own specialties which he pushes. In addition to the standard drugs and medicines, he also carries remedies and medicaments known only in his immediate vicinity. They are mostly of Indian origin, compounded from roots, herbs or other ingredients, produced only in the country where he lives. These find a ready sale among all classes.

Superstitious ideas are prevalent, and there are frequently taken advantage of by the unscrupulous. One pharmacist made a fortune selling Indians, half casts, and whites, for that matter, too, "pink love powders" and "white love powders." The white love powder was pulverized sugar, while the pink love powder was made of the same material colored. Indians would walk hundreds of miles to buy this precious powder.

IF SUBJECT TO COLDS HERE IS GOOD ADVICE

Don't load your stomachs with cough syrups. Send healing medication through the nostrils—send it into the passages that are subject to colds and catarrh. Easy to do this with Catarrhozone, which cures a cold in ten minutes. Even to the lungs goes the healing vapor of Catarrhozone—all through the bronchial tubes, nostrils and air passages—everywhere a trace of disease remains will Catarrhozone follow. You'll not have colds, nor will you suffer from sniffles, bronchitis or throat trouble if Catarrhozone is used. Get it to-day, but beware of dangerous substitutes meant to deceive you for genuine Catarrhozone. Large size, two months' treatment, costs $1; small size, 50c; sample size, 25c.

The Difference.

Case and Comment says that at a recent meeting in Hampton one of the speakers told of a colored witness who was rebuked by the judge for the constant repetition of the phrase, "also, and likewise." "Now, judge," replied the witness, "there's a difference between those words. I'se gwine to splain. Yo' father was an attu'ny and a great one, wasn't he?" The judge assented, somewhat placated. "Well, judge, yo's an attu'ny also, but not likewise. See, judge?"

THIS PLANT IS A THIEF.

Dodder Steals All the Digested Food of Its Clover Neighbors.

Possibly he's too lazy to feed himself or it may be that he came from a family of criminals and can't overcome his heredity. At any rate he's a robber, a thief and a plunderer. None of these names is too severe, and if you doubt it ask the farmer who knows him for the damage he does every year to the clover and alfalfa crops. The plant is the dodder.

Perhaps we can forgive the dodder for not preparing for his own food, for he has nothing to prepare it with. Nearly all plants have chlorophyll, the substance which makes plants green and digests the food which they take from the ground and the air. The dodder has no chlorophyll.

So it has to turn robber to live. After the seed springs from the ground the dodder vine reaches out until it touches some other plant, clover, for example. It attaches itself to the clover stem by its tiny rootlets and begins to eat the food which the clover has taken and digested.

After awhile the root withers and dies, and the vine keeps reaching out for more victims, binding them together with its tiny threads. You probably have seen the small, pale, bell-shaped flowers climbing over a field of clover.

Once dodder gets a hold in a clover field the farmer's only escape is to cut clover and dodder alike and burn the crop. And the farmer believes this death none to horrible for the little robber vine.

Lumbago's Misery Ceases, Every Aching Muscle Cured

JUST RUB ON OLD-TIME "NERVILINE."

Not necessary to drug inside!

That awful stiffness that makes you yelp worse than a kicked dog will be cured—cured for a certainty, and quickly, too, if you just rub on Nerviline.

Rub Nerviline right into the sore spot, rub lots of it over those tortured muscles, do this and the pain will go. You see Nerviline is thin, not oily. Therefore it sinks in, it penetrates through the tissues, it gets right to those stiff, sore muscles and irritated nerves that make you dance with pain.

You'll get almost instant relief from muscle soreness, stiffness, aching joints, lameness or rheumatism by rubbing with Nerviline. It's a soothing liniment, and doesn't blister, doesn't burn or even stain the skin.

It's the most harmless cure in the world for Lumbago, Back Strain or Sciatica. It takes away the ache at once and ends your misery quickly.

Now quit complaining—don't suffer another day — Nerviline, that good, soothing old-time liniment will limber you up mighty quick. Get busy to-day, the large 50c family size bottle is the most economical, of course, the trial size costs but 25c. Any dealer anywhere can supply Nerviline.

John Travers Cornwall.

Bare your heads, men! The soul of John Travers Cornwall is passing.

Dip your colors, king and kaiser, czar and sultan, emperor and president. It is John Travers Cornwall's hour, not yours.

You men in the trenches—Saxon, Teuton, Celt, Serb, Cossack—if your guns must speak, let them speak tribute to him—a child—who looked Death square in the face and died for Duty.

You men in a million harvest fields —stay your sickles and give heed!

You men at the wheels and forge—pause and listen!

You khaki-clad boys who have answered the call to your colors—halt and hearken!

From somewhere out of the void John Travers Cornwall, dead, is calling a message that none should lose

Stand at attention, men, women and children of the wide world! Face the flag of humanity and thank your God —for John Travers Cornwall living and for John Travers Cornwall dead; for John Travers Cornwall, aged 16, soldier, patriot, martyr to duty.

"The fortitude of the wounded was admirable," wrote Vice-Admiral David Beatty, in his report of the behavior of the British naval forces in battle with the Germans in the North Sea. "A boy of the first class, John Travers Cornwall, of the Chester, was mortally wounded early in the action. He nevertheless remained standing alone at a most exposed post, quietly awaiting orders until the end of the action, with the gun's crew dead or wounded all around him. His age was under 16½ years. I regret that he has since died. I recommend his case for special recognition, in justice to his memory, and acknowledgement of the high example set by him."—Minneapolis Tribune.

DEATHWATCH BEETLES.

Their Uncanny Ticking and Their Trick of Playing Dead.

You've probably heard the deathwatch beetle oftener than you've seen him. He hides away in furniture or interior wood-work and keeps up a continual "tick-tick-tick" like a watch. Day or night you'll hear him pounding away. He's eternally persistent about it and ghostlike and uncanny, hence his name.

He makes the little ticking noise with his head, pounding it on the wood. It's the way he has of calling his mate, and his mate answers him in turn. If you pound on the wood where he is hiding he'll answer you just like he does his mate.

You may wonder how he finds his way inside a piece of furniture. He gets there when he's in the grub or larva state, boring his way through wood, paper, or anything the grub can eat. The larva which eats its way through the leaves of a book is a cousin.

The deathwatch beetle has another trick besides that one of calling his mate by pounding his head on wood. When you touch one of the little creatures he folds his legs up beneath his body and makes believe he is dead. He will keep on playing possum even if you put him close enough to a fire to roast him.—Philadelphia North American.

Corns Drop Out INSTANT RELIEF

Paint on Putnam's Corn Extractor to-night, and corns feel better in the morning. Magical, the way "Putnam's" eases the pain, destroys the roots, kills a corn for all time. No pain. Cure guaranteed. Get a 25c bottle of "Putnam's" Extractor to-day.

His Little Lot.

There were some interesting episodes in the life of Sir Charles Euan-Smith. Once in the market place of an Afghanistan town he was fired at by a native. He lodged a complaint with the ameer, who appeared to take no notice of the incident, merely remarking "That's all right." Sir Charles complained again and met with the same reply. He still thought that the ameer was treating a serious matter with less consideration than it deserved, but thought it advisable to say no more on the subject. About a week afterward he was invited by the ameer to ride with him. They rode for some distance outside the town, and they passed gibbet after gibbet. At length Sir Charles said: "Your Highness has been busy of late." "Oh, no," replied the ameer; "they are your little lot. He had seized all the members of the would-be assassin's family and hanged every one of them.

NO—BADLY PREJUDICED.

(London Free Press)

The Detroit Free Press, reviewing the war, says: "Finally, England's navy apparently was defeated by the German high seas fleet in the battle of Horn Reef, Jutland." Which shows our contemporary to be an exceptionally badly informed newspaper.

LONDON SCARES

Men, it has been well said, think in herds. It will be seen that they go mad in herds, for innumerable instances can be given of a whole people suddenly taking off the trammels of reason and running wild under the delusion of some impending calamity.

A panic terror of the end of the world spread over London in 1736 by the prophecy of the famous Whiston, who predicted that the world would be destroyed on Oct. 13 in that year. Crowds of people went out on the appointed day to Islington, Highgate, Hampstead and the intervening fields to witness the destruction of London, which was to be the "beginning of the end."

Again in the year 1761 the citizens of London were plunged into excitement by two earthquake shocks, and the prophecy of a third, which was to destroy them altogether. The first of these shocks was on Feb. 8. Public notice was directed to the fact that there was exactly a month's interval between the two shocks, and a crack brained fellow named Bell was so impressed with the idea that there would be a third in the forthcoming month that he completely lost his senses and ran about the streets predicting the destruction of London on April 5.

As the awful day approached the excitement became intense, and great numbers of credulous people resorted to all the villages within a circuit of twenty miles, there to await the doom of London. Hampstead and Harrow were crowded with panic-stricken fugitives, who paid exorbitant prices for accommodation in these secure retreats. Such as could not afford to pay for lodgings at these places encamped in the surrounding fields.

As is usual in panics, the fear became contagious, and hundreds who had laughed at the prediction a week before packed up their goods and chattels when they saw others doing so and hastened away. The river was thought to be a place of great security, and accordingly all the available merchant vessels and barges were packed with people, who passed the night between the 4th and 5th on board, expecting every moment to see St. Paul's totter and the towers of Westminster Abbey rock and fall amid a cloud of dust. But on the following day the greater part of the fugitives returned, convinced that the prophecy was a false one. A few months afterward Bell was confined in a lunatic asylum, where he died.

Great consternation was caused in London in 1524 by a prediction that on the 1st day of February the waters of the Thames would overflow the whole city of London and wash away 10,000 houses. The prophecy was implicitly believed, and many families packed up their goods and removed into Kent and Essex. As the time drew near the numbers of these immigrants increased. In January droves of workmen might be seen, followed by their wives and children, trudging on foot to the villages within fifteen or twenty miles to await the catastrophe. People of a higher class were also to be seen in vehicles bound on a similar errand.

By the middle of January at least 20,000 persons had quitted the doomed city, leaving nothing but the bare walls of their homes to be swept away by the impending floods. Many of the wealthier class took up their abode on the heights of Hampstead, Highgate and Blackheath, and some erected tents as far away as Waltham abbey on the north and Croydon on the south of the Thames.

On the fateful morning the wondering crowds were astir at an early hour to watch the rising of the waters. It was predicted that the inundation would be gradual, not sudden, so that they expected to have plenty of time to escape as soon as they saw the waters rise beyond the usual mark.

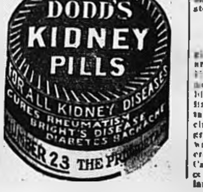
The day grew older, and the Thames flew on quietly as of yore. The tide ebbed at its usual hour, flowed to its usual height and then ebbed again, just as if twenty astrologers had not pledged their word to the contrary.

Blank were their faces as evening approached, and as blank grew the faces of the citizens to think that they had made such fools of themselves. Night set in, and the obstinate river would not lift its waters to sweep away even one home out of the 10,000. Still, however, the people were afraid to go to sleep. Many hundreds remained up till dawn of the next day, lest the deluge should come upon them like a thief in the night.

On the morrow it was seriously discussed whether it would not be advisable to duck the false prophets in the river. Luckily for them they thought of an expedient which allayed the popular fury. They asserted that by an error they had fixed the date of this awful inundation a century too early. The present generation of cockneys were safe and London would be washed away, not in 1524, but in 1624.—London Family Herald.

Postman in Faroff Days.

Postmen have a very respectable antiquity. They were known, the Sunday at Home points out, in the far-off days of King Hezekiah's reign, some 700 years before Christ. In the thirtieth chapter of the second book of Chronicles we read that "the posts went with the letters throughout all Israel and Judah," and, further, that "the posts passed from city to city through the country of Ephraim and Manasseh." The postman of old was a swift runner, who received the letter from the sender's hand and carried it direct to the person to whom it was addressed.



WIT AND HUMOR

LITERAL DESCRIPTION.

(Baltimore American)

"Were you interested in that discussion of tramp life?"

"No; it was a bum argument."

HIS PREFERENCE.

(Punch Bowl)

Young Lady (with hopes)—What do you think is the fashionable color for a bride?

Male Floor Walker—Tastes differ, but I should prefer a white one!

BETWEEN GIRLS.

(Kansas City Journal)

"She says she wishes she could see herself as others see her."

"That's just an excuse for spending a lot of time in front of a mirror."

THE RETORT COURTEOUS

(Baltimore America)

Mrs. Uppish—I can assure you there is a great deal hanging on my family tree.

Miss Pert—Some ancestors, for instance?

WORTH IT.

(Puck)

Husband—Forty dollars a month for a cook! Isn't that a good deal?

Wife—Yes, but dear, she says she can cook.

HEIGHT.

(Washington Star)

"Is that young woman dressed in the height of fashion?"

"Judging from the distance between ankle and skirts, she must be."

UNFORTUNATELY WORDED.

(New York Times)

Artist (pointing to his very successful picture, "A Donkey")—What do you really think of it, anyway?

Enthusiastic Lady—Lovely! And you have put so much of yourself into it, too.

THE MORAL.

(Baltimore American)

"I had too much time on my hands when I was arrested, lady."

"That proves, my poor man, how laziness is at the root of all crime. But could you find nothing useful to do? How came you to have so much time on your hands?"

"I was taking watches out of a jeweler's case when the cop nabbed me."

ITS SORT.

(Baltimore American)

"Did you see where in the storm the other night the jail was struck?"

"Well, what better place for a lightning bolt?"

ICI ON PARLE——!

(London Sketch)

First Tommy—'Ere, mister, this 'am is 'igh Comprennyvoo—'igh 'am!

Second Tommy—Let me do it, 'Erbert; I know the lingo. 'Ere, garsong: ja [illegible]

NATURAL HISTORY.

(Washington Star)

"How do you keep moths out of clothing?" asked the girl with a needle and thread.

"Why," replied the girl with a story book, "I didn't know they were any."

THE SERGEANT'S GUESS.

(London Opinion)

"There will be ladies coming as well, sergeant; how many do you think we can seat?"

"Four hundred, sir, easy—sitting familiar!"

THRIFTY SANDY.

(Tit-Bits)

Scot (at the baths)—What's the price of a bath?

Attendant—One shilling.

Scot—Hech, mon, that's a lot. Can ye no say sixpence and put in less water?

HIS PROPER SPHERE.

(Baltimore American)

"What will they do with that eldest son of theirs? I heard his father say he had neither judgment nor foresight."

"Then why don't they make him a weather sharp?"

A BIT SLOW.

(Ladies' Home Journal)

"How are the incubators getting along?" asked a friend of his neighbor who had recently bought some.

"Why, all right, I suppose; but although I have had them for two weeks now, not one of the four has laid an egg yet."

TRIVIAL WORRIES.

(Kansas City Journal)

"What's the matter with you?"

"My business has slumped."

"Huh! You look so gloomy I thought it might have been the home team."

DANGER FOR SOMEONE.

(Punch)

First Stoker (weary)—I'd like to find the merchant 'oo invented boilers.

Second Stoker (also weary)—Boilers be blowed! I'm looking for the blighter 'oo found out that coal would burn.

GETTING TURNED DOWN.

(Baltimore American)

"I am going to marry a rich woman."

"Congratulations, my boy. Who is she?"

"I am trying to find that out myself by process of elimination."

GONE.

(Buffalo News)

He—You used to say there was something about me you liked.

She—Yes; but you've spent it all now.

PREPARED.

(Detroit Free Press)

"Preparedness is a fad with her."

"That so?"

"Yes; she even sets the breakfast table the night before."

TRUE TO LIFE

(New York World)

"Did you read Scribler's novel of suburban life?"

"Yes; I found it extremely realistic."

"You surprise me. I thought it was as dull as ditch water."

"Well, so is suburban life."

IN PRECARIOUS POSITION.

(Baltimore American)

"Roumania is the bravest of the nations."

"How do you make that out when it has never been in the fighting?"

"No, but it's been sitting the whole time on a barbed wire fence."

Derby's Market Stone.

In Derby, England, there is a curious relic of the great plague of 1665. It stands in the arboretum gardens and is commonly called "the market stone." To avoid infection the country folk from the surrounding villages would leave their orders for anything they might want with the watchman, who used to go into the town, make the necessary purchases and deposit them on "the market stone."

The Word Calico.

The word "calico" has a queer origin. Many centuries ago the first monarch of the Province of Malabar, in Hindustan, gave to one of his chiefs as a reward for distinguished services his sword and all the land within the limit of which a cock crowing at a certain temple could be heard. From this circumstance the little town which grew up in the centre of this territory was called Calicoda, or "the cock crowing." Afterward it was called Calicut, and from this place the first cotton goods were imported into England bearing the word calico.

WALKERTON TELESCOPE

$1.50 per year in advance.

LORNE A. EEDY - PUBLISHER

Phone No. - 40

Residence - 149

WALKERTON, AUGUST 17th, 1916.

EDITORIAL COMMENT

To date Camp Borden has cost over a million dollars.

+ + +

Bruce County has a real job on its hands—to raise 700 more for overseas.

+ + +

If the weather stays just like this we shall have to find something else to grumble about.

+ + +

When it comes to owning a house to live in or an automobile, hitch your mortgage to the shanty.

+ + +

An automobile to every twenty-five people throughout the United States by January 1st is said to be the ambition of the Republic. Wonder if as many own the houses they live in?

+ + +

Some lines of printer's paper have recently doubled in price. Black printer's ink has doubled in price. Some colored inks are almost unobtainable at any figure.

+ + +

Discussing the giving back of the $750,000 profit on a munition order, by Mr. Baillie's Hamilton cartridge concern, Mr. Chas. Marcil, M. P., says: "If such profits could be made on a million cartridge order, those who take any interest in such matters can only figure out how much money has been made by some people since the war began."

+ + +

Newspaper publishers are up against a real problem. Either more revenue must be found or costs of production curtailed. The problem is as acute for the town and village weekly as for the Metropolitan daily. Just now the weekly publishers fancy an increase of subscription price from one dollar per year to one dollar and a half will meet their case. In many instances the resulting increase in revenue will not more than cover the actual rise in the publisher's personal expenditures, leaving nothing to cover the many and serious advances in paper, ink, metal and wages.—Simcoe Reformer.

THE TELESCOPE LETTER BOX

LIEUT. LES. YOUNG WRITES

Mr. A. Johnston received the following letter last week from his friend, Lieut. Les. Young:—

46th Bn. C. E. F.
Bramshott Camp,
Hants, England.
July 14th, 1916.

My dear Andy;—

Despite the fact, that the raging seas dash, splash, and ripple between us, despite the fact that this little piece of cheap note paper will have to travel some thousands of miles to deliver to you the sad message that I am alive and well; despite all these colossal difficulties my mind flies back to the little shop with the mysterious leaning sign post on Durham Street, and I am again once more there in spirit.

I have no news for you except as I have said I am well and hope you are the same. How is Cpl. Harry getting on. I suppose by this time he is Sgt. Major or something to that effect.

This week and next I am in Aldershot taking a course in musketry. You know over here we don't fight we take courses. First it was bombing, then sniping, then map-reading, machine gun, Stokes Gun until there is no doubt about having the courses with unfailing regularity, monthly.

We expect to go out in August, but I have been ordered out twice already and both times the order was cancelled and I was called back just as I was about to board the train, so now I am just sailing along taking my courses and when they say, "Go", I go or "Stay", I stay and so on. There is no use worrying let the captains, colonels, generals, etc. do the worrying. They will worry you enough.

I saw John Burke Esq. the other day, and he was a perfect picture of supreme rage. He cursed everything from Kaisers, Kings and colonels, to beer taps and tooth picks. He had just been declared unfit for overseas service. Poor old Jack, he is the best in the world. Mel. Wilson is still with the 71st Res. undergoing his share of courses. He is a good soldier. You would be surprised to see the way he can handle a squad.

The Walkerton boys are pretty much scattered, some are at the front and some with Lieut. Nisbet in the 10th Brigade French Mortar Battery. Leith Russell is with them. Ackie Dixon went to the 11th Bgd. Machine Gun Company, or the 12th I am not quite sure which and Bill Yaeck is with Brigade signallers.

I am glad the 160th made such a good record in recruiting, however I must say that they surely do not expect to send the batt. to the firing line intact, I hope they do, but it will be needed with all the rest for reinforcing the units already at the front.

Give my regards to all the boys,

Sincerely Yours,
Les Young.

VILLAGES and COUNTRYSIDE

GLAMIS

Mrs. Tuliford of Beamsville is visiting her parents here.

Mr. Peter McKinnon has returned to his home in Canora, Sask.

News reached here last week of the death of Mrs. James Barnes (nee Miss Eva Cunningham) of Gravenhurst. Death was due to a paralytic stroke. To bereaved ones, deepest sympathy is extended.

The Soldiers' picnic to Inver Huron last week was a decided success. A large crowd from here attended.

Mrs. John Gunn has returned from a trip to Michigan and the Soo.

Mrs. J. Crawford has returned to her home in Detroit, Michigan.

Miss Margaret Campbell of Harriston is holidaying at her home here.

Mrs. Dudley of Toronto was a guest of Mrs. Percy for the past two weeks.

Mrs. Geo. and Miss Janet Gilchrist of Owen Sound have been visitors at Mr. Joe. Wrightson's.

Miss. Lizzie McCormick of Detroit Mich. is holidaying under the parental roof.

Miss Lily McKinnon has resumed her duties in Brantford.

Miss Bets McKinnon has been engaged as teacher for the village school Miss Flossie McLennan for McGregor's school, 6th con. Bruce; Miss Belle Shipley for S. S. No. 11 Kincardine Twp.

Miss Kate A. McLean of Toronto is visiting at the home of her brother, Mr. D. A. McLean.

Rev. and Mrs. Watt and family of Burgoyne were visitors at the manse on Thursday.

The Womens Missionary Society met at the home of Mrs. W. H. McNally on Wednesday.

A number from here took in the garden party at Centre Bruce on Thursday evening.

Mr. and Mrs. M. E. Peacock and daughters of Meaford are spending their holidays with her parents, Mr. and Mrs. Neil C. McFarlane.

Misses M. McIntyre and Helen Oliver are camping at their cottage E. E. E. E. Inver Huron Beach.

Miss Annie Hendry of Weston is visiting relatives here.

On Monday evening last Capt. Wilfrid L. McKay was presented with the following address and presentation

To Capt. McKay:—

Our Dear Friend and Fellow Citizen:—

At this late date we are met to express to you what we had planned for another occasion, namely, at the time of the visit of your company of The 160th Bruce Battalion to our village on March 17th.

We had hoped to have had the honor of entertaining you as Lieutenant of the Battalion, and expressing our appreciation of, and good wishes, for you then, but your superior officers planned otherwise.

Miss Laura Cunningham spent a couple of weeks holiday at E. E. E. E. Cottage, Inverhuron.

This week most of our soldier boys return to London again.

Master Russell Palmer of Toronto is holidaying at Mr. Alex. Gilchrist's, 2nd Con. Bruce.

Mr. and Mrs. R. H. Maher leave this week for a visit to his mother in Ottawa.

All will be pleased to learn that Messrs Tom Patterson, and Albert Swallwell who met with serious accidents are getting along as well as can be expected. All hope to see them around soon.

An auto load of relatives from Creemore Sundayed at Mr. Neil Currie's.

All are pleased to see Mr. McFarlane able to be out again after his long illness. Hope before long he will be able to resume his duties in the shop.

Mrs. Everett Fletcher and family of the West have been visitors at Mr. George Fletcher's.

We are glad however of this opportunity, of telling you how sincerely we appreciate your action in so willingly responding to the Call of King and Country in this our nation's time of need. We recognize the great sacrifice you necessarily were compelled to make, in interrupting your studies, and postponing the entering upon your life work. So in no qualified terms we would express our esteem for you as a citizen, and a friend.

We rejoice with you in the attainment of the distinction of being appointed an officer of The 160th Bruce Battalion, and passing so successfully the examinations prescribed in that connection. Many of our citizens recall your boyhood spent in our midst and feel that you are one of us. Many of the incidents of the days gone by are thought of at this time but we refrain from indulging in reminiscences now suffice it to say, that memory brings back nothing but enhances our respect, and love for you. Some here to-day were not privileged to know you in your earlier years but by your courtesy, fairness, and faithfulness, in the discharge of your duties which were at times very trying and by your genial openhearted sociability, in your private relationships you have found a place in all our affections, and we esteem you as a true christian gentleman.

We feel confident that it is due to your untiring efforts prompted by your earnest patriotism, that D. Co. of The 160th Battalion occupies such a high and enviable position to-day. We congratulate you upon the result of your efforts in this direction and feel sure that under your leadership the Company shall yet be heard of bringing honor to you as well as to themselves.

We ask you to accept this pair of Field Glasses as a slight token of the warm affection and sincere good wishes of the citizens of your native village for you and we pray God that you may be guided and guarded throughout all the coming days of conflict and anxiety and that we may be permitted at no very far distant date to prepare a welcome for you and your company with none missing when the war is over and the dove of peace broods over all.

Signed on behalf of your friends,
the Citizens of Glamis
Mrs. (Rev) P. Reith,
Mr. Stevenson,
Lila Cunningham,
D. A C McLennan.

Mrs. Reith read the address, while Mr. McLennan made the presentation. Capt. McKay although taken entirely by surprise made a very feeling reply. After which the National Anthem was sung.

SOLWAY

Miss Lily Dietsche from Walkerton was the guest of Mrs. Wm. Norton last week.

Mr. and Mrs. Lewis returned to Toronto on Friday after spending a couple of weeks at Mr. Thos. Tulloch's.

Mr. and Mrs. Stemler Sr. accompanied by Mr. and Mrs. Scorr from Berlin autoed to the home of Mr. and Mrs. John Stemler here last Sunday.

Mrs. Doyle and son Karl, and Miss Mary O'Connor from Toronto are visiting at the home of their brother, Mr. B. O'Connor here.

Mr. and Mrs. John Craig spent a couple of days last week with friends in this vicinity.

Miss Gertrude McGarrity from Toronto accompanied by her aunt Miss Mary McGarrity is spending a couple of weeks at Mr. Pat McGarrity's.

Mr. A. McIntyre raised his new barn last Wednesday.

KINLOSS

The other day our village blacksmith shop caught fire and would soon have been beyond the eyes of the passing public. But fortunately Alex noticed it in time and after a hard fight he got the upper hand but not until part of the roof was destroyed.

Hello! Come down off your perch and tell us who stole our Red Cross Society. The people missed it very much Saturday evening.

Mr. Alfred Blanchefort received word that his brother had fallen in France while doing his bit for the Red white and blue. Alfred belonged to it also, but he was physically unfit and was discharged.

Picnics are the order of the day and some very pleasant times are spent.

Mr. Peter McDonald was busy threshing Saturday afternoon. The wheat is a splendid sample and it sure was turning out.

We don't wonder at the fish dying in Silver Lake after watching the crowd going for a bath.

Mr. Leslie Sturgeon of Bervie is at present engaged with Walter Knake.

Mrs. Frank Cole and daughter Mrs. Hildred journeyed to Wingham on Sunday.

Miss Rose Rowe and Mrs. Charlie Gibson returned to Teeswater.

Listen! Jingle Bells. Oh no! Not for a while yet.

PINKERTON

Rev. and Mrs. W. Richardson and son of Arthur, are visiting at The Manse.

The remains of the late Mrs. Dobbie, a former resident here, were interred in Douglas Hill Cemetery last week.

Messrs Harvey Garland and Adam Foreman visited at Park Head last week.

Mr. Wilmer Donnelly G. T. R. mail clerk is spending a few holidays at his home here.

The picnic which was held at Silver Lake on Monday of last week was a huge success and a large crowd spent the day in boating and swimming and the evening in dancing.

A number from here attended the Patriotic Meeting at Paisley.

Miss Alma Reid is visiting friends in Kincardine.

Miss Mary McKee of Stratford spent Sunday at her home here.

The Judging of the Standing Grain Competition in this district took place last week, first prize being won by Mr. David Pinkerton.

Mr William Desmond has purchased a new Ford car.

Mr. Beldie Irving of Paisley visited at Mrs. S. Garlands last week.

Mr. Robert Garland of the G. T. R. staff, Paisley spent Sunday at his home here.

COMPETITION - - PRIZES
THE CANADIAN LIBERAL MONTHLY

BOYS AND GIRLS (UNDER 18 YEARS OF AGE)
For the Months of
JULY AND AUGUST, 1916

For the summer months it is proposed to interest the young people, the boys and girls, by giving a generous commission on subscriptions collected for the Canadian Liberal Monthly, thus affording an opportunity to make pocket money during the summer holidays.

We offer a straight commission of 20 per cent, which amounts to 5c for every yearly subscription received at 25c a year. Subscriptions for more than one year from any one subscriber will count by the year, thus $1.00 from one subscriber for four years' subscription will count as four subscribers, and, of course, will carry the commission of 20 per cent.

PRIZES
Capital Prizes for Each Province

First Prize: $15.00 in Cash
Payable on September 1st to the boy or girl in each Province securing the largest number of yearly subscriptions to the Liberal Monthly.

Second Prize: $10.00 in Cash.
To the boy or girl in each Province securing the second largest number of subscriptions.

General Prize
In addition to the Commission of 20 per cent and the Cash Prizes, every contestant sending in 25 subscriptions will receive at once a large portrait, in colors, of The Right Honourable Sir Wilfrid Laurier, P. C., G. C. M. G., M. P.

The subscription price of the Liberal Monthly is 25c a Year

The subscription list has multiplied several times since the 1st of January, 1916. The people subscribe readily and willingly if only given a chance. Anyone who devotes a little time to the work gets dozens and scores of subscriptions from Conservatives and Independents, as well as Liberals.

Results so far have been good, but they could be much better—several times better. Our success so far is the best proof of that.

Everybody Help
For sample copies and additional subscription blanks, apply, Secretary, Central Liberal Information Office, 63 Sparks Street, Ottawa, Ont.

When sending in lists, sign full name, Post Office address and age, and write on the list that it is for "THE COMPETITION."

The modern demand—simple, comfortable and artistic wall papers—is most amply shown in our new season's offering.

New decorative treatments, dainty and pretty bedroom papers with cut out borders to match—living room and dining room papers resembling cloth so closely that you would have to touch the wall to detect the difference—[illegible] to panel the room, are all represented in the variety of colors, grades and prices.

Before decorating, consult us for new ideas in wall papers.

A booklet in color, illustrating model interiors is yours for the asking.

All the Walkerton hotels have applied for the Standard Hotel License which comes into force after Spet. 16th. Only two hotels in East Bruce, Eden Grove and Elmwood have not applied. The new license costs $1 00 a year.

Mr. Butchart, the student who is supplying the Methodist pulpit at Mildmay, preached at the Methodist Church here on Sunday, Rev. Mr. Cosens officiating at Mildmay. Mr. Butchart is a young man who gives promise of a useful career.

Mr. Edward Weldon Berry, a third year graduate of the University British Columbia, and a son of Mr. John W. Berry, a former resident of Mildmay, has been accorded the honor of being chosen as this year's Rhodes scholar from British Columbia.

CORRECTIONS TO LIST

The Walkerton Telescope,
Walkerton, Ont.

Dear Sir:—

In the list of contributors to the Patriotic and Red Cross Fund which appeared two weeks ago a contribution made by J. M. White of $25.00 had the wrong initials. There was also a mistake made in the list given you. Geo. Polley was credited with $1.50 when he really subscribed $20. We would be much obliged if you would kindly make these corrections in your next issue.

Yours truly,
H. M. LAY,
Sec.-Treas. Canadian Patriotic Fund

With the 160th

Grosvenor Camp, London

Several of the men and officers of the 160th attended the Recruiting Meeting at Paisley last Friday.

✦

Captain A. H. Veitch and Captain Foster are out on Recruiting duties.

✦

Corporal Wanless has been promoted to the rank of Sergeant. He will soon be able to take the M. G's. place.

✦

Major McNally is at Ottawa under going a course of instruction in Musketry and Machine Gun Fighting.

✦

There are over nine hundred men of the 160th out on the farms. Why not call us the Canadian Experienced Farmers' Association?

Best in Ten Years

Mr. Fred Lobsinger writes the Telescope from Bruno, Sask:—The crops, with the exception that they are a little behind, are the best seen in this locality in ten years.

✦ ✦ ✦

Wanted

At once, a reliable man of good address with some experience among farmers, to act as county representative for Bruce County—Stone & Wellington, Nurserymen, Toronto. 80-36

✦ ✦ ✦

Wanted

By 15th of Aug. or 1st of Sept. a good reliable girl with good disposition and morals to do housework on farm (no milking) one mile from town, wages $275 per year with promise of increase at end of a year if satisfactory. Apply Mrs. R. A. Anderson, Carnduff, Sask, 30—31.

✦ ✦ ✦

Field Crop Prizes

Mr. Thos. Creighton, Judge, has awarded prizes as follows in the Field Crop Competition for oats in connection with the Northern Fair:—1. W. A. Tolton, 91½ points; 2. Jas. L. Tolton, 90½; 3. E. Tolton, 86½; 4. Albert Flach, 83; 5. John Whitehead, 81; 6. W. A. Rowand, 80½; 7. John Smith 79; 8. John Michlhausen 75.

✦ ✦ ✦

Killed in Action

Word was received last week that another Walkerton boy had made made the supreme sacrifice for his country. A message came to Mrs. Frank Blatchford that her brother, Pte. Joseph Best had been killed in action in Flanders. Pte. Best was a fine stalwart specimen of manhood. For a number of years before enlisting he had made his home in the West.

✦ ✦ ✦

A School With a Reputation.

During the month of July the Management of the Central Business College of Stratford received applications for over 100 office assistants they could not supply. The Central does splendid work. It is one of Canada's best. Those interested in Business Education should write the College for free catalogue.

Seaside Excursions via C.P.R.

An exceptional Vacation Trip is offered by the Canadian Pacific Seaside Excursions. Tickets on sale, to Lower St. Lawrence, Maritime Provinces and Newfoundland Resorts.—Good going August 18th, 19th, 20th and 21st: good returning until Sept. 6th, 1916. To Maine Coast Resorts:—Good going August 25th, 26th and 27th: good returning until Sept. 11th, 1916. Very Special fares. Full information from any Canadian Pacific Ticket Agent, or W. B. Howard, District Passenger Agent Toronto.

✦ ✦ ✦

The Song of Camp Borden.

The boys at Camp Borden have composed a parady that goes with the chorus music of the favorite sheet of music "Mother." It is making a big hit and is rapidly finding place among the civilian population.

The words are as follows:

"B" is for the beans we have for
breakfast
"O" is for oat-meal we never see
"R" is for the rind that's on the
bacon
"D" is for the dust we have for tea,
"E" is for the eggs they feed to the
sergeants
"N" is for the night we had the row,
Put them altogether you have Borden
The place they're stowing soldiers
now.

✦ ✦ ✦

Pinkney—McAfee.

On Wednesday, August 2nd, Miss Mary McAfee, daughter of Mrs. Hugh McAfee of Glamis, was united in marriage at the home of Rev. and Mrs. Wm. Norris Wysham at Tupper Lake Adirondacks, to Mr. Robert F. Pinkney of Mariell, Cuba. The Adirondack Enterprise says.—The bride looked very pretty in a silk coat of old lace and carried a bouquet of pink and white sweet peas. She is a graduate of the Homeopathic Hospital in Washington, D.C. and since coming to this section of the country has been head nurse of the Infirmary at the famous Trudeau Sanatorium, where her efficiency and gentle, kindly manner endeared her to all with whom she came in contact. The groom is an Englishman, but has spent many years in Cuba, where he is superintendent of the quarantine station at Mariel, 27 miles out of Havana. Mr. and Mrs. Pinkney have gone to Old Forge to spend the rest of the summer.

"I FEEL LIKE A NEW BEING"

"FRUIT-A-TIVES" Brought The Joy Of Health After Two Years' Suffering

MADAM LAPLANTE

35 St. Rose St., Montreal. April 4th.
"For over two years I was sick and miserable. I suffered from *constant Headaches, and had Palpitation of the Heart* so badly that I feared I would die. There seemed to be a lump in my stomach and the Constipation was dreadful. I suffered from *Pain in the Back and Kidney Disease.*

I was treated by a physician for a year and a half and he did me no good at all. I tried "Fruit-a-tives" as a last resort. After using three boxes, I was *greatly improved* and twelve boxes made me well. Now I can work all day and there are no Headaches, no Palpitation, no Heart Trouble, no Constipation, no Pain or Kidney Trouble and *I feel like a new being*—and it was "Fruit-a-tives" that gave me back my health".

MADAM ARTHUR LAPLANTE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

CURRENT COMMENT

Roger Casement was not [illegible] a martyr.

Enlist for either the front or the harvest field.

We hope that the Kaiser is getting his place in the sun all right.

Gen. Haig wants no peace talk until victory is won.

Every time the Kaiser gets his sand up he projects a Zeppelin raid on Britain.

The gasoline needlessly used in Hamilton would be of great value to Gen. Haig.

Sir Edward Grey, the British Foreign Secretary, will now be known as Viscount Grey of Falloden.

Britain proposes to stop all motor travel on Sundays so as to conserve the gasoline supply. What a howl there would be if Hamilton got such an order.

New Zealand has adopted compulsory service. Borden and Bourassa stand in the way of compulsory service in Canada.

The toll of the fire in Northern Ontario grows in horror and in extent as time passes. Surely we will never have a recurrence of such a catastrophe.

Hamilton is not going to get the nickel refinery. Port Colborne has been chosen as the site of the factory. We will at least be spared breathing the fumes.

Brussels was fined $1,200,000 for cheering a cardinal. Now another fine has been imposed upon the Belgians for jeering at a bust of the Kaiser. In the settling up, these fines will all have to be paid back.

The Kaiser is worrying about "the helpless women and children of Germany." The helpless women and children of Belgium, France and Britain deserve all they are getting, we suppose.

Those who are counting on racial ties always to stand between us and Britain certainly haven't read the European war aright.—Pittsburg Gazette-Times.

That's so. President Wilson has been quite saucy to Great Britain.

From thirty to sixty per cent. of the United States guardsmen who were called out for service against Mexico have been regarded as medically unfit, and raw recruits have taken their places. Thus the National Guard has lost over half its effectiveness.

It is some years now since the collapse of the Quebec Bridge. It is now nearing completion. It has cost to date over $20,000,000 and ninety-four lives. It is the greatest engineering feat in many respects ever attempted in the world. The central span is the largest which has ever been attempted. The bridge will connect with the Transcontinental and will link up the whole country.

A Buffalo exchange says that "those German-Americans who are making such a noise over the British "invasion" of American rights in blacklisting certain firms that do business in this country should not overlook the fact that the Teutonic allies are preparing a blacklist of Swiss firms who trade with the western allies." And are also sinking ships that trade with the Allies.

Speaking of the amount coughed up by the Canadian Cartridge Co., Mr. Chas. Marcil, M. P., says: "If such profits could be made on a million cartridge order, those who take any interest in such matters can only figure out how much money has been made by some people since the war began."

"Britain Prepared," from a Kinematograph revue of the activities of His Majesty's naval and military forces, reproducing eighty-five photographs by permission of H. M. Admiralty, the War Office and Ministry of Munitions, with letter press by Archibald Hurd, author of "The Command of the Seas," Musson & Co., publishers, Toronto. A very interesting work.

According to Mr. Lloyd George, in June, 1915, the British army was so short of munitions at the front, that it could have been destroyed with ease had the Germans pushed their attack. This is in line with the Turkish statement that the British fleet could easily have forced the Dardanelles on the occasion of its first attack on the Straits.

It is strange to find, in the Canadian newspapers, plans for the maintenance of the hotels after those institutions shall have been deprived of their bars, says the Christian Science Monitor. It seems reasonable to think that the hotel business can stand alone as well in Canada as in the United States. The bar has long since ceased to be an essential to hotelkeeping on the southern side of the line, and greatly to the advantage of the hotel and of its patrons. Cheer up, gentlemen.

Atwell, an imported colt from the stable of Howard Oots, ran away with the second race after indulging blue

CROSS PURPOSES

"Are you inclined to have a look around the place?" he inquired, in a meek voice, when Mrs. Austin seemed to have finished the Times. He waited for her answer with some anxiety. Suppose she should have changed her mind, or forgotten all about it! Experience, it is true, had taught him that women were flatteringly compliant when they had to deal with the young owner of Culverdale Manor. Frank's propositions were invariably applauded by his feminine listeners, and he knew very well that if he were to suggest to any girl in the neighborhood that they should ascend Mount Everest together, she would say it was a delightful idea, and would take his arm to start off that moment. Frank had never found women capricious. Though he was as ready as any other man to say *Souvent femme varie*, in point of fact, in his little flirtations, it was always Mr. Francis Leicester who changed very quickly, and the girl who showed an unnecessary and sometimes reproachful constancy. According to experience, Frank should have had no misgivings when he reminded Mrs. Austin of her promise. But he instinctively felt that his experience was not likely to be of much service to him on this occasion. "You said you should like it—there isn't much to show you, but will you come?" he asked with simple directness.

Mrs. Austin looked up a little absently. Their talk of the evening before had not made a deep impression on her, and she had almost made up her mind to spend the morning in writing letters. When Frank spoke, she had just reckoned up the most tiresome of her correspondents, and had decided that she might hope to possess an easy conscience by luncheon time. But as she met his eyes she remembered his anxiety to amuse her, and checked the answer which was on his lips. He was a nice, hospitable boy, this son of Fanny Leicester's, and if he wanted to do the honors of his house he should have his way. Her letters could wait, and she would see Frank's old china in the morning and his little ruin in the afternoon.

"Will I come?" she repeated. "Of course I will come. I shall be delighted." And she rose instantly, with a sweet readiness which filled Frank's soul with a tumult of delight.

It was speedily obvious that the young man knew very little about the things he had undertaken to show. He was vaguely proud of his heirlooms because they were heirlooms. It pleased him to think that he inherited as a matter of course what other people were so anxious to buy. His old oak had been carved for the Manor-house; his old cups and dishes had belonged to generations of dead and gone Leicesters. That was enough for him. He remembered the names of a few of the portraits, and in one or two notable cases could even tell the artist, but his remarks, as a rule, were not instructive. "Oh, I recollect that one," he would say, with a glance of recognition, "used to hang in the little room out of the gallery upstairs"; or it might be, "Do you see that queer old fellow up there? I remember I was awfully afraid of him when I was a little chap; I thought he walked." Sometimes he confined himself to a simple expression of opinion. "That's a comical get up—doesn't she look as if she'd got a duster and a feather on her head? Do you suppose that a cap, now, or a hat?" But curiously enough, his ignorance did not affect Mrs. Austin unpleasantly. She did not feel as if Frank were an outsider, but rather as if the connection between him and the people on the walls was close enough to justify a disregard of mere book-knowledge about them. She could have learned more names and dates in a couple of days than Frank had acquired in his life, but he claimed kindred with the portraits in the very look and attitude with which he confronted them. There was a young squire of more than a century earlier who might have been his brother. Mrs. Austin called his attention to the likeness, and Frank, with his handsome head thrown back, stood gazing at him in a glow of suddenly-awakened friendliness. "I wonder who he was!" she said. "Suppose he turned out to be a namesake of yours?"

"I'm sure I don't know," the young fellow answered. "Is he really like me?" And, without waiting for a reply, he went on, "I'm idiotically ignorant."

"Don't call yourself names," said Mrs. Austin. "You certainly are ignorant, and it is very disgraceful, but I rather like it. People who know too much won't let one make any discoveries or imagine anything on one's own account. Now you leave me quite free in that respect."

Frank smiled rather ruefully. "If that is all you want, I am perfect."

They went up-stairs, and there he had rather an easier part to play, as she could appreciate what she saw without his explanation. He was eager to fit keys into locks for her, and would readily have broken open any obstinate door which resisted his efforts. Certainly if the future was to be for Gilbert South, the present time was Frank's, and he made good use of it: for, before that journey of discovery was over, the house was peopled with beautiful memories. There was Mrs. Austin pausing at the top of the stairs, and smiling at a grotesque head which grinned from the door of an old cabinet—Mrs. Austin intent on a dingy bit of tapestry, and triumphantly discovering Rebekah at the well—Mrs. Austin laughingly putting him aside when he failed to unlock a great oak chest, and turning the key with her slim white fingers—Mrs. Austin looking out from an oriel-window across the sunlit oaks and chestnuts of the park with a tranquil far-seeing gaze. There was more to remember of this: for in the act of turning away, she stopped short, "Oh, there's some beautiful old china," she said; "I must have a look at that! Don't you care for these things, really, Mr. Leicester?"

"No, I don't know—I mean yes," said Frank. "Don't you think they are women's things?"

"Women's things? Don't be so scornful," said Mrs. Austin, with her quiet smile.

"That isn't scornful," he answered, slowly. "I meant——" He paused, and looked at her, at the brown oak paneling behind her head, at the blue and white china, at her lifted hand as she put back a cup. The sunshine, slipping through the leaves which wavered outside, brightened the picture with capricious touches of gold.

"Well—you meant? I am waiting."

"Why," said Frank, "what good are these things to me? I don't understand 'em, you know. I can read the papers and go over my bailiff's accounts just as well without two blue plates and an old teapot in front of me. But when you stand there it's different—they seem to be all right, somehow."

Mrs. Austin met his gaze with a little touch of laughter just at the corners of her mouth. "Upon my word!" she said, "I didn't know that I was in such perfect harmony with an old teapot. Well, it is something, no doubt, to be able to adorn the leisure moments of life—when the bailiff is away!" Frank would have protested, but she checked him with a quick little movement of her head. "Are you going to explain yourself? Don't: an explanation is enough to spoil the most beautiful thing that ever was said, and to make the worst worse. Besides, there is no need."

"No," he answered with a laugh, "I don't suppose there is."

Mrs. Austin ended by enjoying her morning in a very bright, simple fashion, and feeling a little as if she and Frank were a couple of children engaged in some delightful piece of mischief. Frank had certainly hampered a lock, broken a little saucer, lost one key on the floor of a dark cupboard, and mixed up the remainder in hopeless confusion. He knew there were some queer old dresses somewhere—he remembered having seen them as a boy—and in the search for them he took Mrs. Austin into all sorts of shadowy corners, and made interesting discoveries of old brooms and brushes and dusty books. On one shelf he found some toys, shabby with ill-usage and long neglect. He stood looking at these for a moment, bewildered to find that he had forgotten them so utterly and remembered them so well. He stooped to touch a little painted water-cart and then shut them all into the darkness again with a lingering smile. At last he came upon the old brocades and laces of which he was in search, and looked anxiously to see whether they would please his companion. "Are they right?" he said, "or don't you care for them?" As soon as he was satisfied on this point, he would have tossed them all over the floor for her inspection, if she had permitted it. "Look like private theatricals, don't they?" he said, when he was bidden to stand one one side.

"Oh, isn't this lovely?" she exclaimed, without heeding his question.

He considered the pale delicately-flowered silk with a puzzled face. "Lovely! Isn't it rather queer and—and—washy?" he said at last.

"Oh, that won't do at all!" Mrs. Austin replied, smiling up at him. "That isn't what we say about such things nowadays. We must educate you."

"Well," said Frank, with a flash of inspiration; "I think I should know better if I saw it on." Mrs. Austin shook it out daintily to let the light fall on it, and he looked from the silk to her face, and back again. All at once he seemed to see what she would look like in it; a tall slight figure in the quaint old gown. "Yes," he said, with sudden conviction, "I see now, it's beautiful."

"You are a promising scholar," she replied. "What were you saying about theatricals just now? But these things are too good for theatricals—too real for such little candlelight shams."

"Not a bit too good—if you would act!"

She shook her head. "Not even to wear this dress! Though that would be delightful."

"Do," said Frank "Why not? I'd get myself up like my friend downstairs—the man over the library chimneypiece, you know. Would that be right with this of yours?"

It was Mrs. Austin's turn to call up a picture, and she raised her eyes to his face. "Oh yes, I think so. We should be in the same half century at any rate, quite near enough for private theatricals."

"Oh, I say!" Frank exclaimed. "Half a century!"

"Well, I admit it would be an awkward interval in real life," said Mrs. Austin, smiling. "But I think it might do on the stage."

"Let's try it," said Frank, with his face aglow.

"No," she answered, very gently and decidedly. "Why not ask Miss Vivian?"

"Tiny!" The suggestion called him out of an enchanted world into his every-day existence, and he had to check himself lest he should say something ungracious.

"She would look charming in some of these things," said Mrs. Austin, thoughtfully.

"I dare say she would—I mean, I'm sure she would. Well, we can think of that any time."

"And do you think we can join the others any time?" his companion inquired. "I should say we had better bring our investigations to an end, and look for them. Your mother will think we are lost."

Frank attempted no remonstrance; and she laid everything back in its place with a charming dexterity, only pausing once to look at some old lace. He watched her, still with the shadow on his face which had come when that mention of Tiny's name reminded him of more than Tiny.

They went down-stairs, but could find no one. "My mother is having more than an hour's gossip to-day," said Frank. He turned to a side window and looked out. "And the others are playing lawn tennis."

Mrs. Austin provided herself with a parasol, and they went across the lawn to find the players. Tiny Vivian had enjoyed her morning very well, though she had been conscious that Frank and Mrs. Austin were a long while going round the house. She had not, however, got beyond the feeling that it was very good of Frank, and she came to meet the pair with a bright face of welcome. "Coming to play?" she said, gaily.

"All right," said Frank; and he turned to his companion. "You will, won't you?"

Mrs. Austin shook her head. "No, I can't play. No—don't offer to teach me: it's very kind of you, but I'm too old to begin now."

If he was disappointed, it was only for a moment, for in a moment he felt that he would rather not see Mrs. Austin rushing about after balls eager, excited, flushed. Tiny might of course, but not Mrs. Austin. "It isn't that!" he said, in answer to her smiling refusal. "You could learn anything you liked, but you are quite right—it would not be worth your learning." And he went away with long steps to fetch her a chair. When he came back, Gilbert South was describing something to Tiny in his soft voice, and Mrs. Austin stood a little apart, studying the old house with tranquil eyes.

Frank brought the chair, and an Indian shawl of his mother's, which he had picked up in the hall. "Will you have this on?" he said. "No! Then I'll put it over the chair. It's a very ugly chair." Frank had never been in the habit of eyeing his furniture so discontentedly.

"It's very comfortable," said Mrs. Austin, giving a touch to his arrangement of the drapery which seemed to make it exactly right. "Now I won't keep you from your game."

"Look here, Frank," said Tiny, lightly touching his arm with her little sunburnt fingers, "leave me out this time. You play with Mr. South."

"No, no, Miss Vivian, that won't do," Gilbert protested. "You've been describing Mr. Leicester as a champion player, and I'm not going to be pitted against him for you to laugh at my clumsiness."

"You're not clumsy," Tiny replied, quite simply.

"Thank you," said Mr. South, with a little bow. "But I'm a beginner, you know, and you have undertaken my education. Suppose you let me learn a little by looking on."

"Come then, Tiny," said Frank. After all, he had had his turn. It was only fair play to make way for the rival who was also his guest.

Gilbert strolled across to where Mrs. Gilbert sat, and threw himself on the grass at her feet. "Upon my word," he said, "I'm not sorry to rest a little. I've taken a good deal of exercise this morning."

Mrs. Austin smiled, and watched the game, though she did not understand it sufficiently to appreciate Frank's skill. She was interested in the two agile figures merely as a picture—a pretty picture in the autumn sunshine. Gilbert, at her feet, leaning on his elbow, seemed as if he also were watching the two figures, but in reality his eyes were fixed upon a third, a tall, slender girl, fair, graceful, swift, playing battledoor and shuttlecock in the stillness of a summer evening, close by an old red brick wall, on which peaches were trained. Above the wall a thin rank of trees rose against a clear sky. There was an arch over the garden patch, a tangle of climbing roses, delicate leaf-sprays, and clusters of loose white flowers, under which the girl would go when the game was over and the sun gone down. And beyond the buttressed wall, where the elm boughs were stirring in the cool evening air, was the great world, beginning at the ivy-grown gardengate and stretching away to unknown distances—to India, for instance, which lay waiting for a young fellow who was to do the most remarkable things. It was wonderful only to think of the sights he was to see, the strange faces, the strange skies, before he came home bronzed and bearded, to stroll once more along the grassy walks and find the clustered roses of a later year hanging white in the twilight. As he left the garden for the last time that home-coming had been almost as vivid and real as the tender pain of parting. Afterwards it faded away into a dim picture, and as such pictures are when what was to have become an actual future is put aside and marked, "It might have been." But now, while he lay on the turf, watching Tiny and Frank, it rose up before his eyes as clearly outlined as of old.

It could never be. The heads of the household were dead; the old home was broken up; the house was sold. Gilbert had a vague remembrance of having been told that a retired tradesman, who piqued himself on growing big pineapples, had taken the place and improved it immensely. However long his life might last, it could never hold that happy home-coming, as a hero, to the old garden, and the girl who was to wait for him there.

He raised himself a little, and turned to Mrs. Austin, who was leaning back against Frank's Indian shawl. "Do you remember," he said, "how we used to play battledoor and shuttlecock at West Hill?"

She looked down at his uplifted face. "Yes," she answered, in her tranquil voice, "I remember"; and after a just perceptible pause, she added, "perfectly."

That "perfectly" disconcerted him a little, and checked a sentence on his lips. As a rule, it is not a perfect but a discriminating memory which we desire to find in our friends. Gilbert asked himself whether there was a touch of ironical meaning in her words, or only a frank simplicity. "It's a very long while ago!" he said. It was a safe remark to make, and not an original one. Yet something in his accent made it sound almost like an entreaty.

Mrs. Austin smiled. "It's a very long while ago. These young people were in the nursery then, I suppose, and now their turn has come round."

"Do we only have one turn?" said Gilbert, looking down and touching the end of the shawl which trailed on the short, dry turf.

"Ah, that I can't say!" she answered, lightly. "How can I tell what Fate may have in store for you? I fancy you are younger than I am now."

"No, no!" he exclaimed. "But tell me—am I much changed?"

Her eyes rested on him in smiling scrutiny. "No," she said; "I think you have changed very little indeed."

"You are right," he said, after a pause, "I am very little changed. And you?"

"What do you think?"

South quitted his lounging attitude, and sat up. "That's a question I can't answer. You are changed, and yet I fancy you are not changed. You were only a girl, you know——"

"And now I'm an old woman!"

He winced as if the words hurt him. "Don't say that! Not even as a joke!"

"Oh, I beg your pardon!" she retorted. "I remember now I am a year and a half younger than you."

Ink stains may be removed with oxalic acid or salts of lemon. If oxalic acid solution is used, let stand some little time, then rinse in ammonia water.

USEFUL PRESERVING HINTS

Here's the Way to Succeed in Jam or Jelly Making.

1o—Use ripe — but not over-ripe fruit.

2o—Buy St. Lawrence Red Diamond Extra Granulated Sugar. It is guaranteed pure Sugar Cane Sugar, and free from foreign substances which might prevent jellies from setting and later on cause preserves to ferment.

3o—Cook well.

4o—Clean, and then by boiling at least 10 minutes, sterilize your jars perfectly before pouring in the preserves or jelly.

Success will surely follow the use of all these hints.

We advise purchasing the Red Diamond Extra Granulated in the 100 lb. bags which as a rule is the most economical way and assures absolutely correct weight.

FOR PRESERVING USE ONLY
ST. LAWRENCE
RED DIAMOND
SUGAR

Dealers can supply the Red Diamond in either fine, medium, or coarse grain, at your choice.

Many other handy refinery sealed packages to choose from.

St. Lawrence Sugar Refineries, Limited, Montreal.

READING THE HAND.

Most Murderers, it is Said, Show Their Characters in Their Palms.

A French savant contends that the murderer has a distinctive hand. His face may not be hideous, but the hands are, and are self condemnatory. Evidence on the latter characteristic is scanty and rests upon the investigations of the French criminologists, but, as to the former, it is a fact that some of the most brutal murders on record have been perpetrated by men whose countenances habitually wore a very mild expression.

Dreeming was a pleasant man to speak to until crossed, but some of the authorities who examined his hands declare his broad thumb indicated the born murderer.

The true ballheaded thumb gives to the first phalange a round, bulbous appearance. It is short, and the nail is so abbreviated as to suggest that it has been gnawed. It is imbedded in the flesh, which rises on either side and beyond it.

Dumollard, a wholesale murderer, had a hand remarkable for its thickness and length of palm in proportion to the fingers. He had a significant sign, common to most murderers—namely, almost entire absence of lines in the palm, save the three principal ones—the line of life, head and heart. These lines were very strongly defined. The line of the head—the center line extending across the palm—was violently cut by the line of life running upward from the wrist. Chiromancy interprets this to foretell a violent death. His fingers were knotty and knotted at the nail phalanges.

SUMMER COMPLAINTS KILL LITTLE ONES

At the first sign of illness during the hot weather give the little ones Baby's Own Tablets, or in a few hours he may be beyond cure. These Tablets will prevent summer complaints if given occasionally to the well child and will promptly cure these troubles if they come on suddenly. Baby's Own Tablets should always be kept in every home where there are young children. There is no other medicine as good and the mother has the guarantee of a government analyst that they are absolutely safe. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

The Game of Life.

Life becomes, as the stoics more than once tell us, like a play which is acted or a game played with counters. Viewed from the outside, these counters are valueless, but to those engaged in the game their importance is paramount. What really and ultimately matters is that the game shall be played as it should be played. God, the eternal dramatist, has cast you for some part in his drama and hands you the role. It may turn out that you are cast for a triumphant king. It may be for a slave who dies of torture. What does that matter to the good actor? He can play either part. His only business is to accept the role given him and to perform it well. * * * Success or failure is a thing he can determine without stirring a hand. It hardly interests him. What interests him is that one thing which he cannot determine—the action of your free and conscious will.—Gilbert Murray.

Minard's Liniment Cures Burns, Etc.

Construction of Big Guns.

The making of a big gun involves as much intricate work as the putting together of a locomotive or a giant crane. A twelve inch gun on board a battleship if fifty feet in length, and has an extreme range of 26 miles, and an effective range of twelve miles. There is a vast amount of intricate and delicate trained workmanship wanted in the finish of a giant cannon. For example, says a writer in the Millgate Monthly, the breech block has to undergo eighteen or twenty machinings. And all the medley of mechanism necessary to enable the ponderous mass of ordnance to move to the right or left or up or down at a touch from the naval gunners is being built up together at the same time as the work proceeds on the gun itself. For some of the smaller guns no fewer than 650 machinings are necessary before the weapons are ready for use.

Author of "Annie Laurie."

"Annie Laurie," according to the generally accepted story, was written by a soldier in Flanders to his lady-love at home. The writer was William Douglas, and Annie Laurie was one of the four daughters of Sir Robert Laurie of Maxwelton. Sad to relate, says the London Chronicle, Annie did not marry her ardent lover. Some say Douglas was killed in Flanders, but at all events Annie was led to the altar in 1709 by Alexander Fergusson, of Craigdarroch.

Giant and Dwarf Honey Bees.

In some of the East Indian islands and on the mainland of Hindustan are to be found the smallest species of honey bees in the world. These dwarf honey collectors are known to entomologists as Apis florea. Their honeycombs are no longer than a child's hand and the cells are about the size of a small pin head. This honey is excellent, as is the wax. The little creatures build the comb on the branch of a low tree, and as they have not to provide for winter they work all the year through, raising broods like themselves.

In the same land there is a species of giant bees, Apis dorsata, as large as a field cricket. These monsters of the bee world build honeycombs that are from six to seven feet in length, four or more in width, and weigh from 300 to 400 pounds each.

Minard's Liniment Cures Dandruff.

Light of the Firefly.

Probably as far back as 1733 it was known that the luminous parts of fireflies, glowworms, etc., could be dried and preserved out of contact with the air for considerable periods without losing their light giving power. In late years it has been possible to prove this permanence of the light giving power for at least eighteen months. Kastle and McDermott were able, upon opening tubes containing the luminous organs of the common firefly preserved in hydrogen or a vacuum, to obtain quite a brilliant light by simply moistening with water. The light was increased when hydrogen peroxide replaced water. However, scientists have yet to discover the firefly's secret of producing light without heat.

The man who has a great opinion of himself isn't always a good judge of human nature.

THE PILOT SNAKE.

He is a Bold Burglar, and Birds Are His Chief Victims.

Maybe you've been in the woods some day and heard a squawking and fluttering in a tree over your head. You look and see a pair of frightened birds darting this way and that about their nest on a limb. You look closer, and you see a long, black snake creeping along the limb to the nest. In a minute he will have devoured the young birds or eggs in the nest and then stretch out on the limb for his afternoon nap. The name of this robber is the pilot snake.

He's one of the boldest burglars among our snakes, and birds are his principal victims. He can climb trees, clamber over bushes and race over the ground with equal speed. He grows to be from four to six feet long, and in the woods he looks terrible, but he isn't.

He's entirely nonvenomous, and he doesn't "charm" birds, as many people believe. It may be that a bird will become so frightened at seeing one of these reptiles attacking her nest that she will become virtually helpless. But as for charm, that's all a myth. The pilot snake doesn't need to charm his prey. He's too good a climber.

Often the pilot snake is mistaken for the blacksnake. The latter has a white throat and is bluish rather than black. The young pilot snake has white spots. In addition to birds and eggs, it eats insects and even small animals. It will climb a tree and crawl into a squirrel's nest to devour the young squirrels.—Our Dumb Animals.

The Cause of Appendicitis Now Definitely Known

The commonest cause of appendicitis is constipation. Every doctor says so. When you require physic, don't use a cheap, drastic pill—get Dr. Hamilton's Pills, which are made from the private formula of one of the greatest physicians. Dr. Hamilton's Pills strengthen the stomach, regulate the bowels and prevent any tendency to appendicitis. In one day you feel the tremendous benefit of Dr. Hamilton's Pills. By purifying the blood and cleansing the system they prevent headaches, lift depression and drive away weariness. No medicine so successful as Dr. Hamilton's Pills. Sold everywhere in 25c boxes, with yellow cover; get the genuine.

Anaesthetic for the Teeth Wanted.

There is no local anaesthetic that will penetrate dentine, which forms the principal part of a tooth. That is why dentists hurt teeth so much when drilling holes in them for fillings or when grinding them down for gold crowns. Any one who will invent something that can be put on a tooth to render it insensitive for ten minutes without injuring it has a fortune awaiting him.

Cocaine and novocaine, which are used as local anaesthetics in other parts of the body, have no effect upon the teeth, as they cannot penetrate the hard tissue of which these are composed.

Minard's Liniment for sale everywhere

The Miserable Moors.

The lives lived by the Moors are without perhaps any exception the most precarious and miserable that can be imagined. The poor man is thrown into prison for sums he never possessed and can never pay, the rich to be squeezed of all he possesses, while those only can hope to escape who are members of families sufficiently powerful to arouse the fears of the local governor should he attempt extortion and not sufficiently powerful to stir up the avarice of the sultan.

Even the governors of the provinces suffer themselves as they make others suffer, for just as they squeeze the agriculturist and the peasant so are they in turn squeezed by the sultan and his viziers and should they fail by constant presents to maintain a good opinion at the court they can expect only imprisonment and often death.

"Is he conceited?" "Very. I'll bet at times he even wonders how heaven is getting along without him."—Detroit Free Press.

ISSUE NO. 33, 1916

HELP WANTED.

WANTED—GIRLS TO WORK ON knit underwear—seamers and finished stitchers preferred. We also teach learners, any girl with good knowledge of plain sewing; good wages; ideal factory conditions. Zimmerman Manufacturing Co., Ltd., Aberdeen and Garth streets, Hamilton, Ont.

WANTED — HOUSEMAIDS AND waitresses. Previous experience not necessary. Apply, "The Welland", St. Catharines, Ontario.

MISCELLANEOUS.

WANTED—GIRLS OF GOOD EDUCATION to train for nurses. Apply, Wellandra Hospital, St. Catharines, Ont.

PERSONAL.

$25.00 REWARD WILL BE PAID conditionally, where Crocia fails to prevent Appendicitis. Positive cure for Indigestion, Constipation Dyspepsia. Write for particulars and testimonials. John Galbraith, 31 Cronyn Ave., Toronto.

FOR SALE.

FOR SALE—PLANING SAW AND Chop Mill; doing good business; also motor truck, 1 1-4 ton capacity, in No. 1 condition. Apply to John McCormick, Lawrence Station, Ont.

An Old Alarm Clock.

At Schramberg, in the Black Forest, there is a respectable alarm clock that warned sleepers it was time to get up when Charles I. was King of England. This was made in 1640, and it is deemed a remarkable piece of workmanship. In form it resembles a lantern wherein is a lighted candle, the wick of which is automatically clipped every minute by a pair of scissors. The candle is slowly pushed upward by a spring, which also controls the mechanism of the clock, and at the required hour of waking an alarm is sounded, and at the same time the movable sides of the lantern fall and the room is flooded with light.

We believe MINARD'S LINIMENT is the best:

Mathias Foley, Oil City, Ont.

Joseph Snow, Norway, Me.

Charles Whooten, Mulgrave, N.S.

Rev. R. O. Armstrong, Mulgrave, N.S.

Pierre Landers, sen., Pokemouche, N.B.

A Shabby Royal Palace.

The Persian royal palace is a most unattractive place. The courts are filled with painted pictures of cast iron in a kind of operatic Romeo's costume and with boys of gilt iron offering vermillion cups to gilt eagles. The tanks are stagnant and shabby, the gardens neglected. The rooms are horrible even for one of those monuments of bad taste called royal palaces; the walls are covered with mirrors, and a decoration made of small pieces of mirror set in elaborate patterns, the effect reminding one of a wedding cake. The furniture is without exception European, of poor quality and worse taste; there is not a single one of those exquisite works of Persian art which in the collections of Europe arouse enthusiasm—not so much as a fine carpet. Neither the famous peacock throne, so long erroneously thought to be the one built for the great mogul and looted by Nadir Shah—nor any of the jewels are now exhibited. Local gossip believes them to have been broken up and sold in Europe by the present government.—"From Moscow to the Persian Gulf."

Minard's Liniment Relieves Neuralgia.

Ancient Portent Solved.

The "Woe Water" at Croydon, Surrey, otherwise known as the Bourne Flow, is for the fifth successive year running down the Caterham Valley between Whiteleafe and Purley. The history of these visitations, extending over 600 years, gives an average interval of about five years between them. In ancient days the Flow was regarded as a mysterious portent of "death or pestilence, or great battle," to quote a chronicler of 1473. The prosaic explanation is the flooding of underground water channels.

Are You For "Preparedness"? The best preparedness for man or woman is the preparedness that comes from living in harmony with law. In Summer cut out the heavy foods that tax bodily strength and vigor. **Eat Shredded Wheat Biscuit,** the food that contains all the body-buildi material in the whole whea grain in a digestible form. Fo breakfast or luncheon wit berries or other fruits.

CROSS PURPOSES

"Something makes you very grave, Mr. Leicester," she said, with a slight smile.

"I—I was thinking." And Frank fairly stammered over this brilliant reply.

"So deeply that it was a shame to interrupt you."

"No, no, not at all. In fact, I was thinking—I was afraid you would find this place very stupid—I was wondering what we could do that you would like."

"You were thinking about that?" Mrs. Austin, who had thought Frank very boyish and sulky at dinner, looked at him now with sudden interest. She was surprised and a little [illegible]ed, for there was no mistaking [illegible]k's sincerity. "But, Mr. Leices[illegible]" she said, "there is no occasion [illegible] terrible anxiety. I assure you [illegible] difficult person to amuse. [illegible] you think I was?"

"[illegible]n't think it," said Frank. "[illegible] is nothing at all, how[illegible]"

"[illegible] isn't so bad as that. There [illegible]ft walks, for instance."

"[illegible]ell, yes, there are some," [illegible]rank admitted, rather grudg[illegible] "I didn't know whether you care for walks."

"Yes, in moderation. Not what you call walking, I dare say. And drives?"

"Yes," he said; "you can drive as much as ever you like; only I don't exactly know what there is to drive to."

"You are not encouraging," said Mrs. Austin, with a little laugh.

"There is a ruin," said Frank. "Tiny and I were thinking that perhaps you would like to go to-morrow afternoon, if it is fine. But it is nothing of a place," he continued, fixing his brown eyes despondently on the floor, as if he saw the whole thing in the compass of an Indian rug.

"Ruined too much, or not ruined enough?" she inquired.

"Oh, ruined quite enough—too much if anything."

"I like a neglected ruin; I hate restorations. I am sure I shall like to see this one," said Mrs. Austin, graciously. "And what is this building, or, rather, what was it?"

"Well," Frank replied, "it's a bit of a little tower—Culverdale Castle some people call it." (He had invariably called it so himself till that evening.) "Perhaps," he added, with a fine irony, for he was growing more fluent, "it might have been the fashion to have your castles small when this one was built; or perhaps it wasn't quite full grown when it began to fall to pieces—I don't know. But Culverdale Castle—O Lord!" Frank's tone as he spoke of his little ruin conveyed contemptuous disgust, as if it were no more than a decayed tooth.

Mrs. Austin slowly turned a ring on her finger. "I don't know that I'm so very particular about the size of the [illegible]ins," she said; "some people are, I [illegible]lieve. I remember going once to see [illegible] remains of a Roman villa with [illegible]iends. I think they expected [illegible] it standing up with a knocker [illegible] the door, and they were very [illegible]isappointed; in fact, they said [illegible] a swindle. I won't say your [illegible] swindle, Mr. Leicester, espe[illegible]ter all your warnings."

"[illegible] may if you like," said Frank, [illegible]imly. "I think myself a thing [illegible]ught to be a decent size. What did you say just now—that you didn't like 'em restored?"

"No, I don't. Why? Has this been restored?"

He shook his head. "It's all right then. I only thought that if you would have liked a little more of it, I might have gone over to-morrow with a hod of mortar and a barrowload of stones and done it up for you. Only then you couldn't have driven there till Saturday."

"Thank you," said Mrs. Austin, smiling; "I think I would rather go to-morrow, and see it as it is."

"Well, only you won't expect anything, will you?"

"No, I won't. Do you always depreciate Culverdale and everything belonging to it in this fashion?"

The point blank question, asked in the quietest of tones, was not easy to answer. "I don't know; not particularly," said the disingenuous young man. "It does well enough for me, you know."

"I suspect it would do well enough them nowadays?" said Mrs. Austin, replied. "That was rather a pretty road I came by from the station this afternoon—you shall not run everything down so unmercifully." Frank colored with pleasure to hear her defending Culverdale. He felt as if she were taking his part against himself. "And, by the way," she went on, "there is one thing I want to see which you do not propose to show me, apparently."

Frank emerged from the depth of his despair. "What is that—tell me?"

"Why," said Mrs. Austin, "I want you to show me over your house. I am sure you have all manner of delightful old things stored away here. I caught sight of a lovely old cupboard at the top of the stairs, as I came down, which looked as if it ought to be a perfect mine of wealth."

"What sort of old things?" Frank inquired, anxiously. "Old china, do you mean, and pictures, and old work—do you care for them?"

"Why, yes; don't we all care for them nowadays?" said Mrs. Austin, with something which, though hardly so much as a smile, was like soft sunshine while she spoke. "I'm not conspicuously behind the age, Mr. Leicester—I'm very like other people."

"That I don't believe," muttered Frank, under his breath. It was doubtful whether his companion caught the words or not. Her eyes rested on him with a faintly inquiring expression, and he went on hurriedly. "Let me show you, then. You shall see all that there is."

"That will be very good of you. I should like it very much. I suppose you know everything in the house by heart?" said Mrs. Austin, furling and [illegible] fan, and looking up [illegible] indeed I [illegible] half [illegible]

"It doesn't sound as if you would be a very trustworthy guide."

"Oh, try me first!" he exclaimed. "Then, when you have exhausted my stock of information, you can have somebody else who knows more; and then——"

"And then?" she repeated, when he paused.

"Why," said Frank, blushing like a shy school boy, "then I think you had better teach me."

Mrs. Austin looked at him smilingly. "It would only be common gratitude, wouldn't it?" she said.

"It is a bargain, then," he urged. "But when? Candle-light isn't any good, you know. Will to-morrow morning do?"

She answered that to-morrow morning would suit her perfectly, and looked past Frank in a way that made him turn and discover Mr. Gilbert South at his elbow, smiling agreeably, and holding a piece of music. He promptly announced the nature of his errand.

"Miss Vivian has sent me to ask if you will sing this with her."

Frank hesitated; looking at the song, at Mr. South, at Tiny, who from her music-stool surveyed the scene, and waited the result of her embassy.

"Pray do," said Mrs. Austin. "Especially as I see that Miss Vivian has chosen a song which happens to be a favorite of mine."

"All right!" said Frank, and taking it from Mr. South, he went to the piano. He had had his back to Tiny during his talk, and now that he walked toward her it was with a clouded face. He had suddenly recollected that there was no occasion for him to amuse Mrs. Austin. South had been invited on purpose to do that. "I dare say she was wishing for him all the time!" thought Frank, with a bitter throb of jealousy. "Well, I don't care; I'll show her the house to-morrow. It's my house—it's all I have, and I will have that, at any rate! And he shan't come with us either; the others can take him round if they like."

"Aren't you very grateful?" said Tiny, in a whisper, looking up at him with a sunny little face, and arching her delicate brows as if to point the question. "I saw how good you were, and I knew how you must hate it."

"Your eyes are very sharp," Frank replied.

She nodded. "Oh, but it wasn't only then," she said, setting up the music before her, and flattening the page with a touch of her soft little brown hand. "I looked at you at dinner time, and I saw you didn't like her. I can always tell whether you like people or not."

"Can you? What do you think if I behave to anybody just as I do to you?"

"I shall not answer that question," said Tiny, firmly. "You seem to have forgotten that we are never to talk about anybody but people in general, and you didn't behave to her just as you do to me, so that has nothing whatever to do with it. Do you know, I think I have the best of it this evening. I said I shouldn't like her, and I don't; but he is rather nice."

"Rather nice, is he?"

"Yes," Tiny answered, "he is. Now, are you ready?"

Mrs. Austin, listening to her young friend's performance, decided that he had a pleasant voice, sadly in want of a little training. "Do you sing now?" she asked Gilbert South.

The "now" marked a remembrance that he sung of old.

"Not to-night," he answered hastily; "to-morrow, perhaps."

"Dear me! Everything seems to be for to-morrow," said Mrs. Austin, leaning back in her chair and looking down.

"I should rather have said that everything had been yesterday," South answered, in a low voice.

"To-day comes off badly either way," she rejoined, lightly, but without raising her eyes. "It generally does, I think."

He fancied there was a touch of mockery in her tone, but he could not be sure. "Do not say anything against to-day," he said; "I have looked forward to it for a long while."

"Ah, then you are sure to be disappointed!"

"Am I disappointed?" said Gilbert. "That is what I want to know." He turned quickly to the piano. "Thank you; that is a charming song." He went back to Tiny Vivian, while Mrs. Austin, softly murmuring her thanks, rose and returned to Mrs. Leicester, who roused herself from a state of drowsy contentment to entertain her.

Frank had no further opportunity that evening. Perhaps had one presented itself he would hardly have taken advantage of it. When the party separated for the night, he lingered at the door, and caught a glimpse of Mrs. Austin going up the shallow steps of polished oak, and that moment taught him that his old staircase was a fitting background for a picture. Coming back, he took up his accustomed position on the hearth-rug, so absorbed in his own thoughts that he seemed almost sullen. He was glad that Mr. South was tired, and would not stay to smoke and talk. He bade Tiny a brief good-night; he stood looking heavily at his mother as she wandered about the room, gathering up her scattered possessions.

"You don't like these people, do you?" she said.

Frank muttered something to the effect that South was well enough.

"No, but you don't like them. I didn't much suppose you would; but I thought you wouldn't mind for once. We don't often have anybody you don't like."

"All right," said Frank. "I didn't complain, did I?"

"No; and it was very nice of you to go and talk to Mildred Austin this evening. You did go and talk to her? I didn't dream it, surely? I was half asleep, I think."

"Yes; I talked to her."

"And you know it is only for poor Carrie's sake—just a fancy of mine. It won't be for long, Frank."

"No," said Frank, "I don't at all suppose it will be for long."

"Mildred was always considered very good-looking," Mrs. Leicester remarked, in a musing tone, standing still with a work-basket in her hand. "Of course she has gone off a good deal—though really not so much as one might have expected—since I first knew her. But I know she isn't your style of beauty, even if she were not elderly, as you and Tiny were saying this afternoon. Oh, you young folks!" And Mrs. Leicester ended her sentence with a good-humored chuckle of reminiscence.

There was a pause before Frank opened his lips. Since the time was just long enough to permit of making an appeal to high Heaven, it may be hoped that it was so employed. "I'm sure I never said she was my style," he answered; and added, in a lower voice, "I know very well she isn't!" And with that he turned on his heel and went away to bed.

It was evident that young Leicester might dream his new dream with little fear of discovery, unless Gilbert South should detect his secret. Mrs. Leicester and Tiny Vivian had both perceived that Frank did not like Mrs. Austin. Tiny, being keener sighted than the elder lady, might possibly reconsider the matter; but such a conviction is not lightly set aside. Life is long enough for many changes; but it is not long enough to allow of our recognising many changes in our friends. Having once settled what they must be (which is easily done, since there is but one really complicated human being in the world), it is obviously necessary that they should always be what we have determined they are. How otherwise could we go through life with any feeling of security? It would be little less intolerable than if the hills and valleys, fields and high roads around us, should shift about and journey in different directions, under a sky whose stars were playing hide-and-seek with the astronomers.

II.

If Frank had discovered Mrs. Austin's supreme loveliness and charm in the soft lights and shadows of the evening, it was appropriately reserved for Mrs. Austin to perceive that the morning was the time which best suited her young host. If Mr. South, and perhaps Mrs. Austin herself, should chance to be a little pale and languid, a little conscious of a shadowy past,

"Clouding o'er the new-born day
"With regrets of yester-morn,"

a little disinclined to recommence the monotonous journey from dawn to dusk, which after all seemed to lead to nothing very splendid, one would have said that Frank Leicester was alive and glad with all the life and gladness of the newly-wakened world. He was not in the breakfast-room when Mrs. Austin came down, but, before she had well answered Mrs. Leicester's questions about her night's rest, she heard that he had been out and about for a couple of hours. "He was here a minute or two ago," said Tiny Vivian, herself a radiant, bright-eyed, early riser; "he will be back directly. He only went into the garden." And as the words were uttered Mrs. Austin looked out, and saw Frank emerging from an opening in the tall yew-hedge which bounded the view on one side, and coming up the path, with the sunshine glistening on the short waves of his brown hair, and his dog leaping at his lifted hand. If there was a touch of something rustic about Frank, it was an unmixed charm just then, as he opened the glass door and stepped in, fresh as if he had been steeped to the heart in the air and sunshine of "the country green." He brought a breath of the sweet morning with him, telling how he had brushed through leafy ways and looked across his level meadows before his guests were ready to lift their tired heads from their pillows. He had gone to bed with a heavy heart, but he came forward now, happy and hopeful in spite of himself, and prodigiously hungry.

Breakfast over, Mrs. Leicester excused herself on the plea of orders to give to the housekeeper. "That means and hour's gossip," said Frank to a family portrait.

"It means your dinner, you ungrateful boy!" Mrs. Leicester replied, as she opened the door.

There was a brief silence after her departure. The four who remained, and whose duty it was to amuse and to be amused, seemed a little uncertain how to set about it. Tiny was the first to make an effort. A suggestive remark, aimed at Mr. South, brought him to her side where she stood at the window; a dialogue on gardens followed as naturally as possible, and in less than five minutes the pair were setting out to study the example which lay before them, basking in the yellow September sunshine. Mrs. Austin, meanwhile, was glancing over the Times, and young Leicester, as he leaned against the chimney-piece, pencilled figures on the back of an envelope, and added or subtracted in a curiously haphazard fashion. He never once looked at Mr. South and Tiny, and Tiny was apparently unconscious that Mrs. Austin and he were alive. When the couple were fairly gone, and the sound of their footsteps and voices had died away, Frank drew a long breath, glanced at his bit of paper as if he did not think much of arithmetic in general, tore it across, and stood waiting his companion's pleasure and reflecting on the advantages of early rising.

While Mrs. Austin was yet half asleep Frank and Tiny had held a consultation on the lawn, under the tulip-trees. Starting from the ascertained fact of his dislike to the strangers, it struck Tiny as very nice of him to say that he would show Mrs. Austin round the house after breakfast. But, knowing that even Frank was mortal, she was not surprised that he set a limit to his self-sacrifice. "Look here, Tiny, I can't stand both of them," he had said. "You'll have to take your friend South away somewhere. You like him best, you say—well, I don't. Besides, I expect I shall have enough of him to-morrow. Take him round the grounds, can't you?" And when Tiny hazarded a smiling reference to the story they had heard the day before, he stopped her rather abruptly. "Oh, let my mother mind her own match-making—it's no concern of ours. We've only got to keep the secret. And don't you see, Tiny, it would look rather very queer if you and I walked off and left them to themselves?" Tiny saw that. "They'll have time enough and to spare," said Frank, finally.

"So they will," she assented. "This afternoon, when you are out of the way."

"Yes," said Frank, gazing intently at a weed in the turf, "they'll have this afternoon." And so it happened that, while the afternoon was reserved for Gilbert South, Frank had the morning.

(To be continued.)

THE SAVING HABIT.

(Buffalo News)

A saving account is a saving grace. It makes for order, temperance, virtue, industry and growth. It shows that we prefer independence to charity, and believe that he is best helped who helps himself.

And, incidentally it helps the nation by creating a better social environment for the masses.

SUNDAY SCHOOL LESSON

Lesson VIII., August 20, 1916.

The Riot at Ephesus.—Acts 19. 23-41.

Commentary.—I. The cause of the riot (vs. 23-28). Toward the end of Paul's stay at Ephesus there was great excitement about the work that was being done by Paul and his fellow laborers. The conversion of many pagans in Ephesus and the surrounding regions had resulted in a decrease of gain to a certain line of business in the city. Diana was the goddess that was greatly honored by the pagans of Ephesus. They had built a magnificent temple to her and had placed in it an image that they claimed fell down from heaven. This temple was one of the seven wonders of the world. It was four hundred twenty-five feet long and two hundred twenty feet wide, and built of beautiful white marble. It had marble columns sixty feet high, and the total number of columns was one hundred and twenty-seven. Demetrius was at the head of a trade that was engaged in making models of this shrine in silver, probably in different sizes, to sell to the many worshipers of the goddess. The sales of these images fell off as a result of the conversion of large numbers of pagans, and this aroused Demetrius and his fellow tradesmen to make an attempt to stop the spread of Christianity. He urged the plea that the religion of the Ephesians and the great temple of Diana would fall into decay if Christianity did not cease to gain adherents. No doubt the money consideration was more effective than the religious side of the question in arousing the people into a frenzy.

II. The uproar in the theatre (vs. 29-34). 29. The whole city. The feeling against Christianity was wide-spread and intense. Confusion—There was general excitement. Having caught Gaius and Aristarchus—It is thought that the mob could not then find Paul, but finding two of his fellow workers, they seized them. Rushed into the Theatre—There was an immense amphitheatre in Ephesus capable of seating 30,000 or more persons. This was the ordinary place of meeting for the discussion of public questions and was also used for games and other entertainments. 30. When Paul would have entered in—The apostle was in no sense or degree cowardly, and he was eager to share any reproach that his brethren were called upon to bear and to defend the cause to which he was giving his time and strength. The disciples prevailed upon him to keep away from the mob. 31. Certain of the chief of Asia—These were citizens of influence and wealth who were elected to have charge of the religious festivals and the various games. They were to institute and maintain these games at their own expense. Were his friends—It would seem from the fact that some of these prominent officials were friends to Paul, that though presiding over the games and festivals for the satisfaction of the populace, they had no great care for Artemis or her worship.—Cam. Bib.

32. The assembly was confused—In the excitement that prevailed the people had no clear idea as to why they were thus gathered together. 33. Alexander—He was a Jew, but whether or not he was a convert to Christianity it is not clear. It would seem likely that he was not a Christian from the fact that Jews were urging him to speak. Jesus was not favored by the pagans, and the Ephesians looked upon Christians as a sect of the Jews. This Alexander may have been the one mentioned in 2 Tim. 4: 14. Knew that he was a Jew—It is probable that the people recognized him as a Jew from his features and also by his dress. All...cried out—The pagans well knew that the Jews opposed to their worship and they would not listen to him. Great is Diana of the Ephesians—This cry, continued for two hours, would prevent any address by Alexander, and at the same time would produce a prejudice against the work that Paul and his fellow-Christians were doing. This long-continued outcry reminds us of the frantic efforts of the Baal-worshippers on Mount Carmel to call down fire from heaven to consume their sacrifice.

III. The rioters quieted (vs. 35-41). The townclerk—This was an important officer of Ephesus. He not only had charge of the records, but also had authority that might be compared to that of a mayor of modern times. Had appeased the people—The "townclerk" secured the attention of the rioters and quieted them. Ye men of Ephesus—The speaker began his address in a dignified manner. Goddess Diana—She is represented as presiding over the fruitfulness of vegetable and animal life and as the nourisher of all life. "There is no need for them to about about the greatness of the Ephesian goddess. Everybody in the world is aware how devoted the city is to her worship and how glorious is her temple."—Lumby. Fell down from Jupiter—Jupiter was considered the father of all the other gods, and it was supposed that the image of Diana in the temple fell down from him. 36. Ye ought...to do nothing rashly—The "townclerk" was tactful in his remarks. Assuming as true what the Ephesians would be pleased to have true, that the worship of Diana could not be disturbed, he urged his hearers to refrain from any further disturbance. 37. Who are neither robbers of temples (R. V.)—There were rich treasures in the temple of Diana, and it was clear that neither Paul nor his fellow laborers had taken any of those things. Nor yet blasphemers—The apostles had preached Christ as the Savior of the world, and had won converts by holding up the excellence of the religion of Jesus.

38. The law is open—The official, having disposed of the plea that the temple of Diana would become deserted, showed that Demetrius and his sympathizers had a better way to have their grievances settled than by causing an uproar among the populace. There were courts of justice to which the complainants might appeal. Deputies—Roman officers called proconsuls. Let them implead one another—Let accusations be made and answers given. 39. Concerning other matters—If the case should come before the proconsul, that official was accessible; but, if it was a question to be decided by the ordinary courts, it should be brought before a regular assembly, and not referred to a mob. 40. Called in question—The uproar was without any justification and the Roman government might see fit to withdraw from the city some of the rights that had been granted to it. 41. He dismissed the assembly—The "town clerk" had authority to disperse the crowd. There were no great results from this riot. Paul and his fellow workers escaped injury. The people were assured that the worship of Diana was not endangered by the spread of Christianity, but to-day the site of the great temple cannot be positively identified.

Questions.—Who was Demetrius? What was his grievance? What are the principal points in his speech? How were the people affected? Whom did the mob seize? Who restrained Paul from going into the theatre? Why? Who was Alexander? Why was he not permitted to speak? How long did the uproar continue? Who finally claimed the people?

PRACTICAL SURVEY.

Topic.—Religious pretense.

I. To protect self-interests.

II. To overthrow Christianity.

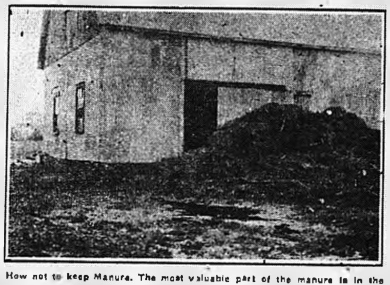
I. To protect self-interests. The revolutionary power of the gospel, encountered by the mercantile spirit, led to a public demonstration in Ephesus. Extraordinary power had accompanied Paul's preaching. Miracles were wrought. Many were converted to Christ. Idolatry was renounced. It was the preaching of the cross which was the source and secret of Paul's power. The wide spreading effects of true religion were seen in the changed habits and customs of the people. Demetrius designated Paul as the person who had not only produced a crisis in trade, but one who had endangered their religion. He aroused the town that day, not by any power of mind or heart, but simply by the explosive force of those depraved and selfish passions to which he appealed. Had the preaching of Paul been confined to a few or had it reached only the intellects and not the hearts of many in Ephesus, Demetrius would have had no cause for alarm. Paul's preaching bore testimony against him. Could Demetrius have denied or ignored its effects, he would have done so. According to his own statement there was much less demand for silver shrines as a consequence of Paul's preaching. When the Ephesians accepted Christ as their Saviour, they turned away from their former superstition. The real offense lay in the fact that the gospel had gained power and was putting down the old faith. Though the gospel contained lessons of godliness with glorious promises of immortality and revelations of the goodness and love of God, Demetrius saw in it one fatal blot which to him obliterated all its excellence. It would destroy his trade [illegible] silver shrines. Faith in Jesus Christ would be a death blow to the gains of Ephesian craftsmen.

II. To overthrow Christianity. False religion resorted to violence for protection. Idolatry was afraid of truth. The craftsmen made use of the people as blind instruments to accomplish their private designs, though the concurrence of the multitude in support of their cause was no proof of its justice. The uproar was excited by mercenary artificers. The triumphs of the gospel at Ephesus, according to Demetrius, involved a religious revolution. The conflict stood between divine truth and human error. It was a spirit of rebellion against the gospel. Pent-up passions were let loose in a popular riot. It was popular opposition to express popular opinion. However uninformed in matters of religion the town clerk was, it was plain that he was a competent man. He gave testimony to the conduct of the apostle as the promoter of a new faith. He reduced the hazards of Demetrius to their proper proportions as mere personal matters. He informed the whole multitude that disaster might be the sequel of the day's wasted uproar and undefended concourse. It was wise advice to urge the multitude to do nothing rashly. It was shrewd counsel to remind the mob of the law, the place of which they were usurping. The sudden quieting of the city was a tribute to genius of Rome for good government. The whole occurrence was improper, unfair, needless and dangerous. The town clerk at Ephesus was an example of undaunted courage, calm prudence, impartial justice and human kindness. Even in the heathen world God witnessed to Himself in Roman law and discipline. In the uproar God preserved Paul and his companions by the confusion of the people and the reasonable interference of a prudent official. The entire effort to protect heathen religion and customs by an attempt to overthrow Christianity was the means of contributing to the spread of the gospel. A church was established at Ephesus of a large number of believers. Paul might have discussed the abstract questions of religion and various questions concerning idols and idolaters without creating any antagonism and without winning any converts to Christianity. However, Paul's great concern was to show the way of salvation from sin by preaching "Christ and Him crucified," showing that the religion of Jesus contains the most sublime doctrines and teaches true devotion.

T. R. A.

USE CONCRETE AND SAVE MONEY

A Concrete Feeding Floor or Manure Pit Will Pay for Itself in a Few Years—Some Pointers on Mixing Concrete.



How not to keep Manure. The most valuable part of the manure is in the liquid portion. Notice how it is being leached away.

On almost every farm a year rarely goes by that some kind of concrete work is not done. If a silo is not being built we are laying down a floor or making a concrete cistern. Unfortunately, results in concrete construction are sometimes disappointing, so that it might be well if a few fundamental principles are explained.

Concrete is made by mixing cement, sand and stone together. The cement used must be fresh and free from moisture.

The sand must have no mould or dirt of any kind in it or the concrete will not harden properly. Most of the grains should measure from one-thirtieth to one-eighth of an inch, and if some of the grains measure one-quarter of an inch the strength of the concrete will be increased. Very fine sand should not be used.

The stone or gravel used, like the sand, must be free from loam or vegetable matter. For foundations the stones may measure from half to two and one-half inches in diameter. For walls smaller stones will have to be used.

In just what proportions the materials should be mixed will depend on the purpose for which the concrete is used. For making silos, tanks, cisterns, fence posts, well curbs, etc., one part of cement should be used to two parts of sand and four parts of stone. For floors and gutters a weaker mixture may be used, consisting of one part of cement, two and one-half parts of sand, and five parts of stone.

HOW TO MIX.

It is best to measure the materials before mixing them. When the proportions are guessed at, very often too little cement is used, with the result that the work has to be done over again in a few years.

A bag of cement contains approximately 87½ lbs. To make a 1-2-4 mixture two bags of cement will have to be mixed with 3 1-2 cubic feet of sand and 7 cubic feet of stone.

A bottomless box is convenient for measuring out the material. If it is made 2 feet by 3 1-2 feet by 11 1-2 inches, it will contain 7 cubic feet.

Before attempting to mix the material all the tools required should be on hand. These will consist of shovels (one for each man), wheelbarrows, water barrel, buckets, and wooden platform to do the mixing on.

The piles of sand and gravel should be dumped near the work so as to prevent unnecessary wheeling backwards and forwards. In mixing, the cement and sand should be mixed first, and then the stones mixed with them afterwards. No water should be added until the whole is thoroughly mixed together.

Although in many barnyards it may not be advisable to have a concrete floor it certainly is desirable in some.

When cattle are fed out in the yards during the winter, concrete yards will pay for themselves in a very short time. The floors of all stalls and mangers where the animals are fed should be of concrete. The wisdom of this is well illustrated by an experiment carried on at the Ohio Experimental Station. In this experiment, which lasted for a full winter's feeding, 29 head of cattle were fed on a hard earth floor, and 24 were fed on a concrete floor. Half of the cost of the concrete floor was saved in six months' feeding and the saving of manure was $50 more on the concrete floor than on hard earth.

It is safe to say that the average farmer in Ontario loses from $75 to $150 per year through the careless way he handles the farmyard manure. He hauls it out and dumps it in the yard and leaves it there.

The best way undoubtedly is to haul the manure out to the field as soon as it is made, but if a manure pit is used and care taken that the manure is kept well packed, little or none of its fertilizing elements will be lost.

Farmers' Bulletin No. 481 of the United States Department of Agriculture gives the following directions for making a manure pit:

"Where manure must be stored for a considerable length of time, larger pits or basins are required. Such pits are seldom made over five feet deep (in the clear at the deeper end), and are wide enough that the manure may be loaded on a spreader in the pit or drawn up a roughened concrete incline or run. The slope for such a run must not be steeper than one foot up to four feet out.

"In building such a basin as this, use a team plow and scraper to make an earthen pit in which to build a concrete basin of the dimensions shown. In laying out the earthen pit, bear in mind that the concrete walls and floors are eight inches thick, and make due allowance for the same. With a spade trim the sides and the deep end vertical.

"In order to form a pump hole from which the liquid manure can be pumped, in one corner at the deep end of the pit dig a hole eighteen inches deep by two and one-half feet in diameter. To protect the concrete floor at the upper end of the driveway excavate a trench eight inches wide and two feet deep, for a concrete foundation apron. Extend it around the corners, and slope it upward to meet the driveway incline.

"In general the framing of the forms is similar to that of shallow pits. If the earthen walls stand firm, only an inside form will be needed. Otherwise, build an outer form. For the forms, use one-inch siding on two by four inch studding, spaced two feet eight inches. These uprights need not be cut to exact lengths. Save lumber by allowing them to extend above the siding. Stiffen each section of the form by nailing a two by four inch scantling to the uprights at top and bottom of the forms.

"Erect the forms in the pit. Set them on eight-inch concrete blocks or bricks, so that the floor may be built under them. To prevent bulging, cross brace the forms with two by four inch timbers. Begin filling with concrete the same as for shallow pits, and do not stop until the job is completed.

"Lay the floor for the bottom and the incline the same as for shallow pits. To give teams a sure footing on the incline, imbed in the concrete the turned-up ends of iron cleats bent at right angles, similar to a capital U. Old wagon tires, cut in lengths not greater than twenty inches, and turned up four inches at each end, will do. Leave one inch clearance between the cleats and the concrete, and set them so as not to obstruct the wheelway. Space the cleats fourteen to sixteen inches. Roughen or corrugate the bottom crosswise every six inches, by using a five-foot length of two by four inch scantling bevelled lengthwise to the shape of a carpenter's chisel. To make the corrugations, set the timber with the bevelled face toward the incline. Strike the two by four with a heavy hammer, so as to indent the concrete to the depth of one inch."

—CANADIAN COUNTRYMAN.

HINDU FLIRTING IS RARE.

There is Little Chance for That Kind of Pastime in India.

There's less flirting per square mile in India than in any other country in the world. The glance out of the corner of the eye and the lowered lash is unknown. A Hindu woman has to dress so that it can be told whether or not she is married; it's a pretty safe bet, however, that she is. When a Hindu girl begins to edge up around fifteen without having made the leap her parents begin to spend listless, feverish nights.

By the rings in her ears and by the way she wears her hair it may be told if a Hindu woman is married and sometimes how many children she has. The best evidence that she is married is the child sitting astride her hip. When you go to lift a Hindu child its little legs automatically fly open as if you had pressed a button.

Flirting is an almost unknown pastime in India. Even the men have to let the world know if they take their wages home each week unopened. A Hindu man can't go around making innocent women believe that he hasn't a single photo on his dresser, for he has to wear a ring on his toe showing if he has ever walked down the aisle in conventional black at high noon. All a woman in India has to do to see if she is wasting her time is to glance down at the man's toes.

One naturally wonders what effect a sudden treaty of peace would have on a floating mine.—Washington Post.

SUNDAY AT HOME

OLD AND YOUNG.

Long ago, on a bright spring day,
I passed a little child at play;
And as I passed, in childish glee
She called to me, "Come and play
with me."

But my eyes were fixed on a far-off
height
I was fain to climb before the night;
So, half impatient, I answered, "Nay!
I am too old, too old to play."

Long, long after, in autumn time—
My limbs were grown too old to
climb—
I passed a child on a pleasant lea,
And I called to her "Come and play
with me!"

But her eyes were fixed on a fairy
book;
And scarce she lifted a wondering
look,
As with childish scorn she answered,
"Nay!
I am too old, too old to play."

—Francis William Burdillon.

A STRONGHOLD IN TROUBLE

Praise the Lord of hosts; for the Lord is good; for his mercy endureth for ever. God is our refuge and strength, a very present help in trouble. I will say of the Lord, He is my refuge and my fortress; my God; in Him I will trust. Who is like unto thee, O people saved by the Lord, the shield of my help, and who is the sword of thy excellency! As for God, His way is perfect; the word of the Lord is tried; he is a buckler to all them that trust in Him. For who is God, save the Lord? and who is a rock, save our God?

If any man love God, the same is known of him. The foundation of God standeth sure, having this seal, the Lord knoweth the way of the righteous; but the way of the ungodly shall perish. Thou hast found grace in my sight, and I know thee by name.

THE SABBATH.

What shall we say of a law maker who is the greatest law breaker? Who is this behind Moses, who says "Thou shalt do no manner of work," and yet he himself works night and day, all days, all nights, knows no fatigue, and is never weary. Talk of the laws of labor!

I stood by a bee-hive on a Sabbath evening and heard the music (was this vocal or vibration), like the song of the humming bird? Has anyone written out the gamut of the harmony of the hive? These bees had returned after a successful honey hunt; had they broken the Sabbath?

It is a far cry from the source of all law to the queenly dignity of the hive; but at both ends I see no law of the Sabbath. I must shorten sail and come into a harbor of limitations, and hear the words of Moses as he speaks to "men." I find here an introspective religious experience, a harp rudely strung, responding to the voice of Moses, and what do I find? Not a harsh edict, formulated with thunder and fire, but I see a magnificent mandate for the security, ennoblement, and perpetuity of the race. "The Sabbath was made for man, and man was made for the Saviour."

What right has man to formulate rules for his fellow-man to follow, to bring him into bondage? Hundreds of rules have been made by men for men and imposed with serious religious sanction. Thereby they think they glorify God. Is religion made up of mechanical, material and carnal elements?

What is the value of religious duties, and ordinances, if the heart does not follow with its splendid sanctions? How near can sacraments approach the spirit of man? Men taste bread and wine, which are carnal things. Suppose the soul stands with its empty cup in hand, waiting for its share in the ordinance; at what point can it dip its cup into the stream and take a drink and be refreshed? Can you come any nearer the spirit of man than by symbol and sound? Can man give vision and light for introspection? Can you arrange the furniture for the reception and ravishment of the awful Presence? What power or man can disturb the soul with the joy of elevated thought? "The kingdom of God is within," independent of and superior to the ministry of man. Deep calleth unto deep, and the sanctuary of the soul is the Holy of Holies, which no one may enter but the High Priest of our profession. The Sabbath is made for man, a symbol, a foretaste, a pre-vision of the home of the saints in light.

"'Midst power that knows no limit,
Where wisdom has no bound,
The beatific vision
Shall glad the saints around.

O happy, holy portion,
Refection for the blest,
True vision of true beauty,
True care of the distressed!

Strive man, to win that glory;
Toil, man, to gain that light;
Send hope before to grasp it,
Till hope be lost in sight."

H. T. Miller.

Kitchen Munitions.

"In time of peace."
"Be prepared for war."

Onions are the best nervine and beautifier known.

They are useful in colds, insomnia and even hydrophobia.

Onions and spinach are each useful in case of gravel.

Honey is wholesome, strengthening, healing, cleansing and nourishing.

Tomatoes are a powerful aperient, a remedy for dyspepsia and indigestion.

Asparagus induces perspiration, thus carrying off dangerous poisons and impurities.

Cranberries rout erysipelas, applied internally, or externally.

Fruits are excellent for purifying the blood and toning up the system generally.

Try oranges for rheumatism, lemons for feverish thirst, and coughs and colds, blackberries for diarrhoea, apples for nervous dyspepsia and other disorders.

Don't neglect to have a green vegetable for dinner every day. It may be in the form of a salad or boiled vegetable.

Watercress, ever wholesome, contains sulphur, while dandelions are excellent tonic for the liver.

In short, Mrs. Housewife, your kitchen contains munitions wherewith you may rout the various enemies which are ever warring with our bodies.

The Youngest Juliet.

Phyllis Neilson Terry was eighteen when she first played Juliet at the New Theatre, in London in September, 1911. Adelaide Neilson was in her twentieth year at least when she first played Juliet, in April, 1865, at Mrs. Thorne's Theatre, Margate. But the record as "the youngest Juliet" must be given up by both of them in favor of Mary Anderson, whose first appearance on the stage was made as Juliet when she was sixteen. That was November 25, 1875, at Barney Macaulay's Theatre, in Louisville.

Was Troubled With
CONSTIPATION
FOR OVER FIVE YEARS.

Unless one has a free action of the bowels, at least once a day, constipation is sure to ensue, then in the wake of constipation comes sick headache, bilious headaches, jaundice, piles, and many forms of liver complaint.

Milburn's Laxa-Liver Pills will regulate the flow of bile to act properly upon the bowels, thus making them active and regular, and removing the constipation and all its allied troubles.

Mr. Phil. G. Robichaud, Pokemouche, N.B., writes: "I have been troubled with constipation for over five years, and I feel it my duty to let you know that your Milburn's Laxa-Liver Pills have cured me. I only used three vials, and I can faithfully say that they have saved me from a large doctor's bill."

Milburn's Laxa-Liver Pills are 25 cents per vial, or five vials for $1.00; for sale at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

Unable To Sleep
Or Do Any Work.
SUFFERED FROM HER NERVES.

Mrs. Thomas Harris, 8 Corrigan St., Kingston, Ont., writes: "I had been a constant sufferer, for many years, with my nerves, and was unable to sleep at night, or do any work through the day. I at last decided to consult a doctor and find out what was really the trouble. The first one told me I would have to go under an operation before I would be well, but I would not consent to this. One day I took a fit of crying, and it seemed that if anyone spoke to me I would have to order them out of the house. I must have been crying two hours when my insurance agent came in. He advised me to try a box of Milburn's Heart and Nerve Pills, and I at once sent to the drug store and got two boxes, and before I had them taken I felt like a different person. I have told others about them, and they have told me they would not be without them. I am very thankful I started to take Milburn's Heart and Nerve Pills."

Milburn's Heart and Nerve Pills are 50 cents per box, or 3 boxes for $1.25, at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

NEIGHBORING VILLAGES & COUNTRYSIDE

News of the Week Collected by Staff of Live Correspondents

CARGILL

After an absence of two weeks through attending bowling tournaments and printers having a week's holidays we are once more settled down and hope to keep our readers in good humour.

Mr. Harry Richardson has taken a position on the farm of J. Hohn, Con. 6, Brant and moved there last week.

Mrs. H. J. Moffat is on a few week's visit with her parents near Guelph.

Mrs. Powers accompanied by Carl and Margaret is on a month's visit to her sister in Donnybrook N. D.

Master J. Wells of Southampton is here on a week's visit with friends.

Mrs. John Clancy was a visitor in Mildmay on Friday.

Three rinks of bowlers paid a visit to Paisley on Thursday and on the finish won 4 of the six games but were 9 points down.

Monday, Aug. 21st is Civic Holiday here when cheap rates can be obtained for all points.

Mr. Jos. Kunkle left on Wednesday for a few month's visit with friends at Powassin.

Mrs. W. D. Ostle of Toronto is visiting with Mrs. C. Kyle.

Rev. Almack, Mr. Mrs. and Miss Keeling were in Wingham on Friday.

Miss Golden of Winston is spending a few weeks with her sister Mrs. Rev. Almack at the Parsonage.

The boys of the 160th Batt. who were on harvest furlough returned to London this morning.

Mrs. Wm. Cameron left on Thursday for a few months visit with friends in Colden.

Pte. Kirvin spent the week-end with his parents in Guelph.

Mrs. John Wagner who spent the past month with her daughter Mrs. Sid Parker returned to her home in Grand Lodge, Mich. on Thursday.

Miss Nelly Clancy left on Monday for London where she has taken a position as stenographer with Silverwoods Ltd.

Editor Eedy of the Telescope Walkerton paid us a friendly call on Saturday.

Mr. Harvey and Mrs. Thos. Grice and Misses Loughleen and Pearson autoed to Galt on Saturday and spent the week-end there.

Mr. Roy Hood who for a number of years has been clerking in Keeling's store has resigned and leaves shortly for a trip to the West. Roy was always courteous and will be missed by the many customers. Edgar Massel is taking his place and Joe Clancy Jr. formerly of the bus takes Edgar's seat on the delivery wagon.

Mr. Jos. Clancy Sundayed in the Queen City.

Mr. and Mrs. Gordon Young and family of Woodstock arrived on Saturday for a two weeks' visit with relatives here.

Messrs. Tom and Joe. and Misses Margaret and Nelly Garvey of Kingsbridge were the guests of their aunt Mrs. Jos. Clancy on Sunday.

Lance-Corp. Zimmerman Sundayed with friends in Southampton.

Mr. Bert Hacking of Listowel formerly druggist here autoed through our burg on Sunday en route to Pt. Elgin.

Mr. Jno. T. Hall made a business trip to Stratford on Monday.

Mrs. Bailey and family of Paisley spent the week-end with her mother Mrs. Wm. Monahon.

Mrs. Thos. Moffat is on a week's visit with friends in Paisley.

Sergt. R. Loughleen returned to Camp Borden on Tuesday after two weeks visit with his parents.

The Women's Patriotic League made the following shipment last week—14 pairs Pyjamas 20 Hospital Night Shirts, 17 Day Shirts, 25 pr. Socks.

NARVA

Miss Jennie Killen of King St., West Eden Grove, renewed old acquaintances in the burg last Saturday. It seems like olden times to see Jennie once more.

Miss Agnes Moffat went to Riverview on Saturday to spend a couple of weeks with her sister, Mrs. S. Allan. Her sister, Miss Annie, accompanied her as far as Walkerton.

Misses Hannah and Rosa Bryce of Paisley were Sunday visitors at Mr. Wm. Alexander's.

Mr. Adam Foreman is spending a couple of days with his mother in Park Hill.

Mr. Wm. Desmond of B Street has purchased a new Ford car.

Miss Myrtle Foreman was ill for a few days last week.

A number of our Narva gentlemen took in the sports in Paisley on Friday last.

Mr. Patrick Morrison and sister, Miss Bella of Durham were Saturday visitors at Mr. W. H. Moffat's.

Mr. D. L. Bell was the guest of Mr. S. Reid on Sunday evening.

The heat in this neighborhood has become so intense that it is reported that one dumb creature, a well-known visitor in this vicinity, fell under its sway.

Mr. Robt. Keyes' handsome new house is nearing completion.

It is reported that Mr. Peter Dales had the misfortune to have his nose broken.

Mr. Elmer Moffat, Maple Ave, South took in a picnic to Silver Lake on Tuesday.

A week ago last Monday, Narva Post Office was closed but the name still lives.

HANOVER

On Wednesday, July 26th, Miss Sadie Ludella Carr of Woodford was married to Signaller Rothwell Helmbecher of Hanover, now with the 147th Batt.

A peculiar and distressing case of insanity developed in Normanby tp. this past week. Tom McGanchie, aged 23 years, son of Mr. William McGanchie, became violently insane as a result, it is supposed, of working in the fields in the hot sun. He was brought to Hanover and placed in the lock-up for safe keeping until arrangements are completed for sending him to the asylum at Hamilton.

The marriage took place quietly at the home of the bride's aunt, Mrs. William Bailey of Hanover of Miss Hannah Elizabeth McFarland to Mr. Harold James Bailey of Campbellford, on August 3rd, by Rev. Mr. Leypoldt.

The Bowling Club will hold a tournament in Hanover on Labor Day.

Hanover bowlers won the second Consolation prize at the Southampton tournament last week.

Max Lockie, son of James Lockie, of Hanover, has joined the 78th Battery at Lethbridge, Alta.

Contractor Jacob Hahn has the contract for the masonry work of the new Town Hall at Harriston.

VESTA

Rev. Father Ferguson of Ayton visited his aged father, Mr. Jos. Ferguson, recently.

Miss Florence Connolly of Toronto visited at her home here.

Miss Kate McGarrity is visiting at her home.

Ptes. Wm. McCaw, James McCaw, Clifford Campbell and Wm. McCurdy of the Vesta detachment of the 160th Batt, are home on harvest furlough.

Born to Mr. and Mrs. Frank Morar, on Monday, July 31st, a son (Francis Bruce.)

Mr. and Mrs. Jos. Rielly and Wm. McGill and Miss Martha Lemphe motored to Owen Sound.

Mrs. Thomas Desmond and Mrs. John Connor of Eden Grove sundayed recently with friends in Vesta.

According to the results of the Lower School Exam it will soon be necessary to erect a high school in this town.

Mrs. T. McCarthy of Niagara Falls, and Mrs. Tertus of St. Catharines are visiting Mr. and Mrs. Hugh Ferguson.

EDEN GROVE

The weather man provided fine cool weather, still our young ladies seem to let the wedding bells stop ringing just the same.

Mrs. Seiler Sr. and Miss Frankie Seiler were the guests of Mildmay friends over the week-end.

Never mind, [illegible] often been stung ourselves.

The Misses McCurdy enjoyed the week-end with Walkerton friends.

Mrs. O'Hagen and Mrs. McGlyn visited at the home of Mrs. Wm. Cassidy King St. West, over Sunday.

Misses Mae and Jane Reid, spent a few days with Paisley friends.

We are pleased to see one of our fair young maidens out again after suffering from a sting of a bee last week.

Mrs. Reynolds returned to London Wednesday, after enjoying a week's visit with her brother-in-law at "Sunny Station."

Miss Ella Lodgewood and Miss Olive Watson were week-end visitors with Southampton friends.

Misses Kathleen and Ruth Pye of Walkerton are the guests of the Misses O'Reilly this week.

We will soon have enough retired firemen in town to start a Hook and Ladder Company.

Mrs. James Reid left Monday for Lasburn, Sask.

Mr. Cunningham, Glamis, was a business visitor in town on Tuesday.

Miss Gertrude O'Reilly graduate nurse Guelph, is spending her vacation at her home, King St. East.

Mrs. McCall and son of Spokane, Wash. are enjoying a week's visit at the home of Mr. and Mrs. H. Pearson, corner King St. and Railroad Ave.

Miss Lily Alexander is visiting friends in Guelph and at the Southern cities.

The Bee, like some of our young men, has a preference for Tu-lips.

Mr. Wilbur Donnelly of His Majesty Mail Service, London, called on friends in town this week.

Mr. and Mrs. Roscoe and Mr. and Mrs. McKeeman motored to Elmwood and Chesley, Sunday.

Miss Mabel Subjecs, Elmwood, was the guest of her sister in town, on Friday.

Mr. Rosseau with his fine Chevrolet car which was nicely decorated for the occasion, had the honor of conveying the bridal party to the depot last Wednesday.

Mr. J. Kerry spent Tuesday in Walkerton.

Yes, Sarah Jane, it was too bad to waste so much rice but then it might be a long while before it happens again.

Mr. O'Reilly shipped a car of lambs Tuesday.

Mr. Clark representative of the Bradley Lumber Co. shipped a car of Rock Elm logs to Quebec, Monday.

Mr. Thos. Clark left for Birch Hills, Sask. on Tuesday.

Mr. John Stevenson and Mrs. E. A. Belltack returned to Toronto last week.

PINKERTON

Miss Aileen Pinkerton is visiting friends in Berlin.

Rev. and Mrs. Gale, and Miss Gladys spent a few days at Inver Huron.

Miss Alma Reid returned from Kincardine this week.

Miss Mary Garland of St. Louis is visiting friends here.

Miss Annie McMillan of Lucknow, arrived Monday on an extended visit to her cousin, Miss Nellie Knox.

Miss Adeline Reid, missionary in Kentucky, is visiting her father Mr. W. T. Reid.

A number from here intend taking in the Western Excursion this week.

GLAMIS

Miss Annie McDonald has been the guest of her cousin Miss Tena McLean.

Capt. Wilfred L. McKay of 160th Bruce Battalion, London, has been spending a few holidays here.

On Monday night, July 31st, Mrs. Chas. McKinnon passed away at her home in Glamis, at the age of 62 years. The late Mrs. McKinnon was born in Elora, her maiden name being Mary Ann McDonald. She married Charles McKinnon 43 years ago. They lived for a time in Huron Township, from there to 9th and 10th con. of Kincardine Township where they resided until about 11 years ago when they moved to the John Rose farm, Glamis, on the Bruce and Kincardine boundary. About two years ago Mr. McKinnon sold his farm and he and his wife moved into the village. Deceased was one of the most highly esteemed residents of this community. She was of strong Christian character and was ever sympathetic and kind to those around her. As a neighbour she was ever found doing good to those around her. She had been in poor health since early spring. During her illness the past six weeks, she bore it patiently through it all. She was a member of St. Pauls Church, Glamis, for a number of years. Besides her husband she leaves the following to mourn her demise; Dan C. 10th Kincardine, Peter, Canora Sask., Pte. Allan McKinnon, Camp Hughes, Man., and Mrs. Harry Maber, Mikado, Sask., also three brothers Robert and Dan McDonald of Ripley, Alex McDonald Spokane Wash, and one sister Mrs. J. Crawford, Detroit, Mich. The deep sympathy of a large circle of friends is extended to all the bereaved ones. The funeral took place on Wednesday afternoon to Purdy's Cemetary and the large attendance was an evidence of the high esteem in which the deceased was held.

BRANT TP. COUNCIL

The Brant Municipal council met at the Tp. Hall on Monday the 7th. day of August 1916. Members all present. Minutes of last meeting of Council read and adopted.

Weir—Gregg—That this council do now go into a committee of the whole with the Reeve in the chair to strike the rates for Township and county purposes for the current year.—Carried.

Rowand—Johnston—That the clerk prepare a By-law to provide for the Levies agreed upon in committee, viz. for Township purposes the sum of $8,965.00 at the rate of 3 and five-tenth mills on the dollar and for county purposes the sum of $11,571.87 at a rate of 4 and six-tenth mills on the dollar, in addition to the sums required for Public and Roman Catholic Schools and other necessary rates.—Carried.

Johnston—Gregg—That By-Law No 80 A. D. 1916 (a By-Law providing for the levies agreed upon) be now read the usual number of times and passed, signed and sealed.—Carried.

Gregg—Weir—That this council acting as a committee do now adjourn and resume general business.—Carried.

Weir—Rowand—That the clerk prepare a By-Law to be passed at the next meeting of council making it compulsory for all rates levied in this Municipality to be paid on or before the 15th day of December 1916 and in default of payment on or before said date a penalty of 1% straight shall be added to the taxes up to and including 22nd of December and five per cent straight shall be added after the 22nd of December 1916.—Carried.

Johnston—Rowand—That the clerk be instructed to advertise in the Walkerton Telescope for a collector of rates for the current year. Tax notices to be served to ratepayers according to Statute. Arrangements may be made by the Collector with the banks to receive payment of taxes. Salary $100. to include postage. Applications to be in the Clerk's hands by 12 o'clock, noon, September 18th, 1916.—Carried.

Weir—Rowand—That the clerk be authorized to have a solicitor prepare a By-law to empower the corporation of Brant Township to enter into a contract with the Hydro Electric Power commission to supply the Hamlet of Elmwood with Electric current and empower the corporation to issue debentures to cover cost of installing the same.—Carried.

Rowand—Johnston—That the Reeve and Deputy-Reeve be a committee to procure plans and estimates for fitting the Township buildings for use as a Hall and report at next meeting of Council.—Carried.

Johnston—Rowand—That a grant of $10 be given to the Richardson family, Cargill, a cheque to be issued to C. W. Keeling.—Carried.

Johnston—Rowand—That a grant of $25.00 be made to the Northern Exhibition, Walkerton.—Carried.

Weir—Rowand—That the clerk write to H. B. Miller re the roadway of Chas. Mauer at 12 con. River bridge.—Carried.

Rowand—Johnston—That the Reeve and clerk issue orders on the Treasurer for all accounts passed at this meeting of council.—Carried.

Flowers are scarce this year, members and others are therefore urged to do their best to make the show a success by sending all flowers and plants possible. Children don't forget the prize for the best wild flower bouquet.

✦ ✦ ✦

Liberal Wins in Toronto

The election of a liberal candidate in the city of Toronto has been hitherto an unheard of thing but that is what happened in Southwest Toronto on Monday when Hartley H. Dewart won out in one of the strongest Tory constituencies in the province by 694 majority. The Government emerges from the contest with a lowered prestige and with less public confidence not altogether from the defeat of their candidate which would have occurred in any case, but from the wobbling and indignified speeches of the Provincial ministers on the stump, which discredit the Hearst Government in the eyes of the whole Province.

✦ ✦ ✦

Death of Mrs. Miller

The death occurred at Sioux Falls, S. Dakota, on Saturday, Aug. 19th, of a former well-known and highly esteemed resident of Walkerton, Mrs. Beecher Miller, in her 63rd year. Mrs. Miller was the eldest daughter of the late Gavin Miller of Culross. For a number of years Mr. and Mrs. Miller made their home in Walkerton, leaving here twelve years ago for Sioux Falls where her husband is engaged in the boot and Shoe business. Mrs. Miller was loved and admired for her sterling christian character and her death is deeply mourned. Besides her husband, she leaves one son, Cecil, a fourth year student in Medicine at the University of Toronto; two daughters, Miss Lois Bell of Sioux Falls, and Mrs. William McConnell of Toronto; three brothers, James of Algoma; Robert and Gavin of Gravenhurst; and William on the old homestead in Culross; and two sisters, Mrs. J. G. Hibbert of Walkerton and a married sister in Sioux Falls, S. D. Mr. Miller arrived here yesterday with the body which will be interred in the family plot at Walkerton Cemetery this afternoon at 4 o'clock.

✦ ✦ ✦

MARRIED

LAMB—FRASER—At Keewatin, Man. on Aug. 1st, 1916, Miss Luella Fraser to Mr. Garrett J. Lamb, B.A. Sc. of Winnipeg, son of Mr. J. J. Lamb of Brant.

✦ ✦ ✦

Hogs are $11.75.

Labour Day, Monday, Sept. 4th.

Miss Ryan of Chicago is visiting old friends here.

Miss Pearl Ernest is home from Manitoulin Island.

Mr. Frank Smith of Cargill visited his parents over Sunday.

Mr. J. A. Hartman was up from Mitchell for the week-end.

Cushionette shoes need no breaking in. Sold at Ramsey's Shoe Store.

Tara juvenile lacrosse club has reached the semi-finals in the O. A. L. A.

Miss Clara Gateman of Hanover spent Sunday at Mrs. Wm. Ernest's.

The prizewinners in the school plots for Bruce will be announced next week.

Mrs. and Miss Belger of Hanover spent the week-end with Mr. and Mrs. Dan Millar.

Mr. P. Bremner has arrived home from a two weeks' holiday at Sarnia and London.

Mrs. John Schwartz and daughter, Marie, of Berlin are visiting at Mr. Richard Schuett's.

Mr. Jerome Illig has gone to Stratford to accept a position as fireman on the Grand Trunk.

Mr. Ed. Bauman of Port Dover is visiting his grandparents, Mr. and Mrs. James Brisbin.

Regal Shoes are made up to a standard not down to a price. Sold at Ramsey's Shoe Store.

Conrad E. Baetz of Carrick Tp. whose death occurred on August 9th, was the biggest landowner in Carrick.

It will pay every thrifty housekeeper to read the Walkerton merchants' ads. in this week's Telescope.

Persons having Dutchess, Wealthy, or Alexander apples to sell, see or call, phone 143 this week.—J. E. McGregor.

Miss Irene B. Smale of Sparta, Elgin County, has been engaged as teacher for Baird's School the coming year at $600.

Mr. Ivan Tolton, of Portage La Prairie, Man., arrived here yesterday on a visit to his parents, Mr. and Mrs. Arch. Tolton.

Miss Annie MacMillan of Lucknow, and Miss Nellie Knox of Pinkerton, spent the week-end at the home of the latter's uncle, Mr. John Smith.

Mr. Mike La France left on Monday for Guelph where he takes a position on the Guelph Daily Herald. Mike's many friends here wish him success.

Mr. Ed. Weltlaufer motored up from Berlin on Sunday. Mrs. Weltlaufer and Misses Lucy, Cora and Daisy returned with him to Berlin on Tuesday.

Mr. and Mrs. F. Latchford and Miss Emma, motored to Kincardine on Sunday with Mr. and Mrs. I. Glintz. Miss Latchford remained in Kincardine and will visit for two weeks.

Rev. J. R. Hall, pastor of Knox church, Sarnia, and little daughter Margaret of Sarnia are visiting Mr. Hall's brother, Dr. Hall. Rev. Mr. Hall is preaching at Chesley last Sunday and next.

The Queen's Hotel, Port Elgin, was struck by lightning on Saturday morning and badly shattered. Fire started but was quickly extinguished. All the electric wiring in the building was burned out.

Mr. A. E. Wahn, Brant's onion king, shipped one hundred bags of onions this week to purchasers in Toronto. The crop is a poor one this year and the prevailing prices are good.

Little Dorothy O'Malley, the three year old grand-daughter of Mr. John O'Malley had a bad fall against the edge of a door on Monday. Her forehead was badly cut and bled profusely, requiring the doctor's attention.

The potato crop is very poor in this district. Late sowing owing to bad conditions, followed by continuous dry weather has resulted in a poor quality of potatoes. In other parts of the Province the potato outlook is even worse.

Mr. William Patterson came up this week from Aylmer where he has been harvesting the crop on his newly acquired farm. Mr. Patterson says that the crops in Bruce are altogether better this year than in that part of the country.

Dr. Campbell of Hespeler, who has been summering with his family at Allenvale on Georgian Bay, motored here last week and took his sister, Mrs. Geo. Reichenbach on a visit to her old home at Ailsa Craig. Mrs. Reichenbach will also visit her son, Sergt. Jos. Reichenbach of the 160th Batt. at London.

Mrs. Ed. W. Michlhausen of Elbow, Sask. and her sister, Miss Kathryn McCallum, professional nurse of San Francisco, Mr. Angus McTavish and Master Jack of Toronto, and Mr. J. McTavish of Winnipeg are visiting at Mr. Geo. McCallum's in Brant. The party came up from Toronto on Saturday morning in a Dodge touring car in about four hours' time. This certainly puts the railways in the shade.

ODD COINCIDENCE

Walkerton Boy in France Finds Note in Socks From Walkerton Lady.

Probably no Walkerton lady is more anxious to "do her bit" than Mrs. P. Stevens, one of the town's oldest residents, who makes her home with her daughter, Mrs. A. S. Royce. She has spent a good deal of her time knitting for the soldiers and in spite of her [illegible] years is an adept in turning out the kind that are a delight to the soldier's heart. Mrs. Stevens was very agreeably surprised one day this week when she received an acknowledgment from "Somewhere in Belgium" of a pair of socks which she had knitted for the local Daughters of the Empire, and doubly surprised when she discovered that the socks in which she had inclosed a scriptural quotation, had been received by a Walkerton boy, Signaller Louis W. Dippel, son of Mr. M. G. Dippel.

"A couple of days ago," he writes, "I received a parcel from the I. O. D. E. containing socks and in the toe of one of these was your note. The socks were very welcome as we seem to wear out an awful number of them, possibly on account of getting them wet so often. Also your socks are unusually soft and easy to wear. A real comfort to have such knitting especially as the Army issue which besides being woefully inadequate, are often near to unwearable. You certainly deserve much credit, [illegible] years old and knitting for us, and believe me, we soldiers appreciate such sacrifice. If everyone were so patriotic and doing their share, recruiting officers would not have such a difficult task. It is quite a remarkable coincidence that I also came from Walkerton and you probably know my father, M. G. Dippel, across from the Evangelical church. I get the paper from home occasionally and heard all about the Battalion that was raised there, and hope to be out here soon. But we all hope there won't be much work by the time they come across."

HOME FROM ENGLAND

Pte. Jim Russell Here For a Few Weeks—Still On Active Duty.

Cons. and Mrs. Robert Russell are enjoying a visit from their son, Jim, of the 2nd Field Ambulance, A. M. C. He arrived from England this week, acting as one of the escorts of a party of insane soldiers who were brought back from the Front in custody. "Jim" and a chum, Pte. Barber, an English soldier, who has been wounded three times, arrived here on Tuesday night and will remain a couple of weeks. They have to report in England on Sept. 28th. Jim was taking a course in the Medical Training School in England when he got the chance of a trip home. As soon as he finishes his course he will rejoin the 2nd. Field Ambulance Corp. in France. Jim looks well and professes to feel O.K. It is over three months since he left France.

Jim is the third of Cons. Russell's four sons, every one of whom are serving their King and Country.

LATEST WAR NEWS

Last Despatch Via G. N. W. Telegraph Before Telescope goes To Press.

London, Eng. Aug. 23—(G.N.W. Tel.) French war office announces that German troops made powerful attacks last night on trenches south of the Somme, south of Estrees and west of Soyecourt which were captured by French Tuesday and succeeded in penetrating French line at several points. North of the Somme the Germans maintained a fierce bombardment of the French first lines both north and south of Maurepas but there were no infantry attacks. Some despatches report Italians making strong thrust at Austrian lines carrying several important positions in the Tolmino and other areas. Petrograd reports attempted terrific offensive near Trebizond on Black Sea coast was defeated with the aid of the Russian fleet.

Flour Supplies

When laying in your stock, enquire for prices of "Prairie Pride" a high grade Manitoba Flour— "Sea Cream," Manitoba Blend Pastry Flour for pie crust and save half the shortening, at all up to date grocers or at the mill. —Pletsch Bros.

✦ ✦ ✦

Carrick Barn Burned

Fire broke out in the barn of John Gillen, Carrick, on Thursday last at 8 a.m. and completely destroyed the building and contents, including the season's crop, a cow, two calves, and two pigs. The loss was fairly covered by insurance, $1200 on the building and $800 on the contents, in the Saugeen Central Insurance Co. It is not known how the fire started.

CURRENT COMMENT

The Bremen may have run up [illegible] the sharks on the Jersey coast.

The Montreal Ammunition Company must have a happy lot of shareholders.

Roumania will have to make up her mind pretty soon now if she expects a slice off the war map.

A Buffalo woman pleaded for leniency for her husband because he only beat her once a week, while other women's husbands beat them once a day.

The opening of the public schools in New York will be postponed to October 1st or later on account of the epidemic of infantile paralysis. Safety first is the first consideration. Neighboring places quarantined New York, and now New York has quarantined them, and children will not be allowed to reach New York without proper health certificates.

We do not know if Sir Sam Hughes is making any political appointments to high commands of the Canadians at the front, but it looks to us as if politics, or religion, or personal [illegible] is standing between General Lessard getting to the front. By general consent this officer is one of the most efficient and proficient in Canada, yet he has been studiously ignored when officers were wanted for the front.

The Montreal Gazette says that the Montreal Ammunition Company this week paid another of its now famous 100 per cent. dividends, making a total of 750 per cent. that has been paid to shareholders, all within a space of considerably less than a year. Within the next month or so, it adds, it is probable that the Ammunition Company's dividends will pass the [illegible] per cent. mark. Why is Mr. Flavelle allowing the British Government to be bled in this way? Is there no [illegible] here for Sir Thomas White?

J. W. Lyon, of Guelph, President of the Hydro Radial Association, has made up his mind that the Hearst Government is opposed to the building of radial electric roads by the Hydro. He declared yesterday that "As far as the radial railways are concerned, I believe the members of the Ontario Cabinet are determined to knife the proposition, and are out to see that they shall not be built. I am told on very good authority that there is not a member of the Cabinet who is in favor of the building of these lines." If Mr. Lyon be right in his conjecture, the Government ought to be brought to task.

The London Free Press is very free with its charges of disloyalty, but the Advertiser comes back at it in a way that it may not like. It seems that the Free Press uses the Hearst syndicate stuff, and the Advertiser has this to say about it:

For instance, every day of its existence, it is "trading with the enemy" by its purchase of the news service of William Randolph Hearst—the man who inserted the word "overwhelming" into a despatch which spoke of the British defeat at Jutland. Hearst is probably the most insidious and crafty foe that Great Britain has in the United States. Further than this, he is a newspaper pariah, whose non-existent war correspondents have been "shown up" in such a manner as to leave no doubt of their non-existence. His news service was recently "blacklisted" in the British House of Commons.

Britain has put the screws on Holland, and in turn Holland has put them on Germany. Holland was led to understand that if she did not ship her foodstuffs to the Allies while she was shipping such to Germany, her supplies from America and her own colonies would be shut off by the British fleet. Owing to Germany's submarine activities Holland was unable to ship much food abroad. However, she informed Germany that she would close her eastern frontier to that country if she persisted in her warfare against Dutch commerce. Germany saw the cat, and has promised that in future she will not interfere with her ships in the North Sea. Score another victory for Great Britain.

The Kaiser is said to have designed the following memorial card to be sent to relatives of German sailors lost in the war:

"On the card is a picture of Christ holding out both hands in blessing over a sinking ship. Surrounding the figure of Christ are the words:

"'Which stilleth the noise of the seas, the noise of their waves and the tumult of the people.'

"Under the picture is this inscription:

"'To the memory of ——. He died for the Fatherland.'

"'Wilhelm. I. R.'"

The New York Sun suggests that a picture of the Lusitania might be substituted for the sinking ship, with the following instead of the Kaiser's inscription:

"Suffer the little children to come unto me, and forbid them not, for of such is the kingdom of God."

On the reverse side, to complete the memorial, this warning might appropriately appear:

"And whosoever shall offend one of these little ones that believe in me, it is better for him that a millstone were hanged about his neck and he were cast into the sea."

Every man should have an aim in life, but most of us want a mighty big target.

CROSS PURPOSES

"Oh, you may call me what you like," said Gilbert. "I can assure you I feel old enough sometimes—detestably, flatly, hopelessly old!" He spoke quickly and passionately; the sunshine lighted his fair, handsome features, and the description of himself, which was absurd in connection with his actual years, was rendered more obviously so by the fact that, apart from a certain expression of face, Gilbert South was a very young-looking man. He had the air of being conscious of every moment of his past life. One would have said that he continually "added up the mortal amount" of days, weeks, and years which he had spent on earth, and carried the total in his weary thoughts. And all the time it seemed as if he only wanted a touch of something not easy to define, of hopelessness, perhaps, or passion, or even defiance, to make him as young as he was at five-and-twenty. It was hardly wanting as he turned to Mrs. Austin. "Say what you please of me! It doesn't matter. But don't say it of yourself. If you——"

The sentence was never finished. "I believe those two are actually going to leave off playing," he said, in a tone of gentle acquiescence in the decrees of destiny.

When the time came for the party to set out on their excursion to the Castle, Frank saw them off with an anxious solicitude for their comfort, which pleased his mother very much. Tiny, behind the scenes, remarked it, too, and said to herself that Frank could afford to be very polite since he was going to get rid of his two bores for the whole afternoon. She liked the politeness none the less for her knowledge of her cousin's motive, and nodded him a bright farewell as she took her place in the carriage.

To the last moment young Leicester was apparently troubled with misgivings about his ruin. "You'll remember that it's a very little one," he said to Mrs. Austin, while his mother was arranging herself and her many shawls.

"Do you know that you are really heightening my expectations?" she replied. "When were you there last? I hope nobody has taken a fancy to it since then, and put it in his pocket."

Frank laughed. "I hope not," he said. "Tiny can find it for you, if it's still there. She knows where to look for it."

"Where to look for what?" Mrs. Leicester inquired. "Wild flowers? We are quite ready, tell them, Frank." And they drove off.

As soon as they were beyond the park gates Mrs. Austin was called upon to admire the scenery. "Of course, we don't pretend to have any wonderful hills and rocks and waterfalls and things," said Mrs. Leicester. "But it is just the king of landscape I like; so simple and English and home-like. Look at that bit of path and that stile, now; wouldn't it make a sweet little water-color picture—with a pretty girl, you know, or an old woman in a red cloak?"

It struck Mrs. Austin that the stile, or any number of stiles exactly like it, had been so wearisomely fitted with simpering rustics that the suggestion was unnecessary. Mrs. Leicester, however obviously prided herself on the idea as an original one. "And I like this up and down much better than those very steep hills—they make such endless trouble with the horses," the good lady went on. She smiled kindly round on everything, and seemed to settle herself comfortably in the country as if it had been made to suit her. And, indeed, if it had been designed with that intention it would hardly have been different.

Mrs. Austin was civil, though not enthusiastic in reply. She would have preferred something wilder and more hilly; but, then, the sleek chestnuts were not her horses. Or, failing that, she would have had the pretty little undulations, which pleased Mrs. Leicester, abolished altogether. She would have liked to drive swiftly forward over wide, lonely levels, with the great arch of sky overhead. She did not appreciate the carefully-kept hedges, enclosing stubble and turnips, nor the prim little plantations which looked like preparatory schools for young trees, nor the small spire which rose with an air of the utmost decorum above a neat church-yard.

"There is Frank!" said Tiny Vivian.

They all turned to look at the distant figure, which Tiny, who knew the road that he would take, had recognized. Frank was seen for a moment on a gentle ascent, and then lost behind a clump of trees, but the glimpse remained with Mrs. Austin as a little picture. She did not know why it was that the words "the only son of his mother, and she was a widow," came into her head as he rode away, but she realized all at once how precious the kindly, handsome, common-place young fellow was in his own home. Mrs. Austin, as she sat absently looking at Frank's bit of road, was thinking of a baby's little grave, closed ten years earlier over a life too short to be borne in anybody's mind but hers. "The only son of his mother." And when she died, the little memory could interest no one but the busy people who count up births and deaths and take pleasure in averages. Even for her it had no individuality that could be expressed in words, though she would not have parted with it for all that life could give.

Meanwhile the carriage rolled smoothly on, and she looked right and left at all the views that were pointed out to her, till Mrs. Leicester was able to announce, with proud excitement, "And there—no, not there—a little farther—no, that tree is in the way for a moment—there! now, don't you see a bit of the Castle wall? Don't you, Mr. South, just beyond the field where the cow is?"

Two minutes later they pulled up by the roadside, at the point nearest to the ruins, and the party set out to walk the brief remainder of the way. There was no difficulty in finding the Castle. It stood, together with a small hay-stack, in the corner of a dreary little field and consisted of a part of a tower, a few scattered fragments of stone, and the broken remains of a bit of low wall. "No doubt," said Mrs. Leicester, "it once extended much farther, and was a magnificent building." She added dignity to the bit of wall by calling it the "rampart." South, who assented to all her views, called it so too, as soon as he found out what she meant, and delighted her by suggesting the possibility of discovering foundations with the help of a little judicious digging. The good lady sat down on a fallen stone to consider the idea, while he undertook to walk round the ruins and inspect them more thoroughly. For this purpose he joined the other two who were gazing up at the tower. "I don't know anything about it, except that it is very old," Miss Vivian was saying as he came up. She looked a little doubtfully at Gilbert, as if she suspected him of possibly making fun of Calverdale Castle, which no one but Frank had any business to do; but after a minute she slipped quietly away and left him with Mrs. Austin.

"And what do you think of it?" he said.

She smiled. "Perhaps it would be more cheerful if there were more of it. It strikes me as the most melancholy little ruin I ever saw. It's a mercy the sun is shining."

"It is melancholy," he said, looking round at the flat, green meadow. The tower was of a blackish gray, crusted with lichen; the grass at its foot and the spreading docks grew coarsely from the ill-drained soil, and a sluggish little stream crawled a little way off.

"People talk of fortresses frowning," said Mrs. Austin; "I think this would if it could. There is a touch of malice about it, though it is too petty to threaten."

"It isn't amiable-looking," said Gilbert, with an air of entire conviction. He knew what he was expected to say, though in truth he was not thinking much about the Castle. They strolled a little further, and when they reached the wall he made a careful survey of the other side.

"What are you looking for?" Mrs. Austin inquired.

He laughed a little consciously. "Walls have ears, they say. It's true this might be deaf by now—it's old enough."

She raised her eyes to his face. "Does it matter whether it's deaf or not?"

"Well, yes, I think it does. There might be a country bumpkin asleep on the grass. We might wake him up."

"If I understand country bumpkins, we should be doing him a service."

Gilbert stood smiling and pulling his mustache, as if he were calling up a half-remembered scene. "Once I thought myself alone," he said, "ut- a long while ago, and I—well, I recited some poetry. Suddenly I felt an impulse to look behind a pillar, and there was a brute, in a cheap traveling suit, grinning from ear to ear. I had a great mind to kill him."

"You didn't, I hope?" said Mrs. Austin, sitting down on a broken bit of wall, and putting up her parasol; terly alone. That was in a ruin, too, "not but that there are plenty of people in cheap traveling suits."

"No, I took off my hat to him, and walked away. It didn't kill him, but I think I might as well; he couldn't have haunted me worse. However, it taught me caution."

"So it seems. And are you going to recite poetry now?"

"No; I don't think I am. At least—yes. I am going to talk about Cornwall."

"Is that poetry?"

"Isn't it?" said Gilbert, coming a step nearer. "Or, rather, wasn't it?"

"Perhaps in King Arthur's days."

"In no days of your own?—of our own " he persisted, in a low voice. "If the old time at West Hill wasn't poetry, there has been none in my life. You said this morning you had not forgotten it."

"No," she answered, "I have not but if that were poetry, it strikes me that the volume was closed and laid away a long while ago."

"Is that true " said South. "You needn't remind me that I was the first to close it. I'm not likely to forget that. But, for the sake of those old Cornish days, I want you to let me say a word of explanation."

Mrs. Austin shook her head with a smile that was half hopeless, half compassionate. "No, no; there is no need of explanation—do not let us have any. You make me repeat myself," she added, lightly. "I told Mr. Leicester this morning that I objected to explanations."

South arched his brows. "It seems to me that it was early for Mr. Leicester to be trying to explain himself!"

"Possibly. And for you it is—late." Her tone was very kind as she went on. "Do you not see that if I had misunderstood you all these years, you could hardly set me right now. But I don't think I did misunderstand you; and for proof of it we were to be friends, and we are friends, I hope."

"It was all my fault," said South; "and to think that I never saw you from the day we parted at West Hill till yesterday! Tell me what you thought of me after I went."

She met his glance, but evaded his question. "There was no fault in the matter. Don't you remember we were to be quite free? You had a right to change your mind, and so had I."

"I was a fool! I was a raw boy—I was flattered; and she never meant anything!"

Mrs. Austin made a quick sign with her hand. "Oh, let it all rest!" she said. "You wrote afterward; you did explain all that there was to explain. It was then that we agreed to be friends. Let us keep to that. As you say, it was only a boy-and-girl affair." She rose as she spoke, but Gilbert followed her.

"It is hard," he said. "My best wouldn't have been good enough; and it is you, of all the people in the world, who know the worst of me."

She stopped, looked him in the face, and smiled. "It isn't very bad," she said, in her gentle voice: and South felt himself a featherweight in the scale, whether for good or evil.

He was silent, but with so unsatisfied an expression that it was evident he only lacked words for the moment, and would seek to speak again later. Mrs. Austin anticipated him.

"Were you out of your teens when we said 'Good-bye?' Well, not much more, at any rate. Our real lives have been since then. I think people ought to keep their consciences in two or three compartments, and shut the lid down on all such by-gone short-comings. I am glad we have met again, if only to shake hands and say simply that we have outgrown old follies."

Gilbert looked down. "I was to have been a hero," he said, bitterly. "Do you remember?"

"Oh, I lived in King Arthur's Cornwall in those days—in Camelot and Tintagel," she replied. "No doubt you were to have been Galahad, or Percival at the very least. I expected the most wonderful things of all my friends."

"I think you did." He hesitated for a moment. "Are you more merciful now?" he asked, in a tone which was between jest and earnest.

"Oh, yes," was the ready answer. "I'm greatly changed. I can assure you that now I expect very little."

They were walking slowly at a little distance from the tower, and as the last words were spoken they caught sight of Tiny Vivian. She appeared to be intently studying the old stones. The dreary little nook in which she stood, pulling an ivy spray from the crumbling masonry, framed a picture of youth, full of delicate grace and hope. South gazed for a moment, and then turned to Mrs. Austin with a faint laugh. "She is in her teens still," he said.

When Frank came back from Bridge End that evening, he found a bunch of ivy-leaves on his dressing-table. They had evidently been carefully chosen for variety of shape and color, and were very daintily arranged. He uttered an impatient exclamation when he caught sight of the significant little bouquet, and stood looking at it with a frown. He knew that his cousin had stolen in during his absence, and left it as a token that Gilbert South had had his turn that afternoon.

III.

Mrs. Leicester troubled herself very little about her match-making. When she happened to observe Mrs. Austin and Mr. South, she thought they seemed to be very good friends; and when they were out of sight, she supposed that they were together somewhere, and getting on nicely. She did not quite know what she would get them for a wedding present, but she determined to run up to town with Frank and look about her. There were sure to be pretty things in the shops. Meanwhile she was very well satisfied. Frank seemed all right, and, that being so, Mrs. Leicester hardly noticed that, as the days went by, his little cousin was not quite her simple, happy self of a fortnight earlier, and that these two, who had been such allies, were no longer on their old footing.

Gilbert made no attempt to resume the talk which was broken off in the ruined castle. He appeared to have tacitly accepted Mrs. Austin's offer of friendship without explanations; and, though from time to time he would turn to her with some allusion to the past, some "Do you remember?" which sent her thoughts away from Calverdale to scenes where he alone could follow, he touched always on those earlier recollections which needed no apology from him and no pardon from her. She would answer readily enough; but Gilbert, who remembered the time when she believed in him, was apt to imagine a delicate, yet unmistakeable irony in her untroubled smile. To Frank it revealed a wonderful far-off tranquillity; but then Frank was very much in love. Mrs. Austin had opened his eyes, and he was prepared to spend his life in a rapturous study of this first miracle. He felt himself at a disadvantage with regard to South, who could look back to a past in which she had a share instead of a degrading memory of measles and extreme youth; yet, in spite of this humility, he was not unhappy. Mrs. Austin could not fail to perceive his devotion, but she never for one moment supposed that there was anything serious or lasting in it. It seemed to her like a little nosegay of spring flowers, which she might accept with a gracious word of thanks, and she was touched by the thought of its very transitoriness. She was very kind to Frank. Within a week she had learned his ways, and looks, and words, as one might learn the few simple notes of a bird in one's garden; and yet they blessed her better than a more elaborate performance. "Poor fellow!" she would say to herself, with a half whimsical regret, "it is not my fault—I cannot help it; but if he only knew how young he seems to me, how he would hate me!" There, however, she was wrong. Frank would have forgiven her even that.

(To Be Continued).

BURMA'S BUDDHA.

This Statue is Said to be the Largest in the World.

The largest monument of the human form existing in the east to-day, if not in the world, is the great reclining statue of Buddha near Pegu, in Burma, around which the Government erected a building with lattice steel pillars to protect it from the elements. This colossus was brought to light during the construction of the railway that runs northeast from Rangoon to Mandalay.

While the permanent way was being banked up to protect the lines from occasional floods the engineer in charge required for the purpose of this work a harder ballast than the alluvial deposit over which the line was running could give him. Less than a mile away was a tree clad mound, and here, it was thought, suitable material might be found. The task of clearing away some of the trees took but an hour or two, and then shafts were sunk to find the needed stone. Before the diggers had gone down more than a yard they struck an enormous and fairly preserved figure of Gautama.

In actual length the statute is 180 feet and 50 feet high at the shoulders. The figure and its pedestal are of brick, covered with plaster. Since its discovery the plaster has been removed and painted over, the bos at the head and the finer nails gilded, and the headdress decorated with glass jewels. The statue is thought to be about 500 years old, but no one knows its history, no reference whatever being made to it in Burmese legends or traditions.—Wide World Magazine.

The Surgeon—Don't worry, old chap. You'll get something some day, and then I'll—. The Intimate Friend—My dear boy, be assured of one thing—I'll never let you cut me up—I'll live first!—Life.

Sciatica Vanishes Instantly If Nerviline Is Used

CAN YOU BEAT THIS CASE?

No ordinary liniment will even relieve Sciatica. Nothing but the most powerful kind of a remedy can penetrate through the tissues and finally reach the Sciatic Nerve. You can always depend on the old-time "Nerviline." Nothing made to-day is as good for Sciatica as Nerviline was when first produced, about forty years ago. All this time the same old "Nerviline" has been curing Sciatica, Lumbago, Rheumatism, and is considered to be without an equal in relieving pain or soreness anywhere. "'Nerviline' couldn't be made stronger or better," writes James E. Edwards. "The way it cures Sciatica is to me simply a miracle. For years I suffered frightfully, I ruined my stomach with internal dosing. I rubbed in gallons of oils and liniments—none were strong enough. One good rubbing with Nerviline relieved. I kept on rubbing and shortly was cured. My father cured rheumatism in his right arm and shoulder with Nerviline, and my mother cured herself of chronic lumbago with Nerviline. Our family simply swears by Nerviline and we are never without a 50c family size bottle in our home. We find that for external pain, for coughs, colds, earache, such minor ills it is a veritable family physician."

Told of the War Office.

A certain officer of the Royal Horse Artillery, having his battery divided into half-batteries, which were garrisoned over forty miles apart by road, applied that he might have an allowance granted him for an extra charger, it being his duty to frequently visit both portions. The War Office ruled that this allowance was inadmissible, saying: "Measured by the ordnance map, as the crow flies, the distance is found to be only thirty-three miles and a half." For a time the officer was nonplussed, but an idea struck him, and he seized his pen and wrote: "There would appear to be some misunderstanding regarding my application. I am asking for allowance for an additional charger, not an additional crow. I do not ride a crow; I ride a horse!" He got it.

Minard's Liniment Cures Burns, Etc.

Clever Reasoning.

Rather an original lesson in political economy was that once taught by the Japanese nobleman Awoto and thus translated by Sir Edwin Arnold in "Seas and Lands."

One evening as he was going to the palace to take his turn in keeping the night watch he let 10 cash drop out of his tinder case into the stream and then bought 50 cash worth of torches to search for the lost coin. His friends laughed at him for spending so much in order to recover so little, and he replied, with a frown:

"Sirs, you are foolish and ignorant of economics. Had I not sought for these 10 cash they would have been lost forever—sunk in the bottom of the Namerigawa. The 50 cash which I have expended on torches will remain in the hands of the tradesman. Whether he has them or I is no matter, but not a single one of the sixty has been lost, and that is a clear gain to the country."

NATIONALIZE NICKEL.

(Toronto Star)

From a national standpoint the nickel question has been badly handled in Canada from the beginning, but more especially throughout the war. The war afforded complete justification for taking control of the nickel situation, and the war still affords that justification. The whole business ought to be made a national monopoly, and it ought to be done now with a completeness that will leave nothing out to form the nucleus of future misunderstandings.

No More Corns

Cure Guaranteed

Never known to fail; acts without pain in 24 hours. Is soothing, healing; takes the sting right out. No remedy so quick, safe and sure as Putnam's Painless Corn Extractor. Sold everywhere—25c per bottle.

Origin of Blotting Paper

Blotting paper was discovered purely by accident. Some ordinary paper was being made one day at a mill in Berkshire when a careless workman forgot to put in the sizing material. It may be imagined what angry scenes would take place in that mill, as the whole of the paper was regarded as being quite useless. The proprietor of the mill desired to write a note shortly afterwards, and he took a piece of the wastepaper, thinking it was good enough for that purpose. To his intense annoyance the ink spread all over the paper. All of a sudden there flashed over his mind the thought that this paper would do instead of sand for drying ink, and he at once advertised his wastepaper as "blotting." There was such a big demand that the mill ceased to make ordinary paper, and was soon occupied in making blotting only, the use of which spread to all countries.

Why abuse Carranza when Carranza has been a perfect godsend to the preparedness movement in which we believe?—Charleston News and Courier.

DIVISION OF NUMBERS.

Rules That Will Simplify Some Examples in Arithmetic.

It is often convenient to know whether a given number is divisible by another without going through the usual process of division. Almost every one knows that however large a number may be, it is divisible by 5 if the last digit is 5 or 0. The following gives the rule for some other numbers:

A number is divisible by 2 when the last digit is divisible by 2; by 3 when the sum of the digits is divisible by 3; by 4 when the number represented by the last two digits is divisible by 4; by 5 when the number ends in 5 or 0; by 6 when it is divisible by 2 and also by 3; by 8 when the number represented by the last three digits is divisible by 8; by 9 when the sum of the digits is divisible by 9.

For example, the number 1728 is divisible by 2, because its last digit, 8, is divisible by 2; by 4, because 28 is divisible by 4, and by 8 because 728 is divisible by 8. It is also divisible by 3 and by 9, for the sum of its digits total 18, a number divisible by 3 and by 9. Since it is divisible by 2 and by 3, it is also divisible by 6.

To find whether a number is divisible by 7 you must go through the usual process of division.—Youth's Companion.

AN ANXIOUS TIME FOR ALL PARENTS

Children Often Seem to Pine Away and Ordinary Medicine Does Not Help Them.

The health of children between the ages of twelve and eighteen years, particularly in the case of girls, is a source of serious worry to nearly every mother. The growth and development takes so much of their strength that in many cases they actually seem to be going into a decline. The appetite is fickle, brightness gives way to depression, palpitation at the heart at the least exertion, and sometimes fainting. The blood has become thin and watery and the sufferer must have something that will bring the blood back to its normal condition. At this stage no other medicine can equal Dr. Williams' Pink Pills. Their whole mission is to make new, rich blood which reaches every part of the body, bringing back health, strength and energy. Miss Helena Taylor, West Toronto, says: "Two years ago I was so badly run down with anaemia that some of my friends did not believe I would get better. I could not go upstairs without stopping to rest, suffered from headaches, loss of appetite, and for two months of the time was confined to the house. I was under the care of a doctor, but the medicine I took did not help me in the least. A friend advised my mother to give me Dr. Williams' Pink Pills, and although I did not expect they would help me after the doctor's medicine had failed, I thought they might be worth trying. After taking two boxes there was such a marked change for the better that people asked me if I had changed doctors, and I readily told them the medicine that was helping me. I continued taking the pills until I had used eight boxes, when my health was fully restored, and I have since enjoyed the best of health. I hope my experience may be the means of convincing some sickly person that Dr. Williams' Pink Pills can restore them to health."

You can get these pills through any dealer in medicine, or by mail, post paid, at 50 cents a box or six boxes for $2.50, from The Dr. Williams' Medicine Co., Brockville, Ont.

Capturing Elephants.

Rounding up elephants is in progress in several places in India. At Sukna nine elephants have been captured and one of them a huge beast, refuses to eat in captivity. Six were sent on to Chalsa, where one of them charged the other elephants, and bowling over one of them, killed the mahut. The other day a tusker charged the only camping ground in the Tendu forest, but fortunately a European assistant prevented a panic. Not long ago a herd took possession of the short branch line from Latiguri to Ramshahi. The driver did his best to frighten them off, but at the last moment one of the animals made for the engine and damaged it slightly, though it was itself thrown off the line, and is believed to have broken a leg.

Minard's Liniment Relieves Neuralgia.

The Eyes of the Musk Ox.

The skull of the bull musk ox is remarkable for the development of the eye orbits, which project sufficiently beyond the plane of the frontal bones to compensate for the interruption the horns would otherwise make in the range of vision. The musk ox, however, does not seem to rely greatly on keenness of sight, far less on acuteness of hearing, for the ears are of small dimensions and are completely covered by the heavy growth of fur about them. The organs of scent are evidently more highly developed, and they exact of the hunter his greatest cunning.

Prosperity brings with it an intoxication which inferior natures never resist.—Balzac.

TREES IN BOOKS.

Probably the Most Curious Collection of Volumes in the World.

There is perhaps one of the most curious collections of books in the world to be found in a small town on the continent of Europe, says the London Tit-Bits. It is really a botanical collection. Outwardly each volume presents the appearance of a block of wood, and that is what it actually is. But an examination reveals the fact that it is also a complete history of the particular tree which it represents.

At the back of the book the bark has been removed from a space which allows the scientific and the common name of the tree to be placed as a title for the book. One side is formed from the split wood of the tree, showing its grain and natural fracture. The other side shows the wood when worked smooth and varnished. One end shows the grain as left by the saw and the other the finely polished wood. On opening the book it is found to contain the fruit, seeds, leaves and other products of the tree, the moss which usually grows upon its trunk and the insects which feed upon the different parts of the tree. These are supplemented by a full description of the tree, in fact, everything which has a bearing upon that particular tree secures a place in the collection.

Minard's Liniment Cures Dandruff.

Be Natural.

Holmes says that there are six people present whenever two meet in conversation—the real A, the real B, A as he sees himself, B as he sees himself, A as B sees him and B as A sees him.

The remark comes back when one goes out upon the street and considers himself and the other people who pass, particularly those who seem on the slippery road to success. It is what they themselves who go by; it is what they would have other people think them. If they are young and inexperienced they must tighten up their faces with an artificial solemnity; if they are getting on in years they must affect an artificial snappiness. They wear their outward aspects like clothes.

One feels like crying in the ears of young men: "Be natural. Live or die, sink or swim, survive or perish, but be yourself."

Inducements to Matrimony.

There prevails in some parts of Brittany a curious marriage custom. On certain fete days the marriageable girls appear in red petticoats, with white or yellow borders around them. The number of borders denotes the portion the father is willing to give his daughter. Each white band denotes 100 francs per annum: each yellow band represents 1,000 francs a year.

LIQUID CATARRH REMEDIES USELESS ONLY RELIEVE—NEVER CURE

They go direct to the stomach, have very little effect on the linings of the nose and throat, and entirely fail to cure. Only by cleansing the air passages, by relieving the inflammation and killing the germs is cure possible. No combination of antiseptics is so essential as Catarrhozone. In breathing it, you send the richest pine balsam right to the seat of the disease. Irritating phlegm is cleared out, hoarseness, coughing and hacking are cured. For a permanent cure for catarrh, nothing equals Catarrhozone. Get it to-day, but beware of dangerous substitutes meant to deceive you for genuine Catarrhozone. All dealers sell Catarrhozone, large size, containing two months' treatment, costs $1.00; small size, 50c; sample size, 25c.

HOUSEBREAKER, BURGLAR.

Do You Know the Difference Between Them?

To most people a "housebreaker" means just the same as a "burglar," but in the law the two terms are very different. If a man wants to be a good old-fashioned burglar he must break into a house at any time between 9 a. m. and 6. p.m. If he breaks in outside these hours, then he becomes a housebreaker. Bill Sykes appreciates the difference in the terms. He would rather be a housebreaker than a burglar, because that is regarded as a less serious crime, and consequently carries a lighter sentence. It is worth while knowing that, if you catch a burglar in the act, you mustn't shoot him except in self-defence; while if he gives in, you mustn't let him go on condition that he returns the "swag." If you do you will be breaking the law yourself.

Volcano Made by Man.

At Brule, France, is the most remarkable volcano made by man. Originally it was a mass of coal, millions of tons. One day about a century ago the coal caught fire, and it has never ceased burning. The summit of the smouldering mass has a genuine crater.

Miss Cutting—You evidently have a pleasant disposition, Mr. Sapleigh. At least, you are easily pleased. Sapleigh—Why do you—aw—think I am—aw—easily pleased? Miss Cutting—Well, I judge so by the fact that you laugh at your own remarks.—Indianapolis Star.

ISSUE NO. 34, 1916

HELP WANTED.

WANTED—GIRLS TO WORK ON knit underwear—seamers and finished stitchers preferred. We also teach learners, any girl with good knowledge of plain sewing; good wages; ideal factory conditions. Zimmerman Manufacturing Co., Ltd., Aberdeen and Garth streets, Hamilton, Ont.

WANTED — HOUSEMAIDS AND waitresses. Previous experience not necessary. Apply, "The Welland", St. Catharines, Ontario.

MISCELLANEOUS.

WANTED—GIRLS OF GOOD EDUCA- [illegible] to train for nurses. Apply Wellandra Hospital, St. Catharines, Ont.

PERSONAL.

$25.00 REWARD WILL BE PAID conditionally, where Crosia fails to prevent Appendicitis. Positive cure for Indigestion, Constipation Dyspepsia. Write for particulars and testimonials. John Galbraith, 11 Cronyn Ave., Toronto.

FOR SALE—PLANING SAW AND Chop Mill; doing good business; also motor truck, 1 1-4 ton capacity, in No. 1 condition. Apply to John McCormick, Lawrence Station, Ont.

Cape of Good Hope.

In 1487 Bartholomeu Diaz sailed f[illegible] enough south along the western coa[illegible] of Africa not only to descry but t[illegible] double the Cape of Storms, as it was then called, and as the coast was ascertained to run toward the northeast the prospect of success in the direction of India seemed now so clear that the Portuguese monarch renamed the cape Cabo de Boa Esperanza, or Cape of Good Hope. The "good hope" was realized in 1498 by Vasco de Gama, who, doubling the southernmost point of Africa, sailed on to Calicut, thus opening up the long dreamed of route to India.

Minard's Liniment Co., Limited.

Dear Sirs,—I can recommend MINARD'S LINIMENT for Rheumatism and Sprains, as I have used it for both with excellent results.

Yours truly,
T. B. LAVERS
St. John.

The Oyster's Meals.

Oysters are most exemplary in the matter of diet. They were well-nigh vegetarians, living almost exclusively on seaweed. The oyster is a most methodical feeder, always dining between the hours of twelve and two in the afternoon. When he wants his meals, he simply opens his gills and lets the water flow in, allowing it to run out again. Only in frosty weather does the oyster go off his feed. In order to protect himself as much as possible from the cold, he lies with bulging shell uppermost. In this position he cannot open his shell, and must perforce go short of food; but he would sooner starve than let the cold water in to chill his delicate flesh.

Minard's Liniment for sale everywhere

Light as a Cure.

Professor E. C. Titus in an address states that light is a much better cure for disease than a hot water bag or poultice. He says that when rays of light fall on the skin some are arrested by one layer of skin and some by another, while some are not stopped until they have penetrated the subcutaneous tissues. When the light is thus arrested it produces radiant heat, which has a higher penetrating power than convection heat, such as generated by poultices, etc. Radiant heat penetrates two inches or more, while convection heat is excited principally on the surface.—Exchange.

A woman who had some knowledge of baseball took a friend to a championship contest. "Isn't that fine?" said the first. "We have a man on every base." "Why, that's nothing," said the friend; "so have they."—Everybody's.

Your "Get-Away" Power in Summer is low. Summer brings mental and physical lassitude. The spirit is languid, the liver is lazy. Nature is trying to unload the toxins that come from heavy foods and lack of outdoor exercise. Help Nature to restore natural vigor and vim. Get an eight-cylinder stamina by eating Shredded Wheat Biscuit with fresh fruits and green vegetables. Cut out meat and potatoes—eat these delicious, nourishing little loaves of baked whole wheat and be cool, contented and happy. For breakfast with milk or cream; for luncheon with berries or other fruits.

Made in Canada

THE AYRSHIRE AS AN ECONOMICAL PRODUCER

Mr. Alex. Hume, of Campbellford, Ontario, Explains That Although the Ayrshire Does Comparatively Well Under Adverse Conditions It Will Do Better When the Feed is Plentiful and the Pasture Luxuriant—By Daniel McKee, B. S. A.

icy Lass—First and Junior Champion as a yearling at the C. N. E. in 1912. She gave 9,000 lbs. of milk in 7 1-2 months.

That the Ayrshire is a good rustler and able to get a living on rough, bare, pastures most dairymen will admit, but many deny that it is capable of responding to liberal feeding. Seven or eight years ago, before the Record of Performance tests were started by the Dominion Government, when there were no official records to show what the breed could do, there may have been some excuse for this latter opinion. But now, when we have carefully kept records of how Ayrshires have produced, and are producing, even the most sceptical must admit that their record as far as and butter production goes, compares favorably with that of any of the other reeds of dairy cattle.

Before Ayrshires can be entered in Record of Performance they have come up to a certain standard of k production—the quantity of milk y are required to give depending the age of the cow. Two-year-olds ave to give at least 3,500 pounds of milk during one year's test; three-year-olds have to give 6,000 pounds or over; four-year-olds must give 7,500 pounds or over; and mature animals (over four years old) must give 8,000 pounds of milk or over during a year's test.

The last report to hand of the cows and heifers that have qualified in the Record of Performance shows that from May 15th to June 30th, 1916, ten animals qualified in the mature class, three qualified as four-year-olds, four qualified in the three-year-old class, and nine qualified in the two-year-old class.

Over 10,000 pounds of milk was given by four animals in the mature class, by two animals in the four-year-old class, and by one animal in the three-year-old class. These performances should convince even the most obdurate that as a milk producer the Ayrshire "is there with the goods."

The Ayrshire, as its name implies, originated in County Ayr in the Lowlands of Scotland. Here on its native [illegible] where the winds were cold and piercing, and the pastures scanty, it developed those characteristics which have made it the most hardy of all the dairy breeds of cattle, with the possible exception of the Irish Kerry.

Describing the conditions which existed in Ayrshire at the end of the sixteenth century, Low, an Englishman, wrote: "There were no fallows, no sown grasses, no carts or waggons and no straw yards; no roots were grown, very little straw and no hay, save the small amounts, cut from the bogs and wastes. Under these conditions the cattle were starved in winter, being scarcely able to raise in the spring, and never were in condition fit for market." These were the conditions in Ayr while the breed was undergoing the process of formation and development.

Unlike many other breeds, no one breeder stands out from his fellows as the great improver of the breed. What the farmers of Ayrshire wanted was an animal that was active and hardy, and could do well on the sparse hillside pastures, but which would also produce the maximum amount of milk when fed on chaffed straw and roots during the long winter months.

In point of milk yield alone the Ayrshire, individual for individual, does not compare favorably with the Holstein, nor in butter production alone will it compare with the Jersey or the Guernsey, but as an economical producer of either milk or butter the Ayrshire can hold its own with any breed, as numerous feeding tests have shown. This undoubtedly is one reason why the breed is so popular with the average farmer.

As a beef animal, the breed, of course, "is not in it" with the Shorthorn or some of the strictly beef breeds, but on account of its smoothness of conformation and the fact that the fat of the carcass, instead of being yellow, is white, it is less objectionable for beef purposes than some of the other dairy breeds.

Hillside Peter Pan—35567—bull at the head of the Hume herd. First as 2-year-old at Toronto and London, 1914, and Grand Champion at London, 1915

BEAUTY AND UTILITY COMBINED.

The modern Ayrshire, so far as conformation goes, differs materially from his ancestors of one hundred years ago. Scotchmen, if the Clydesdale and Ayrshire are any criterion, have their aesthetic senses very keenly developed. For smoothness of top line, beauty of head and shape of udder the Ayrshire has no rival. Indeed, some claim that much of the general usefulness of the animal has been sacrificed to secure these fancy points. While it may be true that some breeders lay too much emphasis on fancy points it is not true of all of them or even the majority of them nowadays, according to Mr. Alex. Hume, of Campbellford, Ont. Mr. Hume has been breeding Ayrshires for the past thirty years and is in a position to speak with some authority on the matter.

"It is a fact," said Mr. Hume, "that twenty or thirty years ago many Old Country breeders paid more attention to the beauty and conformation of their animals than they did to their milk pail record. Many, on the other hand, looked on the Ayrshire as a milk and butter producer first, last, and for all time, and bred accordingly. Thus there were two different schools of Ayrshire breeders; those who bred for fancy points, and those who bred for milk production. When the Babcock test became generally used the men who had been breeding for points had to fall into line and breed cows that were not only nice to look upon, but which also could "produce the goods," in the shape of a full milk pail.

"While for a time it is true the Ayrshire suffered from there being these two distinct strains or types—the show type and the utility type—I think that the fact that attention was paid to beauty of form as well as to the usefulness of the animal, has on the whole been a good thing for the breed. Animals that have nothing else to recommend them but straight lines and well balanced udders are rapidly disappearing. The modern Ayrshire, while yielding to no breed in economy of milk and butter production can beat some of the other breeds off their feet as show animals. Fancy points may not help to fill the milk pail, but they certainly will help to effect a sale."

Mr. Hume attributes the increasing popularity of the Ayrshire largely to the fact that the performance of the breed as shown by the Record of Performance tests is making people realize that the Ayrshire, besides being hardy and able to subsist on little feed, can respond to liberal feeding.

"That the Ayrshire could eke out a living when many other breeds would starve," said Mr. Hume, "has generally been conceded, but that it could convert silage and grain into so many pounds of milk as economically as other breeds has been doubted by many The R. O. P. tests and the feeding tests carried on at the Central Experimental Farm and other places has opened many people's eyes."

At the present time Mr. Hume is milking 18 cows. Seven of these have passed the R. O. P. test and eight are now being tested for entry. The performances and records of some of these cows is interesting.

Spicy Lass, whose picture we give on this page, gave 9,000 lbs of milk in 7 1-2 months. She was first and junior champion at Toronto as a yearling in 1912. In 1913 at the Dairy Show at Ottawa she was first in the two-year-old class and was awarded the special prize given by the Ayrshire Breeders' Association for a heifer under three years from a R. O. P. cow.

Glenshamrock Canty Again, which is an imported cow, in 1912 gave 11,150 lbs. of milk testing 4 per cent. She was first at the Dairy Show at Ottawa in 1916 and is at the present time running for entry in the R.O.P.

Humeshaugh Kate (see illustration on this page) was first as a heifer calf at the C.N.E. in 1912, and first as a yearling in 1913. She qualified last year in the R.O.P. as a three-year-old, giving 8,039 lbs. of milk containing 362 pounds of butter-fat, although she was handicapped by being shown in all the shows on the eastern circuit. She is the daughter of Clerkland Kate, the famous imported show cow.

Bellsland Nan 4th is an imported cow. She was first and champion at London in 1915 and is now running in the R. O. P., and although it is over nine months since she freshened she is giving at the present time from 30 to 35 pounds of milk per day.

Humeshaugh Spicy Kate was first as a yearling in 1914 both at the C.N.E. and at London. In 1915 she was first at London as a two-year old.

Since visiting Mr. Hume's farm Lady Helen of Menie (31081) has qualified as a mature cow in the R. O. P., having given 8,540 pounds of milk testing on the average 4.5 per cent. of butter-fat in 365 days.

In the three-year-old class the honors were carried off for the Hume herd by Seymour Beauty (37161) which gave 7,252 pounds of milk containing 270 lbs. of butter-fat in 279 days.

—CANADIAN COUNTRYMAN.

Humeshaugh Kate—first as yearling in 1913 at the C.N.E. As a three-year-old she gave 8,039 lbs. of milk containing 362 lbs. of butter-fat.

FRUIT OUTLOOK IN THE DOMINION

pples a Small Crop, and Quality Poor.

Peaches Fair, Plums Light, Grapes Abundant.

The Fruit Crop Report issued by the Fruit Commissioner's Branch of the Dominion Department of Agriculture has the following information in its issue of July 31:

Apples.—The near approach of the apple season now makes it possible to forecast the prospects with greater accuracy than has heretofore been possible. There is no doubt that the production in Eastern Canada will be small and, so far as Ontario and Quebec are concerned, the quality of the fruit will be very poor. The continued development of apple scab has caused heavy dropping of fruit, and apples remaining on the trees are badly marked with the fungus. Poorly sprayed orchards are almost worthless, and even in orchards that have been well sprayed, a large portion of the crop will be of low grade. Taking the Province of Ontario as a whole, the total crop will not exceed that of 1915, which was a year of low production, and the quality of the fruit will be poorer. The only section of the province where conditions are more favorable than last year is in the Georgian Bay district, where a slight increase is expected.

Prospects in Nova Scotia have continued to fall off during July. The "drop" was much prolonged, and further reductions were caused by canker worm and green apple bug. Fortunately the development of scab has only been general in poorly sprayed orchards and the bulk of the crop marketed, coming from well cared for orchards, should be of good quality. The total crop is now estimated at about 600,000 barrels, or equal to 1915. No further reduction is likely to occur.

The British Columbia crop should exceed that of last year. There has been some development of scab on account of wet weather, but it is not general, and the bulk of the crop promises to be clean.

The crop in Wentworth is variable, but will average "light." Fungous is not so serious near Lake Ontario as elsewhere in the country. Orchards generally have been much neglected. In the Burlington Oakville district the crop will not be more than 60 per cent. of last year, and of inferior quality. The trees have a very unhealthy appearance. Near Winona the crop is between 40 and 50 per cent. normal. Scab is not serious, except in unsprayed orchards. Kings and Spies are light, with Greenings, Baldwins and Russets fair.

Peaches.—The Niagara peach crop will be between 60 and 75 per cent. of a standard crop. Varieties of the Crawford type are light; Elbertas about medium; other varieties, such as Longhurst, Lemon Free, Smock, etc., are a full crop. A serious hail storm swept through Niagara township, on the Niagara River, on July 2, causing very serious local damage, but not appreciably lowering the total production in the Peninsula. In Lambton county there will be a medium crop of very high quality. The damage from "leaf curl" has been much lighter than was anticipated. A medium crop is also expected in Essex, or about 10 per cent. greater than last year.

The British Columbia crop will be good. There is an increasing demand for British Columbia apricots, which are now being marketed and many trees are being planted.

Plums—There is about half a crop of plums in Niagara. Bradshaws give the best promise. All early varieties are poor. Burbanks are 20 per cent. of a standard crop; Grand Duke, Guell, Monarch, and Reine Claude, 30 per cent.; Lombard, 40 per cent. Considerable rotting is reducing the crop. There is a light crop in Lambton and a very light crop in the Burlington district. Middlesex reports a half crop. East of Toronto and in the Georgian Bay district the crop is practically a failure.

In British Columbia no improvement has taken place. Early varieties are extremely light in the Okanagan and a small crop of all varieties is reported in the Kootenay valley. Taking the province as a whole there will not be more than a medium crop of plums and prunes.

The crop is light in New Brunswick, and almost a failure in Nova Scotia, where hardly any of the blossoms set fruit. Some injury has been caused by curculio in New Brunswick.

Pears—Bartletts are a better crop than other varieties in Niagara. There will be a total crop of about 50 per cent. of normal. Duchess are not more than 25 per cent.; Keiffers medium. There is a light crop in Lambton, and a fair crop in Middlesex. Near Burlington, where there are several large commercial orchards, Bartletts give fair promise, with Keiffers medium and other varieties light. East of Toronto in Ontario there is less than half a crop and much of the fruit is scabby. In a few orchards in the Newcastle district the quality is good.

A fair crop is reported in Quebec, with much spot on Flemish Beauty.

There was a light set of fruit in Nova Scotia, and a heavy drop. The crop is almost a failure.

Late varieties in the Kootenay Valley of British Columbia were reduced by the June drop. Early varieties are good. In the Okanagan Valley there will be a 25 per cent. increase over last year's crop.

Cherries—Sweet varieties in southern and western Ontario are now nearly over. Prices have been good. The sour varieties now being harvested, are a light crop. The development of the fruit has been hindered in western Ontario by the shot-hole fungous, which has been quite general and has completely defoliated some trees. In the Burlington district the fruit is reported to be rotting fast. Montmorency is about a half crop.

In New Brunswick the crop has been light and ripened irregularly.

The cherry crop is a failure in Nova Scotia.

In British Columbia there is a lighter crop than usual. Heavy rains at the opening of the season caused much splitting of the larger sweet varieties, and shortened the total crop at least 20 per cent. Olivets and Morellos are now moving at prices slightly better than last year.

Grapes—There is a promise of a full crop of grapes in Niagara. Some reports show the presence of a mildew on the Roger varieties.

MOSES AND SANITATION.

Ancient Laws as Effective as Modern Rules of Hygiene.

There has been gathered a collection of facts to prove that the sanitary laws of Moses were not only on a line with the modern rules of hygiene, but in some cases in advance of them.

The Jew, thousands of years before Christ, settling in a semi-tropical country, was forbidden to eat pork or shell-fish, and milk was designated as a source of contagion. In the Talmud a method of slaughtering animals was prescribed which is acknowledged today in our markets as the most sanitary.

Five thousand years before Koch gave to the world the results of his researches in bacteriology the Mosaic law pointed out the danger to man from tuberculosis in cattle, but did not forbid infected poultry as food. It was only a few years ago that German specialists discovered that fowl tuberculosis was harmless to man.

The Mosaic law also enforced the isolation of patients with contagious diseases and the burial of the dead outside all cities. These hints the Gentile world did not fully accept until a century or two ago.

The wise lawgiver prescribed not only fasting at certain periods of the year, but the removal of all families in summer out to camps, where for a time they could live close to nature. Many of the laws of Moses were prescriptions intended for the health of both mind and body.

ONCE A SOVEREIGN STATE.

Now Noli is Simply a Fishing Village With a Past.

One of the oddest and quaintest little independent states that ever existed in Europe—the tiny republic of Noli, founded before Rome and maintaining its liberty for many centuries until Napoleon swept away its privileges—is today merely a fishing village near Genoa, but it is full of reminders of its former greatness and affords a wonderful glimpse of mediaeval times. Destroyed by the Carthaginians in 217 B. C., and who knows how often by subsequent marauders, there seemed no limit to her powers of recovery.

This quaint little fishing village maintained itself as a sovereign state for centuries, took a prominent part in the quarrels of Guelphs and Ghibellines, sent doughty warriors to the Crusades, commanded the interest of emperors and popes and only succumbed at last to the armies of Napoleon. Dante clambered hither over terrible hills on hands and knees and revenged himself by consigning Noli to his "Purgatory."

Everybody is rich in this poor man's not rare for the 120 boats to earn $1,600 in a night, or $75,000 in a season. Through fish alone a man earns far more than a clerk, besides which he has no "appearances" to keep up. Under these happy conditions he soon acquires land and houses, which afford a steady revenue while he sleeps or fishes. The earth here has only to be scratched in order to bring forth wealth, so rich is the soil and so abundant the water.

Flounce upon flounce of soft tulle falling over a dainty flesh-colored satin lining goes far to make this dance gown a charming affair. Elaborate pearl bead festoons and embroidery afford rich trimming. The bodice is extremely simple, the only relief from the folds of tulle being the wide band of pearl embroidery.

Chats With the Doctor

BY A PHYSICIAN

CARE NEEDED IN SUMMER.

The farms that are producing eggs and poultry for the city dweller do not make the money they should, owing to the lack of care in handling the flocks. The up-to-date poultry plant can put a balance on the right side of the ledger if properly managed.

But the owners must cater to the best trade and handle the birds in the best possible manner, for a good egg yield at a time of the year when eggs command the best prices are the most alluring, but during the summer months, the flocks get little attention from the average beginner. And yet this summer care is just as important as the care in winter, and in some cases more so. In the case of young chicks that are to be producers of hen fruit during the winter, any neglect will cause them to slow up in maturing, and instead of being at the proper weight and size at five and six months they are below weight, and maturity is a month, and sometimes more, behind. And this means a loss which cannot be recovered with the old fowls, because of the fact that the eggs are no longer desired for the hatching of chicks. The output from the old fowls is not so great, they are given but different care, often penned in yards without a spear of grass or green food, on some farms; many times with no protection from the rays of the summer sun, except to retire in the poultry quarters, which are often so constructed as to be unbearable. Many of the hens so treated are to bee 1917 breeders, yet with this kind of treatment they cannot be in condition to produce eggs, strong in fertility, or hatching qualities.

The summer care of the 1917 breeders will have much to do with the fertility and hatching of the 1917 crop of chicks. This is so often overlooked by not only the beginer, but many times by the more experienced poultry keeper. The growing chicks must have roomy quarters, which should never be allowed to become overcrowded, an evil many poultry keepers indulge in to the detriment of their flocks.

Quality, and not quantity, is what will put the balance on the right side of the ledger. Quantity has put many out of the poultry business when not coupled with quality. If more poultry keepers realized this important fact there would be far better returns from their work, with much less labor.

Many beginners in poultry are like some farmers at planting time—its so easy to plant a large acreage in the spring, but very hard to give it proper cultivation during the summer months. So with poultry, many chicks are hatched, but too often poultry runs not in good condition or roomy enough to accommodate the chicks, and in some cases a death rate larger than it should be. Many of the chicks will never develop into good producers, and in these cases the breeder who sold the hatching eggs or day-old chicks will receive the blame for the poor quality of the growing stock, when the fault lies with the poultry keeper who fails to comply with the essentials that must be followed if the best results are to be obtained. It cannot be said that with so much free advice, given in the poultry keepers do not get a chance to learn. Rather they do not follow the instructions. For young chicks the essentials are not so many, but must be faithfully carried out to secure the best results.

First rooms, well-ventilated poultry buildings.

Second, keeping birds of the same age together and not overcrowding.

Third, poultry yards or runs seeded to grass, clover or alfalfa when they cannot have the advantage of free range. Shade in some form should be provided. Natural shade is best, but artificial shade can be secured by erecting board or muslin shelters. This keeps the growing stock from seeking protection from the hot sun in the poultry buildings, which, no matter how well constructed, will be hot during the day.

Fourth, fresh water, in clean vessels. This in the heated spells of July and August is more important than feed.

For the older fowls, those to be retained for layers and breeders, less corn should be fed, and they should be made as comfortable as possible, that they may go into winter quarters in good condition. There is nothing hard about the handling of the flocks during the summer months. Rather is it a matter of seeing that the small details are complied with. This may appear to the young poultry keeper of small importance, but they are the mainsprings to success in poultry. Neglect any one of the so called minor essentials and a loss is bound to follow. The most successful poultry keepers will always be found among those who are looking forward to giving their flocks every reasonable comfort, both in winter and summer.

NOTES.

Mr. Poultryman, if you take pride in marketing good eggs at a good price, consider the following:

Do not keep mongrel stock. They are not high producers, and their eggs are not uniform as to size and color.

Keep laying hens separated from setting hens.

Gather eggs carefully in warm weather twice daily.

Insist that your buyer candle and grade your eggs and that he pay a premium for "firsts" over "seconds." You cannot afford to produce the best and take a flat "case count" price along with the producers of small, dirty, stale, inferior eggs.

The sale of infertile incubator eggs will never help you to establish a higher market price for your product.

Separate the male birds from the flock except during the breeding season. Fertile eggs are poor keepers.

Keep nests free from filth and provide plenty of them. It is the foul, dirty, unattractive nest that compels the hen to seek the weeds or some other undesirable place.

Market eggs in a standard egg case. Never haul to town over rough roads or in an open basket or pan exposed to the hot sun.

You will have the largest number of "firsts" if you market at least twice a week.

Never wash eggs; it destroys their keeping qualities.

Eggs are easily affected by bad odors. Do not keep in a musty grain bin, or in the vegetable cellar, or where they can absorb the odors of kerosene or gasoline.—C. H. Anderson, Colorado Agricultural College, Fort Collins, Colo.

IF CHRIST WERE IN EUROPE NOW

(By Arthur Lee, Editor of "My Magazine.)

If the Founder of Christianity were in Europe now, an M. P. has been asking this week, do you doubt that He would be a Conscientious Objector?

It is an arresting question, but there should be something in it, no doubt, about the country in which the Founder of Christianity would find Himself an objector. These questions are easy to ask and hard to answer, but one man in these islands begs leave to refuse to bow down to the doctrine that if Christ were in Europe now He would be willing that Germany should have her way in Belgium and Serbia and Poland and France.

"Come unto Me, all ye that labor and are heavyladen"—how grateful and consoling these words are to us all! Is Belgium weary? Is Serbia heavyladen? And would Christ, if He were here to-day, refuse them rest, and consign them to the Troubler of the World? We do His name dishonor in the thought.

We need not hate the man who has a conscience that objects to war. God knows the world has need of consciences like that. We may crave mercy for the conscientious objector in the hard case to which these days have brought him. But it is not liberty of conscience that is in danger in these islands now; it is the liberty to think at all: it is the foundation of justice itself, and while the noblest men on earth are laying down their lives to make this land worth living in, to keep alive the fire of England in the world, to guard the future for your child and mine, we do well to spend our time in other ways than troubling overmuch about a conscience that would let this land be overwhelmed and hand it over to the enemies of God and man.

RIGHTEOUS USE OF FORCE.

There are things from which the mind recoils and we would rather not be asked what Christ would do, but since the question has been asked, and asked in that triumphant way, let us face it and give it an answer. In the opinion of the great multitude of those who believe in Christianity throughout the earth, it is a cruel and needless trial of their faith to suggest that these men who fight for our freedom are wrong, and that Christ is not with them. There is no condemnation of these men in the Christianity that we believe in; there is nothing in the words that Jesus left behind Him, or in the spirit that He planted in the world, which says that he who fights the man who sank the Lusitania, that he who fights the torturers of Wittenberg, that he who fights the men who broke their word to Belgium, is a poorer creature, a less worthy follower of Him who died on Calvary, than the man who is willing to enjoy the peace that other men win for him, and stays at home in the name of his conscience, looking on.

We can think of things that Jesus said which are hard to understand in the light of these dark days, but the day has never been when the mind of man could understand the wisdom of the Son of God. In peace, as in war, there are things that are mysterious, seeming to cut across the very foundations of our modern world. But the last word has not yet been said of the meaning of these things, and, meanwhile, we have something greater than all the words that Jesus spoke: we have the life He lived. If we think of that as our guide, and think more of that than of our little interpretations of the things He said, the consciences of those brave men who fight for England need suffer no anxiety.

RESIST NOT EVIL.

Once in His short life on earth Christ left us all a great example which nations threatened by so evil foe need not hesitate to follow. There was a day in His life when the soft words that turn away wrath were of no avail, when the thing He saw before Him was beyond the patience of Him Who was to endure the bitter mocking of the Cross; and on that day the action of Christ spoke louder than His work. He came into the Temple and found men desecrating the holy place and He drove them out by force.

Let us look back to that day and remember all we know of it. The thought of it will carry a dull consolation to the trenches, where conscience is not really dead. Christ came into the Temple and saw it turned into a market-place, where men were selling animals and birds, and changing money. All power was given unto Him in heaven and on earth, but He did not stand at the Temple door and let this thing go on. He looked about for some small cords. He set to work deliberately, and not on an impulse to equip Himself for what He was about to do, as England has equipped herself for her great task. He picked up these small cords and made a whip of them with His own hands, and armed with this scourge He drove these men out of the Temple with force. He drove their sheep and oxen after them. He flung their money after them. He overthrew their tables. It was, I suppose, the only time of which we know when Christ used physical force. If men shall tell that His message to the world is, "Resist not evil," it will not be easier for them to blot this great day out of His life than for us to explain His words.

Think of these words for a moment, and ask yourself if they are really so very hard to understand. May they not mean that we are to "resist not evil" for ourselves? We are to suffer any persecution and all manner of evil things for the good that may come through our suffering. So Christ spoke for Himself, so He urged that we do ourselves. As between Him and another there was never a doubt. He was willing that a man should strike Him twice; if a man took His coat He would give him His cloak also. It is not very difficult to understand. Everyone knows that the philosophy of it has proved true again and again even in this modern world. We can overcome evil with good; we can speak the soft word that will turn away wrath.

But Christ was no coward, and He was never, so far as we know, in that position of solemn truth, that the citizens of any free nation holds today. Is it to be imagined that if Christ had been responsible for the safety of England in 1914, for all the sacredness of child-life in those islands, for all the innocence that placed its simple trust in Him, for the protection of all those gentle lives that are powerless to protect themselves—is it to be conceived that He would have stood aside to make room for whatever pack of wolves might leap out of Central Europe to overwhelm this land?

Words can hardly frame the thought of an abuse of trust like that. Now come back to the Temple and remember this: that it was for an abuse of trust that Christ took the sternest action of His life and administered punishment by force. It is nothing to say He only used a little whip. He used whatever power was there and whatever power was enough. There is no need for big guns when little guns will do, or for a gun at all if a whip will do; the force that will overpower the enemy is enough.

And now the day has come for us when our highest duty is the sacred keeping of our trust. We hold the present for the future; it is for us to hand on the torch, to keep faith alive in the world. We are entitled to suffer for ourselves, to make sacrifices for ourselves, to allow all manner of evil to come upon us and to endure it in silence, but we are not entitled to hand on suffering and sacrifice and all manner of evil to those who come after us. We reap the rich harvest of the past, we gather the fruit that other men have sown; it is not for us to allow the enemy to scatter them and wither them, and rob our children of the things our fathers gave us. We hold the world in fee for those who are coming on.

SANCTITY OF TEMPLE OF FREEDOM.

And what is it that has happened? We have seen the enemy creeping on to destroy us, to overthrow the liberties we hold in trust for future ages. No trust that ever reposed in the care of men can compare with it. Who are we to say that such a trust, fraught with the happiness of millions of immortal souls, would have seemed less to Christ if He had been on earth than the cause for which He drove men out with whips? Who are we to say that the sanctity of Europe would be less impelling a trust to Him than the sanctity of the temple?

One of three things Christ in Europe now would have to be—He would be for us or against us, or He would be indifferent. We can hardly think of such a blasphemy as that he would be indifferent to such momentous things as these, and we may ask on whose side, then, would He have been when Germany refused to speak the word that would have stayed the war, when Germany betrayed the little nation it was pledged to protect? On whose side would He be at Ruhleben and Wittenberg? We look down through the ages of history, and it is hard to believe that Christ would have been against Alfred, who founded our navy and drove back our foes, against Cromwell who made us free, against Joan of Arc who led France out of bondage, against George Washington who established liberty in the western world, or against His servant and soldier, General Gordon. It is beyond the power to believe that the founder of Christianity could be a conscientious objector to all that these men stood for and all the things they did.

WILL KEEP OUR TRUST.

Perhaps we must come to think of all these things again some other day, but now let us be assured, and let our lectors be consoled. We are not Anti-Christ; our heroes fight for the things He stood for. "If the good man of the house had known what hour the thief would come he would have watched and not suffered his house to be broken through." They are His own words, and after these He said, "Be ye, therefore, ready, also." We may not have known the hour the thief would come, but we watched and we were ready, and we have not suffered our house to be broken through. We had nobler things to do than stand and watch disaster and catastrophe. We shall keep our trust and do our duty, and in our patience possess our souls. Heaven and earth shall pass away, but His word shall not pass away—nor shall the spirit of liberty and justice and humanity and truth that sprang out of His word; nor shall England, as long as there are men still left in her who are not dead to her ancient past, who love her in this bitter present, whose faith in her still abide through a future that shall be nobler and nobler yet.

MILBURN'S
HEART and NERVE PILLS
CURED
Salvation Army Captain.

Capt. Wm. E. Sanford (Salvation Army), 38 Earlscourt Ave., Toronto, Ont., writes: "A short time ago I suffered from heart trouble, which seemed to come on me very suddenly. I was so bad, that at times it seemed as if it was all I could do to breathe. I noticed an announcement of Milburn's Heart and Nerve Pills, and decided to give them a trial. After taking two or three days' treatment I felt fine, and my heart has not bothered me since. If this testimony would be of any service to others you are at liberty to use it."

To all who suffer from any form of heart trouble Milburn's Heart and Nerve Pills will give prompt and permanent relief. They strengthen and invigorate the action of the heart, and tone up the whole system.

Milburn's Heart and Nerve Pills are 50 cents per box, or 3 boxes for $1.25. For sale at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

DRUGGISTS FLOURISH.

How the Business is Run in the South American Republics.

Latin Americans are great believers in medicines and, due to the scarcity of physicians, are obliged to "doctor" themselves. Pharmacy is consequently profitable. With the exception of modern Europe, Canada and the United States pharmacy is practiced in other lands of the world much as it was in the United States seventy-five or a hundred years ago, and this is particularly true of the republics to the south of us.

The individual druggist makes his own pills, extracts, tinctures, infusions and pulverizes his own crude drugs. Soda water fountains are few. The usual rubber goods, toilet articles, soaps, perfumes, instruments and sundries are carried.

Each druggist makes a line of his own specialties which he pushes. In addition to the standard drugs and medicines, he also carries remedies and medicaments known only in his immediate vicinity. They are mostly of Indian origin, compounded from roots, herbs or other ingredients, produced only in the country where he lives. These find a ready sale among all classes.

Superstitious ideas are prevalent, and these are frequently taken advantage of by the unscrupulous. One pharmacist made a fortune selling Indians, half casts, and whites, for that matter, too, "pink love powders" and "white love powders." The white love powder was pulverized sugar, while the pink love powder was made of the same material colored. Indians would walk hundreds of miles to buy this precious powder.

The Difference.

Case and Comment says that at a recent meeting in Hampton one of the speakers told of a colored witness who was rebuked by the judge for the constant repetition of the phrase, "also, and likewise." "Now, judge," replied the witness, "there's a difference between those words. I'se gwine to splain. Yo' father was an att'ny an' a great one, wasn't he?" The judge assented, somewhat placated. "Well, judge, yo' an att'ny also, but not likewise. See, judge?"

John Travers Cornwall.

Bare your heads, men! The soul of John Travers Cornwall is passing.

Dip your colors, king and kaiser, czar and sultan, emperor and president. It is John Travers Cornwall's hour, not yours.

You men in the trenches—Saxon, Teuton, Celt, Serb, Cossack—if your guns must speak, let them speak tribute to him—a child—who looked Death square in the face and died for Duty.

You men in a million harvest fields—stay your sickles and give heed!

You men at the wheels and forge—pause and listen!

You khaki-clad boys who have answered the call to your colors—stand and hearken!

From somewhere out of the void John Travers Cornwall, dead, is calling a message that none should lose.

Stand at attention—men, women and children of the wide world! Face the flag of humanity and thank your God—for John Travers Cornwall living and for John Travers Cornwall dead; for John Travers Cornwall, aged 16, soldier, patriot, martyr to duty.

"The fortitude of the wounded was admirable," wrote Vice-Admiral David Beatty, in his report of the behavior of the British naval forces in battle with the Germans in the North Sea. "A boy of the first class, John Travers Cornwall, of the Chester, was mortally wounded early in the action. He nevertheless remained standing alone at a most exposed post, quietly awaiting orders until the end of the action, with the gun's crew dead or wounded all around him. His age was under 16½ years. I regret that he has since died. I recommend his case for special recognition, in justice to his memory and acknowledgment of the high example set by him."—Minneapolis Tribune.

Was Troubled With
Stomach and Liver
FOR SEVEN YEARS.
MILBURN'S LAXA-LIVER PILLS
CURED HER.

Mrs. Thomas Sargent, Berkeley, Ont. writes: "I have been troubled with my stomach and liver for the past seven years; also have had constipation, causing headaches, backaches and dizzy spells, and at times I would almost fall down. I tried all kinds of medicine, without obtaining any relief. I commenced using Milburn's Laxa-Liver Pills, and they have cured me. I have recommended them to many of my friends, and they are all very much pleased with the results they have obtained from their use."

Milburn's Laxa-Liver Pills have been on the market for the past twenty-five years, and can be procured from all dealers.

The price is 25 cents per vial, or five vials for $1.00.

If your dealer does not keep them, they will be mailed direct on receipt of price, by The T. Milburn Co., Limited, Toronto, Ont.

EDITORIAL COMMENT

The best time to stop bush fires is before they get started.

+ + +

The man who only has three tomato plants in his back yard can't understand how the big green worms caught on to the fact.

+ + +

They can say what they like abou Camp Borden, but we notice that Mister Sam Hughes ain't Summerin' there—Guelph Mercury.

+ + +

"When will it all end?" a correspondent enquired of the London Nation The reply was "the common calculation among officials is—September of next year."

+ + +

Many towns are adopting the system of half yearly payment of taxes—payable in July and December only. The scheme is working out well. It appeals to the working classes who find it less of a burden to have their tax-bill split into two installments and it helps the Council in financing the year's work. Walkerton Council could save a snug sum in bank interest by adopting half yearly taxes.

+ + +

All over the continent the movement to reduce the size of newspapers because of advancing paper prices and the scarcity of newsprint makes headway. Toronto morning papers at three dollars a year will soon be in a class by themselves. Many not so good now cost five and six dollars a year across the border.—Toronto Globe.

+ + +

"It seems as though the Education Department has blundered again by allowing boys who enlisted or worked on the farms, their certificates and then setting two stiff papers which plucked girl candidates, and filling the Normal School Entrance class with boys. But what better could be expected from an incompetent Minister of Education like Dr. Pyne, who allows that autocrat, Dr. John Seath, to control the educational affairs of Ontario. It's time for a change in the Educational Dept. of this Province."—Chesley Enterprise.

+ + +

Twenty-five years ago according to local tradition, Walkerton had two of the best bands in Ontario. To-day the only music heard on our streets is the gentle rustle of the leaves on the trees. Every time there is a big public gathering, the authorities have to import a bunch of hired men from Hanover, or some other town. This is a condition of affairs that should not be allowed to go on indefinitely. The formation of the 160th Band here recently stood in the way for the time being of starting a local organization, but now that the Battalion is away, why should there be any further delay in starting something. We understand there are a number of good bandsmen in the town. If the Town Council would take the initiative in the matter and encourage our local bandsmen to organize we believe they would win the hearty thanks of every citizen.

LETTER FROM ENGLAND

Mrs. J. J. Cook of Toronto, who went to England recently to see her son, Verner Cook, who is in training there for service at the Front, has written her mother, Mrs. Gould, a number of interesting letters, from which we have been permitted to take some extracts:—

Verner had dinner with us last night, our tongues wagged both ways. He looks so well, says he feels fine, and hasn't an ounce of flesh on him, all muscle. We did not stop at Glasgow. We came straight on-two weeks continuous travel. There were three submarines on the lookout for us and for the Saxonia just behind us but once more the British ships and British brains outwitted the "subs." God bless them.

I can tell you one thing England is doing her duty. Girls and women everywhere are doing a man's work. It would make you cry to see nothing but old men and the work they are trying to do—hard work, because there are no young men left to do it. This is one of the loveliest hotels in England, and the first notice that meets you is "no tea or coffee served with meals." If you want it you give a special order for it and so on in every way they are saving. The smallest amount of sugar is given, even water is precious. Canada can well take a lesson. It's wonderful and all so brave.

The Zeppelins paid us a visit last night. We heard their bombs explode or saw them explode away up in the sky but the big guns here chased them off. It was so interesting, seeing the enormous search lights turned up into the clouds, searching every spot of dark cloud. It was wonderful and lower down we could hear the whirring of our own sky pilots. All over the sea here are cruisers, about ever so often, guarding the coast, you'd think even a breath of wind could not get through.

WALKERTON BOYS IN ENGLAND

Write Interestingly of Soldier Life in the Armed Camps of the Old Land

LETTER FROM LIEUT. LES YOUNG

160th Batt. C. E. F.
Bramshott Camp,
Hants, July 22nd, 1916.

My dear Mother and Father:—

I was very pleased last week to get a geist of mail from Canada in which were letters from both of you and from Harold and Gordon, as well as from friends all over, who heard I was in France and immediately they all thought of me being blown up bayonetted, and torn in shreads by the Huns. 'Tis too bad they have to be d'sappointed as I am still in Bramshott quite as comfortable as those at Home.

You seem to be wondering if I lost my rank when I transferred. If it were so I would have told you. I am still a Lieut., and again I want to warn you not to listen to rumours. Anything of any importance you will hear from me. There is no reason why you should think me lonely, homesick or anything of that sort because I am not. I often think it would be nice to run over to Rosebank for a week end, but I am not worrying to death and there is no reason to think so, and it worries me to think that you at home, believe me starving etc., when I am quite comfortable, and am having a whale of a time besides. So do not worry on my account.

I have three parcels of tobacco from Canada and I wish to thank you for them. Besides a young lady of Southampton, Capple Spence was kind and considerate enough to send me some candy, tobacco and a pair of real socks. They are socks, and I can wear them, which is something I can't do with all the socks I get. Besides she enclosed a lovely silk khaki handkerchief. It was very thoughtfull of her. I saw Lew Honey and he told me he had just got the same present from her. She must be a busy little girl if she treats all her soldier friends as she has Lew and me.

This week the school was inspected by the Japanese General Staff, who visited the British Army at the ranges, on the barrack square, in the field and in every place they train.

I am going to send you some snaps of the sports and some of the King's inspection, in which you can see the 46th march past His Majesty.

As you suggest I will notify you from France when I get there. It will be some time yet before we are there but it will be before the end of the year, but owing to the draft taking away our trained men, it will be some time before the Division is in shape.

We have them on the run now and we are going to give it to them. Our Brigade the 10th is commanded by Brig. Gen. Hughes, and he is a real fire-eater. He has been out there and knows the game and says he is out to kill. He is Sir Sam's Brother, and a good one.

Col. Sutherland is in France with the 82nd.

Les.

+ + +

LETTER FROM ED. EIDT

Trench Mortar Battery,
10th Brigade, C. E. F.
August 5th, 1916

According to your last letter, you are having a very dry summer in Canada. It has been the same here as we have had no rain for weeks and the weather in England is always so hot and close. Still any amount of hot weather is better than the continual rain during the first month we were here.

We have been under canvas for the last month, since coming from Pirbright School on July 1st. Ke. Truax got the Telescope of July 13th this morning. Mine must go astray as I only get mine about once a month. The mail is very irregular these days.

You said something in your letter about us being home this fall. I sincerely hope so, but it is a very uncertain thing and there will be much harder fighting and more bloodshed before this is ended. The hospitals all over England are full of wounded soldiers, who have been wounded "got their blighty" in the last British offensive. I have talked with some of them, and they all express the same confidence in the British and Allied Soldiery. I stood on the side of the road the other evening and watched ambulance after ambulance of wounded men going into Bramshott hospital; some lying down with legs or arms in splints and others sitting up smiling with heads all swathed in bandages. Nobody can realise the full meaning of the symbol of the Red Cross until one has seen a little of it and been under its care. It is the fate of many a soldier to take sick in training or perhaps some accident lays him low before he has had a chance to strike a blow in the great cause, and so it is that there is a military funeral out of Bramshott Hospital nearly every day, sometimes five or six.

Several of the battery took a course in bombing last week and it is very interesting work. Every soldier who goes into the trenches carries two or three bombs weighing about a pound each. The type of bomb mostly used is called the "Mills" grenade, and is a little bigger than a baseball.

Bombs are of great importance in trench warfare as they can be thrown right into the opposite trenches, whereas a rifle or machine gun is of no use except to shoot across the open. It is said by many that the trench mortars and bombers are about the most important and useful branches in the army. We will be getting our new badges shortly and will send my set of 71sts home as a little keepsake. Our new cap badge will be the figure of a Stokes gun and the shoulders, T. M. B. 10th Brigade, and we will also wear a blue grenade on each arm.

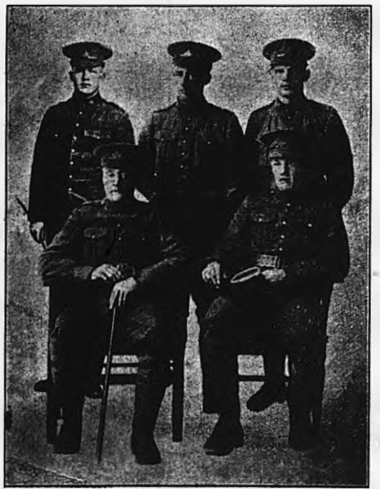
The 4th Canadian Division will be inspected by Sir Sam Hughes on Monday. We are now all ready to move and expect to be in France next week at this time.

A good many of the parcels the boys get here are more or less broken up, except those packed in a tin box. So pack anything you send in a tin box with lots of string around and they'll arrive safe.

Well, I must close. We'll soon be in action now, and there's nothing that cheers a fellow more than a letter from home—so be sure and write lots of them.

Love to all,

Ed.



FATHER AND FOUR SONS IN KHAKI

Signaller Victor Bell of Walkerton, his father, and his three brothers, all wearing the King's Uniform. They are—top row, left to right: Pte. Victor Bell, of the Signal Corps, N. O. R., France; Pte. Russel N. Bell, 161st Batt'n, Camp Borden; Pte. Wilfrid L. Bell, 161st, at Camp Borden; and below, seated: Pte. David Bell (the father), of the 185th Middlesex Battalion, which is leaving for overseas this week; and Pte. Robert Bell, 161st, Camp Borden.

Wanted

By 15th of Aug. or 1st of Sept. a good reliable girl with good disposition and morals to do housework on farm (no milking) one mile from town, wages $275 per year with promise of increase at end of a year if satisfactory. Apply Mrs. R. A. Anderson, Carnduff, Sask. 30–31.

Bread Making Contests
At Rural School Fairs

PRIZES—Free Courses at Macdonald Institute, Guelph
Free Poultry Raising Courses at Ontario Agricultural College
Free Cook Books and Magazines

Over 1,500 prizes in all will be offered in bread-making contests which will be held this fall at over 250 rural school fairs taking place in Ontario. It will be a great event at the fairs and will stimulate interest in bread-making among young girls between the ages of 12 and 17 years.

Here is a wonderful opportunity for your daughter to win for herself a Free Course in Domestic Science at the famous Macdonald Institute, Guelph. All she has to do is to bake one double loaf of bread and enter it in the contest at the fair according to the conditions explained below and more fully told in the folder we will send you on request. The loaf must be baked with

Cream of the West Flour
the hard wheat flour guaranteed for bread.

This is a splendid flour which makes the biggest, bulging loaves—whitest, lightest and most wholesome bread you ever baked. Is this not a splendid opportunity to interest your daughters in breadmaking?

Here are the Splendid Prizes offered for the best loaf of bread baked with Cream of the West Flour. The following are offered at each local Fair.

1st Prize.—1 paid up subscription to "My Magazine" for 1 year. This magazine is full from cover to cover every month with articles suitable for young people of all ages. It is published in England. Value $2.50 per year.

2nd Prize.—6 months' paid-up subscription to "My Magazine" Value $1.25.

Extra Prizes.—When entries exceed ten a 3rd prize will be awarded of 6 mos. paid up subscription to "My Magazine." When the number of entries exceeds twenty the judges at the fair will award 4th, 5th, and 6th prizes of one year's paid up subscriptions to "The Little Paper." This is a wonderful little publication issued every month in England. Its eight pages are packed with highly engaging information and stories relating to history, nature study, animals, bird life, etc.

Important—The winners of 1st prizes at the fairs automatically become competitors for the Provincial Prizes. The second half of the double loaf is sent to Ontario Agricultural College, Guelph, by the district representative in special containers provided. The judging is done by Miss M. A. Purdy of the Department of Breadmaking and Flour Testing at the College.

Provincial Prizes—The winners of first prize at each local fair compete for following Provincial prizes. The first and second prizes, or third and fourth prizes, will not be awarded in any one county:

1st Prize.—Short Course (3 months) in Domestic Science at Macdonald Institute, Guelph. The Macdonald Institute does not accept students under the age of 17 years; if the winner be less than 17 we present her with a certificate entitling her to take the course when she reaches the right age. Value of course $75.00, which pays for fees, room, board and washing. The winner lives at Macdonald Hall while taking course.

2nd Prize.—Short Course (3 months) in Domestic Science at Macdonald Institute, Guelph.

3rd Prize.—Short Course (4 weeks) in Poultry Raising at Ontario Agricultural College, Guelph. Girls taking this course do not live at the College, but good boarding houses will be [illegible] for them in Guelph. Value of course [illegible], which pays board of student in Guelph. (No fees are charged for course.)

4th Prize.—Short Course (4 weeks) in Poultry Raising at the Ontario Agricultural College.

5th to 29th Prizes.—The Famous Boston Cooking-school Cook Book by Fannie Merritt Farmer, latest edition (1915). There are [illegible] information."

Conditions of the Contest

Every girl may compete at the rural school fair in her district, whether or not she attends school, providing that her 12th birthday occurs before November 1st, 1916, or her 17th birthday does not occur before Nov. 1, 1916. One loaf of bread must be submitted baked in pan about 7 x 5 inches and 3 inches deep, and divided into twin loaves so that they may be separated at the fair. The loaf must be baked with Cream of the West Flour. One half will be judged at the fair. The other half first prize loaf will be sent to Ontario Agricultural College, Guelph, to compete in the Provincial Contest. The local contest at the fair will be conducted under the same rules as all the other regular contests at your fair.

The standard by which bread will be judged will be as follows:

1. Appearance of Loaf		15 marks
(a) Color	5 marks	
(b) Texture of crust	5 marks	
(c) Shape of loaf	5 marks	
2. Texture of Crumb		40 marks
(a) Evenness	15 marks	
(b) Silkiness	20 marks	
(c) Color	5 marks	
3. Flavor of Bread		45 marks
(a) Taste	25 marks	
(b) Odor	20 marks	

Each loaf must be accompanied by the part of the flour bag containing the face of the Old Miller (important) and an entry form must be signed by the girl and parents or guardian stating date of birth, P.O. address, and giving name of dealer from whom Cream of the West Flour was purchased. The form will state [illegible] competition. The [illegible] decision of the judges is final. Not more than one entry may be made by each girl and not more than one prize will be awarded to the same family.

The Results of the contests at the fair will be made known in the usual way as in the case of all the other regular contests. The Provincial results will be announced as soon as possible after the conclusion of the Rural School Fairs in the Province.

Do Not Miss this Great Opportunity: Every girl between 12 and 17 years should compete. What a splendid way to stir up increased interest in breadmaking! Get a supply of Cream of the West Flour at your dealers and practise using it as often as possible to increase the chances of winning. If your dealer cannot sell it to you, write to the Campbell Flour Mills Co., Ltd., Toronto, and they will promptly tell you the nearest place to get it.

No Competitions in Counties Named Below: The competition is open to all parts of the province where Rural School Fairs are held, except the districts of Rainy River, Kenora, Manitoulin and Thunder Bay. These districts are the only parts of the province where school fairs are held by the Department of Agriculture in which this competition will not be a feature. There are no district representatives of the Department of Agriculture in the Counties of Huron, Perth, Waterloo, Haliburton, Prescott, Russell or Lincoln, and no rural school fairs are held in these Counties by the Department of Agriculture. We regret, therefore, that the competition cannot include these Counties.

Write for free folder giving full and complete information about every feature of this great contest.

Address **Campbell Flour Mills Co., Limited, (West) Toronto**

KILLED IN ACTION, JUNE 3RD, 1916

He loved the home his people made between
The little hills, the woods, and every place
From mighty Huron to the swift Saugeen—
He loved them—white with snow or brave with green
And old and young were glad to see his face,
Or meet him on the road a joke to pass,
Or give him greetings coming home from mass.
He loved his mother and his father gray;
His ways were their ways, he had learned it so;
To them it seemed but one short yesterday
Since at their knees they taught him how to pray,
And trained his footsteps how they were to go.
He loved his brothers and his sisters all.
He loved his home and heard his Country's call.
He loved the faith his fathers had of yore,
He learned it lovingly when but a lad.
The faith his father's fathers loved before.
He loved the selfsame way, nor wanted more.
Just to possess it made his brave heart glad.
A faith which told him how to die and live,
To love his country and his foes forgive.
Why speak of sorrow when it only tends
To common usage? O the story is told
How he fought the fight for country, home and friends.
What right has sorrow here to make amends?
The pulses of his heart were purest gold.
And hero's deeds in every land and clime
Are sung with gladness to the end of time.
The roaring guns and blasts of iron showers
That sang his requiem over old Ypres,
He hears them not. In God's eternal bowers
But southern winds and Belgium's loveliest flowers
Will blow above him on a happier day.
And in our hearts his memory will be green
As maples growing by his own Saugeen.

News About Town

Mr. and Mrs. J. J. Heffernan and daughter of Guelph were visitors in town this week.

Mrs. Hector Cowan and daughter of Edmonton have been visiting at Mr. W. H. McFarlane's.

Messrs. Harry Allen, Joe McCurdy and E. P. Weis left this week for the West via Canadian Northern.

Mr. Alfred Boddy, of Winnipeg, Alta. writes:—"We like the Telescope so much we would feel lost without it."

John Doerr and John Wagner, of Chepstow, and Tony Strauss of Mildmay went west via Canadian Northern this week.

Mr. and Mrs. James Steele of Bell Plaine, Sask. are visiting Mr. Robert Steele of Brant, and other relatives in this vicinity.

Mrs. Stewart and Miss Stewart who have been visiting Mrs. Stewart's mother, Mrs. McLean, left for their home at Winnipeg on Tuesday.

Mrs. Mary Halell and three sons of Minborn, Alta. who has been visiting her father, Mr. Geo. Carbert, returned home the latter part of the week.

Dr. T. C. Abell and his wife from Chicago visited Mrs. Abell's cousin Mrs. D. McKechnie on Monday. The Dr. is a specialist in Bacteriology and Chemical Analysis.

Gunners Norman Hibbert and Geo. Sillers of the 56th Field Battery were home from Petawawa Camp over Sunday on what may be their last visit before leaving for the Front.

Sergt.-Major Leslie Huether was up from Toronto on Thursday and motored from here to Guelph accompanied by his mother, who has been at the family cottage at Southampton.

Fred Blue, Harold Blue, Stewart Dewar, Wallace Diehl and Harold Collins, five young men of Paisley, all went to Toronto last week and signed up with the Divisional Signal Corps.

Many heroic deeds were recorded in the forest fires of Northern Ontario. Hundreds of lives were saved by those who risked their own lives in helping others to places of security. and many lost their lives who were already safe, in attempting to rescue others.

The following left on C. P. R. for Winnipeg and West on Harvester's Excursion, Aug. 19th:—Henry Brickel, F. J. Suter, Wm. Armour, Norman Ernest. John Alex Coates, Wesley Feising, Harold Jasper, Ed. Graff, Frank Lang, Wm. Craig, Frank Fruin, Earl R. Pinkney, Philip J. Ernewein, Herman Wilhelm, Wm. Bosh, Ed. Ernst, Geo. Dennis, N. A. Yesch, Wm. J. Crawford, Calvin Clubb. Jos. Beingessner, Pat Desmond, Albert J. Heller.

Mr. E. M. Taylor arrived home on Wednesday last from a holiday trip to Montreal and Perth.

Mrs. and Miss Grainger left on a visit to Detroit to be followed by a boat trip to the Sault.

Will Ramsey stepped on poison ivy while camping up the river last week and is laid up as a result.

Mrs. Jackson of Toronto and Miss Pannabaker of Kitchener, are the guests of Rev. and Mrs. C. W. Cosens.

Mr. and Mrs. Ed. Hopkins (nee Baird) of Brantford have gone farming. Their farm adjoins Caledonia village.

Coun. Russel bought a new horse this week to replace the animal which fractured its leg last week and had to be shot.

Mrs. W. L. Chambers and daughter Doris, of Brantford, have been guests of Mrs. Chambers' sister, Mrs. Shelton at Camp E. E. E. E.

Mrs. Jos. Kaoll of Toronto has been visiting her brother, Mr. Jos. Smith at Cargill, and is at present here on a visit to her sister, Mrs. John Weller.

The name chosen by the young ladies for their camp down the river, E. E. E. E. proved quite a puzzle to some people. The interpretation is "For Ease."

Mr. K. M. Taylor, secretary of the local Red Cross organization, acknowledges with thanks the receipt of $64.26 from the Maple Hill Red Cross girls, and $40 from the Women's Inst.

Mr. Harry Galbraith of Shelburne well-known in Walkerton, volunteered for service in the 164th Batt. band. He was accepted at first but has since been discharged as physically unfit.

Mr. John Wilhelm had the tip of his thumb removed by a circular saw at the Bobbin Factory on Thursday. A large portion of flesh underneath the thumb was taken without injuring the bone.

Miss Gladys Brant, of Elmira, formerly teacher in the Business College here, visited her friend Miss Maud Stead on Thursday. Miss Brant is now teaching in the High School, Hammond, Ind.

Mr. John Kuntz, who has been conducting a florist business at Berlin, which he purchased in May, spent a few days with his family here last week. Mrs. Kuntz and the family will remove to Berlin in the Fall.

The marriage took place at Keewatin on August 1st, of Mr. Garrett J. Lamb, son of Mr. J. J. Lamb of Brant. to Miss Luella Fraser of Keewatin. Mr. Lamb is a promising young Civil Engineer. At present he is located at Winnipeg.

Mr. Andrew Meyer was up from Hamilton this week on a visit to his family. He has a good position in the Car foundry, a firm which now has orders three years ahead. His son, Lawrence has a lucrative job at Hamilton, with the G. T. R.

Mr. and Mrs. H. M. Boland and babe of Montreal, visited relatives at Walkerton and Hanover this week. Mrs. Boland was formerly Miss Wilma Haas, and is a daughter of Contractor Alex. Haas. Mr. Boland, a clever young newspaperman, is City Editor of the Montreal Daily Star.

Walkerton Boy Promoted.
Ted Wilhelm, son of John Wilhelm, who went to England with the 71st. has been promoted to the rank of Corporal.

✦ ✦ ✦

Wanted
At once, a reliable man of good address with some experience among farmers, to act as county representative for Bruce County—Stone & Wellington, Nurserymen, Toronto. 30-36

✦ ✦ ✦

Back From the Coast
Mr. and Mrs. David Robertson arrived home Saturday night from a trip to the Pacific Coast. They visited most of the large centres along the way, going north as far as Edmonton. Mr. Robertson states that the crops were uniformly good in the country through which they passed in Alberta and Saskatchewan, and with present prices the farmers should do well this year.

✦ ✦ ✦

Where Women May Help.
There is a great demand for young women to take the places of Office men who have gone or are going to the front. This is one of the ways in which women can "do their bit" by assisting in keeping the wheels of commerce in motion. Training in bookkeeping, stenography and other business subjects is necessary. This can be obtained quickly at the Northern Business College, Owen Sound, which is remaining open throughout the year during the war to prepare young people for war-time office positions.

✦ ✦ ✦

Boys Now in France
The Fourth Canadian Division which includes all the Walkerton boys who went to England with the 71st. Batt. is now in France, and probably on the firing line before this. Letters received by a number of Walkerton people this week, stated that the Division was leaving Bramshott Camp for France on August 10th. Pte. Chester Cunningham wrote his parents, Mr. and Mrs. Thos. Cunningham under date of August 10th:

"I am leaving for France this morning. It is now 8.30 and we are leaving here about 9.45. We were all issued with one hundred and twenty rounds of ammunition this morning and any clothing that we wanted. The whole 4th Canadian Division is going, about twenty-two thousand all together,

OUR OTTAWA LETTER
By H. F. G.

OTTAWA, August 23rd.—And so with one accord and with right good will the cabinet council passed the order depriving Honorary Colonel Wesley Allison of his honors and his military rank and the Duke signed the order with great heartiness and the goat passed out into the darkness.

The incident recalls the poem on the burial of Sir John Moore—it is so different. According to Sir John's poet, "they buried him darkly at dead of night with the lanterns dimly burning." As for Honorary Colonel John Wesley Allison, however, "they buried him neatly in broad daylight for fear of Sam returning.

Which is to say that all these interesting events like the appointing a Secretary to the Militia Department and putting the boots to Sam's guide, philosopher and friend, Colonel John Wesley Allison, are pulled off during Sam's absence. Out of sight, out of mind, that seems to be the motto of Sam's colleagues. But in sight, on our backs. Their courage wilts in the War Lord's presence. What they aim to do is to tie him up while his back is turned, because they haven't the heart to do it when he comes home. Sam has the Borden Government buffaloed. He has cast over them some spell which only works when he is on the spot. When he makes a trip to England the spell loses its power—it doesn't seem to be able to cross water and Sam has no way of giving the situation absent treatment,

What is Sam's spell? Some say it is fear, some say it is a stunned astonishment at his colossal nerve. Nobody mentions love. Whatever it is Sam puts it over. To this day there subsists an affection between Premier Borden and Sir Sam which vies with the famous attachment between Mary and her little lamb.

What makes Sir Sam love Borden so?
Oh, Borden's kind to Sam you know.

And there the matter stands. Nobody has any better explanation. Of course, the analogy is not on all fours, because Premier Borden doesn't appear to be as firm a character as Mary and Sam is certainly no lamb unless it's the kind of lamb one might raise in Pittsburg but it's the only comparison we can think of that gets anywhere near the tender relations between the Premier and his most conspicuous colleague. Sir Robert is true to the last. He stands by Sir Sam as long as Sir Sam is here to stand by. It's only when Sam is three thousand miles of blue water away from his job of keeping a close eye on 'em that Sir Robert lets Sir Sam's rivals get their work in. And even then they're only allowed to slaughter Sir Sam's friends, Sir Sam himself must not be molested.

Meanwhile the zeal and abandon with which Sir Sam's colleagues fleshed their harpoon in Colonel John Wesley Allison suggest that they would take real pleasure in doing the same thing for his patron and benefactor if Sir Sam would let them. But Sir Sam must be consulted first—Premier Borden sticks to that. With Sam away the cabinet will play but with Sam on Parliament Hill again Premier Borden may expect to get back his spine and rescind these hasty orders-in-council. Nobody will ever believe that Colonel John Wesley Allison is finally disposed of until Sam announces publicly that he has dropped a tear and laid a wreath on the Morrisburg patriot's grave.

There is reason to believe, indeed that the late Colonel John Wesley Allison is not dead—in fact that the reports of his death have been much exaggerated—and that he has simply gone on a journey to the United States where he is still "scratching gravel" but not in connection with the Munitions Board at Ottawa. He scratched once too often and far too hard even for that complacent body and his name has been removed from the list. But that does not head off his activities for other War Offices, although he may find it more difficult to get business now that he isn't a colonel any more.

It is stated with a great deal of frankness that the only reason John Wesley Allison was made a colonel was to enable him to get business from people who like to deal with colonels. Of course the fact that he was a colonel of Sir Sam's making and thus had the oblique endorsement of the Dominion Government helped some too but we need not dwell on this point. It came out clearly enough in the evidence before the Duff-Meredith Commission. Allison needed to be an honorary colonel in his business and an honorary colonel he was.

Of course Honorary Col. John Wesley Allison deserved all he got as an honorary colonel who incautiously gave the public an inkling of how much money an honorary colonel can make when he has the friendship of the Minister of Militia behind him. No one wastes any pity on him. He nearly gave the whole game away. He was on the way, so we are told, to save fifty million dollars for the Empire, but he changed his mind and saved a lot for himself. Which reminds us that the old Shell Committee saved thirty two million dollars for the British Empire, which is a sign that they had eaten heartily and were suffering from indigestion. However, they kept it on a shelf where they could look at it and there Baron Thomas found it. Observing that their mouths watered and that there were signs of returning appetite, Baron Thomas suggested that the melon be taken from the ice-box and sent to England. Which was done accordingly.

AN EVIL HERITAGE

CHAPTER XIII.

It so happened that the blue serge was not destined to undergo much hard work. In fact, the creases, which a long period of repose had wrought among its folds, had not even had time to be shaken out, when already its mission of usefulness was fulfilled.

When Bernard arrived at The Monastery on the following afternoon, armed with the fuchsia cuttings, which provided him with so welcome an excuse for repeating his yesterday's visit, there was nothing to warn him of the approach of fate. The long gallery was deserted, as usual, and as usual, too, one of the tables was littered with flowers. The sight of the very first snowdrops of the season gave him a passing thrill, and stirred within him a vague but agreeable memory.

In the drawing room, where a wood fire was comfortably crackling, Mrs. Durrant was, as usual, dozing in the window-embrasure, and, as usual, too, Miss Durrant was occupied with some elegant needle-work. Mr. Durrant having, as usual, been summoned by James, began to make the usual faultless conversation.

If there was any difference, it was only that the topics did not come quite so readily as they ordinarily did, and had Bernard been in a more observant frame of mind, he might have noticed that Mr. Durrant cleared his throat somewhat suspiciously often, and sent an inquiring glance towards the widow-embrasure about once in every two minutes.

It was not until the tea was being poured out that something like animation entered into the talk.

"It was very kind of you to remember about the fuchsias," Mr. Durrant remarked, for about the fourth time. "By the way," and he cleared his throat in a manner which sounded final, "does your gardener happen to have any camellias over? Ours have not been successful this winter, and I believe I am not betraying a state secret when I whisper into your ear that a supply is very badly wanted by the 12th."

"But, papa——" began Sybil, looking up from her work.

"Miss Durrant," said Bernard, reproachfully, "do you think it was either right or kind of you to keep this secret from me? Denman has lots of camellias. For which day do you say you want them?"

"For the 12th," answered Mr. Durrant, pleasantly.

"The 12th—all right. You shall have a cartload of them," began Bernard, enthusiastically, then abruptly broke off. "The 12th," and he tugged rather hard at his moustache. "Let me see, isn't that the day they've settled to have that silly dance?"

"If by this designation you mean the county ball——"

"And Miss Durrant is going?"

"Oh, Sybil is looking forward greatly to the change. Aren't you, Sybil?"

"Yes, papa," murmured Sybil, bending over the urn.

"She is certain to be disappointed. It's the dullest thing out, believe me," and he turned quickly towards Mrs. Durrant. "Music, floor, supper—each will be the very poorest specimen of its kind."

"Sybil is not particular," her mamma placidly replied. "Are you, Sybil?"

"No, mamma."

"And as for dancers, there's scarcely one that deserves such an appellation. You'll have your toes trodden off, Miss Durrant; it's a peculiarity of the neighborhood."

"Fortunately," observed Mr. Durrant, somewhat hurriedly, "our hopes are not confined to the neighborhood alone. I have heard Captain Stenning spoken of as a splendid waltzer."

"Stenning! Stenning? Isn't that the huge fellow with the grin? You have been deceived in the blackest fashion, Mr. Durrant. I am ready to stake my honor that if he dances at all, his performances will not surpass those of a dancing bear."

"Sybil," said the voice from the window-embrasure, "have you done arranging the flowers for the dinner table?"

"Not yet, mamma."

Five minutes later, Bernard, stepping out of the drawing-room in a distinctly ill-used frame of mind, was aware of a sudden and very pleasant transformation of his inner man. That dark-blue figure whose hands were filled with snowdrops, how deliciously familiar it was!

As a matter of course he approached the table near which she was standing.

"By the way, I forgot to ask you whether the camellias were to be white or red?"

"Whichever you like; it really does not matter," she stammered in reply.

"Of what importance can my likings or dislikings be, since I am not to see them on you? Would it not be more to the point to consult Captain Stenning's taste?"

He was a little horrified with himself when he had said it, not having been aware of intending any such downright rudeness.

Sybil looked up in confusion, with a glance which seemed to be asking for mercy. The move had not been prescribed by her mother, but it was not without its effect.

Bernard went on speaking with flying pulses and grating voice, aware that he was losing hold over himself.

"What is the use of trying to look unhappy, when you have just been proclaiming your delight at this festivity of the 12th, and when, no doubt, your card is already filled to overflowing?"

"Oh, no," breathed Sybil, plunging her hands into the flowers.

"Surely you are not going to tell me that you have not given away a dance yet?"

She threw a scared glance towards the drawing room door.

"Only a round and a square," she whispered hurriedly, at the same time crushing two handfuls of hepaticas into two unsightly blue lumps.

"And the name of the fortunate man?"

Again that dumb entreaty for mercy and again not understood.

"It was—it was Captain Stenning."

There followed about a minute's silence, during which Bernard chewed his moustache, not trusting himself to speak. Mechanically Sybil's fingers were moving about among the flowers, and mechanically Bernard's eyes were following them. It never occurred to either of them that she was decapitating the snowdrops in the most heartless fashion, nor that the hepaticas were being arranged in vases without water.

While he stood thus and watched the long, white fingers and listened to the branches of the ash tree outside tapping against the tall window, Bernard, to his astonishment, almost to his disgust, became aware that his bad temper was yielding to a second relapse of soothing memories.

"Do you know that the wind was blowing in just this way on the day when I first saw you?" he began after that pause. "I am not sure that this is not the anniversary of the day."

As he said it a sudden blaze of inspiration illumined his mind. With a most grateful distinctness he recognized that he had been a fool all along and that, considering that this had been the wish of his father's heart, there could be no disrespect to his memory implied by hurrying on events a little.

Sybil was trembling too much to make any reply. She snatched at a bunch of snowdrops, but before she reached it her hand was taken prisoner with a vigor so muscular as to be almost painful.

"Sybil, tell me the truth; would it be too great a sacrifice for you not to go?"

"I—I don't quite understand."

"Yes, you do. To the dance, Sybil. For my sake, remember. It would make me so happy; somehow I can't bear the idea, and I'm afraid I'm making a terrible mess of it, but I'm sure there can't be any mistake. It isn't asking too much, is it?"

Sybil was trembling violently, and yet, despite this, now that the critical moment had come, the woman's self-possession had proved itself to be superior to that of the man. It is generally the party whose affections are most deeply engaged who makes the greatest display. Bernard was stammering like a schoolboy, and was aware of something hot and wet under his eyelids. Sybil, on the contrary, retained just sufficient presence of mind to extract her fingers from his agonizing clasp.

"But, Mr. Berrincott—why should I—I mean—what difference can it make to you?"

"What difference? Bless me, haven't I explained? Because I love you, Sybil, more than the whole of the world put together, or than any number of worlds that exist anywhere else, or those astronomical fellows are always saying. I thought I had begun by saying that. But you won't go to that dance, will you? I know you won't. I'm quite sure that you care for me a little tiny bit, my darling. A-a-ah!"

Again there passed a minute, during which nothing was spoken, and nothing heard in the gallery but the tapping of the twigs upon the window.

It was Sybil's voice that first broke silence.

"Oh, no, no," she began, a little breathlessly, at the same time smoothing her hair with one hand, while with the other she felt for her collar. "I did not mean that Mr. Berrincott, I had forgotten."

"Bernard," suggested that gentleman, in an accent of tender reproach.

"Not yet, oh, I can't. You mustn't ask me. I only meant to say that if papa is agreed, I should have no objection to—to your caring for me. But of course it does not really count until you have spoken to him."

"Which I shall do immediately, never fear, my love. But in the meantime you can't be so cruel as to object to my being happy; to tell you the truth, I'm not in near such a funk about your father as I suppose I ought to be, certainly in not near such a funk as I was of you. Only one more, my darling, there isn't a soul in sight, and I swear it shall be the last."

"No, no, Bern—I mean Mr. Berrincott. I am really quite serious when I tell you that everything depends on papa's decision."

"And supposing it does? Have you any special reason for imagining that he objects to me?" He laughed with an almost impertinent lightheartedness as he put the question. "Is that a door opening? In the name of everything inopportune, I believe it is. My darling, I must be gone. On second thoughts, I'll put off the interview till to-morrow. I'm pretty sure I couldn't be coherent to-day; my brain is going round and round in a circle. I didn't know happiness could make one so drunk. Air will put me right again. Is this the way to the door? At peep of day to-morrow, I'll be over."

He had turned and gone two steps down the gallery, walking, indeed, like a man who is not quite sober, when Sybil came after him, breathlessly.

"Bernard," she began, on some sudden impulse, "I can't bear your going away like that; I want to tell you that—that—about those two dances, you know."

"Still hankering after them?" asked Bernard, with perfect good-temper now. After all he had never had any serious anxiety about that huge Captain Stenning.

"No; what I wanted to say was that it wasn't true, at least it was all a mistake about my having given two dances to Captain Stenning."

"Was it? So much the better," murmured Bertram, in blissful contentedness, his manner entirely taken up with a wisp of silky black hair which strayed loosely over her cheek.

At that moment the distant door was heard again, and the interrupted retreat was hastily resumed.

"It hasn't done any harm, but that's no thanks to me," was the remark which Sybil made to herself as she stood alone in the gallery. "I suppose mamma would kill me if she knew."

CHAPTER XIV.

While Sybil was making these remarks to herself in the gallery, Bernard had reached the open air, almost at a run. Never in his life before had he felt so like choking, and, considering the whirling movement of his brain and the unsteadiness of his legs, he was thankful that he had retained sufficient presence of mind to put off till to-morrow his interview with Mr. Durrant. Solitude and the open air were the two things which at this moment he craved for with something like the hunger of a famished man. Even to get out of Sybil's presence was an unspeakable relief, for to be happy is an accomplishment which requires a great deal more practice than is generally supposed.

To judge from the appearance of the long deserted avenue, Bernard was going to be provided with the desired solitude, while the same blustering March gale, which had rapped the ash twig against the window, seemed to be doing its best to cool his throbbing temples.

It was not until with huge steps he had strode round the first bend of the avenue that he became aware of a man in a grey overcoat sitting on a tree stump and digging holes in the ground with the point of his stick. The attitude seemed to imply that he was waiting for something or somebody, and in any case this was not the sort of day that people generally select for sitting on tree stumps unless they have some object in view.

Bernard's first impulse was one of irritation. So distasteful was the idea of his solitude being even indirectly disturbed that he instinctively stood still and looked round to see whether there was any way of cutting across the grass and regaining the avenue somewhere lower down, below the garden wall perhaps.

At the same moment the man in the grey overcoat raised his head, and, seeing Bernard, immediately stood up from his tree stump and went on waiting, though now in a more definite and less desultory manner.

Bernard, meanwhile, had resumed his progress down the avenue, partly because there was no convenient short-cut within sight, and partly because he was half-ashamed of his childishness. The hesitation had lasted but an instant, the next already was striding on at his former pace, and plunged back again into his former blissful reflections. What possible concern of his could that big grey-coated individual down there be? Most likely he was a genteel beggar lying in wait for the Durrant's carriage.

So completely had Bernard dismissed the individual from his thoughts by the time he reached the tree stump aforementioned, that it was almost with a start that he looked up on hearing himself addressed.

"Mr. Berrincott, if you please, sir."

The voice was not quite abject enough for a beggar; also it struck Bernard, as a passing thought, that he had heard it before, and not so very long ago, either. The grey-coated individual, instead of standing to one side, hat in hand, as would have been the natural thing, had planted himself squarely across the middle of the avenue, and retained his hat—which curiously enough was a straw one—well pulled forward over his forehead.

"Let me pass, I am in a hurry," said Bernard, in some surprise, though his attention was as yet too little engaged by the incident to let him feel angry.

"In a hurry? So am I—in a hurry for my dinner. My dinner. My teeth have been chattering here long enough in your honor. You can pass when you've heard my story, but not before."

On any other day of his life Bernard would probably in reply have knocked him down; to-day he simply shrugged his shoulders and pulled out his purse.

"Will a shilling do?"

"No, it will not do."

"Half-a-crown, then? You've hit upon a remarkably lucky moment, my friend. I can't bear to think of any one is money you want, isn't it?"

"Yes, it is money I want; but neither your shillings, nor half-crowns will do for me. You'll have to open your gold-bags a precious deal wider than that, I can tell you, before you're done with me. Serves you right, too, for chucking me over your doorsill yesterday, as though I'd been a mangy dog."

"Oh, you're the West Indian fellow, are you?" said Bernard, whose patience was beginning to give way, and who would probably have recognized Mr. Silkworth more readily, had not the damp clothes, laid on over night in preparation for to-day's interview, done their work with such bewildering thoroughness. "I have no time to listen to you now. Will you be so kind as to stand aside, Mr. Silkworth," he added, with ominous calmness.

"Not quite yet, Mr. Berrincott, ha, ha! Mr. Ber-rin-cott," repeated the manager, laying an apparently imbecile emphasis upon each syllable. "What a first-class joke it is, to be sure! Has is ever occurred to you that it's nothing but the purest courtesy that moves me to address you so? Ha, ha! The West Indian fellow may end by turning out very much more inconvenient than you have any idea of at present." And Mr. Silkworth held his two sides and positively reeled with glee.

"You told me just now that you have not had your dinner," remarked Bernard; "but I think you must be mistaken; or, at any rate, you have had a few glasses more of something than you are used to taking. I should advise an hour's sleep before night. Some people recommend black coffee, I believe."

"I'll show you in the twinkling of an eyelid whether I'm drunk or not," said Mr. Silkworth, recovering his gravity with a sort of jerk. "You know, don't you, that your father was married to a West Indian wife before he brought home the second Mrs. Simon, who became your mother?"

"Well, and what of that?"

"Only this: have you ever seen the certificate of her death?"

"Certainly not; why should I?"

"For no particular reason that I know of, except that it's generally considered more on the square to have a certificate forthcoming."

"If you're going to come out with some fairy tale about her having got out of her grave again, please be quick, for this breeze isn't exactly balmy."

"That's not at all what I'm going to do. Why, I saw the first Mrs. Simon put into her grave with my own eyes. But what I wanted to say to you, was that she wasn't put there until ever so much later than you have been led to suppose; certainly not until the second Mrs. Simon had done standing in front of the altar with your father.

(To be continued.)

The average man is a middling good sort of fellow, if he can make both ends meet.

SUNDAY SCHOOL LESSON

August 27, 1916. Lesson IX.

Journeying to Jerusalem.—Acts 20:16-38.

Commentary.—I. Arrival at Miletus (vs. 16, 17). 16. To sail by Ephesus—Paul's time to reach Jerusalem for Pentecost was too short to permit him to visit Ephesus, hence he determined to sail past the city without stopping. He could not expect to make a visit there and get away in a day. Day of Pentecost—Paul reached Troas five days after the Passover, and four days were spent in reaching Miletus, therefore only forty-one days remained to make the journey to Jerusalem. Pentecost was an important feast of the Jews, commemorating the giving of the law, and it was an important occasion to Christians, for on that day the Holy Spirit was given them. 17. Miletus—This was a seaport city of Asia Minor, situated at the mouth of the Meander River, 35 miles south of Ephesus. Sent to Ephesus, and called—The vessel was detained here for an uncertain length of time, and Paul sent for the Ephesian elders to come to Miletus to meet him, for it would not be safe for him not to be ready to embark at short notice.—Peloubet. It required at least a day for the messenger to pass from Miletus to Ephesus, and another day for the elders to reach Miletus, hence there must have been a delay of three or four days, at least, at this port. With the elders of the church at Ephesus Paul could confer, hearing from them the spiritual condition of the Christians there, and giving them needed instruction.

II. Paul's life at Ephesus (vs. 18-21). 18. He said unto them—It is evident from the narrative that Luke, the writer of the Acts, was with Paul at this time and heard his address to the elders of Ephesus. Ye know—Paul speaks with the confidence of a life of integrity when he refers the elders to his conduct and labors among them. Asia—The small Roman province in the extreme western part of Asia Minor. After what manner—The elders had been witnesses of his course of life at all times during his ministry of three years at Ephesus. 19. Serving the Lord—This was Paul's one all-absorbing purpose and calling. With all humility of mind—The apostle did not seek to exalt himself. He was the Lord's servant, and his work claimed his utmost devotion. With many tears—He bore the burden of the work of the Lord and his tears were for others. He went forth with weeping, bearing precious seed (Psa. 126:6). Temptations—Trials, testings. By the lying in wait of the Jews—"By the plots of the Jews."—R. V. The writer does not specify the trials to which Paul makes reference, but we know of one act, the riot at Ephesus, that indicates the hostility of the Ephesians toward him. 20. Kept back something that was profitable—This expression indicates that the apostle was thorough in his ministry. Publicly, and from house to house—Paul did not confine himself to public efforts in spreading the gospel, but he engaged in pastoral visitation. He gave the message to those who came to hear it from him, and he carried it to the people where they lived. These few words of the apostle, "I .... have taught you publicly, and from house to house," express, in large part, the pastor's duty. 21. Testifying........repentance ......faith—Paul declared to Jews and Gentiles alike their need of repentance and faith. Repentance and faith were essential to salvation then and they are the condition now. The Jew who had been trusting in his good works or in keeping the traditions of the law must repent of his sins and exercise faith in Jesus Christ. The Gentile who had been worshipping idols must repent of his sins and believe in the Lord Jesus Christ for salvation.

III. Paul's prospects (vs. 22-25). 22. Bound in the spirit—The apostle felt an inward conviction or constraint to go to Jerusalem. His own spirit was urging him on. Not knowing the things that shall befall me—The future had not been definitely revealed to him. Judging from his experience in his apostleship, he could not expect that he would be welcomed everywhere with open arms. He knew that there was still an offence connected with cross of Christ. He had no thought of being other than a strong and fearless defender of the gospel of Jesus Christ, whatever might be the results to him. 23. Save that the Holy Ghost witnesseth—The Spirit had revealed to Paul the general fact that he would be continuously subjected to persecution. Bonds and afflictions abide me—In his work as a minister of Jesus Christ Paul antagonized Judaism on the one hand and paganism on the other, and from both sources proceeded bitter persecution against him. The Holy Spirit revealed to him that wherever he should labor in the future, there would be distresses, and he would be in the bonds of the gospel's sake. 24. None of these things move me—Neither the prospect of the persecution from new sources nor the fact that he would be a prisoner in the hands of the enemies of the cross would keep him back from the ministry which had been entrusted to him. Neither count I my life dear unto myself—Paul's only concern for his life was that he might complete the work to which he had been divinely called. He possessed the true martyr spirit. He had such an intense love for God and for humanity that he was ready to lay down his life in their service. From his words, "Neither count I my life dear unto myself," we note that Paul prized not his life on his own account. He was ready at any moment to depart for the better land at God's summons. Finish my course with joy. The apostle signifies by his words that the race will last as long as life lasts, and that he must not faint in the midst, die, whatever suffering may be in store. The "joy" would arise from the sense of duty done, or, at all events, striven to be done.—Lumby. There would be joy also in the blessing of the Lord upon his soul. To testify the gospel of the grace of God—Paul was able to testify the gospel by his preaching, for he had a clear insight into the plan of redemption; and he could testify also by declaring what the grace of God had wrought in him. 25. I know that ye .... shall see my face no more—This was Paul's final visit to Ephesus. 26. I take you to record—I call upon you to witness. Paul was conscious that he had done his duty by the Ephesians, and he gave his hearers an opportunity to affirm or deny his statement. I am pure from the blood of all men—He had been a faithful watchman (Ezek. 33:1). 27. I have not shunned—No consideration, whether affecting his personal safety or his popularity or reputation, had kept him from doing his full duty. All the counsel of God—He had declared the plan of human redemption through Jesus Christ, with all the conditions laid upon men and with all its privileges and blessings.

IV. Exhortations and warnings (vs. 28-38). Paul was speaking to the "elders," or overseers, of the church and he exhorted them, as shepherds, to care for the flock, to protect them and to feed them. It would come to pass that opposition would be brought against them, and false teachers would come in and attempt to overthrow their faith. He called attention to the fact that for three years he had faithfully instructed them in the way of life. He commended them to the grace of God which was able to build them up and fit them for the glory world. He referred to the fact that in no sense had he made a gain of his ministry, for he had worked with his hands to support himself. The interview closed with prayer, and the leavetaking was most affectionate.

Questions.—Where did Paul go when he left Ephesus? What epistles did he write about this time? Where was he now going? Where was Miletus? To whom was this address given? In what respects had Paul been faithful? To whom were the elders to take heed? What is meant by "wolves"? What other damage threatened them? How had Paul shown unselfishness? Describe the parting scene.

PRACTICAL APPLICATIONS.

The power of example (v. 18). Deeds louder than words. Emerson said, "What you are speaks so loudly that I cannot hear you say what you are." The subject matter of much of the preaching of our day is "Heed what I tell you." Paul's theme was, "Follow my example." The story is told of an English clergyman that he called for an offering from his congregation for the India famine fund. The offering received received amounted to six pounds. The minister was indignant as the people were abundantly able to pay much more. He announced he would preach on the subject the following Sabbath and take another offering. He laid on the truth concerning liberality with all his might. At the close of the sermon he said, "You all know my family"—he had eleven children, all young—"and most of you know the amount of my income. I shall give ten pounds. We shall see what you give." The second collection was not six pounds, but ninety.

A dauntless spirit (v. 22.) Although a Roman Catholic, Francis Xavier was possessed with a passion for souls. Concerning the difficulties and dangers of a missionary's life he said. "If those islands had scented woods, and mines of gold, Christians would have courage enough to go thither, nor would all the perils in the world prevent them. They are dastardly, and alarmed because there are only the souls of men to be saved. But this I dare to say, that whatever form of torture or of death awaits me, I am ready to suffer it ten thousand times for the salvation of a single soul."

The finished course (v. 24.) "I have finished my course" (2 Tim. 4:7). The lever that opened Paul's life was always locked in the notch marked "high". His eye was ever on the goal. The course was already blazed clear through to the end. It was the one who finished at the top who was to be rewarded. So, what were such petty things as bonds, imprisonments and afflictions? Forward was the battle cry. One writer has said, "There is nothing to be done unless we are contented to live on the stretch. Easy going lives are always contemptible lives." The finished course means that none of these things have moved us. We have been faithful unto the end. As you can not stop the current of a river with a straw, so you can not prevent a saint like Paul from finishing at the tape. Neither all the apples from the garden of Hesperides nor the fiercest opposition of Satan will arrest him.

The parting benediction (Golden Text). Dr. Maclaren suggests that a literal reading of his would be, "I lay you down beside God." What a beautiful thought! And the best part of it is that when thus commended to God, we are safe. A heathen asked a Jew how he and his countrymen could hope for any safety, "because every one of you is a silly sheep compassed by fifty wolves." "True," said the Jew, "but we are kept by a Shepherd that can kill all of these wolves when he pleases." "Now the God of peace, that brought again shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every work to do his will, working in you that which is wellpleasing in his sight, through Jesus Christ; to whom be glory for ever and ever." G.W.C.

MANGLING A WORD.

Why "Comptroller" Is Used Instead of the Correct "Controller."

It is an old story, many times told, that two scriveners centuries ago, ignorant of Latin, but having heard that in French "compter" means to count, and assuming that as the controller has to do with money he must of course count money, wedged the false and perverting letter "p" with an "m" before it into a perfectly good and correctly formed word.

In late Latin the word is "contrarotulator." The keeper of the king's rolls, the payroll and other accounts was the "rotulator." To guard against the possible dishonesty of that official the king appointed an auditor to check up his accounts and called him the "contrarotulator"—that is, the counter roll keeper. From "contrarotulator" the word has come into modern languages, always with the offending "p."

In French, Spanish, Italian, German and Russian we have the word "control," meaning the keeping or auditing of accounts, and the title of the officer in those languages is spelled always without the "m" and the "p." When our commissioners to the Paris peace conference in 1898 used the word "control," meaning political control of the Philippines, the Spanish commissioners were troubled; they thought our representatives were speaking of matters of finance.

But the word "comptroller," with its vicious spelling and implication of a false etymology, is imbedded in the federal statutes and in the constitution of the State of New ork. All the king's oxen could not put it out against the Boeotian indifference and inertia of those who, if they would might correct the blunder.

All women are addicted to chin music, and many a woman even has a double chin.

The Price Paid For a Wife

(By Eunice Blake.)

"Father," said Paul Alexandrovitch, "will you not buy Tatiana for me? We love each other. Tatiana is a serf, while I am free. I cannot marry her unless her master will sell her."

"I fear, my son," replied the father, "that the count will not sell Tatiana. I have never been on friendly terms with him, he being a rich landowner and I a small farmer. Besides, there was that trouble about the woodcutting. No, I do not believe he will grant any request of mine. But I will go to him and offer him a good price for the girl."

That was a time when a large proportion of the Russian people were serfs. Paul and Tatiana had played together as children when the little ones of other nations were at school, for education of the lower classes has never been permitted in Russia, and after they were old enough to work they continued the intimacy. And now that they had reached a marriageable age the fact of Tatiana's slavery loomed up a great barrier between them.

Alexander, Paul's father, counted up the money that he might spare to buy Tatiana, and found by straining a point he could gather 1,000 rubles. He went to Count Korloff and very humbly told him of the affection between the boy and the girl and assured him if he would not make them happy by selling the latter so that they could be married. "I will give them a slice off my farm," he added, "and, as for the price, I will pay you 1,000 rubles."

"I cannot spare Tatiana," replied the count. "The countess needs her to dress her hair."

The refusal came so curtly that the farmer dared not pursue the matter. He went away and told his son the result of his mission. Paul was crushed by the news, for in Russia the autocratic system has prevailed for so many centuries that the weak—until the recent revolution—did not think of resisting the strong. Paul told Tatiana of the reason given for refusing to sell her, and she said that she had never dressed the countess' hair.

Paul had a great many friends, and Tatiana was also much beloved. All the world loves a lover, and their case excited a good deal of sympathy. A few of those who heard of the case clubbed together to add to the price that Alexander could raise to buy Tatiana, and one of them went to the count and asked him if he would not fix a price on the girl. He was a very avaricious man, and, thinking this might be an opportunity to get a good deal of money for what was not worth very much to him, he replied that if 5,000 rubles were offered he would accept them.

An effort was made to raise 4,000 rubles, which was the amount required in addition to what Alexander could give. But there is not great wealth in Russia except among those connected with the Government, and the subscriptions came in such small sums that the amount finally subscribed was far below what was required.

The matter looked hopeless, when Paul went one day to do some work for one Mourlensieff, a well-to-do man of the middle class. In talking with Paul he learned about his love affair and how he and Tatiana were made miserable by Count Korloff's meanness. Mourlensieff asked Paul how much was lacking altogether of the fund to buy Tatiana, and Paul said that it was 1,600 rubles ($800). Then Mourlensieff told Paul that he would lend him the money at the legal interest, and he could pay off the loan in eight years, or 200 rubles a year.

Paul accepted the proposition gratefully and sent word to the count that he was ready to buy Tatiana, paying 5,000 rubles for her. Count Korloff was astonished that so much money could have been raised for such a purpose, and it occurred to him that, after so much had been got together, a little more might be added. He replied that he had found a new use for Tatiana which made her much more valuable, but, since he did not wish to stand between her an Paul Alexandrovitch, he would complete the bargain for 5,500 rubles.

Paul's disappointment was all he could bear. He went to Mourlensieff with tears in his eyes to tell him of the failure.

"It would be of no avail," said the latter, "to continue to follow such a man up the scale of his prices. Let the matter rest for awhile."

Paul took this to mean that he would never possess the girl he loved and went away sorrowful.

A few weeks after this when Paul was working in a field a messenger from Count Korloff came to him and said that the count had decided to accept 5,000 rubles for Tatiana. Paul replied that he did not know if the money would now be forthcoming, but he would make inquiries. He did so, and succeeded in collecting the necessary amount. But just as he was about to start with it to the count a man rode up to the house, where he scattered printed copies of a ukase of the Czar. Paul read one of them and threw his cap in the air with a shout:

"The Little Father has freed the serfs!"

And so it was that Count Korloff received nothing for Tatiana. She was free to marry Paul, and no wedding among those people was celebrated with greater rejoicings than hers.

Poison Ivy.

The poisoning peril is at its height now that the vacation season is on. Can you tell the noxious poison ivy when you see it growing luxuriantly for attack on the tender human skin? The ivy looks very much like the virginia creeper, but it has only three leaves, while the creeper has five. Rubbing a little olive oil on exposed parts of the body before going into the woods may prevent poisoning. It is also recommended that the face and hands be washed with a simple solution of cooking soda. When one has been poisoned it is well to rub the affected spots with glycerine or to lay cloths on them saturated with water and glycerine. Wet starch allowed to dry on the poisoned skin, and lime water are some of the remedies for the alleviation of pain.

He Was Right.

A man rushed to the entrance of a lunatic asylum in the middle of the night and yelled to the keeper to let him in.

"Let me in!" he cried. "I have suddenly gone insane."

The keeper woke up, thrust his head out of a first storey window and bellowed down in a rage:

"What? Come here at this time of night? Man, you must be crazy!"

ROUTED BY AN ECHO.

Story of the Most Curious Victory Ever Won On British Soil.

Did you ever hear of an army of fierce fighters that fled in terror when it was attacked by the one word. "Hallelujah!" shouted by an army that was not even in sight? The fact that the shouters could not be seen has something to do with the amazing effect of the word. The knowledge and wit of a foreigner, who knew how to utilize a curious fact in nature and a remarkable topographical formation, must be given the final credit for the most interesting victory ever achieved on British soil. It was less than fifty years after the beginning of the conquest of Britain by the Angles, Saxons and Jutes from Germany, when a small band of those who were forming the nucleus of a coming nation was on the point of being attacked by a vast army of ferocious Picts.

There were no better fighters than the Picts, and the native Britons, together with the Saxon invaders, were facing certain extermination. Then one of the foreigners, called Germanus by the Britons, told the soldiers that he would give them the victory if they would follow him. He led the way to a hollow place in the hills, on the road the Picts were using in their approach. When the scouts reported that the enemy was coming up the mountain road Germanus and his band shouted "Hallelujah!" three times in quick succession. The hills took up the echo, and the Picts thought they were surrounded by a mighty army. They turned and fled.

Expostulating With the Thunder.

In "The Rediscovered Country" S. E. White gives this glimpse of a native custom in an East African thunderstorm:

A Wakoma porter stood out stark naked in the rain and shouted back an answer in a loud tone of voice to every clap of thunder.

He was a fine sight, as he was revealed by the flashes—the upright pose, the rain streaming from his glistening body, the flicker of his metal ornaments. M'ganga, later appealed to, said that he was the official thunder lord for his people. He was saying: "Go away! Go this way! Go that way! You like to sit on high hills! There are no high hills here! Go to Ikoronga, there are high hills!" He had also put "medicine" in a tree in camp. I asked M'ganga if he himself believed in this. He grinned quietly and replied, "Well, the rain has gone."

Seven in the Bible.

The number seven plays a prominent part in events in the Bible. The creation took six days and on the seventh there was rest. On the seventh day of the seventh month a holy observance was ordained, and the Israelites feasted seven days and rested seven days. Noah had seven days' warning of the flood, and the seven years of plenty were foretold in Pharaoh's dream by seven fat beasts, as were the seven lean years by seven lean beasts. We speak of the seven heavens, and the seventh son was supposed to be endowed with pre-eminent wisdom. In short, there is no other number which enters into the Bible so often as seven. No doubt the wide popularity of the number and the superstitions which are connected with it came from its wide use in the Bible.

Sweet Pickles of Cucumbers

Select cucumbers as near the same size as possible. Those about a finger in length are best. Put them in a stone jar and cover with a strong brine made by dissolving salt in hot water and then allowing it to cool. The test for strong brine is when it will bear up an egg. But a reasonably strong brine will do for small cucumbers. Cover with a plate and a weight and let stand for two days. Then remove the cucumbers, throwing away any that have become soft. Bring the brine to the boiling point and pour over the cucumbers again and leave stand over night. Drain off the brine and pour boiling water in which powdered alum has been dissolved (using half teaspoonful of alum to a quart of water) over the cucumbers. It will take about one gallon of water to cover a gallon of pickles. Let stand three or four hours and then pack cucumbers or pickles in glass jars. Meanwhile boil one gallon of medium strong vinegar with two cups of sugar (if not liked very sweet add one cup of sugar), two dozen whole black peppers, two dozen whole cloves and two sticks of cinnamon for ten minutes, and then cover over the pickles in the jars and seal just as you would fruit. The jars should have been sterilized as for canning fruit also. If a scum should arise on the vinegar in the jars, pour it off, add a little fresh vinegar and a little spice, boil and pour over the pickles. Be sure your jars are full to the top with vinegar before sealing them. That will help to keep the scum from forming. This scum does not affect the pickles in any way. If the vinegar is too strong it sometimes softens the pickles. In making brine for small pickles or gherkins, as they are called, I find that a brine made by using half cupful of salt to one quart of boiling water is right. Too much salt might wrinkle the small pickles, I imagine. If you do not care for sweet pickles, the same recipe may be followed, omitting the sugar. A piece of horse radish root placed in each jar of pickles adds a pungent taste that is agreeable to many palates. A teaspoonful of whole mustard seed is also fine to use. Indeed, there are many changes that may be made by adding more spices, such as allspice or seeds as caraway, coriander and anise. A few seeds will give quite a distinct flavor to a quart jar of pickles.

It is well to remember that pickles should never be made in vessels of brass, copper or tin. Indeed, I do not think they should be made in anything except porcelain-lined ware or granite ware. A wooden spoon is best to use also. The vinegar must be good and it must be scalded before using in making any kind of pickles, but it never should be boiled long. A piece of alum as large as a small pea to a quart of pickles will help to keep the pickles green and crisp, and in that amount will do no harm. But on no account put in much alum.

A MIRACULOUS CURE
OF
CHOLERA INFANTUM
By DR. FOWLER'S
EXTRACT of WILD STRAWBERRY.

Cholera Infantum is one of the most common summer complaints of infants, and many die who could be saved if properly looked after on the first sign of the trouble.

It begins with a profuse diarrhoea, very often accompanied by vomiting, and the matter ejected from the stomach has a bilious appearance. The child rapidly loses flesh and becomes weak and languid.

On the first sign of cholera infantum Dr. Fowler's Extract of Wild Strawberry should be administered, and thus check the diarrhoea before it becomes serious.

"Dr. Fowler's" has been on the market for the past seventy years, so you are not experimenting with some untried remedy when you use it, bu sure and get "Dr. Fowler's" w ask for it.

Mrs. B. A. Cirwell, Rosswa writes: "I can recommend Dr. Extract of Wild Strawberry most A friend of mine had a little who was ill with cholera infantum was given up by the doctors. The one's mother asked me to come in and the child. I told her I had a bottle "Dr. Fowler's," and asked her if would try it. When the bottle was half used the child was well. This cure was a miraculous one, for I thought the child was dying at the time."

The genuine Dr. Fowler's Extract of Wild Strawberry is manufactured only by The T. Milburn Co., Limited, To Ont.

Price, 35 cents.

Bradstreet's Trade Review

TORONTO—Most lines of seasonable commodities are finding a fairly ready sale. The drygoods trade is experiencing the usual summer quiet, but wholesalers state that trade is distinctly firmer than it was a year ago. Larger retailers are placing repeat orders for summer goods. Inflation of prices by war conditions will not be removed until after peace is declared, representative wholesalers say. In the leather trade business is fairly good. The shoe business is good, but wholesalers state that harness trade is dull. Hardware dealers say that general conditions are good. Hides and wool are reduced in price, wholesale buyers reported. Scarcity of canned goods is being felt in the grocery trade. Latest advices state that the new canned goods will be advanced in price. Canadian grown potatoes are very scarce, and while prices have risen sharply in the last week, the likelihood is that even higher levels will be reached. Hogs have risen to almost prohibitive prices within the last ten days.

LONDON.—Business conditions here, and in other western Ontario points are fairly good. Good crop returns have ensured the prosperity of this section of the province. County retailers are sending numerous repeat orders to London wholesalers.

MONTREAL.—Wholesale dealers are looking hopefully towards a 200,000,000 bushel western grain yield.

Ottawa.—Most industries are active. Wholesale dealers have been filling report orders in seasonable summer lines. Crop conditions in the Ottawa counties give fair promise of good trade with country retailers.

HAMILTON—Toronto conditions are fairly well reflected in that city. Steel industries are quite active. Good crops and high grain prices give promise for a fairly good late summer.

WINNIPEG—Difficulty is experienced in filling drygoods orders. There is a fair volume of hardware business, and wholesale grocers report that conditions are satisfactory. The trade in boots and shoes is particularly good, wholesalers are busy. At Edmonton conditions are well up to the average and the influx of settlers into the Peace River country is having a favorable effect on Edmonton trade.

VANCOUVER.—Sustained strength in trade are industry are indicated by bank clearings for July. Factors in general are favorable.

QUEBEC—Good demand for immediate wants, but as a rule business is on the quiet side which is usual especially amongst the retailers. Wholesale drygoods reports favorably. The industrial situation is excellent, various factories working overtime to fill orders. Crop conditions are good. Remittances as a rule are fair.

"The Bridge" Born of Sorrow.

"My poem entitled 'The Bridge,'" said Longfellow, "was written in sorrow, which made me feel for the loneliness of others. I was a widower at the time, and I used sometimes to go over the bridge to Boston evenings to meet friends and return near midnight by the same way. The way was silent, save here and there a belated footstep. The sea rose or fell among the wooden piers, and there was a great furnace on the Brighton hills whose red light was reflected by the waves. It was on such a late, solitary walk that the spirit of the poem came upon me. The bridge has been greatly altered, but the place of it is the same."

Sumptuary Laws.

Sumptuary laws are laws, now generally obsolete, enacted in the supposed interest of public morals to restrain extravagance in private expenditure, especially in matters of food, dress and amusements. They abounded in ancient Greece and Rome and found great favor in the legislation of England from the time of Edward II. (1307-27) to that of the Reformation (1517). They existed in France as early as the time of Charlemagne (768-814), and continued to be enacted as late as the seventeenth century, but in neither country do they appear to have been enforced to any great extent. Sumptuary laws were repealed in England in 1856.

Had Pimples and Festering Sores
ON HER FACE.

When the blood gets bad, boils, pimples and festering sores are sure to break out on the face and body. To get rid of them the blood should be cleansed by Burdock Blood Bitters.

Mrs. Charles Jewell, Orrville, Ont., writes: "I feel it my duty to write and tell you about what Burdock Blood Bitters has done for me. I was so pale I had no color at all. I also had pimples and festering sores on my face, and my head ached nearly all the time. I had seen reading in the paper, and saw that Burdock Blood Bitters was good for such troubles so I tried a bottle and before it was half done I felt fine, and when the bottle was finished I felt like a new woman. I tell all my friends about it, and advise everyone suffering from such trouble to use B.B.B."

There is only one B.B.B. That is the genuine, manufactured by The T. Milburn Co., Limited, Toronto, Ont.

FARM AND GARDEN

WORK AMONG THE BERRIES.

There are about a dozen species of strawberries in the world, seven of which are native to North America. The wild plants are well known all over. The cultivated berry is considerably larger than the wild one, and excels in flavor, aroma and shipping qualities.

The bed of strawberries that will fruit in June should be clear of weeds. After a rain every weed should be pulled up and thrown between the rows, which will add to the mulch. A heavy mulch between the rows and all round the plants holds moisture and prevents weeds growing, besides keeping the berries clean. Good mulching gives good crops of fine berries.

Where not done before, the mulch between the rows can be put on any [illegible] before picking begins. Where [illegible] not done, specially between the [illegible]e pickers are apt to tread the [illegible]wn hard about the plants, and [illegible]ries cannot develop to a large [illegible]. There is no better mulch than [illegible] clippings or green grass. [illegible] obtain the true flavor of the [illegible]wberry they should not be picked [illegible]y ripe. Of course, where [illegible] are shipped they must be [illegible]re they are fully ripe.

[illegible]RIES MOST IMPORTANT.

[illegible]spberry is the most import[illegible] the bush fruits. It is a na[illegible] this country. The black raspberry is of most commercial importance. It is more easily grown, yields heavier, and the fruit stands shipping better than the reds, though the reds are more relished. Black raspberries are also grown extensively for evaporating.

Throughout June both the raspberry and the blackberry fields shou'd be cultivated, rather shallow, and the weeds cut off with a hoe. Where the young canes are too thick, they should be thined to one foot apart and started growing through the supports. Hardy varieties that do not need to be laid down for protection, can have the tips pinched off when the canes are four or five feet high. All diseased plants should be dug up and burned.

Black-caps are propagated by rooting the tips of growing canes into in the summer. When those are well rooted they are cut from the mother plant and used for setting out the new plantation. Red raspberries are usually propagated by suckers thrown up from the roots, but root cuttings may also be used. The plantation may be set out either in the fall or spring, but the spring is usually to be preferred.

But raspberries require no summer pinching whatever, except a little the first year or so. The black-caps, however, should be nipped off as soon as they attain a height of 18 to 24 inches. The following spring the laterals of the black-caps should be cut back to one or two feet, and the reds to a height of two and a half or three feet. They are cut back most on poor soils or with weak canes. The fruit of the raspberry is borne upon short fruit stalks produced from the wood of the previous season's growth. Old canes, therefore, that have fruited once, should be removed after the crop is harvested.

THE CULTIVATED BLACKBERRY.

Cultivated blackberries are coming more and more into use. Usually they sell the best of any of the small fruits. The yield averages 100 bushels per acre.

The blackberry fruit is grown on canes which comes from the roots the preceding season. After the fruiting season is over, the usefulness of the canes or shoots is at an end and they should be cut out of the rows. This is best done in the fall, but may be done any time before growth begins in the spring. While fruit is being produced on some canes, others are coming up from the roots. Usually only five or six come from each root and should be allowed to grow, the others being pulled out while they are still small. When the canes are 2½ to 3 feet high, the tips should be cut or pinched back two or three inches. This checks upward growth and many laterals push out. These laterals bear the fruit the following season. They should be shortened somewhat in the spring, depending on the variety grown. Blackberries thus trained require no trellising.

NOTES.

One dry season a neighbor harvested 50 bushels of corn to the acre from land no better than that all around him, which yielded only 12 to 30 bushels. Selected seed had considerable to do with it, but the main reason was tillage. He saved the moisture, without which the richest land and best seed cannot yield. The corn was dragged from the time it was planted until big enough to plow—with a smoothing harrow, teeth well slanted back. Then it was plowed often enough to keep up the dust mulch that had been started with the harrow. When corn on neighboring farms were showing every sign of suffering for moisture, this man's corn was thrifty and "shooting right along." Any time through the long dry spell you could scrape aside the dry surface soil in that field and find the soil under it plentifully moist. It was an object lesson that most of the neighbors heeded.

In a series of tests in feeding western lambs, the Indiana Experiment Station found that lambs fed in a well-ventilated barn nto the same amount of feed and made the same gain in weight as those fed in an open shed. Lambs fed in a barn were of softer flesh and were valued 10 cents per 100 pounds less than those fed in an open shed. The profit per lamb was 91 cents per head in a barn, as compared with $1.04 per head in an open shed. Although feed was high in price, the margin in vale of feeding and fat lambs was sufficient to ensure a satisfactory profit on the operation.

Tomato seed is good for three or four years.

Onions do best on a level seed bed, with perfect drainage.

A necessary concomitant to good hog feeding is exercise. Young pigs and breeding stock need it particularly. Even market hogs need it right up to the final finishing period, when they may be encouraged to leave out exercise and make the putting on of fat the business of their lives.

The term, "Nervous temperament," is used to refer to the ability of the cow to use a great amount of food without wasted energy. It is this nervous temperament that enables good cows to convert every available ounce of food into energy, or milk and butter fat, while other cows would waste energy because conditions under milked are not absolutely ideal and suited to their individual states.

It has been found that about 500 cubic feet of new-mown hay will make a ton. To estimate the amount of hay in a mow a good rule is: Ten cubic yards of meadow hay weigh a ton. When the hay is taken out of old stacks eight or nine cubic yards will make a ton. Eleven or twelve cubic yards of dry clover will make a ton. To find the cubic feet or cubic yards multiply the length, breadth and thickness.

Sheep are pasture improvers, provided you don't overstock the pasture.

Root crops and rape help out the sheep ration.

The best medicine for the young lambs is sunshine. Let them out into the open air on sunny days.

Alfalfa grown sickly on acid soils: the remedy is lime.

Facts for Health Seekers To Ponder Over

Nearly every disease can be traced to clogged or inactive stomachs, livers or intestines. Indigestion, biliousness, headaches and insomnia all emanate from this cause. Keep these organs in working order and you'll have continuous good health. No case was ever treated with Dr. Hamilton's Pills and not cured: their record is one of marvelous success. Dr. Hamilton's Pills are very mild, yet they cleanse the bowels promptly, and establish health regularly. You'll eat plenty, digest well, sleep soundly, feel like new after using Dr. Hamilton's Pills—one a dose—25c a box everywhere. Be sure you get the genuine Dr. Hamilton Pills, in a yellow box always.

UNEXPLORED GEORGIA.

Huge Swamp Has Strange Race of Whites, Negroes and Indians.

One would scarcely think there were any blank spots on the map of the United States, but in Georgia there is a vast area, nearly seven hundred square miles of it, which has not been officially explored, or explored by any except perhaps some of the few half breeds who inhabit it.

This is the great swamp fo Okefinokee. On the government map of Okefinokee there are many parts marked "Impenetrable" and "Unexplored." In the depths of this swamp live white people, colored people and a few Indians. Nearly all of the Indians and colored people have so mixed races as to make it almost impossible to locate full-blooded Indians.

Slaves used to hide in this great swamp. Later many deserters from the Confederate army, and men who escaped enlisting, went into the swamp and their descendants are living there to-day. They call the swamp ground "trembling earth." Only the experienced natives can go about in it. The white men living there, about seven people id the square mile, are a sturdy race. They hunt and trap and fish, and also go outside and work with the cypress lumbermen.

Wet Weather and Camels.

Camels are very sensitive to moisture. In the region of tropical rains they are usually absent, and if they come into such with caravans the results of the rainy season are greatly feared. The great humidity of the air explains the absence of the camel from the northern slopes of the Atlas and from well wooded Abyssinia. This sensitiveness expresses itself in the character of different races. The finest, most noble looking camels, with short silklike hair, are found in the interior of deserts, as in the Tuareg region in north Africa, and they cannot be used for journeys to most regions. Even in Fezzan, south of Tripoli, the animals are shorter and fatter, with long course hair, and in Nile lands and on coasts it is the same. These animals, too, are less serviceable as regards speed and endurance.

To keep your hands soft always use a little ammonia or borax in the water you wash them in.

KEEPS BABY'S SKIN HEALTHY
ECZEMA
Results from neglected chafing and skin irritation. As a preventive and cure there is no treatment to compare with Dr. Chase's Ointment. Use it after the bath.

Clearing Seas of Mines

Announcement that the British Government is about to place on exhibition a German mine-laying submarine, calls attention to a phase of the war that has been almost unchanged in the past two years, namely, the laying of mines by Germany. She was never more reckless in layinb mines than now. There being no German commerce or German warships on the seas, she has argued that every ship that is destroyed by a mine will not be a German ship. It may be a British or a French ship, or it may be a neutral. If it is a neutral, then the probability is that she was engaged in some business that might help the Allies; and the certainty is that her destruction could not be actually proved against Germany. Therefore, the seas have been strewn with mines as far as German mine-layers have been able to operate, and scarcely a day passes that some vessel does not fall a prey to this invention.

Germany has employed unusual shifts to get her mines laid. She uses when possible her own vessels, which are built for this trade. They lay mines at entrances to German harbors, for they dare not venture far from shore. They also lay the mines that will be carried by wind and tide into the open sea. For laying these death-dealing bombs nearer the enemies' coasts she has employed neutral vessels, submarines and even Zeppelins. Although she sets many mines adrift with only a vague idea where they will be struck by a ship, she also places them in certain well-known ocean pathways, just as a poacher sets his snares in the runways of the game. Therefore, while the floating mine is a difficult thing to detect and remove, the British Admiralty, like the keeper on the poacher's track, knows that certain parts of the sea are favored by the German mine-layers. These parts, therefore, are more than carefully examined by the sweepers, hundreds of which are working every day in the waters near the British Isles.

Recently the Admiralty lifted for a moment the veil that conceals the operations of the mine-sweepers, and correspondents were permitted to accompany the mine-sweeping fleet in order that they might learn just how the work was done. One of the correspondents, an American named Gordon Bruce, says that he came back from his trip with a real idea of what the British navy is. "Duty, courage, efficiency," he says, "are the summary of a week's trip in the North Sea." The night before he set out he messed with a number of visiting officers fro mvarious branches of the service. These men told of the most thrilling experiences in the most casual way. Each one seemed to consider the other fellow's job the more dangerous; each seemed unaware that he himself was called in to risk his life daily or hourly in his own particular branch of the service. These representatives of the British navy spoke and acted as though from the cradle they had been at war with Germany, and as though they expected to be at war with her when the time came for them to retire from the service or to meet their death. It was all in the day's work

The mine-sweepers hunt in pairs over certain parts of the sea where they are almost certain to come across a mine. The fixed mine is nothing more or less than a huge bomb anchored to the ocean's bottom, and floating below the surface in such a position that it will be just concealed at low tide. It is not once in a thousand times that an approaching ship can detect a bomb. So it is the business of the mine-sweepers to do the work for them. The boats advance slowly over the sea at a distance of several hundred yards apart. Between them is a wire cable, but one judges that it is a special kind of cable which will [illegible] loose from its anchor when it strikes. [illegible] when [illegible] it will rise to the surface, [illegible] with rifles, will fire at the [illegible] until they penetrate the air chamber and the mine sinks, or until they explode it. It was explained to Mr. Bruce that under The Hague conventions signed by Germany, mines were of certain prescribed kinds; each of them is prescribed kinds; each one of them is supposed to be fitted with a device which renders it harmless should it break from its moorings. This is in order that innocent vessels shall not be injured. The German mines are all found thus equipped, but also it has been found that the apparatus that is supposed to render the drifting bombs harmless has been tampered with, so that they are as deadly a hundred yards away from where they had been anchored as when they were first set out. The mine-sweepers run the risk of striking a mine while they are searching for one, and on this account all the crew work in pneumatic lifebelts. They are also liable to be fired upon by a prowling submarine or any other German ship-of-war. Their work is not spectacular but it is as dangerous and as efficient as any work being done by the British navy.

A Spelling Test.

Here are twenty-one common words frequently misspelled, according to the American Boy. Get some one to dictate the following paragraph to you and see how many of them you can spell correctly:

"The privilege of separating ninety miscellaneous calendars, arranged in two parallel lines, was against the principles of the superintendent, so his niece, not to disappoint the government or cause it to lose business, removed the principal calendars and thus relieved her uncle of a strain which might have brought on a disease. Then she believed it had become truly necessary for her to receive her instruction in grammar."

Nature the Healer.

The influence of the forms and actions in nature is so needful to man that in its lowest functions it seems to lie on the confines of commodity and beauty. To the body and mind which have been cramped by noxious work or company nature is medicinal and restores their tone. The tradesman, the attorney comes out of the din and craft of the street and sees the sky and the woods and is a man again. In the eternal calm he finds himself. The health of the eye seems to demand a horizon. We are never tired so long as we can see far enough.—E[illegible]

Strength Will Return To Weak People Using This Treatment

You are discouraged.
You feel old and worn.
You are sick, but not aware of the fact.
You can drag yourself around —but work is impossible.
With your stomach crying out for assistance and the nerves all on edge why not try Ferrozone?—It will surely do you good.
Ferrozone is a wonderful combination of vegetable extracts, fortified by excellent tonics for the nerves and stomach.
When you feel despondent, Ferrozone cheers you up.
When languor and oppression weigh you down, Ferrozone braces you up.
When sleep is impossible Ferrozone calms the nerves and gives you rest.
For bounding health, good looks, good spirits, nothing equals Ferrozone; makes the weak strong and the sick well. Good for men, women and children; try Ferrozone, it can work wonders, as it did for Mrs. Mary Molong, of Harbor Boucho, N.S., who writes:
"Ferrozone built me up.
"Before using it I scarcely knew what good health meant.
"I was just as miserable and weak as any woman could be.
"Tired from morning to night, bothered by trifles, unceasingly nervous.
"The first box of Ferrozone improved my blood, gave me appetite. In a short time I was like a new person. Now I rejoice in abundant good health."
Try Ferrozone. It will make an unexpected improvement in your looks, your feeling, your health.
Whether anaemic, nervous or suffering from secret disorders.— if you want cure, use Ferrozone, Price 50c per box, or six boxes for $2.50, at all dealers or direct from The Catarrhozone Co., Kingston, Ont.

MUSIC IN THE BALKANS.

A Player Who Startled His Hearers and Unnerved Himself.

People will tell you in the Balkans that a gypsy camp is to be avoided, yet I used to hail them with pleasure. They added to the wildness and savagery of the nature about us. One day several miles from Uskup our horses raised their heads and listened to something we could not hear. At first we thought they were smelling human blood, but we came to the conclusion that something different caused their interest since no tremors of fear were passing through them. Reining them in, we listened, but, hearing nothing, started to ride on. After awhile a sound like a faint moaning of a torrent came to us. The effect on our horses was very peculiar. They seemed to have forgotten their fatigue and were sidling along in a way that made me nervous.

Finally we made out that it was weird strains of music that reached us.

"We are hearing a gypsy camp," my brother said, with relief. "Some one is playing with more fire than usual."

Within sight of the camp the music came to us in its full beauty or its full horror, I do not know which. Since then I have heard many great masters play, but such music as that I have never heard. It was heavenly; it was hellish. Our horses were as much affected as we. They pranced as if they were steeds of great metal instead of poor, scrawny Balkan ponies. As for me, I began to dream of things unheard, unknown, only dreamable.

Sitting on a wagon, a youth was hanging over his violin, playing—playing like mad. Presently, without interrupting his music, he sprang from the wagon and paced back and forth, still playing torrentially. We sat fascinated both by the player and his playing, trying all the time to quiet our horses.

At last the music seemed spent. The boy let his violin fall to the ground, where he, too, threw himself, and the music was succeeded by heart breaking sobbing. His weeping, like his music, was as torrential as a storm. Like it, it ceased when it had reached its climax.

Where Plato Taught.

The famous academy of Plato was in a suburb of Athens, about a mile north of the Dypilum gate. It is said to have belonged to the hero Academus: hence the name. It was surrounded with a wall and adorned with walks, groves and fountains. Plato possessed a small estate in the neighborhood and for fifty years taught his "divine philosophy" to young and old assembled in the academy to listen to his wise words. After Plato's death in 349 B.C. the academy lost much of its fame, but the beauty remained for centuries after the great teacher was no more.

Rubbing Out a Turner.

On New Bond street, in London, some years ago a Turner worth $60,000 was destroyed by a charwoman. The Turner was a water color drawing, and a painting in oils hung beside it. The owner pointed to the painting and said:

"That picture is dusty. Rub a damp cloth over it."

But the charwoman in mistake rubbed her damp cloth over the water color, turning it into a blot, a smudge, and thus one of the finest Turners disappeared from the world.

Practice makes perfect, but the people who flatter themselves are not always successful in flattering others.

War Time in Canada

(Christian Science Monitor.)

Somewhere in the Dominion of Canada. Town of, say, 4,000. Morning papers from nearest large city get in at 9 a. m. Evening papers arrive at 7 p. m. Distributing point, rear of general store. Stragglers begin to halt on sidewalk an hour before traintime. Conversation, at first desultory, begins to show animation half an hour before newspaper wagon starts for station. A quarter of an hour before traintime half a dozen men in the centre of as many groups are explaining the bearing of the news in the last issues of the papers. Particular interest centers in the citizen who came from Toronto, Montreal, St. John or Halifax on the last train. His views command respect because he met some important people during his visit. "I give 'em," he says, "until October: not a ray more." "How are things moving in front of Verdun?" asks a man on the outer edge of the circle. "Everything going our way," replies the traveler. "Good!" comes from the crowd.

"I said to him, I says, 'Now if you will only let me show you and don't be so quick to contradict,'" explains the centre of another group. "'I'll make it as clear as day to you where you're wrong.' But I couldn't do anything with him. He was bound to have it that if our fellows had only followed up their advantage——"

"That's just what I told Angus McLean only this morning," another is heard to say. "I ses, 'Angus, you don't know what you're talking about. We have men here, an' we have men there, and we have deeenforcements over here. Now, if the order comes for the men here to charge, the men here'll move up,' I ses, 'an' that lets in the reenforcements.' But you might as well talk to a stone wall as to try and convince Angus. He has the war all mapped out on the floor of his blacksmith shop, and he'd hold out for his plan against General Joffer or against General Haig if one of 'em was to got upon the doorstep of the general try to convince him he was wrong."

By ten minutes of traintime the sidewalk is crowded and some have got upon the doorstep of the general store. "Just wait till the train comes in," says one, "and I'll prove it. Didn't I tell you three weeks before the drive began just what the British were going to do? Didn't I remind you of it, and didn't you pretend you couldn't remember? Now, I'll make it plain this time, an' I'll ask Aleck here to witness it, that the next move of the Allies in the west will be to——"

It is five minutes to traintime, and the crowd, composed almost exclusively of old men, has begun to move into the store. There is not a young man or boy of high school age to be seen. They are all at the training camps or at the transports or at the front. Boys of grammar school age are absent, for they are doing the work that formerly fell to the lot of their olders. This particular town may be one of the many in Canada that hasn't got a boy or young man fit for service" left, and is proud of that fact. The few young fellows you meet in the town wear badges showing that they have been "rejected for cause." They have tried and failed. To do less than this is a small Canadian town to-day would be earn the scorn of the community.

Not a few of the old men in the crowd waiting for the papers have sought enlistment. They are all envious of some of their number who have "squeezed through." Scarcely one of them but has a relative at the front. Some of them have sons and grandsons in Belgium and France. But they are not making the war personal.

When the papers arrive finally, each in his turn gets his favorite journal and silently emerges from the crush at the counter. All along the street, at every convenient spot, for the next half hour, you may see these men poring over and digesting the war dispatches. Then they make for the common centre, the postoffice, exchanging views with those they meet and pass. It may be, "Well, we's got 'em this time," or "It does not look so well," or "Better news, isn't it?" or "I don't like it; do you?" or, "We'll look for better news tomorrow," but there is no sign or word of discouragement.

Now and then appears among them one who was young when the war for the Union was going on across the border, and who is reminded of similar scenes in the small American town of those days. Surely, the line between the United States and Canada is imaginary in many respects, and nineteen sixteen on one side is simply eighteen sixty-four repeating itself on the other.

BETTER THAN SPANKING

Spanking does not cure children of bed-wetting. There is a constitutional cause for this trouble. Mrs. M. Sum[illegible] W. 8, Windsor, Ont., will [illegible] to any mother her successful home treatment, with full instructions. Send no money but write her today if your children trouble you in this way. Don't blame the child, the chances are it can't help it. This treatment also cures adults and aged people troubled with urine difficulties by day or night.

Ancient Delphi.

If a person's picture is taken with the eyes of the person looking directly into the lens or opening of the camera then the eyes in the picture will ways be directly on and appear to follow whoever is looking at it. This is also true of paintings. If a subject being painted is posed so as to look directly at the painter and the artist paints the picture with the eyes so pointed then the eyes of the picture will follow you. When you are looking at a picture of a person and the eyes do not follow you you will know at once that he was not looking at the camera or artist when the picture was being taken or painted.

"You don't stay home as much as you used to." "No," replied Mr. Heckton "Society has its rights, as well as the individual. It seems rather selfish of me to linger around the fireside and monopolize the conversation of so able and erudite a woman as Henrietta."—Washington Star.

Etiquette teaches us that it is sometimes easier to do the proper thing than the right thing.

EATS DIRT GILLETT'S LYE CLEANS DISINFECTS

THIS WASP HATES SPIDERS.

He Kills and Buries Them and Lays an Egg in Each Grave.

Just to show that he's sanitary, also that he's looking out for the future generation, the South African wasp always buries his prey after he kills it. He stabs a spider with his poisonous dart, digs a hole in the sand and buries the dead spider with an egg.

When the egg hatches the young wasp has a dead spider to nibble at until he gets big enough to hunt food for himself. Thus the wasp looks out for his children before they're hatched. He's a member of the family which scientists have named the pompilus.

Spiders are his favorite victims. He will pursue the spiders which live on ground and paralyze them with his poisonous sting. Even the spiders which build webs are not safe from his attack. He will fight his way through the web until he reaches the centre, where he will grab the spider and hurry away to bury it.

The pompilus is so dreaded and feared that the spider has learned to distinguish him by the hum of his wings. If it's a fly buzzing around the spider waits in his web until he has caught his prey. But if he hears the hum of the wasp's wings the spider will drop from his web and scoot away to any hiding place he can find.

Curious Fishing Plant.

There is a strange vegetable growth under the sea called the fishing plant, which opens and shuts periodically, like like a big mouth. When fishes are near England in 1849 and were made from the a sudden it closes its "mouth" and swallows them.

VANISHED EXPLORERS

There have been recorded many strange tragedies of exploration in lone and distant lands, but no one event of the kind has ever so stirred men's minds as did the total disappearance of the well found and splendidly equipped expedition which Dr. Ludwig Leichhardt, the Franklin of Australia, led into the central deserts of Australia in 1848.

Leichhardt's design was to march right across the continent from the east coast to the west, and as he had already led a successful expedition nearly 3,000 miles through a previously unknown part of Australia, it was generally thought that he would be able to accomplish the task.

Still, there were some who doubted and prophesied disaster, and more than one wealthy friend of the doctor's refused to subscribe toward the expedition on the ground that they were not going to help him to commit suicide.

The members of the expedition numbered six whites and two blacks, an unusually large number for an exploring expedition of this nature, and besides being amply provided with flour, biscuit, tea, sugar and so on, they drove along with them fifty bullocks and 270 goats. They also had spare horses and mules in abundance.

At that time the most westerly station in Southern Queensland was occupied by a squatter named McPherson, who dwelt on Cogoon creek. From there Leichhardt wrote a brief letter as he was about to start into the unknown land beyond.

That was the last ever heard of him or of any of his companions, and this notwithstanding the fact that expedition after expedition was afterward sent out in search of them.

As completely as though they had been swallowed up by the earth, they vanished.

This is the most puzzling part of the mystery—its completeness. Had they been killed by the natives, as was at first wrongly reported, some relics of the explorers would long since have been recovered from them. In some shape the iron work of the implements and arms they had with them would have survived.

And what of the stock? Some of the goats, at all events, must have been left alive, one would have imagined, for these are notoriously hardy animals, able to pick up a living almost anywhere. Yet none of these, nor any of the horses, mules or bullocks were ever traced.

The probability is that the ill fated expedition struck one of those waterless patches of country common in parts of Australia, into which the blacks never venture. It is not difficult in this case to prophesy what would have been their fate.

Their reserve barrels once emptied of their precious contents, the little water carried by the men in their canteens would not last more than a day or so. In the shadeless bush, in that terrific heat, death comes swiftly under such circumstances. About forty-eight hours is the limit of human endurance. Usually half that time suffices.

The explorers, we may be sure, would struggle on to the last, however, husbanding their water to the uttermost drop. The animals would be the first to go, and the desperate expedient of drinking their blood would be resorted to.

Hotter and hotter grows the air as the doomed men stagger further and further into the rainless desert.

Some lose their reason; all lose hope. Then comes the end. They separate and struggle away in ones and twos, and fall and die.

Day after day the terrible and pitiless sun looks down upon them lying there and sees them die and shrivel into mummies.

And still no rain falls.

But one day, it may be years afterward, there arises a sandstorm of exceptional violence. The wind blows with all the strength and fury of an arctic blizzard, but driving before it sand, not snow.

When it ceases the desert is there as before: the same, yet different. Mountains of sand exist where before were valleys.

The mummies have vanished from human ken forever.—Pearson's Weekly.

THE POULTRY WORLD

DIET FOR OBESITY.

Obesity, or over fatness, is one of the commoner physical disabilities of civilized men and women, just as it is of domestic animals. Among wild animals and among savage people it is comparatively rare.

The prevention of obesity is much easier than its cure. Indeed, in many cases, the latter is impossible. Generally, however, by the alterations of the habits of life and of the diet great improvement may be effected. In some cases obesity is directly due to unavoidable disease or constitutional causes. But generally, at any rate, contributory causes are over-eating of the wrong kind of food and the taking of insufficient exercise.

It has been found by experience and experiment that what are called falnaceous woods — that is to say, foods which consist largely of starch —such as bread, potatoes, pastry, sago, tapioca, and rice are much the most fattening—even more so than fat itself. In people who have a tendency to obesity there is no doubt that beer drinking assists the putting on of fat. Also it will generally be found that people who take a large amount of active outdoor exercise every day rarely become unhealthily obese. The main lines of rational treatment are thus obvious. They consist firstly in the leading of an active, outdoor life, and secondly in the taking of simple food eaten in moderate quantity. With this, there should be the strictest limitation of starchy and sugary food. Several formal diets have been advocated, and have achieved more or less reputation. One of the best known is that known as the Banting system. Mr. Banting, the first subject or victim of this dietary, reduced his weight from fourteen-and-a-half stone to eleven stone in a year. It thus undoubtedly achieved its main purpose. The diet which he had adopted on the recommendation of his doctor was as follows: Breakfast, five or six ounces of beef, mutton, boiled fish or bacon, a small biscuit or one ounce of dry toast, a large cup of coffee or tea without milk or sugar. For dinner, five or six ounces of fish or meat, one ounce of dry toast, vegetables, except potatoes, turnips, carrots, or parsnips and two or three glasses of claret. Tea, two or three ounces of cooked, unsweetened fruit, a rusk or two, and a cup of tea without milk or sugar. Supper, two or three ounces of meat or fish, a small biscuit or an ounce of dry toast, with a glass or two of claret. In actual practice this diet, while it certainly reduces weight, also seriously affects the general health. The enormous amount of meat eat in proportion to the other constituents, and also the comparatively small amount of fluid, tend to produce a gouty condition and also a condition of general physical weakness. It seems reasonable to expect also that such a diet, by throwing a large amount of work on the kidneys, would tend to lead to kidney disease.

There are many other special dietaries, including Ebstein's, the Salisbury treatment, and Oertel's. They differ in various respects, especially in the amount of exercise they recommend, and in the amount of fluid allowed. But they all agree in restricting the amount of starchy and sugary food, and in increasing the relative amount of proteid or nitrogenous food. But it seems certain that in the majority of cases, if permanently good results are to be obtained, the dietary must be such as does not bring about a state of absolute nausea, and must provide sufficient of each of the necessary elements of a healthy diet to maintain the regular functions of a human being. Equally certain is it that every day sufficient exercise should be taken to induce a state of genuine tiredness. It may not be irrelevant to point out that the mind also should be kept actively employed. For although it is not by any means a universal law, yet taken generally, it is true that people with an active intellectual life tend to be of the lean kind.

COLD BATHING.

Few measures are more helpful to a vigorous state of health if employed judiciously, and in suitable cases, than the cold bath. The test of its beneficial results is generally afforded by the rapid reaction which should be a feeling of vigor and exhilaration and a clearness of mind and body. Should, on the other hand, the cold bath be followed by a feeling of mental and physical depression, and a continued feeling of coldness, it is it is pretty certain either that the bath has been too prolonged or that the person was not a suitable one for cold bathing. There is no general rule as to the length of time which a bather should spend in the water. So much depends on the season, individual idiosyncrasy, and the actual state of health of the individual at the moment.

Eyes in Portrait.

Ancient Delphi was a small town in Greece on the southern slope of Mount Parnassus, where poets were supposed to draw their inspiration. The ancient town got its name from its founder, Delphus, son of Apollo, and there was a temuple of Apollo there, where prophecies were made; hence the phrase Delphian or Delphine oracles. A fountain called the Castalian spring, supposed to be frequented and patronized by poets, was situated on the mountain side near Delphi. A portion of the site of the ancient town is now occupied by a village called Kastri, and interesting excavations have been made there in recent years.

NUMBER 23 THE PR

WIT AND HUMOR

LITTLE DANGER.

(Life)

Mrs. Hiller—Shall we get a detective to guard Clara's wedding presents?

Hiller (looking them over)—You don't need a detective; all you need is a tinsmith.

KIND OF TOOTER HE WANTED.

(Baltimore American)

"I understand that Billy's father sent him money to hire a tutor."

"What kind of a tutor did he get?"

"A chauffeur who knew how to hit all the high spots in the road."

SAFE.

(London Opinion)

Auntie—Bobbie, why don't you get up and give your seat to your father? Doesn't it pain you to see him reaching for the strap?

Bobby—Not in a train, it doesn't.

TWO CHANCES.

(Judge)

Ellicus—What do you suppose engaged couples do when they decide they have been in love long enough?

Cynicus—I suppose they either break off the engagement or get married.

ELSEWHERE.

(Washington Star)

"Do you ever take a day off and go fishing?"

"Yes. But the fish always seem to take the same day off that I do."

SURE TEST.

(Boston Transcript)

Mrs. Gnagg (with a reputation)—Doctor, I fear my husband's mind is affected. Is there any sure test?

Doctor—Tell him that you'll never speak to him again. If he laughs he's sane.

SOME JOB.

(Chicago Journal)

"What is your head clerk working on —some abstruse chemical problem?"

"You might say so, yes. He's trying to compound a red, white and blue drink for the soda fountain."

LOST.

(Judge)

"What has become of that daughter of yours who went on the stage, Mrs. Mcginnis?" we inquired of our laundress.

"Och—wirra, wirra:" cried the poor woman, bursting into tears. "We niver mintion poor Biddy's name anny more, ma'am. She married beneath her. She run off wit wan o' thim lazy lizards iv the Smart Set!"

THE SCARCE KIND.

(Washington Star.)

"Is help scarce around here?"

"Yes," replied Farmer Corntossel. "I can secure for a consideration any amount of advice and supervisory assistance, but plain ordinary help is gettin scarcer every year."

HARMONY.

(Judge.)

"What is your idea of harmony in politics?"

"Same as most other people in my line of activity," answered the robust alderman. "Harmony consists in having your own way and persuading the other people to be resigned to fate."

SAD CONTRAST.

(Buffalo News)

Bachelor (sadly)—I dreamed last night that I was married. The alarm clock woke me.

Benedict (more sadly)—I dreamed last night that I was single. The twins woke me.

HARD LUCK.

(Baltimore American)

"Talk about perverse fate! This proves it."

"What proves it?"

"Here it is leap year when a woman has an extra chance to be married, and along comes the war to take all the men away."

LADYLIKE.

(Detroit Free Press)

"She's so ladylike."

"Yes, indeed. Even her own brothers have never heard her swear."

DANGEROUS INFLUENCES.

(Washington Star)

"What does your wife think of woman suffrage now?"

"She says it's all right," replied Mr. Meekton. "Only she's afraid some of the women are learning a little of the trickery of practical politics from their husbands."

BRIDE'S BACKGROUND.

(Lexington Herald)

Aunt—Your bride, my dear boy, is wealthy and all that, but I don't think she'll make much of a beauty show at the altar.

Nephew—You don't, eh? Just wait till you see her with the bridesmaids she has selected.

EXPRESSIVENESS.

(San Francisco Call)

"How is your boy Reub getting along with his book?"

"First rate," replied Farmer Alf Alfa. "He's learned a whole lot."

"Knows more than you do, I be[illegible]"

"I won't say that. But he kin [illegible] a lot of things I already kn[illegible] language I can't understand."

NOT EXACTLY.

(Kansas City Journal)

"And in the country we'll get milk fresh from the cow."

"Ice cold, eh?"

RUB OF THE GREEN.

(Judge)

Miss Ruffles—Look at the green and white striped sweater the blonde in the next foursome is wearing!

Mr. Truffles—Anything as loud as that is distracting and should be suppressed under the head of unnecessary noises.

TURNING THE TABLES.

(Detroit Free Press)

"How long did you stay in your last place?"

"Two weeks, mum, and before I agree to come to work for you I should like to know how long you kept the last girl you had."

FLUSH.

(New York World)

"If you please, sir," pleaded the bookkeeper, "I'd like to have three weeks vacation this year instead of two."

"Have you any particular reason for making such a request?" asked his employer.

"Yes, sir. I've saved up more money this year than I usually do, and I'm afraid I won't be able to spend it all in two weeks."

SO APPROPRIATE

(Boston Transcript)

First Girl—Do you know I heard that Mamie Brown's engagement ring is paste.

Second Girl—How perfectly lovely and appropriate! You know her fiance is a paperhanger.

METAPHORS MIXED.

(Baltimore American)

"Fire losses in the big cities are showing a decrease."

"Yes; the new science of fire prevention is blazing the way."

SUSPECTED.

(Tid-Bits)

"Behind the altar," said the cathedral guide to a party of tourists, "lies Richard II. In the churchyard outside lies Mary, Queen of Scots. And who"—halting above an unnamed flagging in the stone floor and addressing a tourist from London—"who do you think, sir, is a-lying on this spot?"

"Well," answered the Cockney, "I don't know for sure, but I have my suspicions."

"Great wealth is a burden." "I shouldn't mind having it long enough to become a little fatigued."—Boston Transcript.

The New Coats For Fall

The First Lot of Ladies' Fall Jackets are Here.

You will like our Coats because they are particularly stylish, the cloths are the very latest and each coat is perfectly finished.

This season the coats are of loose swagger style, large sleeves and many with a generous cape collar.

The materials are very pretty, consisting of Cord Velvet, Plushes, Novelty Plaids, Fancy Mixtures and Beaver Cloths.

They are as attractive as we have ever shown.

Prices start at $10.00 up to $25.00.

Ladies' Raincoats

Special Quality at $5.00

Abnormal market conditions have made it impossible to secure materials at this price but we have been able to secure a line and mark this that the quality has not been sacrificed or the workmanship skimped for the sake of price.

These coats come in Pearl Grey and black and made of splendid quality Mercerized Poplin.

Special price—$5.00

HANOVER

Miss Dorothy Engel carried off the ladies championship at the Oliphant Regatta.

Warden Cordingley of Shallow Lake and Reeve Mearns of Hanover have been appointed a committee by the county council to present the colours to the 147th Grey Battalion at Camp Borden on Tuesday, August 22nd, at 2 o'clock. The colours were purchased by the county council on behalf of the county.

William Knechtel & Son have made a contract with the Hydro Electric Power Commission of Ontario for a supply of power for their flour mills.

In the draft of 57 junior officers which will go overseas from Camp Borden this week, the Grey Battalion will give its quota. Four of the officers will leave with this draft, as follows:—Lieut. H. L. Lazier of "C" Company; Lieut. Tom A. Allen of "B" Company; Lieut. R. C. Ferguson of "D" Company; Lieut Percy Edge, of "A" Company. These officers are to be assigned to posts with some of the earlier battalions now in active service in France, whose officers have been killed or wounded in recent engagements.

Knute Carlson, an employee of the Ball Furniture Co., had his head badly cut on Tuesday of last week. It appears that the dust shade fell on the knives of the carving machine which he was operating, with the result that that the revolving knives threw the shade against his head with great force, inflicting a nasty wound in his forehead.

When "Someone" Comes

You can entertain him with the Edison Diamond Amberola, bearing the greatest singers of the day or dancing to the liveliest and latest popular hits.

And, all the while you can take pride in the fact that it is an Edison, the peer of all phonographs—and not a common, everyday "talking machine" that you would feel like apologizing for.

The "humanness" of the Amberola's startling—hear it

Walkerton's Finances

One would go a long way to find a municipality that stands better financially than Walkerton. With a debenture debt of only $44,000 this town is in a class by itself so far as indebtedness is concerned. The tax rate is correspondingly low in comparison with other towns. This year with a tax-rate of 31 mills, the Council is spending two thousand dollars on road-building, fifteen hundred dollars in fixing up the Town Hall, and contributed $1183 towards the expense of keeping the 160th Battalion here and $300 for the Northern Ontario Fire sufferers. In spite of this extra unforseen expenditure, the Council promises to have an absolutely clean sheet at the end of the year.

Home From Sketching Trip

Miss Verna Skelton returned on Tuesday from a sketching trip in Eastern Ontario which she and a number of other young ladies of the Toronto Conservatory of music took with the well-known artists, Mr. and Mrs. McGillivray Knowles. The Knowles took the party in their new yacht, the Ariel, to Picton which they made their headquarters. The Toronto Star recently had an interesting sketch of Mr. Knowles' yacht which he is using for sketching trips. It cost originally twenty-one thousand dollars, is run by gasoline and contains an electric plant for heating, cooking and lighting. It is also provided with a motor boat in which the artists can take side trips up rivers and streams when looking for new sketching ground. Needless to say the young ladies had an enjoyable as well as profitable time.

WERNER—In Normanby, on Aug. 19th, to Mr. and Mrs. Donne Verner, a daughter.

GETS MILITARY CROSS

Lieut. J. F. Farrell is the First Walkerton Boy to Be Decorated During the Present War

The first Walkerton boy to be honored for distinguished conduct at the front is Lieut-nant J. J. Farrell, who has been awarded the Military Cross. Particulars as to how he won this exceptional honor are meagre. It is reported, however, that at the battle of Mount Sorel, the senior officers of his unit were among the casualties and Lieut. Farrell handled the situation with such courage and gallantry as to win the highest commendation of his superiors. Farrell was teller in the Merchants Bank here before enlisting. He first signed up with the Wireless Guard at Tobermory. On the reduction of the guard he joined the 34th and later was given a commission in the 71st. For a short time in October last he acted as recruiting officer at Walkerton before leaving for the Front. Farrell was regarded as a plucky young fellow and his friends were not surprised when they heard that he had distinguished himself on the Firing Line.

MAJOR FRASER WRITES

From "Somewhere Else in France" Telling of the Canadians' Big Shift.

Major Fraser has written Mr. Arthur Collins from "Somewhere Else In France", giving an interested account of the Canadians' shift in location at the Front.

August 13, 1916.

Dear Attie:—

You will probably see by the papers before you get this, not where we are, but that we are out of the Salient. I don't think there is any one of us but considers himself lucky to be out with a whole skin. None of us but have been in shell fire. Some have had bits of shrapnel in their clothes, and chunks of earth strike them, but nothing worse, fortunately. As a send-off the last night there was a gas attack and we had our gas helmets on for over an hour. They proved an absolute protection if properly put on. We had three days' march in extremely hot weather. There was no weather nor heat like it last year at all. Besides it was very dusty. I had charge of the Ambulance on the march as the Colonel went ahead in a motor car. We had fewer fall out proportionately than any of the battalions—in fact only three. Think the reason was the strenuous week we put in just before when we were supposed to be in rest. Physical drill for an hour before breakfast, route marches, baseball, etc., on the go all day long, so the fellows were pretty fit.

The first night we stopped in the village where we were last year just before going into Ypres. The Col. and myself were the only two left and we both went to our old billets. They were delighted to see us and gave us the best in the house. The next night we stopped in Une Grand Chateau, that was formerly owned by a Duke. The grounds must have been beautiful at one time but now look neglected after two years. Although we were on the move, we received a mail while here. We stopped in a big field each day for lunch. The country we passed through was a beautiful part and the crops were heavy everywhere. I have not seen a better country since leaving Canada, although different from what we have seen here before.

Just after starting on the march, I saw Col. Douglas who is with one of the battalions now. A little later fell in with Farrell who was in the Merchants Bank when I left. He is a lieutenant now in a trench mortar battery, and got a Military Cross at Mt. Sorel. There is the largest river here we have seen for a long time. It averages about six yards across with some holes three feet deep. A river in France is what we would call a ditch at home, and this is clear running water. We all went for a swim the first day here. Everyone, I believe, from the General down was in it some time during the day.

The roads here are good. We are on one now—a national road, it is macadamized for miles. We are here but that is all we know. We do not know where or when we may be moved. There are lots of rumors but that is all. Saw Hed and Roy a week ago to day.

Mr. and Mrs. Hermiston, and Mrs. Holm motored to and spent Sunday with Mr. Robert Cunningham Brent. Mr. Cunningh misfortune to fall fro couple of weeks ago shaking up but is r

Council Strikes Rate Of Thirty-One Mills

One Mill Less Than Last Year

Special Expenditure Ran Into A Lot Of Money This Year—Council Is Also Spending Two Thousand Dollars on the Roads—Work on the new Sidewalks begun.—Council Favors Equal Pensions for Officers and Men After the War.

The Town Council held a special meeting Tuesday night and struck the tax rate at 31 mills, one mill less than last year. Earlier in the year it was thought the rate would lower still but unforeseen expenditures cropped up. These included :— 160th Battalion, $1,139; Northern Ontario Fire, $300; Town Hall repairs, $1500. These items alone mean about 4 mills. Reeve McNab stated that the thirty-one mill rate would mean a thorough clean-up leaving no hangovers for another year.

Town Treasurer Collins had the year's expenditures summarized from the Committee estimates beforehand and the Finance Committee's report had been all prepared so that the rate-striking was as simple as pressing a button.

Thirty-one mills is calculated to raise the sum of $24,644.77. The estimate is as follows:—

	Mills
County Rate including Provincial Tax and Patriotic Grants	8.35
High School Rate	3.18
Public School Rate including Debentures	7.20
Separate School Rate	7.20
Public Library, including Sinking Fund	.75
Debenture Debt and Interest	4.23
Local Improvement Rate	1.14
General Purpose Rate	10.76
	31.00

The Soldiers' Pensions

A communication was read from the City Clerk of Niagara Falls asking the Council to pass a resolution urging the Dominion Government in passing the proposed Pension Bill to treat officers and men on a basis of absolute equality. It urged that this is a democratic country and the men should receive the same treatment after the war as the officers. After considering the matter in Committee, the Council decided unanimously to support the resolution and forward a memorial to the Government.

Mr. Robert Goode asked to have permission to leave the temporary sewer which he built between Major Henderson's and the Town Hall there permanently, as there was no sewer on Cayley St.—Left over to regular meeting of Council.

Town Auditors K. M. Taylor and W. H. McBurney reported that they had made the June Audit and found the treasurer's books correct. Council decided to ask the auditors for a statement.

The fourteen sidewalk by-laws were given their last reading, finally passed, and received the Corporate Seal.

Chairman Pietsch of the Court of Revision named Friday, Sept. 29 as the date of the Court for hearing sidewalk appeals.

The Clerk was instructed to advertise for coal for the Town Hall.

The Mayor's Crossing

Mayor Lippert stated that a crossing was badly needed on the sidewalk in front of his firm's monument works. A crossing should have been laid in the first place instead of sidewalk. Different members of the Council had seen their horses floundering over the walk and falling over. He had spoken to Chairman Russell of the Streets Committee about the matter and Mr. Russell had informed him that the Committee had decided that the crossing would not be built. He now asked the Council either to build the crossing or give him permission to build it himself.

Coun. Russell said his committee did not wish to take the responsibility of laying the crossing as there are too many people wanting crossings.

On motion of Coun. Arscott and Reeve McNab the Streets Com. was instructed to lay the crossing.

Coun. Pietsch asked that the hole from the end of the sidewalk on Durham St. to the mill race bridge be fixed. Coun. Russell promised attention.

Sidewalks Are Started

Coun. Russell said it would be impossible to complete the new sidewalks this year. He had a gang of men at present laying the walk on Mary St. The next one would be the sidewalk from the Carrick road, and the third would be the walk past the Brewery. These were the most important as they would be used by the men going to work.

Those present were:—Mayor Lippert, Reeve McNab, Couns. Douglas, Arscott, Russell, Pietsch, McCarter.

Patriotic Buttons.

Through the generosity of Mr. C. M. Bowman, M.P.P., the Bruce Preparedness League has been furnished with Patriotic Buttons, which are intended to give publicity to the work of the League. The buttons are being sold for ten cents, the proceeds going to support the work of the League. Lionhead leads so far in the sale of buttons. Little Jessie Cooper, daughter of Mr. E. C. Cooper, did her bit by selling 26 on a Saturday. Other children might emulate her example. Until a place of sale can be arranged, buttons may be obtained from Warden McNab.

+ + +

A Young Old Timer.

Mr. John Flett of Vancouver arrived here last Thursday on a visit to the old home. Mr. Flett, being one of Vancouver's largest mercantile men should be in a good position to guage conditions on the coast. He says business is improving and the outlook is better. The mills are very busy at present and find it difficult to get help. He looks for great expansion in trade on the Pacific coast after the War. Japan sees her opportunity and already many new lines of Japanese manufacture are in the market. Russian trade will also be a big factor. Mr. Flett is none too optimistic regarding Canada's crops this year from the view he got coming East. In B.C. where the principal crop is hay and oats, some of the hay rotted. Frost bit Northern Alberta. Southern Alberta's crops are good. In Saskatchewan crops were fair with some rust. Rust was bad in Manitoba. In most sections of Ontario crops are poor. Although not an old man by any means, Mr. Flett counts himself among the old timers having left here thirty-six years ago. He finds that of the real old-timers in Walkerton and Brant, few indeed have escaped the Grim Reaper.

C. P. R. TO BUILD?

Rumor That Hanover Cement Co. Is Taking Options on Lands Between Here and Teeswater

It is rumored in Brant that the Hanover Cement Co. is taking options on several farms on the Teeswater Road between here and Enniskillen. This is taken to mean that the two stub ends of the C. P. R. will be linked up in the near future and the lime rock which is to be had in abundance in that vicinity shipped to Hanover for cement making. manufacture of cement, from limestone has proven highly successful at very many places. It produces the highest grade of cement and the cost of production is in some instances lower than the cost of producing cement from marl.

LETTER FROM FRANCE

Ed. Eidt Tells of His Trip from Bramshott to "Somewhere in France"

Mr. Nicholas Eidt received a letter yesterday from his son Ed. who had just arrived in France giving some interesting impressions:—

Somewhere in France,
Sunday Afternoon,
August 13, 1916.

Dear Father:—

We left Bramshott Camp on the morning of August 10th, and embarked for France in the evening on a big troop ship. We landed in France next morning and marched out to a rest camp where we stayed until night when we marched away and boarded the train for the firing line. We had a fine day and night trip across France and arrived at our station last night and after a hard night march with full packs and rifles, we reached our billet this morning about 2 o'clock. Our billet is just a barn with straw-covered floor, but it is quite dry and comfortable. We are now about eight miles from the firing line and can hear the guns quite plainly. Aeroplanes are scouting overhead at all times. We expect to go into action very soon. This will be our permanent billet and we'll always return to our little old home in the barn after our spells in the trenches. We had a fine trip from Bramshott and saw some beautiful towns and cities of old France. The French people are all very pleasant and generous, and we'll have to learn a little of the language now so that we can make ourselves understood. They have a very fine crop of everything this year and a good many of the women and girls are busy cutting the crop in the old fashioned way, with sickle and scythe. We saw a good many French training camps and columns of French soldiers in their blue uniforms, and also a number of German prisoners working in the railroad yards and shipping stations, still in their uniforms. The towns and villages in this part of the country are completely deserted, and most of the places about here were overrun by the Germans in 1914. The water of the country is very bad and must be boiled before using which makes things a little unhandy for us, but otherwise we're quite comfortable.

Removing to Hanover

In the removal of Mr. and Mrs. Robert Smith to Hanover, this town is losing one of its most estimable families. After residing here about thirty years, the breaking of old associations means a good deal not only to them but to their wide circle of friends here. Mr. Smith has been active in the the work of Knox Church, an elder of the Church, and a man who has been a good citizen in the best sense. Mr. Smith has been agent for the Canada Life for Walkerton, Hanover, and the surrounding district for a number of years and he will retain that position. The fact that both of his daughters are located at Han

AN EVIL HERITAGE

As he said it he burrowed with his hands a little deeper in his pockets, and settled himself into a new attitude, in expectation of the effect of his words.

There was not much effect to be seen. Bernard looked up and down him slowly, as though taking his measure.

"I think I should try that cup of black coffee, if I were you," he then observed, deliberately. "You evidently don't know what you are talking about. Everybody knows that my father was a widower for at least a couple of years before his marriage. I'm sure I don't know why I'm taking the trouble to tell you this. You have your stars to thank for my being in a super-humanly good temper to-day. And now, good morning: even my patience is at an end. You had better take care in case of a carriage coming down the avenue; the coachman mightn't see you in time to pull up the horses."

And, pushing past Mr. Silkworth with a rapid movement, Bernard set off again at a swinging pace, heading in the direction of the ivy-covered garden wall, round which the avenue at this place took a sharp curve.

But he had forgotten that Mr. Silkworth's legs were quite as long as his own. In less than half-a-dozen strides the manager had overtaken him.

"But, Mr. Berrincott, sir, or whatever your legal appellation ought to be," he began speaking more hurriedly now, "upon my soul I'm not joking, there really has been some grand mistake somewhere. I always knew that your father had made pretty sharp work of marrying again, though it wasn't till ever so much later that we got the news of it—quite in a round-about way, I might say, and of course no one had any call to examine the dates. But I've done that now, and I swear to you that your father's first wife did not die till the June of '59: the end of June, '59."

"Swear it to some one else," said Bernard, striding on at the same pace. "I have no time for fairy tales."

"That is exactly what I am going to do," broke out Mr. Silkworth, whose eyes were beginning to roll and his teeth to gleam; "why the devil should I hold my tongue unless you make it worth my while to do so?"

At this point Bernard stopped short suddenly, for he had something to say, and felt instinctively that he could speak with more emphasis thus than when covering the ground at the rate of ten miles an hour.

"Look here," he said with great deliberation, "up till now you have been almost amusing, but now you are beginning to be distinctly too much for my temper. If you imagine that by trumping up old legends about my father's first wife you'll scare me into paying you hush-money, then all I've got to say——"

"Not so loud," interrupted Mr. Silkworth, in a harsh whisper, dropping his hand on Bernard's arm. "I'll be blessed if there isn't some one on the other side of that wall." and he rolled his eyes uneasily towards the garden wall beside which they were now standing, and from beyond which certain subdued sounds were audible, of which it was difficult to say whether they were caused by the wind among the peach-branches or by the grating of a ladder against the stones.

"I don't care whether there are a hundred people on the other side of that wall," retorted Bernard, speaking, if possible, with a greater distinctness then before; "and they are welcome to open their two hundred ears so far as any secrets of mine are concerned, or any calumnies of yours regarding my father's antecedents. This is all I have got to say. And now if you do not stand aside I give you my honor as an English gentleman that I will knock you down; and I believe I can do it too, though you're half a head taller than I am."

In the next minute Bernard was striding down the avenue, alone this time, and Mr. Silkworth, livid with rage, and looking curiously like a washed-out negro, was shaking a not over clean fist at his back.

Had he not been so much engrossed by this occupation, it might possibly have occurred to the ex-manager to glance upwards at the garden-wall, in which case the sight of a battered felt hat, a pair of startled eyes and half a nose emerging from over the topmost ivy-twigs would have been pretty certain to give him an unpleasant turn.

CHAPTER XV.

On the evening of the same day on which Bernard had been brought to the point, Mrs. Durrant settled herself down with a sigh of extra comfort in front of her toilet-table, in order to have what remained of her once plentiful black hair brushed out for the night.

Toilet-tables are generally white, or [illegible]

had unquestionably been successful, hence that sigh of extra comfort with which the mental review closed to-day.

The glance backwards was followed by a glance forwards—not into the future, however, but into the toilet mirror on the table. This, too, was a habit quite as ancient as the other, and almost as ancient as the venerable Podskin herself, whose skinny fingers daily moved deftly among the scanty black locks, and had been used to move there since the time when the locks had been luxuriant, and they themselves almost plump. Ever since those bygone days this faithful servant had been the one link between the upper and the lower regions, the only one among those who received the retired soap-boiler's pay who knew that her mistress was not so sleepy as she looked.

Podskin was useful in more ways than one, having a well-developed vision and an excellent sense of hearing, which were entirely at Mrs. Durrant's service. Through this medium it was that that lady was warned of any undue consumption of tea and sugar in the servants' hall, just as it was through the aforenamed eyes and ears that she was kept informed of the private doings of her visitors.

Despite the long-standing intimacy between mistress and maid, Podskin was a great deal too decorous to think of opening the conversation herself, but the glance into the mirror never failed to disclose whether or not there was any reason for Mrs. Durrant doing so. What that lady saw there to-day was too distinct to be mistaken. The long thin nose that drooped above her own head was almost wagging with badly suppressed excitement, while the sunken lips were closed in what evidently was a heroic effort not to speak until addressed.

To Mrs. Durrant's eyes the situation was so obvious that she began without preliminary—

"Well, Podskin, what is it?"

The words were scarcely spoken when already the barrier had fallen with a rush.

"It's rather an out-of-the-way thing, ma'am, to say the truth, though of course its very likely only a little muddling up of dates, to be sure. Hindeed, I don't see as 'ow it can very well be anythin' else, considerin' what the consequences would be to Mr. Berrincott. And Jebb isn't the man, either, whose word I'd take at the first sayin'. My opinion is that he's apt to know more about things inside the garden-wall than outside it."

"Be a little more explicit, please," said Mrs. Durrant, a trifle severely. "You are talking of Jebb, the under-gardener, I presume?"

"Of him, ma'am, exactly. It was this afternoon, and he was busy with the peaches on the south wall, tying the new twigs on to the trellis, when all at once he hears steps coming down the avenue at a great rate and some one saying: 'And I swear to you that your father's first wife didn't die till the June of '59'; and in the same minute the voices had got just to the other side of the wall and some one else almost shouted out somethin' about legends being trumped up, and his not going to be frightened into paying hush-money. And the voice that spoke first also said: 'Why the devil should I hold my tongue, unless it's made worth my while?' or words to that effect—and it ended up by their offering to knock each other down, and when Jebb, half scared as he was, looked over the wall, he saw young Berrincott swinging off down the avenue, and a man in a straw hat shaking his fist at his back. Leastways that's the story he brought into the servants' hall this evening, when he was up at the house with the grapes for dessert."

Podskin paused for breath and peered inquiringly over her lady's head into the toilet-mirror, though, to be sure, she might have known by this time that there never was anything to be seen there.

There was a short pause, during which Mrs. Durrant stared impassively at the rings on her hands. Then she remarked with equal impassibility—

"That sounds very much like a got-up story."

"Don't it, ma'am? And I never even should have bothered you with it, if it hadn't been for the Thornton Reads having been over here this afternoon, looking in upon our Minnie, as she sometimes does, and she was tellin' a story about a man with a straw hat who had walked in upon them yesterday at dinner time, and who had turned out to be the West Indian manager, and had made some queer remarks about the late Mr. Berrincott's first wife, which had somehow puzzled even Mrs. Spankins. And I couldn't help fancyin' that this kind of tallied, specially with the straw 'at; and so, since you generally like to know things, ma'am, I thought I'd just be [illegible]

[illegible] Mrs.

"In the smoking-room, I believe, ma'am."

"Go there immediately and tell him I wish to speak to him before going to sleep."

When Podskin had closed the door behind her, Mrs. Durrant continued to gaze at her rings. What she was saying to herself was this—

"After all, there is nothing like being on the safe side."

CHAPTER XVI.

When Bernard opened his eyes on the morrow of his latest visit to the Monastery, it was to greet the early daylight as no daylight had ever before been greeted by him. The day of his betrothal! How considerate of that blustering March wind to have laid itself to rest for the occasion!

Not once did Mr. Silkworth's figure darken his exultation. If he thought of him at all, it was to smile at his yesterday's adventure, and to wonder at the strange forms which eccentricity is apt to take.

Having by a tremendous outlay of self-control forced himself to wait until a reasonable portion of the forenoon had elapsed, and armed with a large bouquet of white camellias, he at length started for the Monastery. The camellias had been an inspiration. It had struck him as a peculiarly happy thought that his first gift to Sybil should be those very flowers, the mention of which had yesterday indirectly led to the crisis; and what was happiest of all about the thought was that every one of those dazzling blossoms should shine and fade in Sybil's hair or on her breast unseen by Captain Stenning. Poor wretch! How his grin would fade when he got the news that that round and that square on the 12th were not for him! Oh, no, by-the-bye, that had been a mistake, Sybil said. What could she have meant, exactly? Surely the queen of his heart had not been fibbing! He laughed as he put the question to himself. This was not a day on which it was possible to find fault with anything. And yet even she could not be allowed to fib. He would make her confess, he told himself with a mixture of tenderness and amusement, and straightway fell to picturing to himself what she would be doing and how she would be looking when first his eyes should fall on her to-day. The picture, indeed, was pretty nearly ready-made. It was so difficult to imagine her doing anything but leisurely disposing flowers in a vase, and—well, nothing else, in particular, except being beautiful. What need either? Were there not plain women enough in the world for the more prosaic occupations?

By the time he had reached the Monastery his impatience had become almost unbearable. His first glance down the gallery showed him that no flowers were being arranged to-day. Mr. Durrant was waiting for him in the library, the footman informed him. So much the better, was Bernard's reflection: all the less loss of time.

The heavy oaken door was scarcely closed behind him when already he was hurrying forward towards the tall figure by the writing-table. What with the joyful smile on his face and the white camellias in his hands he had about him something of the air of a happy boy, laden with birthday greetings and hastening to his father's arms.

"You know why I have come," was all he said, in a voice that shook with eagerness.

Mr. Durrant retreated a little nearer to his writing-table, for Bernard, in truth, did not look as if he were going to stop short of an embrace.

"I believe I am aware——" he began, a little nervously.

"Sybil has told you everything, has she not?"

"My daughter certainly informed me of——"

"And you have no objection to our happiness?"

Mr. Durrant made a step further backwards, for Bernard was still pressing on.

"Forgive me, but you seem to take a great deal for granted."

The words were the first which succeeded in reaching more than Bernard's ear. Up to this moment he had been too entirely blinded by his own exultation to notice that his reception was other than he had pictured it. Now, something like a first sobering of his senses came to his aid. Very likely he had been making a fool of himself—he acknowledged it freely; he should have remembered that the old soap-boiler was a stickler for the proprieties. Well, the want was easily supplied. Here goes!

"I have been a little too quick about it," he said, struggling to look at least decently grave; "but I am sure you will pardon me. Of course, I should have begun by telling you that I love your daughter, that I am happy enough to have gained her love, and that I am come to request your consent to our union."

"There is some slight mistake here," put in Mr. Durrant, uneasily. "My daughter is not likely to have acknowledged sentiments of the sort you describe, so long as——"

"Of course not; she has acknowledged nothing—I have only guessed; but I don't think I have made a mistake, and—well, can't you understand that these five miles over have seemed just interminable, and that I am dying for a chance of laying these flowers at Sybil's feet?"

"I am afraid there will have to be rather more delay than you suppose. Will you take a seat, Mr. Berrincott? There are unfortunately some matters which it is my duty to discuss with you."

"Settlements, of course," thought Bernard. "Hang it all! couldn't that have stood over a bit?" Aloud he [illegible] "As far as any conditions are [illegible] you have only got to——"

[illegible] condition," interrupted [illegible] eagerly. "The [illegible]

SUNDAY SCHOOL LESSON

Lesson X. September 3, 1916. Paul's Sorrows and Comforts.—2 Corinthians 11: 21-12: 10.

COMMENTARY.—I. Paul's ancestry (vs. 21, 22.) 21. I speak as concerning reproach—Paul's opposers undertook to disparage him by declaring that he was weak, and did not, in his ministry, give evidence of the strength that should characterize a genuine apostle. Paul proceeds at once to meet the accusations of his enemies. whereinsoever any is bold—Others had been bold in their assertions of his weakness and he would be bold in showing the Christians at Corinth the grounds upon which his apostleship stood, and the basis of the claims he had upon their confidence. I speak foolishly—"I speak in foolishness."—R. V. The apostle intimates that it may seem foolish for him to declare his boldness in presenting his case. Some think that others charged him with foolishness. He now rises to an argument that is at once elevated and convincing. 22. are they Hebrews—The opposers of Paul were evidently Jews. Some had intimated that he was a Gentile.

II. Paul's sufferings (vs. 23-33). 23. ministers of Christ—The apostle's opposers were not only Jews, but they were claiming to be the public servants of Christ. I speak as a fool—The statements Paul was about to make might appear to be boasting, and hence he might be accused of folly; but it was necessary for him to speak thus for the sake of the Christians at Corinth who had been saved through his ministry. I am more—Paul was not boasting when he said that if his opposers were ministers of Christ, he was more, because he had suffered and labored in a sense and to a degree that they had not. In labours more abundant—Paul begins to record his labors and sufferings for the gospel's sake, thus showing his right to say that he was more fully a minister of Jesus Christ than were his detractors. His was "a life without precedent in the history of the world." He was constantly and strenuously engaged in the work of the Lord, and that, too, in the face of obstacles and opposition. In stripes above measure—The Romans were not limited in the number of blows inflicted in beating their prisoners, while the Jews were not allowed to administer more than forty stripes. He was beaten by the Romans in Philippi Acts 16: 23). prisons—From the fact that but one imprisonment has thus far been mentioned, it is evident that only a part of his experiences are given in the Acts or in his own writings. In deaths oft—Paul was again and again in danger of losing his life. 24. five times—The particular occasions are not mentioned. forty stripes save one—In Deut. 25:3 the law says that not more than forty stripes shall be inflicted in punishment. In Paul's time the rule was adopted that but thirty-nine should be given lest the legal number might be exceeded.

25. Thrice was I beaten with rods—This was a Roman form of punishment inflicted upon those who were not Roman citizens. It was liable to cause death. One of these occasions was when Paul was at Philippi (Acts 16: 23. Once was I stoned—This took place at Lystra (Acts 14: 19.) He was threatened with stoning at Iconium (Acts 14: 5.) Thrice I suffered shipwreck—The shipwrecks are not recorded in the Acts. The one while he was on his way to Rome as a prisoner had not yet occurred. A night and a day I have been in the deep—For twenty-four hours he kept himself afloat on the sea. 26. Journeyings—Traveling was not easy in those times and the journeyings of Paul may well be counted as labors. 26. Perils of waters—The word means rivers. Streams were not usually spanned by bridges, and there was much danger in crossing swollen streams, and streams whose beds and currents were treacherous. In perils of robbers—Travelers were in constant danger of robbers. Mine own countrymen—The Jews. Heathen—Gentiles. In the city—As in Philippi, Corinth and Ephesus. In the wilderness—In contrast to the city, showing that the apostle was in peril everywhere. Among false brethren—He had been in perils by both Jews and Gentiles, who had openly opposed him, and in distress also because of Judaizing teachers who ought to have been his helpers instead of trying to destroy his influence. 27. Weariness and painfulness—These afflictions arose from Paul's excessive labors. In watchings—Sleeplessness. Hunger and thirst—The apostle suffered for lack of food and the ordinary necessities of life.

28. That which cometh upon me daily—The labors and sufferings which have just now been mentioned came from without, and were connected with his efforts to spread the gospel in many lands. Paul now spoke of the responsibility that was upon him with respect to the many churches which he had founded. It is not supposed that he referred to all Christian churches everywhere, but to those only which he established. 29. Who is weak, and I am not weak—The apostle in this expression declares that he has deep sympathy with the individual Christians of the churches, where he labored, and felt for them in their weaknesses and distresses. Offended—"Caused to stumble."—R. V. Burn not—When any of his brethren were caused to stumble, Paul burned with shame and sorrow for them, and with a zeal to help to restore them. 30. If I must needs glory, etc.—If I am compelled by my traducers in self-defence to "glory," I will evade the charge of being a boaster by centering [illegible] not upon my powers and [illegible] "mine infirmities." [illegible] knoweth that [illegible]
